The Right of Way.—Another suit respecting this much-disputed question was tried Wednesday in the Marine Court, New York. The plaintiff was an organ-grinder, and was injured by coming in contact with a cart while in the act of crossing a street. The jury awarded to him $250 damages, and this instance should teach the drivers of vehicles in our crowded thoroughfares more caution. This question of law arises very frequently, not only in our own courts, but also in England, and it is of great importance that it should be understood by all parties. A foot passenger, when crossing a street, has the right of way; but this does not give him the right to jump immediately before a passing vehicle. He must use ordinary care and caution in crossing streets, and then, if he is injured by being knocked down or run over, the owner or owners of the vehicle may be held responsible for damages.

SUMMARY.

One of the passengers recently arrived from Europe, is Col. Tal. P. Schaffner, who has resided some considerable time past in Russia, and returns to make arrangements to carry out the contracts he has made with the Russian Government. Col. Schaffner has secured contracts for railroads, telegraphs, and other public works, on the most gigantic scale and on very favorable terms. In addition to the enterprises above named, the Colonel has become largely interested in property belonging to the Archduchess Marie, sister of the Emperor, and to others of the Princes and Princesses of the house of Romanoffsky. The aggregate cost of the works undertaken by Col. S., representing the enormous amount of $26,000,000, affords a splendid margin for the triumphs of American skill and energy.

A well-advised Western authority estimates the excess of Wheat over our wants for home consumption, at 41,000,000 bushels. The harvest reports in July and August bear out this calculation. The receipts of new Grain at the sea board in October and November fully endorse it. The real question is, how far this surplus will be drawn upon from abroad. The draft last year was only 6,821,584 bushels. The American crop was a failure. The year before, the draft was 28,148,595 bushels. The crop was a fair average. This season, the draft promises to reach 35,000,000 bushels. The crop much above the average. Prices thus far show 40 cents the bushel and $2 the barrel above the currency of 1853.

A dispatch dated Boston, Tuesday, Dec. 4, says: Judge Merrick of the Supreme Court to-day continued the injunction on the Grocers' Bank until the 7th of January, when another hearing will take place. In the meantime all the property of the Bank is placed in charge of Messrs. Charles H. Warren, Jarvis Slade and Southworth Shaw, who are empowered, to return private property in the possession of the Bank, renew securities, and otherwise act for the best benefit of the parties interested.

The Philadelphia *Ledger* states that the business of the anthracite coal regions in that State is beginning to suffer in a pecuniary point of view—that it has been overdone, and that speculation and other causes have involved the operators and others in pecuniary liabilities to an immense amount. Some few persons have made largely in coal lands and the coal business, and hundreds of others followed, blindly overlooking the difference in location, time, and circumstances.

The Hon. Francis Gillette, Walter Dunham, Esq., A. W. Wells, Esq., and Rev. J. W. C. Pennington, D. D., have been appointed trustees of the estate of the late Homer Treat, Esq., of Lichfield County, Conn., who died recently. The estate will probably realize from $3,000 to $4,000. The object of the worthy testator is to erect an Academy for colored youth, or to provide for the education of a limited number of that class by investment of the estate.

There is a statute in Indiana that prevents the testimony of a negro from being received in the courts. This disability, just now, gives the negroes the monopoly of the carrying trade in liquor in that State. As they cannot be made witnesses, the liquor dealers are not afraid to sell to them, and they are very generally employed to effect the exchange between the seller and consumer of the prohibited article.

The Ohio *State Journal* notices the peach crop of Mr. Loughry, whose farm is on the Ohio river, in Adams county. Ten years ago he set out eleven acres with the choicest varieties of the peach. The *Journal* says that his eleven acres of peaches this year will bring him the substantial sum of "five thousand dollars," or nearly five hundred dollars per acre.

There are one hundred and seventy places called Washington in the United States, besides the one in the District of Columbia. This is at least five to every State. And this estimate does not include the dozens of Washington Heights, Washington Hollows, Washington Villes, Washington Corners, Washington Lakes, Washington Mills, Washington Butte, and Washington South Yuba.

The number of offices in the gift of the House of Representatives does not vary much from a hundred. Of these, one receives a salary of $3,600 per annum; five, $2,160; twelve, $1,800; and the balance ranging down to $438 for laborers. The clerk, door-keeper, postmaster, and sergeant-at-arms, are elected by the House, and the others appointed by the aforesaid officers.

At St. Paul, Minnesota, the Mississippi was considered closed on the 22d of November, the mercury having fallen to 10 deg. above zero. In recapitulating the business of the season, the *Pioneer* shows that 68 boats ran to that port, which is an increase of 30 over the previous year, and the total number of arrivals was 560, an increase of 315. Sleighs commenced to run Nov. 20.

Land warrants are very plenty, and the demand is moderate. The rates range from 95 to 105c. per acre. The 120 acre warrants are most plenty, and sell at the lowest rate. Speculators having been buying and holding large amounts, and finding the demand for consumption not equal to their expectations, are throwing them on the market.

The proprietors of the *Southern Literary Messenger* have announced to the public, that it is their intention to discontinue its publication with the December number, unless the people of Virginia and the South shall come to its rescue and increase its circulation.

Dr. J. B. Davis, of South Carolina, has recently sold fifteen three-quarters bred Cashmere kids, seven months old, and one pure bred two years old Cashmere buck, to a gentleman in Tennessee, for $4,000—the ewes at $200 each, and the buck at $1,000.

The latest style of robbing houses in New York is as follows: A rogue takes a boquet to your front door, tells your servant it is for the lady of the house, waits for her to dictate a reply, slips into the parlor and pockets the little treasures that lie around loose, and is off.

On the 3d inst. two steamers were destroyed by fire at Memphis, Tenn. The fire originated in the steamer Collier, and then communicated to the Mayflower. The Mayflower was valued at $100,000, and insured for $50,000. The Collier was valued at $35,000, and insured for $15,000. The wharf-boat contained $20,000—a total loss. Fifteen persons are missing, who are supposed to be lost.

A bill has been introduced into the Legislature of Georgia, proposing to confiscate, for the benefit of the owners of fugitive slaves, the debts due by citizens of Georgia to citizens of the State to which slaves may have escaped, if the authorities of that State refuse to deliver up the slaves upon claim of their rightful owners.

The whole number of cars and locomotives on the Erie Railroad is 3,168, which, if coupled together in one train, would reach a distance of twenty-one miles, and be able to carry 150,000 persons in one day from New York to Lake Erie. The company has in its employ not less than 5,000 persons, whose pay per month is $125,000 or $1,500,000 per year.

A special dispatch has been received from Milwaukee, which states that the only two counties in Wisconsin from which returns had not been received, have now been heard from, and that they give Barstow a majority of *one hundred and twenty*—thus insuring the election of Bashford, the Republican Candidate for Governor, by from 500 to 700 majority.

A bill has been introduced in the Georgia Legislature, providing for the incorporation of a mining company, with a capital of $900,000, with the privilege of increasing it to $9,000,000. The object of the proposed company is to work rich copper, silver, and gold, said to abound in that State, and particularly in the Cherokee cession.

The New York City Tax Collector has received up to Dec. 4, $4,337,941 in cash on account of the Tax List of 1855, being within $1,506,831 of the entire list. The discounts for prompt payment amount to $29,714. The receipts on the last day, Nov. 30, were $906,578.

There are no less than *six thousand* men in Protestant Germany, who, having finished their theological studies, and undergone the examination required by the rules of the University, have obtained the title of "candidates" for the ministry, but have no regular pastoral duties.

Col. J. W. Pierce, of Greenland, New Hampshire, will furnish for the Boston market this year 3,000 barrels of grafted apples, which is perhaps the largest amount ever sold from a single farm in that State in one season.

A dispatch dated Utica, N. Y., Monday, Dec. 3, says: The Wadding-Mills attached to the Westmoreland Cotton Mills, eight miles from here, were burned this morning. Loss $3,000. No insurance. The property was owned by Hon. E. J. Richardson.

The Virginia House of Delegates has appointed a Committee to provide for the adoption of more effectual measures to prevent the escape of slaves, and to inquire into the expediency of retaliatory measures against the Northern States.

The boiler of a steam fire engine exploded at Cincinnati, Dec. 5, at the corner of Sixth and Vine streets, while on trial before a committee from Chicago. The engineer was killed, and two others wounded.

The Secretary of the Treasury has selected a portion of the M'Gee Farm, about two miles south of the village of Burlington, as a site for the Marine Hospital, ordered by act of Congress.

Gov. Minor, of Connecticut, has issued his proclamation, announcing that the amendment to the Constitution lately adopted, that voters must be able to read and write, is now part of the organic law of the State.

The operation of removing an eye was performed upon a young lady at the Geneva Medical College, recently. The eye had been sightless for several years, and protruded so as to be annoying.

The house of Mrs. Spelman, on Palmer Hill, Essex County, N. Y., was burned down on Sunday morning, Dec. 2d, burning to death three children, one but seven years of age.

A Police Justice, of Detroit, Tuesday, Dec. 4, delivered an opinion declaring the Prohibitory Liquor Law unconstitutional in every important respect.

Four Mexican boys were brought into Santa Fé, recently, by a small escort of dragoons, having succeeded in making their escape from the Camanche Indians, a short time since.

At the sale of the estate of the late Samuel Pointer, in Halifax Co., Va., the sum of $600 was paid for a *mad stone*—a mineral supposed to have wonderful healing virtues.

Two girls, aged 10 and 15 years, and a small boy, were drowned on the 30th ult., in attempting to cross the Maumee River, near Toledo, Ohio.

In North Carolina, South Carolina, Georgia, and Alabama, $60,000 have been subscribed for the purchase of Mount Vernon.

It is reported that Joseph Lane has been appointed a Brigadier-General in the army of the United States.

The American Institute has bought the Crystal Palace, for $125,000, and taken possession. The debts of the Palace amount to about $175,000.

Four young men were drowned on Friday, Nov. 30, below Long Point Lighthouse, on Lake Ontario, in attempting to take in a gill net.

It is said that Mrs. John Tyler, who was a Gardiner, is heir to a just discovered fortune in England, by which she will get $500,000.

Elizabeth Jewett, formerly of South Boston, drowned herself at Gardner, Me., having been crazed by belief in spiritualism.

The amount of tax raised in New York city in 1855 was $5,843,822 89. The estimate for next year is $6,475,855 43.

Board Meetings.

The next Quarterly Meetings of the Executive Boards of the Seventh day Baptist Missionary, Tract, and Publishing Societies, will be held at No 80 Seventh-st., New York, on the second Fourth-day in Janunry, 1856, commencing at 10 o'clock, A. M.

Geo. B. Utter, Sec.

☞ A meeting of the Executive Board of the Education Society will be held in New York on the day following the above-named meetings.

FOR SEVENTH-DAY BAPTIST MEMORIAL:

Geo C Babcock, Dakota, Wis $3 00

WILLIAM M. ROGERS, Treasurer.

Bills.—We are sending bills to those who owe for the Sabbath Recorder up to the end of volume twelve, now more than half completed. If any errors are discovered in them, please notify us immediately, and the proper corrections will be cheerfully made. If they are correct, please make it convenient soon to remit the amounts. The money is needed.

"Always Ahead of all Competitors!"
OPENING OF A NEW CAMPAIGN!
WOODWORTH'S YOUTH'S CABINET,
EDITED BY FRANCIS C. WOODWORTH,
Assisted by the best Writers in America,

A magazine which has earned for itself the reputation of being the "best periodical for the young in the Union," and which has long had the habit of being "always ahead of all competitors," begins a new volume with the January number, *now ready for delivery*. This number contains

AN ACCURATE PORTRAIT OF THE EDITOR, elegantly engraved on steel, and is filled with the richest and rarest gems from the editor and his assistants, illustrated by upwards of tw e-five handsome engravings. The CABINET has been enlarged, so as to contain

THIRTY-SIX OCTAVO PAGES IN EACH NUMBER, and is otherwise materially improved in its costume, as well as in its literary contents. It is the intention, both of the editor and the publisher, to make WOODWORTH'S YOUTH'S CABINET excel, as it has heretofore had the reputation of excelling, any publication for the young ever issued in this country or elsewhere, to say nothing of any still below th horizon, whose advent is announced with the sound of a trumpet. To maintain this superiority, we shall employ all the resources which an experience of ten years in catering for the amusement of the little folks, as well as our correspondence with nearly all the acceptable writers for the young in the Union, put at our command.

NOW IS THE TIME TO SUBSCRIBE!

Yearly subscription $1 in advance; 4 copies, $3 50; 5 copies, $4 00; 8 copies, $6 00.

For a club of five or more, an extra copy will be sent to the one forms the club. Those who are unacquainted with WOODWORTH'S YOUTH'S CABINET, will please send for a specimen number. Single numbers, containing the portrait, 12½ cents. Proof impressions of the Portrait, extra size, 25 cents.

CLUBBING WITH OTHER MAGAZINES.

☞ *Look at these liberal offers!*—The publisher of WOODWORTH'S YOUTH'S CABINET will, until further notice, furnish any one of the following three-dollar magazines and the YOUTH'S CABINET, each one year, for *three dollars*:

Harper's Magazine,
Knickerbocker Mag.
Graham's Magazine,
Putnam's Magazine,
Godey's Lady's Book,
Household Words.

☞ By this mode, families can obtain the CABINET free of expense. D. A. W. will also furnish either of the following two-dollar magazines, and the CABINET, each one year, for *two dollars and twenty-five cents*:

Peterson's Magazine,
Arthur's Home Magazine,
National Magazine.

Please forward your orders, by mail, with the amount (in money or post-office stamps) to

D. A. WOODWORTH,
Publisher of Woodworth's Youth's Cabinet,
118 Nassau-st., New York.

D. A. Woodworth,
Publisher of Woodworth's Youth's Cabinet, 118 *Nassau Street, New York*,

WILL SEND PRINCE'S PROTEAN FOUNTAIN PEN by mail, *without expense of postage*, on the receipt of the manufacturer's price—$4 50 for the large size, $3 50 for the smaller size. This pen is one of the most important mechanical wonders of the age. It enables one to write twenty or thirty pages from the reservoir of ink in the holder. For 10 subscribers to the "Cabinet," and $10, a pen of the large size will be sent as a premium.

Send for a Specimen Number

OF WOODWORTH'S YOUTH'S CABINET. The January number, beginning a new volume, is *now ready for delivery*. It contains an accurate PORTRAIT OF THE EDITOR, engraved on steel, and is filled with the choicest dainties. Yearly subscription, $1. Single specimen numbers, 12½ cents.

D. A. WOODWORTH, Publisher,
118 Nassau Street, New York.

Person's Wanting Employment,

CAN learn of an excellent field of labor, with liberal compensation, by addressing the subscriber, who will furnish them with a circular, giving full particulars of the agency. None except active, industrious, capable men, who are willing to canvass for subscribers, and who furnish the best of testimonials, need apply.

D. A. WOODWORTH,
Publisher of Woodworth's Youth's Cabinet,
118 Nassau Street, New York.

Rogers' Hotel and Dining Saloons,

Carpet Warehouse.

YOUNG & JAYNE, No. 364 Broadway, corner of Franklin Street, (opposite Taylor's Saloon,) offer for sale a very choice and extensive assortment of

CARPETINGS, OIL-CLOTHS, CURTAIN MATERIALS, MATTRESSES, &c.,

at the lowest rates. Purchasers are respectfully solicited to examine the stock.

Misrepresentations, either expressed or implied, are strictly prohibited in this establishment.

YOUNG & JAYNE,
364 Broadway, corner of Franklin-st.

N. B.—Churches and clergymen furnished at wholesale prices. Sept 27—3 m.

Farm for Sale,

CONTAINING about 100 acres, with a fair proportion of woodland, a small orchard of grafted fruit, and a comfortable dwelling and outhouses. It is situated about four miles north of Westerly, R. I., and within a mile of each of the flourishing manufacturing villages of Potter Hill and Ashaway. There are several other manufacturing establishments near, affording a ready market, in the immediate vicinity, for every species of produce. It is convenient to the first Hopkinton Church, as well as to the very excellent male district school.

It will be sold with or without the stock and farming implements, and possession given the ensuing winter or spring, if desired. To those wishing to secure a quiet home in an enterprising neighborhood, and surrounded by such comforts as can only be found in an old settled and thickly populated country, this affords an opportunity seldom offered. For terms and other particulars apply to the subscriber on the premises, or address John E. Potter, No. 15 Sansom-st., Philadelphia, Pa. Benjamin Potter, Ashaway, R. I.
11tf.

Good Crops, Good Prices, Good Books, and Good Times.

BELCHER'S HISTORY OF ALL THE RELIGIOUS DENOMINATIONS IN THE UNITED STATES. Large Octavo 1,024 pp. and nearly 200 engravings.

FLEETWOOD'S LIFE OF CHRIST AND HIS APOSTLES. 704 pp. and 25 engravings.

Probably there has never been a more favorable opening for the sale of books than the present. Large crops have been produced throughout the country, and these are bringing good prices; every body is in high spirits.

The above volumes are printed on fair paper, in clear, large type, are handsomely illustrated, and bound in a neat and attractive style. More than all, their contents bear the ring of the true metal, enabling the agent to sell them to the highest in the land as well as the humblest, with the gratifying feeling on his part that he is conferring a favor rather than receiving one. They have gained and are gaining a world-wide fame; and being sold exclusively by subscription, the agent has the entire benefit of their popularity.

Canvassers, and those wishing to become such, will find it for their interest to secure an agency. We can offer them with other popular works on the most favorable terms. For further particulars apply to or address either of the

The Diadem is a strictly moral and religious work—designed for the Christian family without regard to any particular denomination.

FIFTY ENERGETIC BUSINESS MEN are wanted immediately to circulate the "Diadem" throughout the Eastern and Western States. To such as can send good references the very best inducements will be given. Address Z. P. HATCH, Publisher, 9 Spruce street, New York. May 24—3m.

Seventh-day Baptist Publishing Soc.'s Publications.

The Sabbath Recorder,

Published Weekly.

Terms—$2 00 *per Annum, in Advance.*

The Sabbath Recorder is devoted to the exposition and vindication of the views and movements of the Seventh-day Baptist Denomination. It aims to promote vital piety and vigorous benevolent action, at the same time that it urges obedience to the commandments of God and the faith of Jesus. Its columns are open to the advocacy of all reformatory measures which seem likely to improve the condition of society, diffuse knowledge, reclaim the inebriate, and enfranchise the enslaved. In its Literary and Intelligence Departments, care is taken to furnish matter adapted to the wants and tastes of every class of readers. As a Religious and Family Newspaper, it is intended that the *Recorder* shall rank among the best.

The Sabbath-School Visitor,

Published Monthly.

Terms per annum—Invariably in advance:

One copy	$ 25
Five copies to one address	1 00
Twelve copies to one address	2 00
Twenty copies to one address	3 00
Twenty-eight copies to one address	4 00
Forty copies to one address	5 00

The Seventh-day Baptist Memorial,

Published Quarterly.

Terms—$1 00 *a Year*, 25 *Cents a Number.*

Each number of the *Memorial* will contain a lithographic portrait of a Seventh-day Baptist preacher, together with a variety of historical, biographical, and statistical matter, designed to illustrate the rise, progress, and present condition of the Seventh-day Baptist Denomination. Wood-cuts of meeting-houses will be introduced from time to time in connection with the history of the churches.

[The first, second, and third volumes of the *Memorial*—being for the years 1852-3-4—may be had bound, for the subscription price and the cost of binding.]

The Carol:

A Collection of original and selected Music and Hymns, for the use of Sabbath-Schools, Social Religious Meetings, and Families. Compiled by Lucius Crandall. 128 pages octavo; price 35 cents per copy.

The *Carol* is designed principally for Sabbath-Schools, and contains Music and Hymns adapted to all ordinary occasions, and to such special occasions as the sickness of teachers, funerals, anniversaries, &c. A number of pieces suitable to social and public worship, together with a few Temperance Songs, are included in the book. It contains 93 tunes, and 156 hymns.

☞ Orders and remittances for the above should be addressed to the General Agent, George B. Utter, No. 9 Spruce-st., New York.

Postage.

The postage on the Sabbath Recorder is 13 cents a year in the State of New York, and 26 cents in any other part of the United States, payable quarterly or yearly in advance.

The postage on the Sabbath-School Visitor is 3 cents a year in the State of New York, and 6 cents in any other part of the United States, payable in advance.

The postage on the Seventh-day Baptist Memorial is 2 cents a year in the State of New York, and 4 cents a year in any other part of the United States when paid in advance, or 4 cents a year when not paid in advance.

Miscellaneous.

From the Michigan Farmer.

The Farmer's Life for Me.

Wealth may boast her hoarded treasures,
Pride no joy like her's may see,
Dissipation vaunt her pleasures,
Yet the farmer's life is the life for me,—
With its freedom blest,
From the stern unrest
Of the crowded marts of life,
With its rosy health,
What a mine of wealth!
With its quiet unmarred by strife.

Toil it hath, yet with it there is
Sunlight of a willing mind,
And the farmer's home so fair is,
None a fairer e'er can find—
With its glowing hearth,
With its heartfelt mirth,
When the winter's fire burns bright;
Oh! the farmer's cot
Is a cozy spot
In a chill December's night.

His are Summer's richest treasures,
All her wealth of fruit and flowers,
All the intellectual pleasures
Of her bright instructive hours—
His the golden gleam
Of the sunset beam,
And the mild majestic night;
His the first soft ray
Of the rising day,
And the dew-drops sheen and bright.

Far from heartless Fashion's empire,
Far from Mammon's haunts of sin,
From the dens of Dissipation,
And the crowded city's din—
He may safely rest,
Oh! how truly blest,
With the friends we hold most dear—
And the great world's noise
Cannot mar his joys,
In his calm, secluded sphere.

Paper Materials.

Efforts have been made for centuries since the use of linen and cotten was introduced, to find other substances for the manufacture of paper, arising from the scantiness of the supply of rags to meet the increasing demand for paper. I send you a little chronology on the subject, from a work now in press, arranged in this wise, embracing history, statistics, patents, discoveries, and every thing else connected with the subject, to which a date can be affixed.

1360.—Ulman Stromer began to write at Nuremberg, the first work ever published on paper-making.

1640.—The manufacture of paper-hangings was begun time as a substitute for the ancient hangings of tapestry, or cloth; they reached a high state of beauty and perfection.

1646.—Athanasius Kircher, a Jesuit of the 17th century, boasted of having paper, among other things, made of asbestos.

1716.—John Bagford, the most extraordinary connoisseur of paper ever known, died in England. It was said of him that he could tell at first sight the place where and the time when any paper was made. He prepared materials for a history of paper-making, which are now in the British Museum, numbered 5891 to 5988.

1719.—Reaumur, is an essay published at this time, seems to have been the first author who perceived that paper might be produced from wood, and suggested that some one having the opportunity should make the experiment.

1734.—Seba, a *Flemish* writer on natural history, called attention to the fact that his country *"does not seem to want trees fit for* making paper, if people would give themselves the necessary trouble and expense. Alga marina, which is composed of long, strong, viscous filaments, might it not be proper for this purpose, as well as the mats of Muscovy, if they were prepared as the Japanese are accustomed to do?"

1751.—Many suitable vegetables had been discovered, and schemes proposed for converting them into paper, as a substitute for rags, but none were carried into effect until now, when M. Guettard, in France, published his experiments, and communicated new specimens of paper made from the bark, leaves, wood, &c., of different plants, shrubs, and trees.

1756.—The first attempt to manufacture paper of straw, which was made in Germany, was induced by the scarcity of rags. A treatise was printed on the subject, giving a plan for reducing all vegetables into pulp, and bleaching the same.

1765.—Schoeffer, of Ratisbonne, published a work, in octavo, upon the different sorts of paper which he could make without the use of rags, giving specimens, among which were the coton du peuplier, hornets nest, saw dust, moss, beech, willow, aspen, mulberry, clematite, and pine; also hop vines, the peelings of grape vines, hemp, the leaves of aloes, and lily of the valley; also arroche, mothwort, masse d'eau, barley straw, cabbage stumbs, thistles, burdock, conferva, wheat straw, broom corn, and Bavarian peat.

1774.—Scheele discovered a gas, which is now known as chlorine, which, in combination with lime, came to be employed in bleaching paper stuff to a very great extent.

1776.—A volume was printed in France upon a whitish paper made from the bark of the linden (basswood) at the end of which were some twenty specimens of paper, made from as many different kinds of vegetables. But the poor quality of the fabrics, and the cost of producing them, seem to have discouraged the inventors.

1786.—The works of the Marquis de Villette were printed in London on paper made of marsh-mallow. At the end are specimens, in single leaves, of paper made of the nettle, hops, moss, reed, three species of conferva, couch grass, spindle trees, way-faring tree, elm, lime, pellow willow, sallow willow, poplar, oak, burdock, coltsfoot, and thistle. These experiments were made at Bruges. They served to show that paper could be made of a multitude of articles; but the difficulties were not overcome, which still exist, of preparing a substance more economical than linen and cotton.

1794.—A paper mill was built at Fairhaven, Vermont, by Col. Lyon, at which paper for wrapping was made from the bark of basswood.

1800.—The Marquis of Salisbury presented upon paper manufactured of straw, which treated of the manner in which the ancients employed different materials to perpetuate the remembrance of events before the invention of paper.

1800.—A successful experiment was made in England by Matthias Koops, by which 700 reams of clean and white paper was turned out weekly from old, waste, and written and printed paper alone, which had previously been thrown away.

1801.—Matthias Koops succeeded in making "the most perfect paper from straw, wood, and other vegetables, without the addition of any other known paper stuff." He obtained a patent for a mode of manufacturing paper from straw, hay, thistles, waste and refuse hemp and flax, and different kinds of wood and bark fit for printing and almost all other purposes for which paper is used.

1802.—Burgess Allison and John Hawkins obtained a patent at Washington for making paper of the husk of Indian corn.

1802.—M. Lozanna offered to the Society of Agriculture at Turin, a number of specimens of paper made of the savatula ervensis, the carduus nutans, and the bark of the erigerone of Canada.

1805.—It was about this time that the (so called) rice paper of the Chinese, used for artificial flowers, was introduced into England.

1806.—Francis Guy, of Baltimore, obtained a patent for paper floor carpets, which he claimed were equal to canvas floor cloths, much more beautiful, and fifty per cent. cheaper.

1812.—Gabriel Desetable, of Caen in France, presented specimens of paper made from straw, by means of an instrument said to be so simple that any person who pleased could make paper equal to the most practical workman.

1818.—The Prince of Wales Island Gazette was printed on paper which was said to have been made from rice; by which was probably meant rice straw.

1820.—A patent was granted for five years, by the government of Denmark, to the inventor of a mode of making paper from seaweed, which was claimed to be whiter and stronger than the paper in common use, and cheaper.

1825.—William Van Houten, a Hollander, took out a patent in England for a mode of manufacturing paper of moss. The same year Louis Lambert, a Frenchman, obtained a patent in England for improvements.

Deep Tillage.

Deep plowing turns the drought itself into good account, and renders mulching and irrigation comparatively needless, or, if used, more efficacious. During a dry spell, and in trenched ground, roots strike deeper in search of food and moisture, become more thoroughly ramified, and sooner find the rich loam and manure intermingled with the soil. The leaching process, as it is termed, is reversed, and takes place upwards more than at any other time, or, in more scientific phrase, capillary attraction is increased. As each particle of moisture is evaporated from the surface, it is succeeded by another, and the whole soil is filled with the ascending moisture and gases, which are appropriated by the numerous rootlets as they have need.

The wet season is also a blessing to the deep cultivator. The more rain, the more heat, ammonia, carbonic acid, and other organic elements, are left in the soil as it descends. As each drop filters through it is succeeded by another, or by air, both essential to vegetation, and to dissolve, act on or combine with the inorganic elements of the soil. As the water drains off, air is sure to follow, and this is the proper mode of its circulation. Each is also generally at a higher temperature than the undrained land, and the warmth of the under soil is therefore relatively increased. The farmer often objects to this waste of water, and would retain it for a dry time! The trenched and porous soil holds water like a sponge, notwithstanding the drainage. It retains or can command enough for the wants of vegetation. But let us see the operation on the undrained land.

The farmer often speaks of his "cold, wet land." No variety of soil, in any location, is of itself colder than another. The very water, which trenching, draining, &c., allows to pass off, after imparting its virtues to the soil, if retained on or near the surface, by hard, impervious subsoil, becomes itself, by its change, the source of the coldness complained of. Instead of running off it evaporates, and by this practice abstracts a great quantity of heat from the soil and surrounding atmosphere. The evaporation of a pound of water requires about 1,000 degrees of heat, some authors stating it at least and others more; or it reduces one hundred pounds of air 45 degrees. This is reversing the experiment of Professor Johnson, in Espy's "Book of Storms," where he says "a pound of vapor," condensed to water, "would heat 100 pounds of air about 45 degrees." The ground, to a considerable depth, is warmer by many degrees, where the rain is drained off, instead of being allowed to accumulate and evaporate. Hence this enormous loss of an invaluable stimulus to vegetation.

The chilling and deadly process of evaporation is going on to excess from the time frost comes out of the ground in the spring, till freezing again occurs. At this period, the undrained land having the most water to freeze, becomes the warmest, say in December, when of no value to vegetation, but rather an injury. For once, forsooth, the undrained land is warmer than the drained! But for this excess of heat in winter, this kind of land must pay dearly in early spring. How is all this? inquires the farmer. Simply because water, it congealing to either ice or snow, has its capacity for heat lessened about one-ninth, and this excess is given off to surrounding bodies; or in other words, its latent heat is set free. On the other hand, ice or frost, as it is called in the ground, in melting demands back this same heat, at the rate of from one-eighth to one-ninth of 1,000 deg. for every pound melted; and under the surface it does not obtain all this directly from the sun, but through the soil; therefore, the more water, the colder and longer cold will be the land in the spring. Now, let the agriculturist go to work and make this "cold, wet, heavy land" of his, the very best he has for any product, trees, vegetable, grains or grasses.

[Dr. Kelley.

Keep Fruit Trees Straight.

Trees in an open exposure often acquire a leaning position from the prevailing winds. This should not be suffered beyond a certain stage of the tree. When as large as one's wrist, they should be set up erect, and indeed thrown into the wind at an angle of ten or fifteen degrees, in order to bring them ultimately into a straight position. This is best done by obtaining crotched limbs from the woods, 8 to 12 feet long, and placing the butt end, which should be sharpened, on the ground, and the crotch end, either against the trunk immediately beneath the branching point, or against a large limb if more convenient, securing it from chafing in the crotch by a padding of straw, or litter, and setting the tree at once up to the desired angle of elevation. Loosen the ground on a windward side of the root; so that it will not bind, and the work is accomplished. Let this be done when the trees begins to make its summer growth, or soon after leaving out. One season, if the tree is thrifty, will be all that is required. If, however, it be obstinate, repeat the trial another year. The remedy is sure. Even large trees, which have acquired a permanent lean, may be thrown into an erect position by loosening the earth at the root, and occasionally cutting an obstinate large root, without injury to their growth. An erect tree will be longer lived and more fruitful than a leaning one, and not half so subject to casuality as if left to its own guidance.

A Remarkable Narrative.

A few nights since, (says the Trenton *Gazette*,) there passed through this city, on the railroad, bound for Canada, a family of eight fugitive slaves. One of these—the leading spirit of the whole—was a woman of sixty years of age, a bold, courageous, prompt, and energetic woman. Two years ago she was living as a slave in the South. She was the mother of six children, all of whom she had had torn from her arms, when old enough to be useful, and sold away from her. One day she overheard her master bargaining with a soul-driver, who desired to purchase, for the far South, her grandson, a boy of some fifteen years old. Stung to the quick by this design of robbing her of the last of her kindred, she instantly resolved on flight.

The same night she started with her boy for the North. Night after night they traveled by the North star—the only guide the hapless fugitive knows in making for the land of freedom, and one that deceives him not, since it is fixed in the heavens. After long and painful wanderings they arrived in Canada.

Here this heroic woman hired herself at wages. Two months ago, with purse well filled, she started back to the residence of her old master at the South. Here, alone, she concealed herself in the woods and thickets, a fugitive from Freedom—cared for, however, by the few trusty souls to whom she revealed the dangerous secret of her presence in the land of bondage. After remaining there some two weeks, she collected seven of her children and grandchildren, and started with them for the North. Long and slow and anxious was their journey. The same unerring star shone faithfully from above upon their midnight pathway. By day they lay by, concealed by the thickets of the country, through which they made a bee line for the North. No toil discouraged, no danger dismayed this heoric woman. Many times the party suffered to the verge of starvation. She cheered them onward—she was their only "guide, their counsellor and friend."

Worn down with the hardships of this perilous journey, with garments torn to shreds, and fluttering in the breeze, with shoes torn into fragments, without hats or bonnets, this heroine conducted her party to the house of a friend. Word was immediately passed around among some of the good souls who dwell there, as the salt of the earth, that eight fugitives were concealed in a garret, and destitute of the means of further progress. The word was followed by the deed. All necessary means were instantly provided for their safe transmission to the North, and the train which passed through this city on the same night carried the whole party to the home of their leader, in Canada, where they have, by this time, undoubtedly arrived.

We doubt if a similar instance of devotion to friends and kindred is on record. It requires a daring mind to even conceive the idea of going back to the scene of bondage, and encountering the hazard of discovery in the lion's den. But nothing short of that heroism which, under other circumstances, has made men immortal, was needed to put into execution an enterprise so full of difficulty and danger. Such spirits, if any, not only deserve to be free, but are fitted to enjoy the largest liberty.

Iron and Lead Pipes for Carrying Water.

"A Farmer" wishes to lay down a pipe for conveying water to his house aud barns, from a spring half a mile distant, and inquires whether iron pipe is not better and cheaper than that made from lead. He does not state the size of the pipe desired nor the make of the ground in which the pipe is to be laid. We will, however, make a statement or two, which may be of use to him and others.

Relative Cost.—The manufacturers' prices in New York are about as follows:

For iron pipe, having an interior diameter or bore of ½ inch, 10½ cents per foot; ¾ inch bore, 13 cents per foot; 1 inch bore, 17½ cents per foot; 1¼ inch bore 26 cents per foot; and for 1½ inch bore, 32 cents per foot. These pipes are made of wrought iron, in pieces 10 to 12 feet in length, and are supplied with coupling screws upon the end of each piece.

For lead pipes of all sizes the charge is now 8¾ cents per pound. Lead is 1 cent per pound higher than a few months since, owing to the great war demand. Lead pipe variees greatly in thickness, thus: A pipe ½ inch internal diameter is made of the following weights, ½ lb., ¾ lb., 1 lb., 1¼ lbs., 1¾ lbs., and 2 lbs. per foot. Lead pipe of 1 inch interior diameter is made weighing 1½ lbs., 2 lbs., 2½ lbs., 3¼ lbs., 4 lbs., and 4¾ lbs. per foot. The lighter weights are too thin for conveying water, being chiefly used for gas pipes in protected situations, within the walls or ceilings of buildings, for example. A lead pipe, 1 inch in diameter, and weighing 2 pounds per foot, the thinnest practicable for conveying water, costs 8¾ cents, or 17½ cents per foot, which is just the cost of an iron pipe of the same diameter. A comparison of the above figures shows that lead pipe of any diameter may be selected of such thickness as to exactly equal the cost of iron pipe of the same size.

Relative value of Lead and Iron Pipe.—In all exposed situations, where pipe is liable to bruising, iron is preferable, if there be no serious objection to its use. Iron rusts more readily than lead. This property does not injure it for conveying dry gases or *pure* water, but spring-water generally contains acids of some kind, which will more rapidly corrode or rust iron than lead. Most of the compounds formed in the corrosion of lead are washed away, while iron-rust is generally insoluble, and there is danger of its filling or clogging iron pipes. The thick reddish "scum" observed upon the surface of many sluggish springs, is the rust of iron washed out from the soil. A soluble sub-oxide is first formed in the soil, which is changed to the insoluble red oxide when it comes to the air. The water conveyed in generally charged with air, so that this red oxide would be formed within them, especially if there is not a sufficient current of water to keep them clear.

One advantage possessed by iron over lead pipes is, that while the salts formed by the corrosion of lead are poisonous, the salts of iron are comparatively harmless, especially if the water has been for some time exposed to air.

When carefully laid under ground, lead pipes are far more durable than iron; the former often lasting fifty or a hundred years, while the latter sometimes rust through in five or six years, or less. Old iron pipes are of little value, while old lead pipe will sell for one-half or two-thirds its first cost. Lead pipe is more conveniently laid down, as it is easily bent around large stones, and to fit any irregularities in the soil.

Everything considered, lead pipe is to be preferred to iron for conveying water or gases under ground, even when it is required to be of such size and thickness that the first cost will be considerably higher.

Wakefulness—Cause and Remedy.

Many persons of nervous temperament—hypochondriacs with uneasy stomachs, from the use of too much rich and highly seasoned food, nicknacks, or tea or coffee—the thinkers, inventors, authors, and those who have domestic or other troubles pressing on the brain; in fact, all who are not of mere animal construction, and of redundant health, are subject more or less to wakefulness, and a difficulty of obtaining that repose necessary to reinvigorate the system, after the labor and cares of the day. It becomes a disease, and sometimes as distressing as the "snake in the boots" of the inebriate.

Many devices have been suggested to bewilder the mind and induce the lethean forgetfulness of sleep; counting up to hundreds—multiplying two or more numbers in the mind and obtaining the result—calling over the names of acquaintances, or the counties in the State, &c. The most effective course is to jump out of bed and commence walking in the dark, exercising your judgment in avoiding and in finding objects about the room, taking no heed what the matter is; its effect is to break the chain of thought, dispel vapors, equalize the circulation, and disperse the electricity of the body, which the bed, being a non-conductor, cannot do. The antagonism of the warm bed and cold air gives a shock to the nervous system, acting like a cold bath, which it is, only air instead of water. On getting into bed a pleasant glow is felt, and in nine cases out of ten the brooding nightmare of wakefulness is driven to the land of Nod, and forgetfulness and refreshing sleep ensue.

[Rural New Yorker.

Grafting Old Fruit Trees.

We wish we could have had some of the thriftless skeptics with us, whose farms teem with old crab-apple trees and pears, as we dropped into the fruit yard of Mr. Thompson Wells, of Stonington, Ct. He came in possession, some years ago, of an orchard near his house. Some of the trees were fifty years old, and bore very unsatisfactory fruit for trees that had arrived at the age of discretion. Mr. Wells determined to teach these old dogs new tricks, in spite of the proverb, and the well meant advice of his neighbors. He began to supply the roots with new food, by digging up the turf and putting on compost manure liberally. As the land was sandy and gravelly he put on also some clay. When the trees were well started with new wood, they were grafted with choice varieties of apples and pears. Most of the grafts are now three and four years from the setting, and are loaded with fruit. There where a miserable scrub orchard set the visitor's teeth on edge, we saw ruddy June Eatings and Sampsons and tasted them. Rhode Island and summer Greenings and noble Russets loaded the branches. There were splendid Bartletts, just beginning to look tempting, and Seckles blushing for the dainty juices maturing under their skins. These hung upon limbs that once bore only poor seedling pears.

The only secret of this success is a little intelligent husbandry and patience. The trees are pruned, scraped, grafted and fed, and though old they learn the new trick of yielding luscious fruits with great readiness. Many only expect fruit every other year, but these being well fed make no exception for the odd year, toe the mark with exemplary exactness, and hand over their golden harvests. As we have had occasion to know in years past, Mr. Wells has the very best of apples in his barrels, home grown, when his neighbors' barrels are empty of those grown abroad. They can not afford them, they cost so much.

Now, let the thriftless learn a lesson as they look with watering mouth at these loaded boughs. Put that everlasting "can not" out of your mouth, and with a little faith in the gratitude and faithfulness of the soil you cultivate, put a few loads of good compost, stable manure and muck, or ashes and muck, or lime and muck, around your stunted and worthless trees. When the young shoots start, as start they will, graft them or bud them, at a suitable age. Follow up your treatment with compost, lime, ashes, bones, scraping, washing, &c., and you will have fruit; good measure, pressed down, and running over, will Nature give back into your basket.

[American Agriculturists.

The Public Lands.

It is stated, as a fact, that the public lands of the United States are rapidly running out. The Washington correspondent of the New York Courier says:—

"We have nominally 1,400,000 square miles, that is, some eight or ten hundred millions of acres; but perhaps five-sixths of the entire quantity is uninhabitable and valueless. Already the government is unable to supply lands in Minnesota to actual settlers at the maximum price of $1 25 per acre. We sold and gave away in 1853–4, 23,000,000 of acres. We sold at a nominal sum during the past year 15,000,000 acres, and gave away to States and to individuals property enough to make good the enormous quantity of 30,000,000 of acres. At this rate how long will our two or three hundred millions of available public lands supply the demand for the purpose of settlement, to say nothing of the exigencies of the Treasury in time of war or of financial distress? In Minnesota, which has 55,000 inhabitants, the lands cannot be surveyed as fast as Congress gives them away. This is said to be the cause of the reduction of the quantity offered in Minnesota. In Utah, already settled by some 30,000 Mormons, the base line has just been established, and perhaps years must elapse before the government, so wholly absorbed is it in the work of gratuity, can furnish a legal title to the lands occupied by its citizens."

THE EVILS OF TOBACCO.—Uncle Toby says that tobacco costs more than education or religion, the army or navy. It costs England and America, a sum sufficient to support 50,000 ministers, with a salary of $1,000 each, or more than 100,000 missionaries. The students in one college pay more than $6,000 for segars yearly. It tends to idleness, poverty, strong drink, and the whole family of vices. It tends to debility, dyspepsia, palsy, cancers, insanity, delirium tremens, and sudden deaths. It weaves a winding sheet around 20,000 in our land every year.

REMEDY.

1. Never use it yourself.
2. Banish it from your families and premesis.
3. Purify the church.
4. Rebuke the manufacture and sale of it.
5. Look after schools, and save the young.
6. Sign and circulate this pledge: "I hereby pledge myself to abstain from the use of tobacco, in all forms, totally and forever."

AN ANCIENT FROG.—James Crabtree, pit-sinker to Messrs. Ackroyd, of Burkinshow Bottom, in sinking a pit in Morley, near Leeds, England, recently found a live frog in the centre of a seam of coal, two hundred and thirty feet below the surface, considerably below the Morley tunnel, to which it is close adjoining. The frog is still very lively. When found it was very dark in color, but is becoming like the common, every-day species. The eyes are very bright, and surrounded with a gold ring. It has four claws on its fore feet, and five (web-footed) on the hind feet. Its mouth is closed, or firmly shut, but it has two vents, apparently nostrils on the top of its nose. The seam of coal from which it was disinterred was saturatrd with water, and probably from this circumstance, combined with close confinement, it had been enabled to sustain its half-torpid life through countless ages.

AUTUMN WORK IN THE FRUIT YARD.—Insects still commit their depredations, and need a vigilant watch kept upon their movements. We noticed this morning (September 7) a whole limb of a young apple tree stripped of its foliage. Upon examination, we found a brood of worms about the size of a well-grown caterpillar, posted upon an adjacent limb, and still devouring the leaves. We found several trees afflicted with similar visitors, in various stages of growth. The stove or fire place is a good lodging for them. Hasten them up to their quarters immediately. The pear slug also reappears this month, and needs a good dressing of ashes or some whale oil soap. Wash the trunks of all your young trees with strong soap suds. Examine the collar, carefully removing the earth, and cleaning out all borers and worms. Give all your young trees a barrowfull of compost. Keep them in vigorous health. [Am. Agri.

GRAPES NOT RIPENING WELL.—Formerly our Isabella and Catawba grapes, just as they began to color, would shrivel and drop off before ripening. A good supply of proper fertilizers, such as potash, bone-dust, guano, muck, and rotted barnyard manure, and what we call very close trimming in the spring, obviated this to a certain extent, and gave us much more and better ripened fruit. But latterly we have only let two or three branches fruit each season from stems two inches or more in diameter, and these branches not permitted to run over about seven feet in length, and more or less of the fruit is picked from them when about half formed. The result is well developed, luscious grapes, adhering to the bunches with sufficient tenacity till desirable to pick them. [Am. Agriculturist.

VARIETY.

The American Express Company has paid over to the United States Government the $50,000 said to have been stolen from them, while on its way, under custody of their agents, from Dubuque, Iowa, to this city. The loss occurred on the 17th of September, and the Government allowed to the Company until the 20th November to make inquiry for it. Such inquiries having proved fruitless, the money was paid over to Mr. Cisco, the Assistant Treasurer of this port, on behalf of the Government.

Rev. Edward Beecher, D.D., for twelve years pastor of the Salem-street Church, Boston, preached his farewell sermon on Sunday, being about to take the pastoral charge of a society in Galesburg, Illinois. The venerable Dr. Lyman Beecher, father of the pastor, occupied a seat in the pulpit. During the last twelve years the society has paid a debt of $5,000, and remodeled their church at a cost of about $20,000, besides contributing liberally to charitable objects.

At Concord, N. H., the other day, nine Indian skeletons were found within a surface of from ten to fifteen square feet; among them the bones of two children. The mode of burial seems to have been to place the bodies in a posture mid-way between lying and sitsitting, and to cover them with the bark of trees, laid about the bodies after they were placed upon the earth.

A vessel called the Robert Peel, which has just arrived in the Loire from Sumatra, has brought a magnificent royal tiger for one of the public menageries. Forty armed men were, it is stated, sent to capture him, but he killed ten and injured thirteen of them before he could be secured.

The town liquor agency of New Haven has sold nine thousand dollars worth of liquor the past year. This sum would purchase ninety hogsheads of rum! According to the law, this large amount must all have gone for "medicinal" and "mechanical" uses.

At Charlotte, C. H., recently, fifty negroes belonging to the estate of the late John M. Thomas were sold at public auction for the aggregate sum of $25,400. Some other negroes were sold at the same time, *and one or two boys weighing 95 pounds brought about $950 each.*

Two days of last week there were disturbances in the prison at Sing Sing, which resulted in a serious and dangerous assault upon several of the officers, and in the death of one of the convicts.

The sincere believers in Spiritualism in Troy, N. Y., are estimated at 1,200.

New York and Erie Railroad.

ON and after Wednesday, Sept. 19, and until further notice, Passenger Trains will leave the pier foot of Duane st., New York, as follows:

Dunkirk Express at 6.30 A. M. for Dunkirk.

Buffalo Express at 6.30 A. M. for Buffalo.

Mail at 8¼ A. M. for Dunkirk and Buffalo, and all intermediate stations. Passengers by this Train will remain over night at Owego, and proceed the next morning.

Rockland Passenger at 3 P. M. (from foot of Chambers-st.) via Piermont, for Sufferns and intermediate stations.

Way Passenger at 4 P. M. for Newburgh and Otisville and intermediate stations.

Night Express at 5½ P. M. for Dunkirk and Buffalo.

Emigrant at 6 P. M. for Dunkirk and Buffalo and intermediate stations.

On Sundays only one express train, at 5½ P. M.

These Express Trains connect at Elmira with the Elmira and Niagara Falls Railroad, for Niagara Falls, at Buffalo and Dunkirk with the Lake Shore Railroad for Cleveland, Cincinnati, Toledo, Detroit, Chicago, &c., and with first-class splendid steamers for all ports on Lake Erie.

D. C. McCALLUM, General Sup't.

Ayer's Pills.

FOR all the purposes of a Family Physic. There has long existed a public demand for an effective Purgative Pill which could be relied on as sure and perfectly safe in its operation. This has been prepared to meet that demand, and an extensive trial of its virtues has conclusively shown with what success it accomplishes the purpose designed. It is easy to make a physical *Pill*, but not so easy to make the best of all *Pills*—one which should have none of the objections, but all the advantages of every other. This has been attempted here, and with what success we would respectfully submit to the public decision. It has been unfortunate for the patient hitherto that almost every purgative medicine is acrimonious and *irritating* to the bowels. This is not. Many of them produce so much griping pain and revulsion in the system as to more than counterbalance the good to be derived from them. These *Pills* produce no irritation or pain, unless it arises from a previously existing obstruction or derangement in the bowels. Being purely vegetable, no harm can arise from their use in any quantity; but it is better that any medicine should be taken judiciously. Minute directions for their use in the several diseases to which they are applicable are given on the boxes. Among the complaints which have been speedily cured by them we may mention Liver Complaint, in its various forms of Jaundice, Indigestion, Langor and Loss of Appetite, Listlessness, Irritability, Billious Headache, Billious Fever, Fever and Ague, Pain in the Side and Loins, for in truth, all these are but the consequence of diseased action of the liver. As an aperient, they afford prompt and sure relief in Costiveness, Piles, Colic, Dysentery, Humors, Scrofula and Scurvy, Colds, with soreness of the body, Ulcers and impurity of the blood; in short, any and every case where a purgative is required.

They have also produced some singularly successful cures in Rheumatism, Gout, Dropsy, Gravel, Erysipelas, Palpitation of the Heart, Pains in the Back, Stomach, and Side. They should be freely taken in the spring of the year, to purify the blood and prepare the system for the change of seasons. An occasional dose stimulates the stomach into healthy action, and restores the appetite and vigor. They purify the blood, and, by their stimulant action on the circulatory system, renovate the strength of the body, and restore the wasted or diseased energies of the whole organism. Hence an occasional dose is advantageous even though no serious derangement exists; but unnecessary dosing should never be carried too far, as every purgative medicine reduces the strength, when taken to excess. The thousand cases in which a physic is required cannot be enumerated here, but they suggest themselves to the reason of every body; and it is confidently believed this Pill will answer a better purpose than any thing which has hitherto been available to mankind. When their virtues are once known the public will no longer doubt what remedy to employ when in need of a cathartic medicine.

Being sugar wrapped they are pleasant to take, and being purely vegetable, no harm can arise from their use in any quantity.

For minute directions, see the wrapper on the Box.

Prepared by Dr. J. C. AYER, Practical and Analytical Chemist, Lowell, Mass.

Price 25 Cents per Box. Five Boxes for $1 00.

Ayer's Cherry Pectoral,

FOR the rapid cure of Coughs, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption. This remedy has won for itself such notoriety for its cures of every variety of Pulmonary diseases, that it is entirely unnecessary to recount the evidences of its virtues in any community where it has been employed. So wide is the field of its usefulness, and so numerous the cases of its cures, that almost every section of the country abounds in persons publicly known, who have been restored from alarming and even desperate diseases of the lungs by its use. When once tried its superiority over every other medicine of its kind is too apparent to escape observation, and where its virtues are known, the public no longer hesitate what antidote to employ for the distressing and dangerous affections of the pulmonary organs which are incident to our climate. And not only in formidable attacks upon the lungs, but for the milder varieties of *Colds, Coughs, Hoarseness, &c.* and for Children it is the pleasantest and safest medicine that can be obtained.

As it has long been in constant use throughout this section, we need not do more than assure the people its quality is kept up to the best that it ever has been and that the genuine article is—

Sold at wholesale in New York by A. B. & D. SANDS, retail by RUSHTON, CLARK & Co., and by all Druggists, everywhere.

The Sabbath Recorder,

PUBLISHED WEEKLY
By the Seventh-day Baptist Publishing Society,
AT
NO. 9 SPRUCE-STREET, NEW YORK.

Terms:

$2 00 per year, payable in advance. Subscriptions not paid till the close of the year, will be liable to an additional charge of 50 cents.

☞ Payments received will be acknowledged in the paper so as to indicate the time to which they reach.

☞ No paper discontinued until arrearages are paid, except at the discretion of the publisher.

☞ Communications, orders, and remittances, should be directed, post paid, to

GEO. B. UTTER, No. 9 Spruce-st., New York.

Liabilities of those who take Periodicals.

The laws declare that any person to whom a Periodical is sent, is responsible for payment, if he receives the paper, or makes use of it, even if he has never subscribed for it, or has ordered it to be stopped. His duty in such a case is not to take the paper from the office or person with whom the paper is left, but to notify the publisher that he does not wish for it.

If papers are sent to a post-office, store or tavern, or other place of deposit, and are not taken by the person to whom they are sent, the postmaster, store or tavern-keeper, &c., is responsible for the payment until he returns the papers, or gives notice to the Publisher that they are lying dead in the office.

MATTER AND SPIRIT.

The philosophy of atheism maintains that the phenomena of mind are scintillative effects of organized matter, while that of Christianity has generally referred mental phenomena to spirit, not necessarily dependent on material organism. And yet, I apprehend that for the want of observing the proper distinction between matter and spirit, the Christian view has often only ultimated itself in that of the atheistic. For, if Spirit be but matter volatized, sublimated, rarified, or etherialized, where lies the difference? For, if Spirit be *only* etherialized or spiritualized matter, and if mind be spirit, then does it not follow, that mind is matter, and all mental phenomena but the exhalations of matter, or evolved out of matter?

But is there not such a distinction between matter and spirit as that the former can never be produced from the latter? One of the efforts of atheism has been to prove that creation has been so progressive as that each succeeding order of existence was but an outbirth of that which preceded; so that from the monkey came the ourang-outang, and from the ourang came man; therefore man is but an improved race of monkeys. This error I deem blank atheism, as it obviates any necessity of a spirit-creator, the laws of nature being sufficient to move forward the whole concern. But the truth is, vegetable nature could not of itself produce the animal nature, nor oculd one distinct species of the animal race of itself produce another distinct species. Each distinct species must have been the direct effect of the Creative Spirit, which anew entered receptive matter. Hence the Spirit was the active agent in all successive creations, while matter was passively receptive.

And here lies the distinction between Matter and Spirit—one active, the other passive. The distinctive property of matter is inertia, lifeless, motionless; while that of spirit is life, motion, power. And it matters not how etherialized matter ever becomes, it never loses its distinctive property, nor ever becomes spirit. Nor does spirit ever become matter, however gross the matter in which it dwells.

Matter is but an organism through which spirit acts. The ear never hears; the eye never sees; the nerves never feel; the muscles never move. But it is spirit which sees with the eye, hears with the ear, feels with the nerves, and moves with the muscles. Spirit is Life. God is a Spirit, the only self-existent Spirit; and from that spirit-fountain all other spirits proceed. Life and motion are an evidence that spirit is present; inertia, death, that it is absent; and matter is such a receptivity of spirit, as is necessary for spiritual phenomena on an earthly plane. But Spirit and Matter must never be confounded. They are separate and distinct; the one never merging into the other. They are not convertible the one into the other.

To what conclusion, then, do we come, if not that there is a spiritual universe, as well as a material universe—the one a cause, the other an effect? Spirit, then, is not a product of material organism; but material organism is the product of spirit. Is matter indestructible? How much more must spirit be, which is the cause of matter!

Annihilationists, in maintaining that mind is only the effect of material organism, have put the cart before the horse. A true philosophy is equally necessary to a correct understanding of revealed religion as of natural.

If the foregoing view be true, it is not difficult to ascertain, with a good degree of correctness, what the state of man is after natural death. For if his spirit be all that is active, must it not then carry with it all its activities, its powers, its memory, its knowledge, its loves, its hatred, its goodness, its badness, its holiness, its sinfulness? If this be true, how terrible must be the spirit-world, where no hypocrisy can exist, but where all is developed! How dreadful must be that world where mankind, in their spiritual state of existence, will be forever evolving that character, both moral and intellectual, the foundations of which were laid in this life.

I have thus given, briefly, my view of matter and spirit. I have not said so much of what either are, as what are their distinctive properties. And I would respectfully ask attention to the main point, viz: that matter does not, by etherialization, or any other process, ever become spirit; nor does spirit, by any process, ever become matter. They are two separate and ever to be regarded distinct substances or existences—one always active, the other always passive.

S. S. G

FAITH AND WORKS—TWO PLANKS.—From the pocket of a dead Russian soldier in the fortress of Bomarsund, a British sailor took a tract, which was sent to England as a curiosity, and was there translated and published by the London Religious Tract Society. The following extract illustrates a great truth:

"A preacher wishing to explain to his congregation what a dangerous delusion those persons are in who seek salvation partly from the righteousness of Christ, said to them: Supposing it is needful for you to cross a river, over which two planks are thrown. One is perfectly new, the other is completely rotten. How will you go? If you walk upon the rotten one, you are sure to into the river. If you put one foot on the rotten plank and the other on the new plank, it will be the same; you will certainly fall through and perish. So there is only one safe method left: *Set both your feet on the new plank.*

"The rotten plank is your own unclean self-righteousness. He who trusts in it must perish without remedy. The new plank is the eternal saving righteousness of Christ, which came from heaven, and is given to every one that believeth in him. Trust in his righteousness, or rather in his everlasting truth, and you shall be saved; for the Scripture saith, 'Whosoever beliveth on him shall not be ashamed.'"

A SPEECH ON SLAVERY.

To the Editors of the Sabbath Recorder:—

As an antidote to the diabolism of the slave-power, as shown in Miss Webster's letter, I send you a speech of the Rev. G. T. Day, of Providence, R. I, a Free-Will Baptist minister. If we were all like him, these horrid outrages would cease. Please publish the speech.

S. S. G.

Some of you are ready to tell me that the back of the North is at last crystalizing into solid bone. But there are circumstances connected with even this, which make it the saddest thing of all. The mischiefs of slavery were perpetually increasing—the bondman's burden every day growing heavier—his sweat pouring out in larger and larger streams—his cries, and groans, and tears, constantly multiplying—and yet we were content to be indifferent, till at last the South stood up and touched our honor; then we sprung to life! We waked when the finger of despotism touched our pride, and that passion was fanned to a flame. When at last it is required that she shall become a party to a national action that does not let her get her share of the spoils, like a terrier in the presence of a rat, she can show her teeth in indignation, as if she were really manly, and Christian, and conscientious. It is the saddest thing of all, that so large a fraction of our resistance to slavery is only the expression of a sense of wounded honor!

Our nation has lost its faith. It has faded out into dimness. The rugged heart of the fathers has ceased to beat in the bosom of their sons. America is busy in the multiplication of her wealth. She saw a gold mine in California, and seized it, and the gold has cankered upon her. The sentiment, bright and eternal as the stars, which we inaugurated eighty years ago, and which we repeat every fourth of July, we now see torn from day after day, without so much as a single mournful wail sent abroad upon the breeze. While the appeal comes up, day after day, to our Northern manufacturers—that princely class of our Northern people—to look South and see the encroachments of despotism, and how its victims writhe under a deeper torture, and how the national life is failing—the only response is, '*Sheeting is a cent higher—send us a thousand bales more of cotton!*' Then comes the plea to our merchants, who do business in State and Wall streets: O, exert your influence in your political parties, in your churches, and everywhere, for the benefit of the slave!—and all the reply we get is, a fresh order sent to Charleston for '*four hundred boxes of sugar!*' The plea comes to literary men, who have the control of mind, and the response we get is, '*The sophomore class in our college this year has room for ten more young men—send them up from the South!*' Up to the churches the appeal comes, 'as they would honor Christ, not to ignore the existence of the evil of slavery'—and the response is, a plea for some great benevolent organization, showing the '*lowness of its treasury;*'—when the fact is plain, that it demands to be filled up by the sale of more slaves. We are getting to be so eminently moral, [?] that we beg for money, and let the slaves suffer on.

A man who lost his wife some time ago was asked why he did not take a second one. He replied, he had never found an opportunity to make twenty per cent. in the transaction. And that reply was something more than a pointed sarcasm. We are bartering away all the glory of our national character for the sake of material emolument. And this is the vice of the nation. The simple fact is, we can hardly get a single man to maintain his nobleness for a series of years. What are the great men to whom we have been accustomed to point? There was a great triumvirate. There was Calhoun, the mighty genius, with all the splendor of intellect and power of argument, who busied himself in drawing out a programme of political operations for the protection and perpetuity of American slavery. There was another man—the second of the triumvirate. He was the idol of his party, the pride of the nation. He was mighty in counsel, a comprehensive thinker, a skillful tactician. But he gave his mighty energies to the playing of political jugglery before the people. And then there was Webster, the mightiest son of Anak, with his jutting brows that suggested the double-ribbed ship at anchor, and his eye-sockets that reminded one of the Mammoth Cave in Kentucky! There was Webster, uttering thoughts that were spiritual Titans, in words, each one of which was a thunderbolt! And yet what was he? Just simply an evidence how great a thing God may make, and how terribly sin may mar it. And how has it been with great men who have come here from abroad? Kossuth came here with the accumulated wrongs of Hungary. He was a mighty champion for freedom! But when he goes South, he is sagacious enough to see that he must speak of freedom carefully. And so he goes home again, made timid by the concession he had given. John Mitchel comes. The British lion growled before his impressive eloquence. They bore him to the distant island of the sea. But at last he comes to our shores—comes here, as we hoped, an ally to the friends of freedom. But not three months had he been here, before the climax of patriotism under American culture was reached in his earnest wish to fatten and grow sleek on an Alabama plantation. This is the spirit of the present age.

Our legislation—what is its character? There is our national Congress, sitting day after day, and night after night, and offering itself to the influences that mould it after the spirit of our times. There is our Senate, utterly refusing to move—our House of Representatives, with arms wide open to take the gift of bribery, and sell itself—and our Judiciary, alas for it! while the hero of Pennsylvania is in Moyamensing prison!

And where is our executive force? Three days ago, I read something semi-official, in which the chief of the Executive says, in substance, that he is able to do nothing to improve Kansas affairs.

Our issue to-day—the best we are making up—what is it? The Republican party—what is it aiming at? The restoration of the Compromise, and the repeal of the Fugitive Slave law. It consents that slavery shall live in the States undisturbed.

It frankly pledges its free and fraternal coöperation with the fifteen slave States, though they go on in their career, maintaining a despotism that never can live in harmony with freedom. That I believe is the advance ground of the free sentiment party of to day.

But is that the noblest stand a national party can take? Is that the goal at which we aim? Will we be politically content that slavery shall be tolerated, and approved, and sympathized with, *any where* in the country?

For my part, while I sympathize with all that is excellent in the Republican movement of '55—while I am gratified with any expression of interest in the cause of freedom—*never, so help me God! will I ally myself with any political party which lays down a single concession to despotism—which will consent that slavery shall live for an hour!* I will not do such violence to the deepest instincts of my heart. Whatever I do, shall be done with the open and frank avowal, that I recognize slavery as an outlaw—if not by the *Constitution*, by the law which is above it. Never will I take any other attitude.

Accept this as my confession of faith.

There are few men, I know, who take the ground that slavery has no legal existence, and can have none in these United States. I certainly have no sympathy with Papacy, and I am not anxious to acquire the credulity of its votaries. I have wished many times that I could conceive of the immaculate conception of the U. S. Constitution. I cannot believe any such thing. It is not in me to believe it. And the facts in the history of our national life are the best comment on that instrument.

Mr. President, this is a sad speech. I am aware of it. But it is best to look at things as they are. I would not flatter you that slavery will walk into its grave with a courteous 'good morning!' It is possible that you will get the Compromise restored, and the Fugitive Slave Law repealed. But even that might become but a dose of chloroform to the anti-slavery of the nation. The shout would then go up, 'Now, for the first time, slavery has walked towards its tomb! We have cuffed its ears right smartly, and it will go into its grave!' My friends, I am suspicious of the whole matter. I am satisfied with nothing but that which entirely repudiate slavery.

And yet I am not hopeless. I have spoken of depotism, and the path along which it has walked to its present position. But freedom, too, has her allies. And her triumph over slavery is only a question of time. There is not a single instinct of humanity—not a single inspiration of hope—not a single affection which religion has nurtured—not a single aspiration towards the future which has been aroused into life—not one of all these put in as an ally of freedom.

I look over this country—and sometimes not without tears. She is beautiful in her physical structure. How nobly God has piled her mountains! How grandly he has poured the waters of her cataracts! How full of majesty are her waters, bearing her products to the ocean! How everything comes here, ready to minister to our necessities; combining to enlarge our virtue into a grander picture than the world has seen, and giving us a name such as history tells no tale of! Here, in the last quarter of the earth, God would have the civilization of all former ages unite, that he might show a product, in the form of man, which should combine all the excellencies which humanity is capable of

I look at this land. She is the land of promise. The nations look at her. And, O! to think that she should forget her mission—that she should still run to sin—that she should re-enact the tragedies of the despotisms of old ages—and, with opportunity to gather rays of glory from all the civilizations that were, she should sink into shame—and that, from under the dome of Freedom's temple, we should go out to fasten fetters on human limbs, and push further into the future the world's millennium! It is too much! And yet, our past career has been in that direction. But there is the omnipotent God still reigning, and to him I turn and find relief. I can hope no more in man; for our past history and present character prophecy nothing but darker days. But it is something to go with the face turned toward heaven, and cry, *O, my country! mayest thou yet be free!*

THE RAGE FOR FICTION.

"I want a paper that has long stories in it," said a young lady; and she added, "I don't want a paper for any thing else." Poor girl! much to be pitied—and a pitiful appearance she will make through life, at the present rate. She wants nothing serious, no acquaintance with the history of her times, no intellectual—nothing but newspaper novels! Empty heads they must be, that can find room every week for some ten columns of a sham story. Yet these are the heads for which the weekly press toils and groans, throwing off by the ten thousands, its sheets of shallow, insipid, and disgusting fiction; and for this, an amount of money is paid which a sound literature utterly fails to command. Yes, Christian fathers and mothers buy this vile trash for their sons and daughters, and so minister to their ignorance and destitution of all taste and fitness for life's duties. Doubtless the periodical press does more than any other one instrumentality, to decide the opinions, habits of thought, and general character of the age. A family will very soon begin to show a sympathy with its weekly paper, and parent and child will soon begin assimilating to it in sentiment and feeling; and as families are, so is the community at large. Blind and stupid, therefore, yea worse, are those parents who tolerate in their houses a class of papers which are good for nothing—made up of the writings of silly, ignorant scriblers who would be "at the foot" in a town school, much more in a school of good morals. Such the teachers of half the present generation. [Alb. Spectator.

CHRISTIANS AND MISSIONS.

Rev. Dr. Duff, in an address before the late Paris Convention, made the following appropriate remarks in reference to professed Christians and missions:

What *sacrifices* had Christians made? The receipts of benevolent societies had been diminished on account of one or other causes, which had affected the revenues of God's people; but where had retrenchment been commenced? Had it been in regard to splendid residences, or sumptuous furniture, or rich viands? Had it not been with the house of God? Some thought that Christians should give a tithe of their income for the cause of Christ. But this was no measure for Christians. Even the Jew gave more than a *single* tithe. On examination it will be found that he gave at least *three* tithes. If any man wishes to be a Jew, let him give as much as that. But this is no proper measure. The man who has $25,000 a year, and gives $2,500, does not give as much as the person who has only $100, and who gives $10. The former has $22,500 left, the latter only $90. Let the former keep for himself $2,500, and give the rest to Christ. All should retain only what their real wants require, and the rest they should give to God. There must be self-denial, or there can be no moral excellence in what we do. What an instance and example of this principle in the gift of God to be the Saviour of his people!—in the Redeemer's coming to our world, leaping, as it were, from the bosom of the Father, across the vast abyss which separated man from God, that he might seek and save that which was lost! Those who are God's people will come under the influence of the same spirit. Their worldliness will cease. If we see a clod of earth falling toward the ground, we believe it to be under the influence of the attraction of the earth. But if we see that clod rising upward, and behold it gradually becoming ethereal and bright, till it resembles some shining orb, we suppose that another influence is operating upon it. So with the child of God.

THE MOTHER OF THE WESLEYS.

The *Lutheran Observer* prints the following interesting extract from a letter on family government, written by the mother of Rev. John Wesley, at his urgent solicitation. It contains food for thought.

DEAR SON,—According to your request, I have collected the principal rules I observed in educating my family. The children were always put into a regular method of living, in such things as they were capable of, from their birth. When turned a year old, they were taught to fear the rod, and to cry *softly*, by which means they escaped much correction, which they otherwise might have had, and that most odious noise of the crying of children was rarely heard in the house. As soon as they grew pretty strong, they were confined to three meals a day. They were suffered to eat and drink as much as they would, *but not to call for anything.* If they wanted aught, they used to whisper to the maid. As soon as they could handle a knife and fork, they were set to our table. They were never suffered to choose their meat. Eating and drinking between meals was never allowed, unless in cases of sickness, which seldom happened; nor were they suffered to go into the kitchen to ask anything of the servants when they were at meat. If it was known they did so, they were certainly beaten. At six, as soon as family prayer was over, they had their supper. At seven, the maid washed them, and beginning at the youngest, she undressed and got them all to bed by eight, at which time she left them all in their several rooms awake, for there was no such thing allowed in our house as sitting by a child until it fell asleep. They were so constantly used to eat and drink what was given them, that when any of them were ill, there was no difficulty in making them take the most unpleasant medicine, for they durst not refuse it.

In order to form the minds of children, the first thing to be done is to *conquer their will.* To inform the understanding is a work of time, and must with children proceed by slow degrees, but the subjecting of the will is a thing that must be done at once, *and the sooner the better;* for, by neglecting timely correction, they will contract a stubbornness and obstinacy which are hardly ever conquered. In the esteem of the world *they* pass for kind and indulgent, whom I call cruel parents, who permit their children to get habits which they know must be afterwards broken. When the will of a child is subdued, and it is brought to revere and stand in awe of its parents, then a great many childish follies and inadvertencies may be passed by. But no willful transgression ought ever to be forgiven children without chastisement, less or more. I insist upon *conquering the will of children betimes*, because this is the only strong and rational foundation of a religious education, without which both precept and example will be ineffectual. But when this is done, the child is capable of being governed by the reason and piety of its parents, till its own understanding comes to maturity, and the principles of religion have taken root in the mind. I cannot yet dismiss this subject. As self-will is the root of all sin and misery, so whatever cherishes this in children, insures their wretchedness and irreligion. Whatever checks and mortifies it, promotes their future happiness and piety. This is still more evident, if we further consider that religion is nothing else than doing the will of God, and not our own; that the one grand impediment to our temporal and eternal happiness being this self-will, no indulgence of it can be trivial, no denial unprofitable. Heaven or hell depends on this alone, so that the parent who studies to subdue it in his child, works together with God in the renewing and saving of a soul! The parent who indulges it, does the devil's work, makes religion impracticable, salvation unattainable, and does all that in him lies to damn his child, soul and body, forever. Our children were taught the Lord's prayer as soon as they could speak. They were early taught to distinguish the Sabbath from other days. They were taught to be still at family prayers, and to ask a blessing immediately after meals, which they used to do by signs, before they could kneel or speak. They were quickly made to understand that they should have nothing they cried for.

THE DUTY OF MAKING A WILL.

So many are the sudden casualties which cut men off, both by land and water, and so uncertain is human life under all circumstances, that it is clearly the duty of every man who has anything to leave, to "set his house in order," by making a legal distribution of his property while he is in a condition to do it. There may be exceptions where the law will dispose of it just as the testator would; but we believe they are few. Wherever there is more than one heir, it is better for the head of the family to say who shall have property, and in what proportions, however confident he may feel that his heirs will divide it as amicably as he could. Where children love one another so well that there seems to be no danger of disputes or hard feelings arising, they would, if they are wise, prefer to have the parent decide how the estate shall be distributed among them, rather than have it left to them to agree. How often have bitter and lasting altercations taken place in families, which no one anticipated, and which would have been entirely prevented by a legally executed will. The heirs can afterwards, if they choose, make distributions somewhat different between themselves. They sometimes do, and it is right they should.

Perhaps there is hardly any social and relative duty which is more apt to be postponed and finally neglected than this of the testamentary settlement of estates. Men somehow feel a strange reluctance to do it. They know they must die. In words they admit that it may be suddenly. They know that as they "came naked into the world, so they can carry nothing out," and perhaps fully intend to settle all their worldly affairs before they are taken away from their families, just as sinners intend to repent before they die, and as with multitudes the convenient season never arrives.

It is a serious thing to make and execute a will. It ought to be. It seems to bring death very near, and this, I apprehend, is one of the main reasons why the duty is so generally postponed, especially by men in the middle period of life, and earlier. They expect to live a great while, and why should they be settling up their affairs just now, when there is no call for it, and they have so many other things to do?

Probably, too, many more than would be willing to acknowledge it, postpone the duty from a sort of indefinable superstitious impression, that they shall die sooner than they otherwise would. They would not acknowledge it even to themselves; but nevertheless, it is one cause of procrastination.

Others, who are above any such superstition, postpone the duty, because the performance of it compels them to think more of dying and being prepared for it, than they do while they are "busy here and there," and putting far off the evil day. It seems to them, too much like looking the king of terrors in the face before the time, and needlessly interrupting their worldly plans and pursuits.

But just so far as the making a will brings death and judgment before the mind, it is an urgent reason why it should be done. Men need every influence that can bring them by anticipation nearer to the eternal world, than they are brought in the discharge of the ordinary duties of life. Thousands, we doubt not, could testify, that they hardly ever before felt themselves brought so near, as in making their wills; and this has sometimes been one of the means of bringing them to repentance. "My estate I shall leave behind, but where will my soul be?" An infinitely more momentous question than, "How shall I settle my estate?"

A CITY OF RELIGION.

Jerusalem had little to give it importance, apart from its temple and its worship. Except its rocky fastnesses, which probably led a shepherd clan at first to select it as a place of security to their flocks, it had nothing to make it the site of a city, no conveniences for either trade or mechanic industry. It is situated many miles inland from the sea, amid inaccessible hills, where the commodities of art and trade are conveyed with difficulty, and to which carriage roads have never afforded the means of travel and transportation. All its merchandize must come and go on the backs of men and animals. But from the age of Melchisedek, who was the "priest of the most high God to whom Abraham gave a tenth of all," Jerusalem has been the seat of Religion, and to that it has owed its opulence, renown, and populousness. Whenever the native Arabs, or pilgrims from other lands, first get a glimpse of it from contiguous elevations, it is with the shout of "Hagiopolis, Hagiopolis," the "Holy City, the Holy City," to indicate how universal is the reverence for it as a religious location. Apart from its selection as the seat of God's worship, it could have become little more than a stronghold of shepherds, and thousands of years ago would have perished as utterly as Petra or any other stronghold of ancient times. It is religion that has given it place among the renowned cities of the world; and it is this, and this alone, which has in our age made it of so much importance in the eyes of the nations, as to supply the existing cause of the present war in the East. Its Holy Places have been an object of embittered strife between Russia and the Catholic nations of the West for many ages. It is even one of the Mohammedan holy places, and the followers of the Prophet show there his footsteps, surrounded by a golden gate. Thousands of pilgrims visit it yearly, whose expenditures are a principal source of its present wealth. It was a motive of hostility to its ancient Jewish worship that led Hadrian to rebuild the city A. D. 118, it having been destroyed by Titus forty-eight years previous, and to make sure that the true God should no more be worshiped in it, he changed its name to Ælia Capitolina, and decreed that no Jew should be permitted to dwell there. And, as a motive of hostility to Judaism dictated this measure of Hadrian, so a motive of hostility to Christianity induced Julian, the Apostate, to restore the Jews to Jerusalem, and assist them in rebuilding the temple, about the year of our Lord, 370. Then, again, in 637, the Saracens were equally actuated by religious fanaticism, in conquering the place, and erecting there the Mosque of Omar, which is a magnificent structure, occupying the site of Solomon's Temple, and is regarded as one of the greatest sanctuaries of the Mohammedans. Thus we have, in every aspect of Jerusalem history, the working, under some form, Jewish or Pagan, Christian or Mohammedan, Greek, or Catholic, of those powerful impulses, to which we give the name of religion.

THE PANTING SOUL.

As the hart panteth after the water brooks, so panteth my soul after thee, O God. To a mere speculative believer in Christianity, this language may appear extravagant, but it is a portion of the inspired word. The Holy Spirit never exaggerates. There is such a thing as panting after God. It is a state of mind which every Christian should experience.

The panting soul is one which longs with intense desire for communion with God. The Christian should be content with nothing short of this intense desire. It is not a fanatical, but a most reasonable state of mind. The husband and father, when separated from those dearer to him than life, is not content with making them the subject of occasional thought, and of transient desires. He would feel that he was an unworthy husband and father, if his heart did not burn with an intense desire to be restored to their society. Much more should the Christian cherish an intense desire to meet and commune with his Heavenly Father. That Father is the all-perfect. That Father loves him with a love which no human calculus can estimate. The Holy Spirit does not attempt to describe the vastness of that love. "God so loved the world that he gave his only begotten Son, that whosoever believeth on him might not perish, but have everlasting life." He has called him with an effectual calling. He has borne with his ingratitude and perverseness. He has crowned his days with loving kindness and tender mercies. Infinite, intrinsic loveliness, and infinite loving kindness towards him should call forth his supreme affection, and awaken an intense desire for conformity to his image, and intimate communion with him.

Many Christians desire to walk more worthy of their vocation. They desire to set a better example, to have a stronger faith, and clearer evidence of their adoption. This is well, but it is not panting after God. God is the true portion of the soul. God is the fountain of holiness. Fellowship with him should be desired above everything else.

Many wearied with the toils and cares of earth, and groaning beneath the body of sin and death, desire the rest of heaven. They can say, Oh that I had the wings of a dove that I might fly away and be at rest; but they cannot say, as the hart panteth after the water brooks, so panteth my soul after thee, O God.

Many desire the coming of Christ's kingdom; desire, and make efforts to promote the salvation of souls. This comes short of panting after God and his holiness. Christians ought to desire the salvation of souls with great intensity, but their desires towards God ought to have still greater intensity.

Reader, does your soul pant after God? Is he the object of your chief desire? Thank God for the pledge of eternal glory which you have in that desire. That desire shall be gratified in preference to all others. He whose soul pants after God, shall assuredly have Him for his portion, for time and for eternity. [N. Y. Obs.

COMFORT FOR THE RICH.—When the time drew nigh that the oxy-hydrogen microscope should be shown, at the Newrastle Polytechnic Exhibition, one night a poor old woman, whose riches will never retard her ascent to heaven, took her seat in the lecture room to witness the wonders that were for the first time to meet her sight. A piece of lace was magnified into a salmon net, a flea was metamorphosed into an elephant, and other marvels were performed before the venerable dame, who sat in astonishment, staring open-mouthed at the desk. But when, at length, a milliner's needle was transferred into a poplar tree, and confronted her with its huge eye, she exclaimed, "A camel could get through that. There is some hope for the rich folks yet!"

NATIONAL SUNDAY LEAGUE.—An association has been formed in England with this name. Its objects are "to obtain the opening of the British Museum and other national institutions, and the repeal of the law which compels the closing of the Crystal Palace and other collections of an instructive character on that day." Sir Joshua Walmsley, M. P., is the President, and fout other members of Parliament are among the Vice Presidents.

OUR CONTROVERSY WITH S. S. GRISWOLD.

Several months ago, we presented to the readers of the *Recorder* some thoughts concerning the state of the dead, animadverting upon a doctrine which sets forth that man has no conscious existence between death and the resurrection, and that the wicked receive the penalty of the Divine Law in the entire extinction of their being. What we wrote was followed by some strictures of S. S. Griswold, not in denial of our main proposition, but criticising our manner of defending it. In particular, it was alledged, on his part, that if man was endowed with a natural capacity of being recompensed according to his works, in the future state, there was no necessity of a miraculous resurrection of the body, however modified the moral government of the world in consequence of the mediation of Christ. We do not quote his exact language, but such was substantially his holding, to sustain which he was driven to a denial of the resurrection of the body, and to the adoption of the fanciful theory of Emanuel Swedenborg, Professor Bush, and the New Jerusalem Church generally. We had alledged the necessity of the resurrection, in order that the moral government of the world, as modified by the Gospel, might be vindicated in the retributions of the Last Day. Yet we had denied its necessity on *natural* grounds; that is, on the supposition of man's responsibility to the laws of Natural Religion only, we argued that there was no absolute necessity for the resurrection of the body; the soul, or immaterial part of the man, being endowed with a capacity of being rewarded or punished according to the course of nature. In this, Bro. G. endeavored to make us appear inconsistent, and succeeded; to his own satisfaction, no doubt, perhaps, to the satisfaction of others also.

How far it is best to follow Bro. G. in reply to what he has advanced, we are somewhat at a loss to know. We have waited a good while to hear him say whether he had *finished* his argument, as it was our wish that he should deliver himself fully, before undertaking any reply. From his protracted silence, we conconclude that he considers himself to have accomplished what he proposed; and though the commencement of the discussion dates so long time back, and its progress has been so broken by long intervals, that many of our readers may have lost the recollection of its important features, and may not care to have it revived, we consider that the gravity of the question involved, and the position in which Bro. G. has placed himself towards the Seventh-day Baptist denomination, as well as justice to ourselves, require that something more be said.

We wish to premise, however, that while we have no retraction to make of any argument we have advanced, we would, if we had it to do over again, modify some of the expressions we employed. We said that "the resurrection was ordered, not to render it possible for God to recompense his creatures, but in order that soul and body might be rewarded together." Now, if we had liberty to amend our language, we would not say "that soul *and* body might be rewarded together," but "that the soul might be recompensed *through the medium* of the body." For we perceive that, as we at first expressed it, the idea of making the body itself accountable to a certain extent is involved; whereas we held no such idea, and were careful to say, in another place, that "the body, of itself, neither transgresses a law nor obeys it. It is not the subject of sin, nor of holiness. It is a mass of matter merely, and though, in its organized form, endowed with certain instincts and propensities, yet, in the absence of a rational soul to guide and direct it, it is no more accountable than the brutes that perish." And had Bro. G. been as careful to discover the real scope of our argument as he appears to have been to find occasion for controversy, he would not have charged our theory as "representing God as inflicting punishment upon a mere mass of characterless, unaccountable matter." (See *Recorder* of May 24th.) We certainly advanced no such dogma, and we are not able to see wherein our theory is responsible for it. The nearest we came to saying any thing which could, by any possibility, be tortured into such a meaning, was in our article of the 5th of April, in which we said that "in the final award made to the transgressor, not only is the soul punished, but vengeance is taken upon the body which has been the instrument of the soul's sin." Yet the connection in which that sentence is found renders our meaning so transparent, and the idea there presented is so obviously scriptural, that we can hardly suppose Bro. G. to have taken his cue from that place.

Thus much by way of introducing the subject anew to our readers. We do not expect to be very lengthy in our review; perhaps one or two articles may comprise all we shall have to offer, though we bind ourselves by no positive promise, as the subject may grow in our hands.

T. B. B.

THE BIBLE UNION.—At the last meeting of the Board of Managers of the American Bible Union, the Treasurer, Wm. Colgate, Esq., reported a favorable condition of the finances, though the expenditures had exceeded the receipts about $500. Nearly $3,000 had been employed during the month in the revision of the English Bible. On the 1st of January, it was stated, an additional reviser, connected with the Protestant Episcopal Church, would enter the active service of the Union at the Revision Rooms in New York. Large additions had been made to the library. Among the valuable books was a complete set of the Greek and Latin classics. The publishing agency in England state that the revision movement is attracting the attention of men in every station. The demand for publications increases. The agents in Oregon and the British North American Provinces have obtained many new life members. The Bible Revision Association, located at Louisville, Ky., is rendering the cause great service.

YEARLY MEETING.

The Yearly Meeting of the Seventh-day Baptist Churches of New Jersey, was held recently with the Piscataway Church, at New Market. It has been held alternately in East and West New Jersey for more than a century, and has had a tendency to perpetuate and strengthen the bonds of Christian union, and to promote vital godliness in the churches. Previous to the formation of the General Conference and the Associations, it was numerously attended; but since the introduction of so many meetings, it has not received so much attention as formerly.

The meeting commenced on Sixth-day at 11 o'clock, when a sermon was preached by W. B. Gillett of Shiloh, from Psalm 122: 1—"I was glad when they said to me, Let us go into the house of Jehovah." There was not as full an attendance at the commencement as was desirable.

At evening the house was well filled, and after a season of prayer, a sermon was preached by D. Clawson of Marlborough, from 1 Cor. 15: 58—"Therefore, my beloved brethren, be steadfast, unmovable, always abounding in the work of the Lord, knowing that your labor is not in vain in the Lord."

Sabbath morning, the house was well filled, with attentive listeners, when a sermon was preached by W. B. Gillett, from 2 Cor. 1: 18—"While we look not at the things that are seen, but at the things that are not seen; for the things that are seen are temporal, but the things that are not seen are eternal." After the discourse, the brethren and sisters united in celebrating that memorable event, the suffering of our Saviour, in partaking of the emblems of his body and blood.

At evening the house was again well filled, and after a season of prayer, a sermon was preached by J. Bailey of Plainfield, from Isaiah 52: 7—"How beautiful on the mountains are the feet of him who bringeth good tidings, who publisheth peace, who bringeth good tidings of good, who publisheth salvation, who sayeth to Zion, Thy God reigneth."

On First-day morning, we again met, and listened to a sermon by D. Clawson, from Jeremiah 8: 22—"Is there no balm in Gilead? Is there no physician there? Why then is not the health of the daughter of my people restored?"

In the evening, after a season of prayer, preaching again by W. B. Gillett, when the meeting closed, after each of the pastors present gave a brief statement of the present condition of the churches with which they labor.

According to previous arrangement, a meeting of business was held on First-day morning. The meeting was organized by appointing H. H. Baker, Chairman, and W. B. Gillett, Secretary. Brother J. C. West, the former Secretary, having removed from the bounds of the Yearly Meeting, and leaving the book of records with W. B. Gillett, he presented the records of the last meeting, when it was resolved that the Secretary prepare a synopsis of the proceedings of the present meeting, and record them in the book of records, and request their publication in the *Sabbath Recorder.*

Resolved, That the Secretary be requested to prepare a brief history of the churches, as connected with this Yearly Meeting, and record it for future reference.

Resolved, That a Committee of three be appointed, who shall devise and recommend some plan of operation for the future arrangement and a more efficient organization of this Yearly Meeting.

Resolved, That W. C. Whitford of New Market, James Bailey of Plainfield, and Dr. George Tomlinson of Shiloh, be said Committee, and that they be requested to report at the next Yearly Meeting.

Resolved, That W. C. Whitford be requested to prepare an Essay, and present it at the next Yearly Meeting, on the duty of Family Religion.

Resolved, That the next Yearly Meeting be held with the Church at Shiloh, on the sixth day of the week before the third Sabbath in the eleventh month, 1856, at 10½ o'clock A. M.

H. H. BAKER, Chairman.
W. B. GILLETT, Secretary.

EXHIBITION IN UNION ACADEMY.

Union Academy, at Shiloh, N. J., under the instruction of Mr. W. A. Rogers and Miss Mary C. Fithian, is in a prosperous and progressive state. On Fourth-day evening, Dec. 5th, they had an exhibition, that was an honor to the teachers, pupils, and patrons. The exercises were, Orations from a number of young gentlemen, Essays by a number of young ladies, Vocal Music by a few select singers, accompanied with instrumental music by Professor Morton and Miss Fithian the preceptress. The Orations were well composed and well delivered. The Essays were instructive and amusing, and were read most elegantly. "The Miniature Peace Congress"—a colloquy in six languages, Hebrew, Greek, Latin, German, French, and English—was managed in a masterly manner by those engaged in it, and was listened to with much interest. The *Academic Star*—a paper established in the institution a number of years ago—was read by the Editors, Jacob Harris and Annie Colvin. The articles read evinced an ability on the part of the many youthful contributors almost incredible; it was both instructive and amusing, to young and old. The house, though large, was literally filled, and many were obliged to leave for the want of room. At a late hour the assembly left, delighted with the exhibition, which was truly creditable to all concerned.

The Public School in this place, under the instruction of Mr. and Mrs. Jones, is in a very prosperous state, and closed its first term at the same time.

The Winter Terms in both schools will commence Second-day, the 17th inst. The terms are fourteen weeks each. A CITIZEN.

SHILOH, N. J.

MORE ABOUT DISCUSSION

To the Editors of the Sabbath Recorder:—

I read in the *Recorder* of Dec. 6th, an article on Geology, which pleased me more than any piece I have read on that subject; and what delighted me so much was this, that the writer, in conclusion, concurred with the remarks of "*A Subscriber,*" on free discussion, with one exception; that was an amendment which he proposed, and I think it was his wish that all who have a thirst for disputation should start a Literary Omnibus, which should be open to the discussion of all the ologies and isms of the day. I as heartily concur with brother B. as he does with *A Subscriber*, and I hope the *Recotder* may be devoted to subjects more congenial to the humble and devoted Christian. I should be gratified if our ministerial brethren, who have often filled columns of the *Recorder* on Geolgy and the Future State of the Dead, would fill up as many columns on practical piety, exhorting their lay brethren to be in readiness for that day which will reveal to us all the state of the dead. I consider it our duty to give earnest heed to our ways, and strive to live in Christ, rather than spend our time and faculties in speculations about the future, or seek to be wise in Geology above what is written in the Sacred Word. The Christian has the promise of being like unto Christ; and, trusting in the promises of Him who never erred, should I continue in the faith, I shall behold him as he is, and if permitted to be with Christ, that glorious future will be revealed to me.

A SUBSCRIBER IN R. I.

DUTY TO PARENTS.

In all the relations of life, there are many duties to discharge, imposed upon us by divine authority, and by the relations themselves. There is a beautiful harmony between the divine requirements and those which arise out of the natural ties which bind us together. Nothing can be more natural than that parents should love their offspring, or that children should love their parents, and that the effect of the one should be a careful provision for their every interest, and of the other a strict regard to their authority and instruction. All these are obligations laid upon us by the commands of Heaven, and plainly made known to us in his word. Yet, like all others that are right and natural and religious, a due regard is not given to them. Many parents manifest no proper affection for their children, and are negligent of their comfort. But among the rising generation, and those too who have been ardently loved and well provided for, there is a sad neglect of filial duties and proper respect for parents. In the families of those who fear God, there is much to censure and be ashamed of, on account of the demeanor of the children and young people. Such low and shameful expressions as "I shan't do it," and "Do it yourself," are often heard from the lips of children to their parents. It is not uncommon for young people to call their parents "old man" and "old woman," as if they were mere beggars, or among the most despicable of mankind. All this is a violation both of nature and revelation, and will meet, sooner or later, its reward. The advice of parents is often despised, and the youthful judgment considered paramount to that of age and experience, governed as it may be by strong parental love, and ardent desires for their wellfare. Many a youth follows his or her own inclination and judgment, (too much biased by inclination,) until the most ruinous results follow, which crush both parent and child—a life of disgrace often on the part of the one, and of sorrow which ends only in the grave to the other.

Nor are children who profess to have been converted free from the charge of neglecting filial duties. Alas! it exists among those who would even imagine a renovation of mind and submission to the divine requirements. We might fairly expect that filial affection was refined and strengthened by religion; but the evidence is fearfully wanted. Children, when grown up into life, are too apt to forget that they are children yet, or that there is the same relation as there always has been. It is true, that children may excel their parents in point of knowledge, ability, and circumstances, and yet there is an obligation to esteem and venerate parents still resting upon them, from which they can never be free. Children are forgetful of the divine denunciation against disobedience to and disrespect of parents. We often tremble for the result when we see the rebellion, disrespect, and abuse, practiced by young people towards father and mother. Many of the miseries endured by mankind are the fruit of filial disobedience, and this cause itself often proves an inward source of anguish.

There is one idea in reference to filial duty which is but little entertained, or perhaps thought of—we mean duties in the absence of parental observation. Young people sometimes promise the performance of somethings, and the avoidance of others, to a father or mother; and yet, when out of sight, the promise is forgotten, or at least broken. Two evils are here committed—one the violation of parental wish and advice, and the other, a breach of promise; both are criminal in the sight of God, who marks every such act of delinquency when parents cannot. "Honor thy father and thy mother," is a requirement in their absence as well as in their presence. Young people are not aware of the intense anxiety parents feel when their children are from home. They know the danger to which they are exposed—their liability to be drawn aside from the path of rectitude by the example and enticement of others—their want of experience as to the devices of the wicked—and their natural tendency to some particular sins, which, if practiced, will be their ruin. If the private exercises of the parent's heart, and the agonizing prayers offered in the silent retreat, could be realized by a son or daughter with a spark of filial affection, it would be a barrier to misconduct over which the most impetuous could not pass. But this cannot be. We appraise the young of it, however, and urge them not to violate a parent's proper wish when away from observation.

GEO. R. WHEELER.

SALEM, N. J.

CALLING PASTORS.

The first Presbyterian Church at New Orleans gave Dr. Palmer, of Columbia, S. C., a call to become their pastor. To enforce their call, they sent commissioners to the Charleston Presbytery, who argued the cause long and earnestly. The result of their appeal appears in the following resolution of the Presbytery:

Resolved, That after weighing prayerfully the claims of the first Presbyterian Church of the city of New Orleans, for the pastoral labors of the Rev. B. M. Palmer, D. D., as earnestly and eloquently set forth by the commissioners who have appeared before this body, we find ourselves unable to place the call in his hands, because Dr. Palmer's labors as Professor in the Theological Seminary are indispensable to the prosperity of that institution; and because we must not contravene the wishes, nor defeat the action of the Synod, our higher judicatory, which has unanimously placed him in that office.

A Methodist paper, in noticing the foregoing, says:—

"Still unsatisfied, the commissioners gave notice that they would appeal to the Synod, where, we presume, they will again fail; and after all this agitation, expense, and strife, be obliged to look elsewhere for a pastor. How much better is the simple plan of Methodism in exchanging pastors through a power constituted for that purpose, than this agitating process to which our Presbyterian brethren are driven!"

To the above a Congregational paper very sensibly replies:—

"How much better still is the simpler plan of Congregationalism, which commits the liberty of the pastors and churches neither to the great tyranny of a Synod, nor the little tyranny of a Bishop and his advisory Presiding Elders, but leaves each Christian body free to ask the man of its choice, and each Christian minister, so asked, free to obey the convictions of his own sense of duty, enlightened by the Word of God, and by prayer, and the friendly advice of neighboring churches and ministers. That is the natural method of supply and demand in other things, and, in this, Congregationalism follows nature as well as Scripture."

LADY EMELINE STUART WORTLEY.—Among the recent deaths is that of Emeline Charlotte Elizabeth, second daughter of the Duke of Rutland, and widow of the late Hon. Charles Stuart Wortley, brother of the late Lord Wharncliffe. Lady Wortley was very well known and very popular in this country. She visited the United States twice, and in 1851 published a volume of travels; and a very pleasant book it is, too. Lady Wortley traveled throughout North America, and afterward went to Havana, the British West Indies, and extended her trip to Panama, surmounting the perils which environed the isthmus transit at that time, with much more cheerfulness than many of the sterner sex. Lady Wortley afterwards made an extended tour in Asia and throughout Southern Europe. With the exception of Mme. Pfieffer, she was the greatest female traveler of the age. In addition to her volumes of travels, she has published her poems. She was a woman of extensive information, and was familiar with all the leading statesmen, authors, artists, &c., both in England, on the Continent, and in the United States. During the latter part of her life she lived at Beirut, in Syria, where she died, on the 29th of October, aged about forty years. She was rather eccentric in her habits, and for the past two or three years has lived a sort of hermit-like existence. She leaves a son and a daughter.

THE AMERICAN AND FOREIGN BIBLE SOCIETY.—At a meeting, on the 6th inst., of the Board of Managers of the American and Foreign Bible Society, grants of Scriptures to a large amount were made for circulation, and nine additional colporteurs were appointed. The sentiments of the body respecting the Society's colportage and success in this form and labor, were expressed in resolutions, of which we annex the one most important:—

Resolved, That the Divine favor manifested in our colportage work, wherein in our incipient efforts fifty laborers are already in the field, by whom (besides the work of those in foreign lands whose reports are not yet received) 24,552 visits in preaching the Gospel from house to house, have been made; 225 prayer meetings held; 391 children gathered into Sabbath schools; 382 persons induced to attend church; 3,297 visits to vessels for seamen made; 114 sermons preached; 38 persons hopefully converted, and 13 baptized—calls for devout thanksgiving to God.

HIGHER LAW OF THE JESUITS.—The Harrisburg *Herald* says: It is related of Dr. De Barth, the Jesuit Priest and Vicar General of Pennsylvania, that when told by a brother that he could not take the oath of naturalization to America without violating the oath of ordination to the Roman Pontiff, *he pronounced it a mistake,* and promptly remarked, that any part of the oath of allegiance to this country which may be incompatible with the first and greater allegiance to the Pontiff is of no obligation.

NEWSPAPERS.—Of all the amusements, says Herschel, that can possibly be imagined for a hard-working man after a day's toil, or in its intervals, there is nothing like reading an interesting newspaper. It relieves his home of its dullness and sameness, which, in nine cases out of ten, is what drives him to the ale-houses, to his own ruin and his family's. It transports him into gayer and livelier, and more diversified and interesting scenes; and while he enjoys himself thus, he may forget the evils of the present moment as much as if he were ever so drunk, with the great advantage of finding himself the next day with the money in his pocket, or at least laid out in real necessaries and comforts for himself and family, without the headache. Nay, it accompanies him in his next day's work, and, if the paper he has been reading be anything above the idlest and lightest, gives him something to think of besides the mechanical drudgery of his every-day occupation; something he can enjoy while absent, and look forward with pleasure to return to. The history of the world for one day is given to him; the follies, vices, and consequent miseries, of multitudes, are so many admonitions and warnings; the acts of jealousy and anger; the story of one friend murdered by another in a duel; the cautions against gambling and profligacy—"talk they not of morals?" Take a good newspaper, read it, and it will give you better advice than all the moralists in the universe.

THE RIGHT SPIRIT.—Dr. Storrs, in a missionary sermon, which he recently preached, said:

"Fain would I see every where displayed the spirit of one who supports herself and her aged parents, and still, by economy, saves ten dollars a year to send the Gospel to the perishing! Or of another, who quits the rich and attractive home of her childhood for the toils of a factory, that she may personally instruct the ignorant, and sustain the missionary abroad! Or of the revolutionary soldier, who, crutch in hand, deposits annually nine-tenths of his pension in the Lord's treasury! Or of the enfeebled day laborer, who lays aside a fifth of his earnings, as a benefaction to the cause of missions! Or of Richard Baxter, who first contrived to need as little as possible; then to lay out nothing on things unnecessary; then to profit others by whatever he used himself; and finally, to do all the good possible with whatever he could save from the competency God gave him! And more than all, the spirit of Him who, though he was rich, for our sakes became poor, that we, through his poverty, might become rich!"

BOOK PUBLISHERS AND THE EDITORS.—Some of our exchanges are giving considerable space to a controversy in which is involved the relations of editors to book publishers. The occasion of the controversy was as follows:—

"Messrs. Ticknor & Fields, one of the oldest and best publishing houses in the country, sent a copy of Longfellow's *Hiawatha* to the Boston *Traveler.* That paper published a condemnatory notice of it—whereupon Messrs. Ticknor & Fields addressed the Editor a note, stating that the notice was unfair and unfriendly to them; and that they should, therefore, hereafter send to the *Traveler* neither books nor advertisements. The *Traveler* published this note, and denounced the conduct of the Publishers who wrote it, as an attempt to coerce the Press into noticing their books *favorably,* without regard to their merit. The New York *Publishers' Circular* vindicates Messrs. Ticknor & Fields, denounces the *Traveler* for having made public a private note, and brings a general charge against the Newspaper Press, of *seeking* to be bribed by the Publishers of Books. The Press at large has taken up the matter for comment; and as a general thing the Publishers are condemned, and the *Traveler* vindicated, in the course they have respectively taken."

PRINTING.—Fox, the martyrologist, thus enumerates the advantages resulting from this incomparable invention:—

"Hereby tongues are known, knowledge groweth, judgment increaseth, books are dispersed, the Scripture is seen, the doctors be read, stories be opened, times compared, truth discerned, falsehood detected, and with finger pointed, and all through the benefit of printing. Wherefore, I suppose that either the Pope must abolish printing, or he must seek a new world to reign over; or else, as this world standeth, printing will doubtless abolish him. Both the Pope and all his College of Cardinals must thus understand, that through the light of printing the world beginneth now to have eyes to see, and heads to judge. He cannot walk so invisibly in a net, but he will be spied. And although, through might, he stopped the mouth of John Huss before, and of Jerome, that they might not preach, thinking to make his kingdom sure; yet, instead of John Huss and others, God hath opened the press to preach, whose voice the Pope is never able to stop, with all the puissance of his triple crown. By this printing, as by the gift of tongues, and as by the singular organ of the Holy Ghost, the doctrine of the Gospel soundeth to all nations amd countries under heaven, and what God hath revealed to one man, is dispersed to many; and what is known in one nation, is open to all."

MONUMENT TO JUDAH TOURO.—The Newport *Mercury* describes the monument recently erected in the Jewish cemetery in that town, to the memory of Judah Touro, by his executors. It is of Quincy granite, thirteen and a half feet high, and bears the following inscription:—

"To the memory of Judah Touro, born in Newport, R. I., 16th of June, 1775, died in New Orleans, La., 18th of January, 1854. Interred here June 6th. The last of his name He is inscribed in the book of philanthropy, to be remembered forever."

In the lower base there is deposited a copper box, containing the weekly newspapers of Newport, New York and Boston papers of the day previous, a copy of Mr. Touro's will, and coin of the year. The whole work has been executed in such a manner as will insure its standing many years.

THE PEN AND THE PULPIT.—In reading the interesting narrative of the Jubilee in connection with John Angell James' fifty years of labor, we were impressed with the vast amount of good accomplished by his pen. One of the speakers on that occasion remarked as follows:—

"I believe that he who chooses his instruments where he will, made use of the pen of Mr. James for the promotion of his own glory, and that that dear and honored servant of Christ stands before us as one of the trio—for I hold that there are but three, who have been more signally honored than all the rest; Baxter, the author of the 'Saint's Rest;' Doddridge, the author of the 'Rise and Progress of Religion in the Soul;' and then comes James' 'Anxious Inquirer.' These three men have been blessed of God to confer advantages upon the church such as no other three men were ever permitted to do. And to the man whom God has thus honored, I am anxious to offer a feeble tribute of my gratitude and love."

REVIVAL IN VIRGINIA.—At Charlottesville, a revival, as reported in the *Religious Herald*, has resulted thus far in the conversion of one hundred and thirty persons:—

"About seventy have been baptized already, and some thirty more are waiting to receive the ordinance. Among them have been the grey-haired men of sixty, and the little child of ten years, the strong man in the strength and vigor of life's prime, and the gentle maiden in the freshness of her youth—all bowing at one common mercy-seat, and rejoicing in the same precious hope of sins forgiven, and peace made with heaven through the merits of a crucified and risen Saviour. The hardened and almost hopeless have been aroused, the backslider reclaimed, and the gay and worldly taught to bow humbly at the foot of the cross."

LONDON CHURCHES.—It is interesting to study the statistics of the churches of the city of London, as brought out in Watkin's Directory for 1855. The whole number of churches is 663 Of these 344 are connected with the Church of England, or more than half of the entire number. The whole number of the clergy is 889. The population of London is placed at 2,362,239, or more than fourteen times that of Boston. Boston has about 100 churches, and perhaps 125 ministers. If London was as well supplied, it would have above 1,400 churches and about twice as many ministers as it now has.

SAILING OF MISSIONARIES.—A band of Missionaries sailed from Boston, on the 12th inst., in the bark Sultan, for Malta and Smyrna. They were, Rev. Daniel Bliss and wife, of Geneva, Ohio; Geo. A. Pollard and wife, of Salem, Mass.; Henry H. Jessup, of Montrose, Penn.; Tilman C. Trowbridge, of Birmingham, Mich.; Miss Sarah E. West, of Palmyra, N. Y., and Miss Mary E. Tenner, of Hartford, Ct. They all go out under the auspices of the American Board for Foreign Missions.

ENGLISH BENEVOLENCE.—Elihu Burritt has compiled a table of the amount contributed to the English Benevolent Societies, for the last year. This does not include the Scotch or Irish. Bible Societies, £230,616; Foreign Missions, £544,006; Irish Missions, £42,147; Home Missions, £158,604; Educational Societies, £78,512; Benevolent Societies, £127,630; Miscellanies, £75,637; total, £1,256,644, or about six millions of dollars.

RETURN OF A MISSIONARY.—We learn from India, that Rev. Myron Winslow, the distinguished oriental scholar and missionary, is about to return on a visit to his native land. For thirty years Mr. Winslow has labored in India, and has been eminently successful in establishing churches and schools in the island of Ceylon, and on the continent, and in the city of Madras.

THE SABBATH-SCHOOL VISITOR.—The fifth volume of the *Sabbath-School Visitor* ended with the number for December. The first number of the sixth volume will be issued on or before Jan. 1, 1856. Now is the time to get up lists of subscribers for the new volume. It is hoped that no church or society will allow its list to be diminished, and that many will increase it. Let us hear from you, if possible, before the volume commences.

TROY UNIVERSITY.—An official announcement has been made, that the $200,000 for the endowment of the new college at Troy, N. Y., has been secured. At a meeting of the board of trustees, held on the 22d of November, the Rev. John McClintock, D. D., was unanimously elected president or chancellor of the University. Dr. McClintock is at present the editor of the Methodist *Quarterly Review.*

MONUMENT TO DR. SHARP.—This distinguished Baptist clergyman was in his lifetime presented by [illegible] Lawrence with a lot in the Cemetery at Mount Auburn. Since his decease a very chaste monument to his memory has been erected on the lot by his parishioners and personal friends.

MRS. MARY E. WEBB (known as the colored Siddons) is at this time reading in our principal cities, to large audiences, the drama of "THE CHRISTIAN SLAVE," founded on the story of "Uncle Tom's Cabin," and written by Harriet Beecher Stowe. The readings are numerously attended, and her efforts are said to be pleasing and satisfactory.

THE STEAMER VANDERBILT ON THE ROCKS.—On Friday morning, Dec. 14th, the fine Sound steamboat Cornelius Vanderbilt, of the Stonington route, ran ashore on the rocks abreast of Randall's Island. A heavy mist hung over the water at the time, and the ledge was not perceived until the steamer was near upon it, when an attempt was made to cast the anchor; but the chain catching in the windlass, it was prevented from holding. The boat then swung round and was subjected to the whole force of the tide. The passengers, numbering something over one hundred, were removed by the steamer Connecticut, passing down to the city. On the rising of the tide the vessel was shifted and got off the ledge leaking badly. Yet she was not damaged much over $1,000.

RELIGIOUS INTELLIGENCE.

There is vast meaning in the advice, *Give till you feel it.* It is by this principle that churches are founded, and gospel institutions sustained in cities. It is by this principle that many rural churches have made such noble responses to the claims of benevolence. And if this rule could be applied everywhere, there would hardly be a feeble church in our land; or a church in debt; or a sanctuary out of repair; or a minister half sustained; or a true case of charity without all needful resources.

R. M. Johnson, a colored student, one of the physicians of Cleveland, has been refused admission to the Medical College in that city, on account of the color of his skin. One of the Professors asked him to matriculate, but the threats of Southern and dough-face students to leave the institution in case he was admitted caused the Faculty to quail, and his application, after some disgraceful paltering, was denied.

An earnest appeal has been made to North American Christians in behalf of a large number of the inhabitants of Carthagena, New Grenada, for aid in erecting a free Protestant church in the most important seaport in the northern part of South America; and a subscription has already been opened with promising success.

The Society for the Propagation of the Gospel, some months ago, opened a fund for the erection and endowment of a church in Turkey. It is stated that they are now contemplating the sending out of one or two clergymen at once to Constantinople—a preliminary step which appears to meet with very general approval.

H. W. Derby, Esq., of Cincinnati, Ohio, upon a recent visit to Bloomington, Indiana, learned the calamity which had befallen the Indiana University, in the total destruction of its library by fire, and generously requested President Daily to select from his catalogue of books, to the amount of fifteen hundred dollars.

The Providence Journal says that the St. John's church of that city has done an act of unusual justice, by guaranteeing to Rev. Dr. Crocker, who has served them more than half a century, a liberal support for life, together with an annuity for his family.

Mr. Tilman C. Trowbridge, graduate of the Union Theological Seminary, was ordained as a missionary of the American Board, in Rev. Dr. Spear's Church, Brooklyn, on the 15th ult. Mr. Trowbridge is destined to the Armenian mission.

A sort of civil war is raging in Roanoke College, Va. A large portion of the students have rebelled against the authorities of the institution, and have succeeded in winning over to their cause a portion of the faculty. The difficulty originated in the dismissal of a student for not attending recitation.

European News.

European dates to Dec. 1st have been received.

No event of any importance had transpired in the Crimea. Sebastopol was being rapidly leveled with the ground, and the splendid docks would be completely destroyed by the end of the month. No regular bombardment has been opened as yet upon the north forts, but the Russians were keeping up a severe fire on the city with red-hot shot.

From the official accounts of the late explosion in the French camp near Inkermann, reported by the previous arrival, it seems that 21 men were killed and 116 wounded, including 5 officers. The shock was felt at a distance of three miles.

Gen. Simpson has delivered up his authority as Commander-in-Chief of the British Army to Gen. Codrington. The troops were at length comfortably settled in their Winter quarters.

Details have come to hand of the recent Turkish victory in Asia, where Omar Pasha so gallantly forced the passage of the River Ingour, in the face of 16,000 Russians entrenched upon the opposite bank.

Two eminent men have died—Count Mole, one of the veteran politicians of Europe, who held office under the first Napoleon, and Admiral Bruat, who so recently distinguished himself in the Black Sea.

A most serious misfortune befel Messina on the 14th ult. by an inundation, occasioned, it is supposed, by a waterspout. The whole country about Messina was laid under water, trees were rooted up, houses, gardens, furniture, and cattle destroyed, and many persons drowned. Much damage has also been done to the city itself. The total loss is said to exceed two millions of ounces, or one and a quarter million sterling. In Palermo the cholera is very bad, deaths being from 70 to 100 per day. In Naples from 30 to 40 deaths per day are occasioned by this fatal malady.

A waterspout burst in the harbor of Tunis and sunk five ships, on the 18th ult.

Pacific News.

The steamer Northern Light, with San Francisco dates to Nov. 20th, arrived at New York on the 12th inst.

The San Francisco papers record the assassination of Gen. Wm. H. Richardson, U. S. Marshal for the Northern District of California, in the streets of the city, and in the broad light of day, by a ruffian named Chas. Cora. As soon as the deed was perpetrated, the most intense excitement pervaded the city, and it was with the greatest difficulty that the murderer could be saved from being lynched by the infuriated people. Gen. Richardson is universally spoken of as an efficient officer and honorable gentleman, and his untimely end has caused no little sensation among the citizens of San Francisco.

And this is not the only outrage upon society that it becomes our duty to notice. From Monterey we learn that Hon. Isaac B. Hall, Collector of that port, and T. S. Williamson, an officer of the county, were both shot through the head while traveling from Monterey to San Luis Obispo. At the latest date the murderers had not been captured, but the whole surrounding country was being thoroughly searched, and their escape was believed to be impossible.

Accounts from Tuolumne County, of the late gold discoveries in Table Mountain, continue to be of the most promising nature.

The Indian outbreak in the North was assuming most formidable proportions. On the 1st of November a desperate engagement took place at Rogue River between large parties of soldiers and Indians. The former were forced to retreat with a loss of about eighteen killed and twenty-five wounded. Gen. Wool left San Francisco for Oregon, on the 6th ult., with a company of United States troops. There seems also a disposition among the Indians of Southern California to break out in insurrection, and settlers along the Southern frontiers are organizing for self-protection.

Late papers from the Sandwich Islands mention another eruption of the Volcano of Manua Loa, which was considered so dangerous that the people, in the greatest alarm, were leaving Hilo. Accounts from Marquesas state that, from dancing and feasting, the natives had turned to war and murder. Horrible instances of Cannibalism are recorded.

The Northern Light has also brought us later intelligence from China and Australia. Another fleet of pirates has been destroyed in the China seas by two British sloops-of-war. The Imperialists had gained fresh success, and as of old continued to butcher their prisoners with the most inhuman ferocity.

News from China.

Our Hong Kong dates are to Sept. 15.

According to the Friend of China, Canton was the scene of frightful butcheries. On the 10th September a rebel chief was cut into two hundred pieces, and five hundred poor wretches were executed with him. The correspondent of the China Mail, writing from Canton, says:

"By a report obtained from good authority, it appears that over 7,000 have been publicly executed in Canton since Feb. 15, or Chinese New Year. About 27,000 were put to death at Shanking-fu, and 25,000 at the taking of the fort at Bleinheim Reach. In many places houses have been erected, where suspected persons are allowed to commit suicide, and thus protect their posthumous reputation. On the 9th of September one of the leaders, named Kane Sin, was put to death by a lingering process, having been sawed in 108 pieces. This leader threatened the northern part of the city last Autumn and Winter. More than 500 others were executed the same day."

In the North China Herald, of the 8th of September, there is a detailed account of a cruise against the North pirates, in which the British sloops Bittern and Pauoshun destroyed eleven junks—six they set on fire, four sunk, and one surrendered without being fired into, and was handed over to the mandarins at Tang-chow-foo, the captain of her giving most important information.

The China Mail of the 15th September, furnishes the following later intelligence, from the North China Herald, of the 8th.

The Peking Gazette reaches from July 27 to Aug. 2, and reports repeated victories over the Rebels at Ch'aou-chow, Fung-ch'uen, on the borders of Kwang-se, at Houmen, and Lung-ch'uen, in the northeast of Kwang-tung; the recovery of Poh-lo, a district city east of Canton, and the expulsion of the Rebels from Kwan-yang, who seized upon Tung-ngan, where the Imperial troops are besieging them.

Congress.—In the House of Representatives, last week was spent like the preceding one, in unsuccessful efforts to elect a Speaker. In the Senate, there was nothing done worth mentioning, that body meeting and adjourning from day to day so as to be ready to receive the Message of the President when the House is organized. Of the prospects ahead, the N. Y. *Times* speaks as follows:—

"We can scarcely expect any united and patriotic action during the session, from a body of men who evince so little devotion to the public good as the Opposition have thus far shown. We presume that no party has a working majority in the House. The session is likely, therefore, to be spent in factious wrangling, as discreditable to the parties as it is to the country."

Baker and Poole.—For two or three weeks past the case of the People *vs.* Baker, on a charge of murdering Wm. Poole, has been before a New York Court. It was given to the Jury on Fourth-day of last week, and they, after deliberating more than forty hours on the subject, reported, "that we differ in such character and degree as will preclude all possibility of agreeing." Accordingly they were discharged, and the case will have to be again tried. It is understood that a majority of the jury were in favor of a verdict for murder.

From Kansas we have all sorts of rumors, and only a few additional facts. A large number of men have been under arms—some to protect themselves and freedom, and others to put down anything which opposes slavery. There has been no actual fighting, and it is probable that explanations and acquaintance with the facts will remove the immediate occasion for fighting.

Lands for Education.—The Hon. Henry Barnard, at the last meeting of the Connecticut Historical Society, presented a paper showing that the whole amount of land appropriated by the general Government for educational purposes, to the 1st of January, 1854, was 52,970,131 acres, which, at the minimum price of such lands when first brought into market, represented the munificent sum of $56,000,000, but which, at this time, could not be worth less than $200,000,000. The amount of the donations and subscriptions, by individuals, far exceeds all that had been given by State legislatures. The same gentleman, from a table which he exhibited, showed that the donations and bequests made within the last fifty years by the citizens of Boston alone amounted to upwards of $4,000,000.

A suit was brought in Jersey City on Thursday, before Justice Gardiner, against the New York and Erie Railroad Company, by Lewis Barnum, of Jersey City, for an overcoat which was stolen from his seat in the cars on that road. The train stopped at Port Jervis, and the plaintiff, seeing a notice posted up in the cars that passengers, in order to keep their seats, must have some article of baggage or wearing apparel in them, left his overcoat there while he went into the refreshment saloon. Upon returning he discovered that his overcoat had been stolen. The Company declined to pay for it. He sued them, and the Justice decided in his favor.

SUMMARY.

A letter from Sevastopol says: Any person venturing to speak of the evacuation of the Crimea, would be laughed at. There is evidently no such intention on the part of the allies, for why should the English be constructing magnificent roads, building a new town with stone in the neighborhood of Balaklava, repairing part of the town, and extending the railway, if the country was to be abandoned? Every day 6,000 men are employed in those works. The English army is at present more flourishing and numerous than ever. It numbers about 50,000 men, and reinforcements are daily arriving.

The Ilion *Independent* gives a long account of the robbery, by the aid of chloroform, of Mrs. David Weight, of Toronto, while on the Hudson River Railroad. It was accomplished by a dark-eyed, well-dressed, genteel lady, who, when Mrs. W. complained of a pain in the head, said, "Oh! I have some cologne with me, let me put a little on your temples, it will doubtless relieve you." A porte monnaie, containing considerable money, her ticket, baggage check, and breast-pin, were all taken, and the robber, by means of the check, also stole the baggage.

A Paris physician has just published a pamphlet with the title of "The Physical and Moral Degeneration of the Human Race caused by Vaccination." The startling theory that Jenner, who for more than half a century has enjoyed the reputation of one of the greatest benefactors of humanity that ever existed, was in fact the principal author of cholera and a host of modern diseases, has been broached before, but without exciting much attention.

We are requested to say, says the Newark (N. J.) Daily, that Mr. John B. Gough expects to commence his long contemplated visit to this State on the 15th of January. His engagement here will be shorter than is desirable, his health being unequal to the pressing demands for his services. The arrangement of his New Jersey meetings is left entirely in the hands of Dr. Condict, of Jersey City.

In regard to the provision of the late law by which all letters sent between places within the United States are required to be prepaid, we understand inquiries are made at the department as to whether it applies to letters to be sent to foreign countries; and, if so, whether stamps or stamped envelops only can be used in the prepayment of the latter class of letters. The answer is, that the law in no respect affects letters for foreign countries.

Barnum announces his intention to erect a Lyceum Hotel in New York, embracing within its walls a lecture and concert hall, a library and reading room, restaurant, rooms for instruction in music, and adult evening schools, and a large saloon for the social enjoyment of families and friends, and all this without the use or presence of intoxicating drinks.

Gov. Reeder's remarks in Trenton recently, relative to Kansas, have created a good deal of desire in that city to emigrate to that Territory. A speculation in lands is being got up, which lands will be immediately mapped off into lots and put up for sale. It is proposed to call the town Trenton.

Gov. Clark has pardoned Kissane, who was convicted of forgery on the Chemical Bank some time since. He is pardoned that his testimony may be used in some trials connected with the Martha Washington affair still to come off in some of the Western States. Among those who petitioned for his pardon were the Governors of Ohio and Indiana.

A dispatch dated Utica, Dec. 13, says there was a grand celebration at Boonville to-day in honor of the completion of the Black River and Utica Railroad to that place. About 2,500 persons were present, including many distinguished citizens of Oneida, Jefferson and Lewis Counties. The occasion was one of unusual interest.

A bill has been introduced in the Tennessee Legislature to purchase the Hermitage in the name of the State, and to establish an agricultural and military school at that place, the purchase to require the issue of State bonds to an amount not more than $60,000.

J. C. Fremont, it is said, has taken a house in this city, for the accommodation of himself and family during the winter, that he may enjoy greater facilities in preparing and publishing the results of his Pacific Railway explorations, which will be ready for the press before the adjournment of Congress.

A bill has been presented to the Legislature of Tennessee, levying a tax of five dollars on every gentleman who wears a moustache, and a fine of five dollars upon bachelors over thirty years of age, for the purpose of raising money to increase the school fund.

The Regents of the University, New York, at a meeting held on the 4th, elected Prof. Woolworth, Principal of the State Normal School, to be Secretary of the Board of Regents, in place of Dr. Beck, deceased.

An engineer of one of the gravel trains, named J. Smith, fell between the cars at the depot in Plainfield, N. J., on *Saturday*, Dec. 8th, and was so badly injured that he died before the next morning.

It is a well ascertained fact, that sawdust, into which oil has been spilled, will ignite in a few hours, if exposed to the sun's rays. Any kind of cotton goods saturated with oil, and laid by, will also soon take fire.

In New York, one day last week, at the Novelty Works, the Adriatic's bed-plate was cast—a single piece of iron weighing fifty tons, and the largest bed-plate ever cast in this country.

The annual value of the manufactures sent forth to the markets of the world by French goldsmiths and jewelers is upwards of two millions sterling, ($9,800,000.)

The Richmond *Whig* states that eleven slaves ran away from their owners in that city on Saturday night. Seven of the eleven belonged to Mrs. Susan L. Hatcher.

A call has been issued for a convention of the National American Party, to assemble at Philadelphia, July 10, 1856, to nominate candidates for President and Vice President.

From Athens we hear that at the date of the 26th of October, the cholera was raging violently in several parts of the kingdom.

In Rhode Island, the Supreme Court, during the present term, have granted thirty-six petitions for divorce.

Prof. Charles Davies, of this City, has been appointed Professor of Mathematics in the State Normal School at Albany.

A dispatch dated Boston, Saturday, Dec. 15, says: Oliver King and Warren C. Ayars were arrested last night in Lawrence, by Messrs. Ham and Savage, Boston Police Officers, charged with robbing the American Express, at the West, of $50,000 in gold belonging to the Government, the particulars of which were published some weeks since. Mr. C. White, the express messenger, who had charge of the money between Chicago and Detroit when the money was stolen, is also under arrest, and circumstances strongly implicate him with the others.

The Michigan Central Railroad Company have joined the Illinois Central and Chicago and Burlington Roads in refusing currency to the Wild-Cat money of George Smith and others, who have been banking in the Northwest under Georgia charters. The Southern Michigan Company have for some time past discountenanced this circulation. The only railroad concerns that now afford it favor are the Galena and Chicago, and Chicago and Rock Island Roads.

On Sixth-day, Dec. 14th, the early train on the New Jersey Central Railroad from Somerville to New York, ran off the track at Scotch Plains. One passenger car was thrown down an embankment, smashed, and afterward burned. No one was killed, but quite a number were more or less hurt, among whom were Mahlon Vail, Wm. Dunn, and Messrs. Thorn, Stutsworth, and Pruden, of Plainfield. The injured are all doing well.

A company of farmers from Chester Co., Pa., have recently sent an agent to Minnesota, and purchased 5,000 acres of land between the St. Croix and Mississippi rivers, for $25,000. This land was entered one year since at $1 25 per acre. It is a high rolling prairie, skirted by timber, and was declared last summer by a clergyman from Massachusetts, to be the realization of the poet when he sang of "sweet fields all dressed in living green."

Canada is rapidly becoming more independent of England. Out of 363,000 pounds of tea imported into Canada last year, only 66,000 came by way of sea, the remaining through the United States. Of £301,000 worth of sugar, only £145,000 worth came by sea. Of molasses, only £23,000 out of an import of £66,000. Of coffee, only £5,900 out of an import of £42,000.

The autor of the Widow Bedott papers, in which there is a good deal of fun, was a modest but eccentric young lady, by the name of Miriam Berry, of Whitesboro, N. Y. She married the Rev. B. W. Whicher, of that town, and died young. Certainly none but a woman could ever run on as the widow does.

By census of 1850, the population of Wisconsin was 305,391. A State census has recently been taken, which shows a population of 553,588, estimating Fon du Lac county (not reported) as containing 26,000. The population of Minnesota Territory has doubled since last spring. It is now about 70,000.

In the Missouri Legislature, on the 30th ult., an act was passed to expedite the removal of free negroes from the State, and appropriating $3,000 annually, for ten years, for this purpose, to be expended under the control of the State Colonization Society.

Mr. Brayton, of Buffalo, N. Y., has patented a machine for making nuts for screws. The whole operation is done in an instant, and the nut comes out perfectly smooth and true, and without any crooks or flaws in the iron, the compressing of the bar while being cut making it perfectly solid.

A number of gentlemen of well-known capital and enterprise have formed a company in this city to keep and run omnibuses, not to exceed fifty, for the conveyance and transportation of passengers and their baggage, to and from and between railroad depots, steamboat landings and hotels.

The Baltimore Gas Company has been sentenced to pay a fine of $50, for damages sustained in consequence of the refusal of that corporation to supply the prosecutor's place of business with gas, the ground of refusal being that the previous occupant of the premises had failed to pay for gas furnished by the company.

Among the imports last week, were two bulls from Hamburg, which were valued at $5,000 each, and entered accordingly at the Custom-House, as the cost price at the place of purchase in Germany. It is well for the importer there was no duty on them. Animals for breed are free.

The elegant mansion of Ex-Gov. Hunt, at Lockport, was discovered to be on fire about 11 o'clock on Friday morning, Nov. 30; and, notwithstanding the efforts of the firemen and citizens, it was entirely consumed. It was completed during the past year, and cost about $10,000. There was no insurance upon it.

The New Orleans Fire Companies, feeling themselves aggrieved by the treatment which they have received from the city authorities, marched in procession to Lafayette Square, on the 1st inst., and surrendered to the city their fire apparatus, so that the town is now totally without a Fire Department.

The Illinois Central Railroad Company has sold 494,121 acres of the 2,595,000 acres donated to it by the General Government. Much of the land had been in market 25 or 30 years at $1 25 per acre; but since the completion of the railroad it has sold at an average of $10 72 per acre.

The Governor of South Carolina recommends an amelioration of the law in regard to colored seamen, the subjects of foreign nations, and the preservation of all the rigid restrictions in regard to such as come among them from the North.

25,000,000 sponges were sent to New York market from Florida last year. Five years ago they cost 12 1-2 cents a pound in Florida, and now 40 cents. The annual value of the shipment to New York is $15,000.

The fare of the New York and New Haven Railroad has been raised about 10 per cent., commencing with the 1st inst. It is now $1 65 over the whole road, or $1 70 if paid in the cars. Yearly commutation tickets, which for a while were only $70, are now $100.

The Erie Railroad Company has purchased 800 acres at Jersey City, and 300 acres on Bergen Hights, for $300,000; to be used in the straitening of their road.

The U. S. Post-Office Department is said to show a deficit of $2,500,000, having added, during the year, some 3,700 miles of road service to the operation of the department.

The Boston Advertiser publishes a letter from the Greek island of Zante, gratefully acknowledging the receipt of 560 sacks of Indian corn, contributed by the inhabitants of Boston and other cities in the United States, for the relief of the sufferers from famine in that island.

A grand Concert of vocal and instrumental music was held at the Academy of Music, in New York, on Sunday evening, Dec. 16th. The object was a charitable one, which will probably cover the sin of the thing.

A correspondent of the Petersburg (Va.) Express says that the contributions for the yellow fever sufferers in Norfolk and Portsmouth, have amounted to $310,000, of which Portsmouth received $80,000.

A verdict of $7,000 has been awarded in favor of Malinda Winn, against the Macon and Western Railroad. The engine came in collision with a carriage containing Mrs. Winn and three children.

The loss by the burning of W. O. Walker's grain warehouse in Chicago, is estimated at from $120,000 to $150,000. The building was valued at from $30,000 to $50,000, and contained a large amount of grain and wool.

There was a large fire in Canal-st., New York, on the 15th inst., which destroyed Lyman & Co.'s large steam saw-mill. Damage about $100,000.

Martin Kosta, the naturalized Hungarian, has arrived at Galveston, Texas, from Chicago, with the intention of making Texas his future residence.

New York Markets—Dec. 17, 1855.

Ashes—Pots $7 50 per 100 lbs.; Pearls 8 25 a 8 50

Flour and Meal—Flour, 8 37 a 8 62 for State, 8 31 a 8 43 for mixed Western, 8 37 a 8 87 for Michigan and Ohio, 9 75 a 11 50 for extra Geneseė. Rye Flour 6 00 a 7 50. Corn Meal 4 25 a 4 31 for Jersey.

Grain—Wheat, 2 20 for Southern and Western white, 1 94 for western red. Rye 1 30 a 1 32. Oats 49 a 51c for State, 52 a 54c for Western. Corn 97 a 99c. for Western mixed, 104 for Southern yellow.

Provisions—Pork, 18 00 for prime, 20 00 for mess. Beef 9 00 a 10 00 for country prime, 10 50 a 12 00 for country mess. Butter 18 a 23c. for Ohio, 23 a 28c. for common to very good State, 28 a 30c. for prime. Cheese 9½ a 11½c.

The past week shows a decline in the price of many articles—in Flour of 25 a 50c. per bbl.; in Wheat of about 5c. per bushel; in Corn, Western mixed, of 2c. per bushel; in Oats of 2c. per bushel; and in Barley of 2c. a 3c. per bushel. Pork is quite abundant, and prices have sunk during the week 75c. a $1 per bbl. Salt Beef is also 25c. a 50c. per bbl. cheaper. Lard has gone up ⅛c. per lb. Butter and Cheese are firm but unchanged in price.

MARRIED,

At Shiloh, N. J, on the evening of the 8th inst., by Rev. W. B. Gillett, Mr. Gideon Smalley, of New Market, N. J., to Miss Clarissa Frazeur, of Shiloh, N. J.

On Saturday, Dec. 1st, by Rev. S. S. Drake, Mr. David Lenox, to Mrs. Jemima P. Cole, all of Plainfield, N. J.

In this city, on Monday, the 10th inst., by the Rev. T. Armitage, Mr. Stephen Carver to Miss Phillipena Frey, all of the above place.

DIED,

At Snowhill, Franklin County, Pennsylvania, on Sabbath-day, the 1st of December, 1855, Elizabeth Burger, wife of Abraham Burger, of dyspepsia and rheumatism, after a painful sickness of eleven weeks confinement to her bed, aged 65 years and 1 month. Sister Burger embraced religion in early life, and was a worthy member of the German Seventh-day Baptist church at Snowhill upward of 40 years. Her suffering was very great and painful, yet she bore it patiently. She retained her senses to the last, when her spirit winged its flight to the realms of glory. She has left a husband, and many friends and relatives, to mourn her loss.

In Independence, Allegany Co., N. Y., Mr. Joel Crandall, of typhoid fever, in the 61st year of his age. Bro. Crandall has been for many years a worthy member of the Seventh-day Baptist Church of Independence. That he was highly esteemed by all who knew him, was evident from the multitude who attended his funeral. J. K.

In Alfred, N. Y., Dec. 5th Randall C. Wilbor, of Potter Co., Pa., in the 37th year of his age. He was a member of the 2d Alfred Church, and died in the hope of a blissful immortality. N. V. H.

WILLIAM M. ROGERS, Treasurer.

Bills.—We are sending bills to those who owe for the Sabbath Recorder up to the end of volume twelve, now more than half completed. If any errors are discovered in them, please notify us immediately, and the proper corrections will be cheerfully made. If they are correct, please make it convenient soon to remit the amounts. The money is needed.

Hudson River Railroad.

TRAINS leave Chambers street daily, for Albany and Troy. On and after MONDAY, Nov. 19, 1855, the trains will run as follows: Express Train 7 A. M., connecting with Northern and Western Trains. Mail Train 8 30 A. M. Through Way Train, 12 M. Express Train 5 P. M. For Hudson 3 30 P. M. For Poughkeepsie—Way Freight and Passenger Train, 12 30 P. M. For Peekskill, 5 30 P. M. For Sing Sing, at 4 20 and 9 P. M. For Dobbs' Ferry, 7 15 and 11 A. M. The Dobbs' Ferry, Sing Sing, Peekskill, and Hudson Trains stop at all the Way Stations. Passengers taken at Chambers, Canal, Christopher, and 31st streets. SUNDAY MAIL TRAIN at 4 P. M. from Canal street, for Albany, stopping at all the Mail Stations.

M. L. SYKES, Jr., Superintendent.

Central Railroad of New Jersey,

IN connection with the Lehigh Valley Railroad, opened to Mauch Chunk—WINTER ARRANGEMENT, commencing Nov. 19, 1855. Leave New York for Mauch Chunk from Pier No. 2 North River, at 7 30 A. M. For Easton, at 7 30 A. M. and 3 15 P. M. For Somerville, at 7 30 and 10 45 A. M., and 3 15 and 4 30 P. M. The above trains connect at Elizabeth with trains on the New Jersey Railroad, leaving New York from foot of Courtlandt street, at 7 30 and 11 A. M., 3 and 4 P. M.

Leave Plainfield for New York at 7 05 and 9 05 A. M., and 1 40 and 6 13 P. M.

JOHN O. STERNS, Superintendent.

Board Meetings.

The next Quarterly Meetings of the Executive Boards of the Seventh day Baptist Missionary, Tract, and Publishing Societies, will be held at No 80 Seventh-st., New York, on the second Fourth-day in January, 1856, commencing at 10 o'clock, A. M.

Geo. B. Utter, Sec.

☞ A meeting of the Executive Board of the Education Society will be held in New York on the day following the above-named meetings.

Rogers' Hotel and Dining Saloons,

Carpet Warehouse.

YOUNG & JAYNE, No. 364 Broadway, corner of Franklin Street, (opposite Taylor's Saloon,) offer for sale a very choice and extensive assortment of

CARPETINGS, OIL-CLOTHS, CURTAIN MATERIALS, MATTRESSES, &c.,

at the lowest rates. Purchasers are respectfully solicited to examine the stock.

Misrepresentations, either expressed or implied, are strictly prohibited in this establishment.

YOUNG & JAYNE,
364 Broadway, corner of Franklin-st.

N. B.—Churches and clergymen furnished at wholesale prices. Sept 27—3 m.

Farm for Sale,

CONTAINING about 100 acres, with a fair proportion of woodland, a small orchard of grafted fruit, and a comfortable dwelling and outhouses. It is situated about four miles north of Westerly, R. I., and within a mile of each of the flourishing manufacturing villages of Potter Hill and Ashaway. There are several other manufacturing establishments near, affording a ready market, in the immediate vicinity, for every species of produce. It is convenient to the first Hopkinton Church, as well as to the very excellent male district school.

It will be sold with or without the stock and farming implements, and possession given the ensuing winter or spring, if desired. To those wishing to secure a quiet home in an enterprising neighborhood, and surrounded by such comforts as can only be found in an old settled and thickly populated country, this affords an opportunity seldom offered. For terms and other particulars apply to the subscriber on the premises, or address John E Potter, No. 15 Sansom-st., Philadelphia, Pa. Benjamin Potter, Ashaway, R. I.
11tf.

Good Crops, Good Prices, Good Books, and Good Times.

BELCHER'S HISTORY OF ALL THE RELIGIOUS DENOMINATIONS IN THE UNITED STATES. Large Octavo 1,024 pp. and nearly 200 engravings.

FLEETWOOD'S LIFE OF CHRIST AND HIS APOSTLES. 704 pp. and 25 engravings.

Probably there has never been a more favorable opening for the sale of books than the present. Large crops have been produced throughout the country, and these are bringing good prices; every body is in high spirits.

The above volumes are printed on fair paper, in clear, large type, are handsomely illustrated, and bound in a neat and attractive style. More than all, their contents bear the ring of the true metal, enabling the agent to sell them to the highest in the land as well as the humblest, with the gratifying feeling on his part that he is conferring a favor rather than receiving one. They have gained and are gaining a world-wide fame; and being sold exclusively by subscription, the agent has the entire benefit of their popularity.

Canvassers, and those wishing to become such, will find it for their interest to secure an agency. We can offer them with other popular works on the most favorable terms. For further particulars apply to or address either of the

Magnificent Floral Gift.

SUBSCRIBERS to the "CHRISTIAN DIADEM" for 1855, are entitled to a splendid steel engraving, the ☞ LILLY AND THE ROSE PERSONIFIED, being given *gratis* to all old and new subscribers who send us only ONE DOLLAR, by mail or otherwise.

Six Copies for Five Dollars.

The Diadem is a strictly moral and religious work —designed for the Christian family without regard to any particular denomination.

FIFTY ENERGETIC BUSINESS MEN are wanted immediately to circulate the "Diadem" throughout the Eastern and Western States. To such as can send good references the very best inducements will be given. Address Z. P. HATCH, Publisher, 9 Spruce street, New York. May 24—3m.

Seventh-day Baptist Publishing Soc.'s Publications.

The Sabbath Recorder,

Published Weekly.

Terms—$2 00 per Annum, in Advance.

The Sabbath Recorder is devoted to the exposition and vindication of the views and movements of the Seventh-day Baptist Denomination. It aims to promote vital piety and vigorous benevolent action, at the same time that it urges obedience to the commandments of God and the faith of Jesus. Its columns are open to the advocacy of all reformatory measures which seem likely to improve the condition of society, diffuse knowledge, reclaim the inebriate, and enfranchise the enslaved. In its Literary and Intelligence Departments, care is taken to furnish matter adapted to the wants and tastes of every class of readers. As a Religious and Family Newspaper, it is intended that the *Recorder* shall rank among the best.

The Sabbath-School Visitor,

Published Monthly.

Terms per annum—Invariably in advance:

One copy	$ 25
Five copies to one address	1 00
Twelve copies to one address	2 00
Twenty copies to one address	3 00
Twenty-eight copies to one address	4 00
Forty copies to one address	5 00

The Seventh-day Baptist Memorial,

Published Quarterly.

Terms—$1 00 a Year, 25 Cents a Number.

Each number of the *Memorial* will contain a lithographic portrait of a Seventh-day Baptist preacher, together with a variety of historical, biographical, and statistical matter, designed to illustrate the rise, progress, and present condition of the Seventh-day Baptist Denomination. Wood-cuts of meeting-houses will be introduced from time to time in connection with the history of the churches.

[The first, second, and third volumes of the *Memorial*—being for the years 1852-3-4—may be had bound, for the subscription price and the cost of binding.]

The Carol:

A Collection of original and selected Music and Hymns, for the use of Sabbath-Schools, Social Religious Meetings, and Families. Compiled by Lucius Crandall. 128 pages octavo; price 35 cents per copy.

The *Carol* is designed principally for Sabbath-Schools, and contains Music and Hymns adapted to all ordinary occasions, and to such special occasions as the sickness of teachers, funerals, anniversaries, &c. A number of pieces suitable to social and public worship, together with a few Temperance Songs, are included in the book. It contains 93 tunes, and 156 hymns.

☞ Orders and remittances for the above should be addressed to the General Agent, George B. Utter, No. 9 Spruce-st., New York.

Postage.

The postage on the Sabbath Recorder is 13 cents a year in the State of New York, and 26 cents in any other part of the United States, payable quarterly or yearly in advance.

The postage on the Sabbath-School Visitor is 3 cents a year in the State of New York, and 6 cents in any other part of the United States, payable in advance.

The postage on the Seventh-day Baptist Memorial is 2 cents a year in any part of the United States when paid in advance, or 4 cents a year when not paid in advance.

Miscellaneous.

Camels for this Country.

At the meeting of the Farmer's Club connected with the American Institute, on the 4th Dec., considerable time was spent in talking about the efforts now being made to introduce and acclimate Camels in this country.

Mr. Disturnell referred to the value of camels in the southwestern portions of this country as beasts of burden for travelers, and especially for the Army. The climate and soil is equally well adapted to their use with the southern regions of Europe, Western Asia and Northern Africa. In March, 1855, the Government appropriated $30,000, to be expended under the direction of the War Department, in introducing camels and dromedaries for the use of the Army in the West and Southwest. A vessel was fitted out and placed under the charge of Major Wayne, who is now in the Mediterranean, with a corps of officers, examining the different species, and making purchases. The Bey of Tunis received Major Wayne with much kindness, and showed a lively interest in the subject of Agriculture generally. He presented the expedition with two superb camels, which, with a third one purchased, had, at last advices, been on shipboard sixty-five days, and were in excellent health and flesh.

The vessel visited Smyrna and other ports, and at last reports was in Constantinople. The Turkish Sultan had offered a cargo of the best camels in that country to be sent over in furtherance of the enterprise. Around Constantinople, in the Crimea, and throughout that country generally, the Bactrian, or two-humped camels are most generally used.

Mr. Disturnell stated that a Camel Company was chartered by the Legislature of New York in 1854, and three Commissioners were appointed who were now pursuing their investigations.

He then introduced a map, and showed that many parts of this country corresponded exactly with a portion of Europe, Africa and Asia. Thus, Egypt had its counterpart in Louisiana and Texas; Turkey corresponded with Florida; the Crimea with Lake Champlain, New York; Constantinople with New York City; Cairo with St. Augustine, Fla., &c. Chicago is a great central point between Hudson's Bay on the north, the Atlantic Ocean on the east, the Gulf of Mexico on the south, and the Rocky Mountains on the west. The camel, horse and wild ass are indigenous to Arabia. The climate, soil and food have much to do with hardihood—the horse in Arabia being much more hardy than elsewhere. The Arabian camel has but one hump, the dromedary has but one, while the Bactrian camel has two humps. The Arabian camel, without green or moist food, cannot endure deprivation of water more than four days. The natural abode of the camel is in dry, sandy regions. Mr. Bartlett, of the Mexican Survey, is quite confident the camel is peculiarly adapted and quite essential to travel in New Mexico, Western Texas, &c.

Mr. Edward Magauran was next introduced, and went into a full and lengthy discussion of the peculiarities, &c., of the camel. Himself and Mr. G. King, two of the Commissioners of the American Camel Company, had been for sometime making extensive investigations on this subject, which they are still continuing. Mr. M. states that the camel feeds upon the cactus, and drinks brackish water, two qualities eminently fitting this animal for crossing the plains to the Rocky Mountains. The camel's habitation is not limited by climate, but by the character of the surface. By shoeing it will travel and do well in any locality. Some of the most healthy and best camels are found in the old regions of Asiatic Russia.

They are adapted to draft—a pair will draw 3,600 lbs. with ease. The dromedary will "amble" 80 miles, or gallop 200 miles in 24 hours. Camels' flesh and milk are superior articles of food. Their tallow is nearly equal to spermacetti, or wax, in hardness. They are raised at low cost, need no shelter or shoeing, and their equipage is very cheap. They are long-lived; are little subject to disease; have great powers of endurance; are sure-footed; are not easily scared; will not get up night stampedes; and if stolen by inexperienced Indians cannot be driven rapidly away. They make capital sentry posts, as their riders are raised up so high as to have a wide range of vision. The high Tablelands of New Mexico and Texas are just like their native countries.

It has also been proved that when imported here they live out their natural term of life. The horse, dog, and sheep are not indigenous here, but have become so acclimated that they even surpass those remaining in their natural abodes. The camel promises even more than those animals. The Bactrian camels are fully domesticated, and thrive well in colder climtaes in Russia than that prevailing in the Northwestern Territory of the United States.

Mr. Magauran gave a long list of writers who had described the camel in various countries, in the Canary Isles, in Morocco, in Algeria, &c., with extracts from their contributions, all of which showed that the company have put their work into the hands of thorough men as Commissioners.

The only articles upon the camel, of any account, that have appeared in this country, are, one in the Patent Office Report, 1853, and one by Mr. Magauran, in "Hunt's Merchants' Magazine" for June, 1854. Mr. Marsh, former Minister to Constantinople, has been very much interested in this subject and has done much to stimulate Government to the efforts now making.

The Jireed.

This is a game or exercise of Arab horsemen, which is in great repute. The only plaything needed is a heavy cane about three feet in length. Two horsemen are enough for the play, though twenty or thirty often engage in it upon the same turf. At the beginning the cane is in the hand of the hinder horseman, who, in hot pursuit of his antagonist, hurls it endwise at his head, when some twenty or thirty feet from him. Ordinarily the practiced ear of the foremost enables him to know when the cane is coming, when he bows upon the neck of his steed and the cane passes over his back and comes to the ground before him; but if he be a moment too late, the cane which is generally thrown with much precision and not a little force, strikes him, when a shout from the spectators is the triumph awarded to the one who threw the cane. The cane is generally picked up by a spectator, and the pursuer then immediately becomes the pursued, and thus the play is sometimes continued till all engaged are literally smoking with perspiration from the violence of their exertions. It is generally conducted in good feeling, though instances sometimes occur when intentional mischief is done. [Journal of Missions.

Winter Care of Fruit Trees.

Yesterday we crossed an orchard, by chance, the owner of which was already preparing his trees to endure the frosts of Winter—as he supposed. But, according to our experience as well as theory, he was taking the most direct method of giving them the least possible chance "for living through." As he was but a beginner, we could more readily excuse him for following what at first thought might seem to be a feasible plan. "Somebody" had told him that the frost would have less effect upon the roots if they were kept imbedded in water through the winter, and he was heaping up and packing solid a circular bank of earth four or five feet distant from the body of each tree, so as to hold a pool of water even with the surface of the ground. Nothing could be more unphilosophical, as a little reflection will show.

Every healthy, vigorous tree or plant, is supplied with an almost infinite number of fibrous roots, which penetrate every part of the soil, and gather sap, and along with it a supply of organic, and, perhaps, of inorganic food. The expansion and contraction of the s[illegible] during winter, tear and break great num[illegible]f the minute roots, a majority of which are so small as to be imperceptible to the unaided eye. Where there is a great number of alternations of heat and cold, so many of these roots are broken as to leave the tree in a sickly condition in the Spring, and it should be a careful study to protect them from such action of frost. Should there be but a slight degree of frost, not more than enough to freeze water half an inch to an inch in depth, a body of water around the roots, would doubtless act as a preserver, and from this fact probably arose the practice above alluded to. But in this climate we have to guard against foot-deep instead of inch-deep frosts.

A simple experiment will show the difference between a dry and a wet soil around the base of a tree. Take three cups, each nine inches deep; fill each of them within one inch of the top—the first with water, the second with earth, satured with water, and the third with moist, but nearly dry earth—all three cold enough to freeze them solid. In the first, the water, in changing to ice will expand so as to fill up the entire measure. The moist earth in the second will have expanded nearly as much, while the comparatively dry earth will scarcely expand an eighth of an inch.

The experiment, or the principle which it illustrates, viz: that water in freezing expands about one-eighth of its bulk, while dry solids do not thus expand, has a direct bearing upon the winter treatment of trees. Instead of retaining water around them, it is better to dig a ditch (at a sufficient distance to avoid cutting the roots,) to convey the water away and leave the soil dry.

It is sometimes even advisable to bank up the earth eight or ten inches high around the body of the tree, and slope it off for a few feet. This will both carry off the water and afford additional warmth to the roots.

For giving increased warmth it is well worth while to mulch the ground well with straw, muck, or sods; that is, put on a thick coating of any of these substances, to be in part remove in the Spring, and in part worked into the soil. This will keep out the frost, and thus save the roots from the breaking, tearing effect of the frost, and also give additional richness to the soil. When straw is used it should be wet, and even a little rotten, and not be placed too thick against the body of the tree, lest it should furnish a nest for mice.

We repeat, the most essential considerations in the winter protection of trees, are to keep the soil dry, and shields the roots from frost.

Agricultural Benefits of Snow.

It is with some feelings of regret and discomfort, that farmers, as well as other men, regard the approach of winter. That during several months, there must continue an exhausting drain upon the accumulations of the year, without any replenishing streams to counterbalance its effects, is a fact not pleasant to contemplate, especially if an individual happens to be straitened in supply. Hence, when a storm of snow occurs early in the season, the inquiry generally arises, of what benefit is snow? We see its evil effects in the wretched state in which it places our roads; in the strained and broken manner it leaves our trees, especially if it comes before they have been defoliated by the wind and frost; in the downcast and sorry look it gives to all animated nature, man included.

It is not our purpose to assert the value of an untimely snow, any more than that of an untimely frost. Any one of the phenomena of nature may be attended with evil consequences, however beneficial and necessary in a general way. Too much rain or too little, too backward a season or too forward; and a thousand things generally beneficial, may be specially injurious. Nature works by general laws, and in their impartial administration, does not stop to inquire whether or not this man's seed is sown, or that man's harvest is secure.

Snow, in latitudes where the temperature is sufficiently low for it to fall, is of vital importance to vegetable life. Its peculiarly porous structure renders it an exceedingly bad conductor of caloric; and hence, when covering anything either warm or cold, and greatly differing in temperature from the snow itself, or from surrounding objects, it requires a long period of time for the equilibrium to be restored.

If the earth becomes early covered with snow, and before the ground is frozen, it will remain above freezing point the entire winter, even though the atmospheric temperature should go down many degrees below zero. So decided is its protection, that if the soil be penetrated with frost to the depth of several inches before the fall of snow comes on, the caloric of the subsoil will remove the frost, notwithstanding the atmosphere has not at any time risen much above freezing point The ground had been frozen like a stone before the snow fell upon it, the weather continuing many weeks below freezing point; and yet afterwards, on removing the snow, the ground was found thawed out, and easily lifted with a shovel. Of course, a boy's reason was given for this circumstance, viz: that the snow was warm, and had thawed out the ground, instead of the true one, that its non-conducting properties had intercepted the radiation of the heat from the lower strata of the soil, and this, acting upon the upper stratum, had removed the frost.

Alpine plants, that outlive the severest winters of mountain districts because protected by the snow, have perished in the comparatively warm climate in England for want of such protection. We had a good illustration of the genial influences of snow in our own country last winter. The thermometer went down to a point unprecedented in our history, being no less than twenty-two degrees below zero. That was a point of depression indicated for the first time in a record of sixty-seven years, and for how long a period previously, it is impossible to tell. Of course, the peach crop was utterly ruined, and orchards, which were wont to yield hundreds of bushels of splendid fruit, produced this year, nothing but leaves. At our horticultural show, however, there were exhibited several magnificent specimens of peaches, which, upon inquiry, were found in every instance to have been produced upon limbs that had, by a fortunate accident, been bent down and covered with a snow-drift. The temperature in their position did not probably fall to zero, and if they could have laid upon the ground, would barely have reached freezing point. The earth at this severe period was mantled with a heavy fall, and we tremble at the possible consequences which might have ensued in case the ground had been exposed and denuded. As it was, the frost did not penetrate to an unusual depth, and the wheat fields and the meadows came out in the spring, fresh and green from their long winter slumbers.

Snow has been called the poor man's manure; but we are not aware that analysis shows it to possess any fructifying elements not contained in rain water. The gradual manner of its melting away enables the soil to absorb a greater portion, and thus become thoroughly srturated at the season when such a result is desirable. The absorption of caloric, which becomes latent in melting snow, prevents a sudden transition from the chill of winter to the warmth of spring. If it were not for this, vegetation would start too early, and all the fruits and tender plants would be nipped by vernal frosts. As the seasons are now constituted, the sun must at least cross the equator, and the length of days exceed that of the nights, before the snow melts from the hill-side, and disappears in the vale. It has then performed its mission, a gentle and a merciful one, whatever may have been its chill and forbidding aspect in the early autumn.

A locality that experiences abundant falls of snow, which cover the ground uniformly through the winter, will admit of the cultivation of many things that cannot be grown in other places with no lower temperature, but destitute of snow; and many countries would be, without its protecting influences, mere regions of waste and desolation.

[Rural New Yorker.

The Law of New Jersey relative to Intestate Estates.

Our readers would perhaps like to know to whom their property would go, in case they do not dispose of it by Will themselves; and we therefore lay before them the main provisions of the New Jersey statutes on this subject.

A person who dies without making a Will, is said to die *intestate*. Those to whom his *real estate* goes, are said to take it by *descent*; those who inherit the personal property take it by *distribution*; the real estate descends, and the personal property is distributed.

If the intestate leaves a widow, she is entitled to the use, during her life, of the third part of all the lands owned by her husband at the time of his death. This is the wife's *dower*; and such 'dower' may be barred by jointure; or by pecuniary or other provision, if she assent to it in lieu of dower. If her husband has exchanged lands she cannot have dower in both, but may elect; and if the lands have been on a mortgage given for purchase money, she can only have dower in the surplus. After the widow's dower is set off, the residue of the real estate is liable for the debts of the intestate, in case they should not be paid out of the personal property; and such residue, together with the widow's third, after her death, then descends as follows:—

1. To the children in equal parts; but if any of such children shall have died leaving issue, then such issue are to take the share which the parent would have received if living. If a child have an advance of land from the parent in his lifetime, that shall be considered as so much of that child's share in the estate.

2. If the intestate die without lawful issue, then the inheritance goes to his brothers and sisters equally, if there be any—and if any be dead the share such one, if living, would take, goes to the child or children of the person so deceased.

3. If there be no brothers or sisters, or any lawful issue of such brother or sister living, the inheritance goes to the father, unless the inheritance came from the mother, in which case it will descend as if no farther were living.

4. If the father be not living, or be not entitled to take under the last provision, then the inheritance goes to the mother for life, and after her death descends as if no mother had been living.

5. If there be none of the persons above named living capable of inheriting, then the inheritance descends to the brothers or sisters of the half-blood, if any there be equally—and the child or children of any such brother or sister as may be dead, will take the share such brother or sister would have taken, if living—and all those who are not of the blood of the ancestors from whom the laws are derived are excluded.

6. If there be none of the foregoing persons living capable of taking, the inheritance will decend to the persons of equal degree of consanguinity to the intestate—unless the lands were derived from some ancestors, in which case those who are not of the blood of suph ancestors will not take.

7. Posthumous children in all cases inherit as if born in the lifetime of their respective parents.

The personal property of the intestate is to be first applied to pay his debts, and the residue is to be distributed as follows:

1. One third to the widow and the rest in equal parts to the children if living, and the children of such as may be dead take the portion which would have belonged to the parent.

2. If there be no children, nor any legal representative of them, the widow takes half, and the other half is distributed among the next of kin, as mentioned below.

3. If their be no widow, the whole goes to the children and their legal representatives.

4. If there be no widow, and no children, and no representatives of a child, then the whole is distributed to the next of kin, in equal degree to the deceased and their legal representatives.

5. If there be a widow and a father, but no child or descendant, the widow takes half and the father one-half, but if there be no widow, the father takes the whole.

6. If the intestate leaves a mother, but no descendant or father, the widow takes half and the mother half; but if there be no widow the mother takes the whole.

7. If there be no widow, and a mother, and brothers and sisters, the mother takes an equal share with the brothers or sisters, or the representatives of them.

8. Grandfathers or grandmothers take in exclusion of uncles or aunts.

9. Uncle and aunts, and nephews and nieces take equally.

10. Advancements of real or personal property made to a child before the death of the intestate, are to be taken into the account, so as to make the portion of the children equal.

The foregoing are the provisions of our laws in the main, omitting some minutiæ which are not of general interest. Most of our readers will see how their property will be disposed of, if they neglect to dispose of it themselves. If they do not like the above provisions, they should lose no time in making their wills; there are plenty of legal gentlemen who, for a fee of five or ten dollars, will help them to dispose of their estates precisely as they would wish. [Sussex Herald.

Fatal Thrist for Discovery.

From one of our exchanges we learn that a recent traveler has been lost in the crater of Vesuvius, forfeiting life by excess of curiosity:

Some Germans of good family, on a recent occasion, had toiled to the summit of Mount Vesuvius, and after resting themselves on that sulphurous bed, they descended the steep incline to the mouth of the crater. There was little smoke that day, and the scientific gentlemen began to get into danger without being aware of it. The guides having had quite enough of soft ashes and hard work in the ascent, sat down on the upper rim of the crater, not feeling inclined for more exertion. So many people had gone to peep into this chimney of the infernal regions, day after day without an accident, that these lazy guides preferred some sour wine, and a slice or two of lemon sprinkled over with salt, a very common comestible amongst the lower orders of Neapolitans, and a little siesta, to looking after the souls and bodies of those entrusted to them. One of the most adventurous of the Germans, finding he could bear the little sulphur which seemed emitted from the crater, resolved to penetrate further; but scarcely had he placed his foot upon an apparently solid projection, than the whole crumbled beneath him, and he was precipitated at least one hundred feet! The interior of the crater seems as soft as the exterior, for the first words heard from the unfortunate man were, that "he was not hurt." In vain he tried to extricate himself; whatever he grasped mouldered in his grasp. He could not regain his feet—of this his companions above were informed. They seemed to have become more stupified than the unfortunate victim; for instead of dispatching the guide to the Observatory or the Hermitage for ropes, or assistance of some kind, they stood listening to their friend below, who gave them the idea of going elsewhere than where they remained useless and spell-bound. There is everything in Naples but what is required; and at the Observatory, although ropes must always be in readiness, and, at least, of precautionary utility, yet none could be obtained either there or at the Hermitage; and the guides were obliged to go to Resina for that which ought always to be at hand. In the meantime, the sulphur began to operate upon the poor fellow in the crater, and he felt himself gradually sinking, not only in strength but in position. With a wonderful self-command he took leave of his friends, being perfectly certain he could not survive the natural dilatory delay of the Neapolitans. For two long hours did he survive, when his voice became feebler and feebler. Perhaps as he by slow degrees slid deeper into the crater, hope gradually vanished—until the voice was entirely lost. An occasional groan was heard, until after the expiration of the above time, when all was silent. The body was many hours after rescued by a guide, who descended two hundred feet before he found it. Of course it was perfectly lifeless—the sulphur had suffocated the poor fellow.

Setting Type by Steam.

It may not be known beyond a very narrow circle that five full-sized and expensive machines are in full tide of operation in setting type, in the establishment of Mr. Trow, in this city. There is believed to be one in use to some extent in Paris; but with this exception these are the only machines actually working for this purpose within our knowledge. These five give employment to ten large and an equal number of small girls, with a foreman to oversee and one additional female to supply the machines with type. Two compositors alternately relieve each other, first setting and next justifying a quantity of matter, while the smaller attendants busy themselves in distributing and arranging the type for the machines. Three thousand ems of long primer have been set in an hour, or twenty-six thousand in a day of ten hours, by one girl; but much depends, of course, on the skill of the operator. The extreme capacity of the machine is ten thousand per hour, equal to about a column and a half of this type in the Tribune; but this limit will probably never be reached. The machine is driven by a band on a pulley, and the labor of setting consists in fingering a set of keys like a piano. Each kind is carried forward on a separate band, and deposited continuously on a single tape, running diagonally across the line of the first. From this second tape they are dropped into a wheel, which in turn, leaves them standing single file on a long galley, from which they are taken and made up into lines of proper length. The enterprise has not until quite lately been made to assume a form in which it appears pecuniarily profitable, and even yet must be reckoned as a hopeful experiment rather than a triumphant success. [Tribune.

Cultivation of Cranbarries.

At the New Hampshire State Fair, Richard Hall, of Auburn, exhibited some cultivated cranberries raised in a run not very wet, but bordering upon the high land. His process of cultivation he stated to be this: To remove the surface of the ground some three inches in depth, which in this case was carted to the pig-sty; he then took sand from the shore of a pond, and spread it plentifully upon the ground, and set his vines two feet apart; the second year after this he had a plentiful crop. This was done three years ago, and the vines now cover the ground completely, no grass or weeds being present. He has done nothing to the vines since, and says that the average yield will be, the present year, two bushels of cranberries to every ten feet square. He esteems this the most profitable crop he can cultivate. He has five acres of this land, which he intends to appropriate to this use.

When it is considered that this fruit is now sold at not less than two dollars a bushel in our markets, this may be considered as farming to some purpose and profit. There are thousands of acres in New England which should undergo the same treatment. By such a course a great deal of wealth would be added to the community annually from the investment of a small amount of capital. Mr. Hall also stated that some cranberries in the immediate vicinity, growing naturally, had been destroyed by the frosts, while those cultivated were not affected in the least.

VARIETY.

From an English Almanac we cut a receipt for mending china, a long time since, and the opportunity having occurred for trying, we found it admirable, the fracture scarcely being visible after the article was repaired. It is thus made:—Take a very thick solution of gum arabic in water, and stir into it plaster of Paris until the mixture becomes a viscious paste. Apply it with a brush to the fractured edges, and stick them together. In three days the article cannot again be broken in the same place. The whiteness of the cement renders it doubly valuable.

It is stated that the late Leonard Jarvis, of Baltimore, has bequeathed one-half of the Melange edifice, on Baltimore st., in that city, to the President and Governors of the Harvard University, and the other half to the Baltimore Humane Impartial Society, the House of Refuge, the Aged Women's House, and the Orphans' Asylum. This estate, which is estimated at $20,000 per annum, and increasing, will be the property of Mr. Jarvis' widow during her lifetime, but, after her death, will revert to the above institutions.

Converse not with a liar or a swearer, or a man of obscene or wanton language; for either he will corrupt you, or at least it will hazard your reputation to be one of the like making; and if it doth neither, yet it will fill your memory with such discourses that it will be troublesome to you in after-time; and the returns of the remembrance of the passages which you have long since heard of this nature will haunt you when your thoughts should be better employed.

The fly-spider, says philosophy, lays an egg as long as itself. The caterpillar has four thousand and forty-one muscles. The eye of a drone has fourteen thousand mirrors in it; and to effect the respiration of a carp, thirteen thousand three hundred arteries, veins, bones, etc., are necessary.

A man has been convicted at Wilmington, Del., of stealing a pocket-book, and sentenced to pay as restitution money, $13 66, to be whipped with twelve lashes, to be imprisoned three months, and to wear a convict's jacket for the space of six months.

Morton Peto, the treasurer of the English Baptist Missionary Society, gives away annually, from his own resources, about $170,000, mostly for the building of churches. He must have a large income, as well as a benevolent heart.

A friend asked a pretty little child of six years old, "Which do you love the best—your cat or your doll?" The little girl thought some before answering, and then whispered in the ear of the questioner, "I love my cat best, but please don't tell my doll!"

When some of his courtiers endeavored to excite Philip the Good to punish a prelate who had used him ill—"I know," said he, "that I can revenge myself; but it's a fine thing to have vengeance in one's power and not to use it."

I beg you to take to heart, (says Kossuth,) one maxim, which for myself I have ever observed, and ever shall—it is, never to say more than is necessary. The unspoken word never does harm; what is once uttered cannot be recalled, and no man can foresee its consequences.

Milton and his widow only received $115 for the copyright of "Paradise Lost," while the piece of paper signed by him, containing his contract with the bookseller, was recently bought for $525, or more than four times the author's receipts.

Home is emphatically the poor man's paradise. The rich, with their many resources, too often live away from the hearth-stone, in heart, if not in person; but to the virtuous poor, domestic ties are the only legitimate and positive source of happiness short of that holier heaven, which is the soul's home.

There are moments in human life when persons, linked together in a series of events, may form *tableaux*, which stand out from ordinary grouping, like an illustration stamped in strong light and shadow on the book of destiny.

A car on the Augusta Railroad was crushed on Saturday near Charleston. It contained a party of emancipated negroes en route for Baltimore to sail for Liberia. Several of them were seriously injured.

The all-seeing One, who judges the thought as well as the act, will make no distinction betwen life drained drop by drop from the soul, and that sent forth at a blow with the red hand.

Mr. William M. Halsted has paid $100 to present an elegant copy of the Memoir of Rev. Dr. Justin Edwards to every student and every officer of the Union Theological Seminary.

Neither men nor women become what they were intended to be by carpeting their progress with velvet; real strength is tested by difficulties.

The rails of the Black River and Utica Railway are laid to Boonville, and the road will be operated to that point in a few days.

New York and Erie Railroad.

ON and after Wednesday, Sept. 19, and until further notice, Passenger Trains will leave the pier foot of Duane st., New York, as follows:

Dunkirk Express at 6.30 A. M. for Dunkirk.

Buffalo Express at 6.30 A. M. for Buffalo.

Mail at 8½ A. M. for Dunkirk and Buffalo, and all intermediate stations. Passengers by this Train will remain over night at Owego, and proceed the next morning.

Rockland Passenger at 3 P. M. (from foot of Chambers-st.) via Piermont; for Sufferns and intermediate stations.

Way Passenger at 4 P. M. for Newburgh and Otisville and intermediate stations.

Night Express at 5½ P. M. for Dunkirk and Buffal.

Emigrant at 6 P. M. for Dunkirk and Buffalo and intermediate stations.

On Sundays only one express train, at 5½ P. M.

These Express Trains connect at Elmira with the Elmira and Niagara Falls Railroad, for Niagara Falls, at Buffalo and Dunkirk with the Lake Shore Railroad for Cleveland, Cincinnati, Toledo, Detroit, Chicago, &c., and with first-class splendid steamers for all ports on Lake Erie.

D. C. McCALLUM, General Sup't.

Ayer's Pills.

FOR all the purposes of a Family Physic. There has long existed a public demand for an effective Purgative Pill which could be relied on as sure and perfectly safe in its operation. This has been prepared to meet that demand, and an extensive trial of its virtues has conclusively shown with what success it accomplishes the purpose designed. It is easy to make a physical *Pill*, but not so easy to make the best of all *Pills*—one which should have none of the objections, but all the advantages of every other. This has been attempted here, and with what success we would respectfully submit to the public decision. It has been unfortunate for the patient hitherto that almost every purgative medicine is acrimonious and irritating to the bowels. This is not. Many of them produce so much griping pain and revulsion in the system as to more than counterbalance the good to be derived from them. These *Pills* produce no irritation or pain, *unless* it arises from a previously existing obstruction or derangement in the bowels. Being purely vegetable, no harm can arise from their use in any quantity; but it is better that any medicine should be taken judiciously. Minute directions for their use in the several diseases to which they are applicable are given on the boxes. Among the complaints which have been speedily cured by them we may mention Liver Complaint, in its various forms of Jaundice, Indigestion, Langor and Loss of Appetite, Listlessness, Irritability, Billious Headache, Billious Fever, Fever and Ague, Pain in the Side and Loins, for in truth, all these are but the consequence of diseased action of the liver. As an aperient, they afford prompt and sure relief in Costiveness, Piles, Colic, Dysentery, Humors, Scrofula and Scurvy, Colds, with soreness of the body, Ulcers and impurity of the blood; in short, any and every case where a purgative is required.

They have also produced some singularly successful cures in Rheumatism, Gout, Dropsy, Gravel, Erysipelas, Palpitation of the Heart, Pains in the Back, Stomach, and Side. They should be freely taken in the spring of the year, to purify the blood and prepare the system for the change of seasons. An occasional dose stimulates the stomach into healthy action, and restores the appetite and vigor. They purify the blood, and, by their stimulant action on the circulatory system, renovate the strength of the body, and restore the wasted or diseased energies of the whole organism. Hence an occasional dose is advantageous even though no serious derangement exists; but unnecessary dosing should never be carried too far, as every purgative medicine reduces the strength, when taken to excess. The thousand cases in which a physic is required cannot be enumerated here, but they suggest themselves to the reason of every body; and it is confidently believed this Pill will answer a better purpose than any thing which has hitherto been available to mankind. When their virtues are once known the public will no longer doubt what remedy to employ when in need of a cathartic medicine.

Being sugar wrapped they are pleasant to take, and being purely vegetable, no harm can arise from their use in any quantity.

For minute directions, see the wrapper on the Box.

Prepared by Dr. J. C. AYER, Practical and Analytical Chemist, Lowell, Mass.

Price 25 Cents per Box. Five Boxes for $1 00.

Ayer's Cherry Pectoral,

FOR the rapid cure of Coughs, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption. This remedy has won for itself such notoriety for its cures of every variety of Pulmonary diseases, that it is entirely unnecessary to recount the evidences of its virtues in [illegible] where it has been employed. So wide is the field of its usefulness, and so numerous the cases of its cures, that almost every section of the country abounds in persons publicly known, who have been restored from alarming and even desperate diseases of the lungs by its use. When once tried its superiority over every other medicine of its kind is too apparent to escape observation, and where its virtues are known, the public no longer hesitate what antidote to employ for the distressing and dangerous affections of the pulmonary organs which are incident to our climate. And not only in formidable attacks upon the lungs, but for the milder varieties of *Colds, Coughs, Hoarseness, &c.* and for Children it is the pleasantest and safest medicine that can be obtained.

As it has long been in constant use throughout this section, we need not do more than assure the people its quality is kept up to the best that it ever has been and that the genuine article is—

AN AUTO DE FE.

Prescott's forth-coming history gives the following sketch of the cruel exhibition with which Philip the Second was welcomed to his Catholic dominions:—

The *auto de fé*—"act of faith"—was the most imposing, as it was the most awful, of the solemnities authorized by the Roman Catholic Church. It was intended, somewhat profanely, as has been intimated, to combine the pomp of the Roman triumph with the terrors of the day of judgment. It may remind one quite as much of those bloody festivals prepared for the entertainment of the Cæsars in the Colisæum. The religious import of the *auto de fé* was intimated by the circumstance of its being celebrated on a Sunday, or some other holiday of the church. An indulgence for forty days was granted by his holiness to all who should be present at the spectacle; as if the appetite for witnessing the scenes of human suffering required to be stimulated by a bounty; that too in Spain, where the amusements were, and still are, of the most sanguinary character.

The scene for this second *auto de fé* at Valladolid was the great square in front of the church of St. Francis. At one end a platform was raised, covered with rich carpeting, on which were ranged the seats of the inquisitors, emblazoned with the arms of the Holy Office. Near to this was the royal gallery, a private entrance to which secured the inmates from molestation by the crowd. Opposite to this gallery a large scaffold was erected, so as to be visible from all parts of the arena, and was appropriated to the unhappy martyrs who were to suffer in the *auto*.

At six in the morning all the bells in the capital began to toll, and a solemn procession was seen to move from the dismal fortress of the Inquisition. In the van marched a body of troops, to secure a free passage for the procession. Then came the condemned, each attended by two familiars of the Holy Office, and those who were to suffer at the stake by two friars, in addition, exhorting the heretic to abjure his errors. Those admitted to penitence wore a sable dress; while the unfortunate martyr was enveloped in a loose sack of yellow cloth—the *san benito*—with his head surmounted by a cap of pasteboard of conical form, which, together with the cloak, was embroidered with figures of flames and of devils fanning and feeding them; all emblematical of the destiny of the heretic's soul in the world to come, as well as of his body in the present. Then came the magistrates of the city, the judges of the courts, the ecclesiastical orders, and the nobles of the land, on horseback. These were followed by the members of the dread tribunal, and the fiscal, bearing a standard of crimson damask, on one side of which were displayed the arms of the Inquisition, and on the other the insignia of its founders, Sixtus the Fifth and Ferdinand the Catholic. Next came a numerous train of familiars, well mounted, among whom were many of the gentry of the province, proud to act as the body-guard of the Holy Office. The rear was brought up by an immense concourse of the common people, stimulated on the present occasion, no doubt, by the loyal desire to see their new sovereign, as well as by the ambition to share in the triumphs of the *auto de fé*. The number thus drawn together from the capital and the country, far exceeded what was usual on such occasions, is estimated by one present at full two hundred thousand.

As the multitude defiled into the square, the inquisitors took their place on the seats prepared for their reception. The condemned were conducted to the scaffold, and the royal station was occupied by Philip, with the different members of his household. At his side sat his sister, the late regent, his son, Don Carlos, his nephew, Alexander Farnese, several foreign ambassadors, and the principal grandees and higher ecclesiastics in attendance on the court. It was an august assembly of the greatest and the proudest in the land. But the most indifferent spectator, who had a spark of humanity in his bosom, might have turned with feelings of admiration from this array of worldly power, to the poor martyr, who, with no support but what he drew from within, was prepared to defy this power, and to lay down his life in vindication of the rights of conscience. Some there may have been, in that large concourse, who shared in these sentiments. But their number was small indeed in comparison with those who looked on the wretched victim as the enemy of God, and his approaching sacrifice as the most glorious triumph of the cross.

The ceremonies began with a sermon, "the sermon of the faith," by the bishop of Zamora. The subject of it may well be guessed, from the occasion. It was no doubt plentifully larded with texts of Scripture, and, unless the preacher departed from the fashion of the time, with passages from the heathen writers, however much out of place they may seem in an orthodox discourse.

When the bishop had concluded, the grand inquisitor administered an oath to the assembled multitude, who on their knees solemnly swore to defend the Inquisition, to maintain the purity of the faith, and to inform against any one who should swerve from it. As Philip repeated an oath similar in import, he suited the action to the word, and, rising from his seat, drew his sword from its scabbard, as if to announce himself the determined champion of the Holy Office. In the earlier *autos* of the Moorish and Jewish infidels, so humiliating an oath had never been exacted from the sovereign.

After this, the secretary of the tribunal read aloud an instrument reciting the grounds for the conviction of the prisoners, and the respective sentences pronounced against them. Those who were to be admitted to penitence, each, as his sentence was proclaimed, knelt down, and, with his hands on the missal, solemnly adjured his errors, and was absolved by the grand inquisitor. The absolution, however, was not so entire as to relive the offender from the penalty of his transgressions in this world. Some were doomed to perpetual imprisonment in the cells of the Inquisition, others to lighter penances. All were doomed to the confiscation of their property—a point of too great moment to the welfare of the tribunal ever to be omitted. Besides this, in many cases the offender, and, by a glaring perversion of justice, his immediate descendants, were rendered forever ineligible to public office of any kind, and their names branded with perpetual infamy. Thus blighted in fortune and character, they were said, in the soft language of the Inquisition, to be *reconciled*.

As these unfortunate persons were remanded, under a strong guard, to their prisons, all eyes were turned on the little company of martyrs, who, clothed in the ignominious garb of the *san benito*, stood waiting the sentence of their judges—with cords around their necks and in their hands a cross, or sometimes an inverted torch, typical of their own speedy dissolution. The interest of the spectators was still further excited, in the present instance, by the fact that several of these victims were not only illustrious for their rank; but yet more so for their talents and virtues. In their haggard looks, their emaciated forms, and too often, alas! their distorted limbs, it was easy to read the story of their sufferings in their long imprisonment, for some of them had been confined in the dark cells of the Inquisition much more than a year. Yet their countenances, though haggard, far from showing any sign of weakness or fear, were lighted up with the glow of holy enthusiasm, as of men prepared to seal their testimony with their blood.

When that part of the process showing the grounds of their conviction had been read, the grand inquisitor consigned them to the hands of the corregidor of the city, beseeching him to deal with the prisoners *in all kindness and mercy*; a honeyed, but most hypocritical phrase, since no choice was left to the civil magistrate but to execute the terrible sentence of the law against heretics, the preparations for which had been made by him a week before.

The whole number of convicts amounted to thirty, of whom sixteen were *reconciled*, and the remainder *relaxed* to the secular arm—in other words, turned over to the civil magistrate for execution. There were few of those thus condemned who, when brought to the stake, did not so far shrink from the dreadful doom that awaited them as to consent to purchase a commutation of it by confession before they died; in which case they were strangled by the *garrote*, before their bodies were thrown into the flames.

Of the present number there were only two whose constancy triumphed to the last over the dread of suffering, and who refused to purchase any mitigation of it by a compromise with conscience. The names of these martyrs should be engraven on the record of history.

One of them was Don Carlos de Seso, a noble Florentine, who had stood high in the favor of Charles the Fifth. Being united with a lady of rank in Castile, he removed to that country, and took up his residence in Valladolid. He had become a convert to the Lutheran doctrines, which he first communicated to his own family, and afterwards showed equal zeal in propagating among the people of Valladolid and its neighborhood. In short, there was no man to whose untiring and intrepid labors the cause of the Reformed religion in Spain was more indebted. He was, of course, a conspicuous mark for the Inquisition.

During the fifteen months in which he lay in its gloomy cells, cut off from human sympathy and support, his constancy remained unshaken. The night preceding his execution, when his sentence had been announced to him, De Seso called for writing materials. It was thought he designed to propitiate his judges by a full confession of his errors. But the confession he made was of another kind. He insisted on the errors of the Romish Church and avowed his unshaken trust in the great truths of the Reformation. The document, covering two sheets of paper, is pronounced by the secretary of the Inquisition to be a composition equally remarkable for its energy and precision. When led before the royal gallery, on his way to the place of execution, De Seso pathetically exclaimed to Phillip, "Is it thus that you allow your innocent subjects to be persecuted?" To which the king made the memorable reply, "If it were my own son, I would fetch the wood to burn him, were he such a wretch as thou art!" It was certainly a characteristic answer.

At the stake De Seso showed the same unshaken constancy, bearing his testimony to the truth of the great cause for which he gave up his life. As the flames crept slowly around him, he called on the soldiers to heap up the fagots, that his agonies might be sooner ended; and his executioners, indignant at the obstinacy—the heroism—of the martyr, were not slow in obeying his commands.

The companion and fellow-sufferer of De Seso was Domingo de Roxas, son of the Marquis de Poza, an unhappy noble, who had seen five of his family, including his eldest son, condemned to various humiliating penances by the Inquisition for their heretical opinions. This one was now to suffer death. De Roxas was a Dominican monk. It is singular that this order, from which the ministers of the Holy Office were particularly taken, furnished many proselytes to the Reformed religion. De Roxas, as was the usage with ecclesiastics, was allowed to retain his sacerdotal habit until his sentence had been read, when he was degraded from his ecclesiastical rank, his vestments were stripped off one after anothers, and the hideous dress of the *san benito* thrown over him, amid the shouts and derision of the populace. Thus apparelled, he made an attempt to address the spectators around the scaffold; but no sooner did he begin to raise his voice against the errors and cruelties of Rome, than Philip indignantly comanded him to be gagged. The gag was a piece of cleft wood, which forcibly compressing the tongue, had the additional advantage of causing great pain while it silenced the offender. Even when he was bound to the stake, the gag, though contrary to custom, was suffered to remain in the mouth of De Roxas, as if his enemies dreaded the effects of an eloquence that triumphed over the anguish of death.

The place of execution—the *quemadero*, the burning-place, as it was called—was a spot selected for the purpose without the walls of the city. Those who attended an *auto de fé* were not, therefore, necessarily, as is commonly imagined, spectators of the tragic scene that concluded it. The great body of the people, and many of higher rank, no doubt, followed to the place of execution. On this occasion, there is reason to think, from the language—somewhat equivocal, it is true—of Philip's biographer, that the monarch chose to testify his devotion to the Inquisition by witnessing in person the appalling close of the drama; while his guards mingled with the menials of the Holy Office, and heaped up the fagots around their victims.

Such was the cruel exhibition which, under the garb of a religious festival, was thought the most fitting ceremonial for welcoming the Catholic monarch to his dominions! During the whole time of its duration in the public square, from six in the morning till two in the afternoon, no symptom of impatience was exhibited by the spectators, and, as may well be believed, no sign of sympathy for the sufferers. It would be difficult to devise a better school for perverting the moral sense, and deadening the sensibilities of a nation.

TRUE MORAL COURAGE.

The following incident in the life of a Prussian General is a fine illustration of Christian heroism:—

"There is a story told in connection with the great Frederick, which is a good table trait in its way. Joachim Von Ziethen was one of the bravest of the generals who stood by Frederick the Great, in victory or defeat. He was the son of a poor gentleman, and had little education, save what he could pick up in barracks, camps, and battle fields, in all of which he figured in early youth. If his head was not over ballasted with learning, his heart was well freighted with that love for God of which some portion, as the dismissed lecturer on Ecclesiastical History in King's College tells us, is in almost every individual without exception, and forms the sheet anchor which shall enable him to ride through the storms which keep him from his desired haven of rest. He became the terror of the foes of Prussia; but among his comrades he was known only as 'good Father Ziethen.' He was remarkable for his swiftness at once of resolve and execution, and in remembrance as well as illustration thereof, a sudden surprise is spoken of by an astonished Prussian as 'falling on one like Ziethen from an ambush.'

"Now, old Ziethen, after the triumph achieved in the Seven Years' War, was always a welcome guest at the table of Frederick the Second. His place was ever by the side of his royal master, whose cause he had more than once saved from ruin; and he only sat lower at the table when there happened to be present some foreign royal mediocrity, illustriously obscure.

"On one occasion he received a command to dine with the King on Good Friday. Ziethen sent a message to his sovereign, stating that it was impossible for him to wait on his Majesty, inasmuch as that he made a point of never omitting to take sacrament on that day, and of always spending the subsequent portion of the day in private meditation.

"A week elapsed before the scrupulous old soldier was again invited to the royal dinner table. At length he appeared in his old place, and merry were the guests, the King himself setting an example of uproarious hilarity. The fun was running fast and furious—it was at its very loudest, when Frederick, turning to Ziethen, smacked him familiarly on the back, and exclaimed, 'Well, grave old Ziethen, how did the supper of Good Friday agree with your sanctimonious stomach? Have you properly digested the veritable body and blood?' At this blasphemy, and amid the thunders of pealing laughter, the saluting artillery of the delighted guests, Ziethen leaped to his feet, and after shaking his gray hairs with indignation and silencing the revellers with a cry as though they had been dogs, he turned to the godless master of the realm, and said—words, if not precisely these, certainly and exactly to this effect:—

"'I shun no danger; your Majesty knows it. My life has been always ready for sacrifice when my country and throne required it. What I was, that I am, and my head I would place on the block this moment, if the striking of it off could purchase happiness for my King. But there is One who is greater than I, or any one here; and He is a greater Sovereign than you who mock Him here from the throne in Berlin. He it is whose precious blood was shed for the salvation of all mankind. On Him, that Holy One, my faith reposes; He is my consoler in life, my hope in presence of death; and I will not suffer His name to be derided and attacked when I am by, and have voice to protest against it. Sir, if your soldiers had not been firm in this faith, they would not have gained victories for you. If you mock the faith, and jeer at those who cling to it, you only lend a hand to bring yourself and the State in ruin.' After a pause he added, looking the while at his mute King: 'What I have spoken is God's truth; receive it graciously.'

"Frederick was the patron of Voltaire, who had dared to say at his own table that what it had taken God and the twelve Apostles to build up, one man (Voltaire) would destroy. But Frederick was now, for the moment, more deeply moved by what had been uttered by the unphilosophical Ziethen than by anything that had ever fallen from the brilliant but irreligious Voltaire. He rose, flung his left arm over Ziethen's shoulder, offered his right hand to the brave old Christian general, and exclaimed: 'Ziethen, you are a happy man! Would that I could be like you! Hold fast by your faith; and I will respect even where I cannot believe. What has occurred shall never happen again.'

"A deep and solemn silence followed, and the dinner was spoiled, according to the guests, to whom the King gave the signal to disperse long before their appetites had been satisfied. Ziethen was preparing to withdraw with the rest, but Frederick, taking him by the hand, whispered: 'You, my friend, come with me to my cabinet.'"

AN HOUR WITH MY GOD.

One hour with thee, my God, when daylight breaks
Over a world thy guardian care has kept;
When the fresh soul from soothing slumber wakes,
To praise the love that watched me while I slept;
When with new strength my blood is bounding free,
The first, best, sweetest hour, I'll give to thee.

One hour with thee, when busy day begins,
Her never ceasing round of busy care,
When I must meet with toil, and pain and sins,
And through them all thy cross again must bear;
O then, to arm me for the strife, to be
Faithful to death, I'll kneel an hour with thee.

One hour with thee, when rides the glorious sun
High in mid-heaven, and panting nature feels
Lifeless and overpowered, and man has done
For one short hour with urging life's swift wheels;
In that deep pause my soul from care shall flee,
To make that hour of rest an hour with thee.

One hour with thee, when saddened twilight flings
Her soothing charm o'er lawn and vale and grove;
When there breathes up from all created things
The sweet enthralling sense of thy deep love;
And when its softening power descends on me,
My swelling heart shall spend an hour with thee.

One hour with thee, my God, when softly night
Climbs the high heavens with solemn step and slow;
When thy sweet stars, unutterably bright,
Are telling forth thy praise to men below;
O then, when far from earth my thoughts would flee,
I'll spend in prayer one joyful hour with thee.

THE SECRET OF SUCCESS.

Rev. Dr. Wayland, on retiring from the presidency of Brown University, made an address, in which he indicated the principles by which he had been guided, and to which he traced, under God, all his success. They were in substance, as follows:—

1. A resolute and honest consecration to the work to be done. He had cut loose from whatever interfered with that work. He kept himself from amusements—for which he had no taste—and even from favorite studies, and gave himself to the work of building up the University.

2. A dogged instinct to do his duty. He had a fixed determination to go through with what he had begun, and to take up every duty as it came. No doubt, in the matter of discipline, some had thought him a "regular old despot." But God only knew the agony he had endured when called to inflict pain on any student or his friends. But the pain they had suffered was nothing when compared with his. He had tried to avoid discipline, but could not help it. And now, as the rejected suitor appealed from Philip drunk to Philip sober, so he appealed from impetuous and excited young men, to the men he saw before him, matured and subdued by experience. They must decide on his acts as instructor; and there was no pupil of his whom he would not be be glad to meet anywhere, for he knew that toward all he had done his simple duty.

3. Never to act for to-morrow, or next month, instead of to-day. It has been my rule to do to-day what I have to do, as well as I know how. The way to prepare for to-morrow, is to do with a whole heart the duties of to-day. Sometimes young men take up teaching as a temporal employment, while preparing for a profession; but their hearts are not in it, and, consequently, they break down as teachers, and carry with them into their profession the reputation of men who have already failed. Do your present duty and never be mousing round for something.

4 Adherence to general principles. Have confidence in general principles. Our wisest men—for I presume our politicians are our wisest men—often mistake for want of confidence in principles. Things follow their tendencies. Take a law of right and carry it through, and take the good and bad together. You cannot have the good of a principle without the evil. But follow the principle. It will bring you into narrow places, and up steep defiles; but keep on, and you will see a glory beyond that will repay the labor and toil of the ascent. For myself, I am built railroad fashion. I can go forward, and, if necessary, I can go back; but I cannot go sideways.

5. Whatever of knowledge I have of men or mind, I have got from the New Testament of the Lord Jesus Christ. Study the Bible, if you would be wise. Count it your highest honor to be useful to your fellow men.

FINE IMAGERY.

Rev. J. T. Thompson, of New York, has the following introduction to a sermon on Ezek. 1: 26, 29:—

"There is but one scene in nature that approximates this sublime vision of the throne of God; and he who once has looked upon that scene will ever after feel the inspiration of these symbols of the prophet.

"I stood at midnight upon the brink of Niagara. No human form was nigh; no voice or step of man was heard. There rolled the everlasting flood, thundering into the abyss that seemed to swallow it, yet left it undiminished in volume or power. Dread symbol of eternity, without beginning, without end, rolling evermore upon its unseen axis, like that living wheel of emerald flashing with eyes, with wheel revolving within wheel, 'whose rings were so high that they were dreadful.' There resounded evermore the thunder of that power that shakes both earth and heaven—a power that sweeps to instant destruction all that comes within its grasp. There yawned that dread abyss upon whose slippery brink trembled one poor mortal with the thought of utter impotence in this close proximity of death. Above all stretched the firmament with its 'terrible crystal,' and upon its pavement of stars seemed to rest the sapphire throne. From the abyss there rose up a column towering to the sky, like the smoke of a furnace, the spray of that great agony of waters vainly seeking to regain the level they had lost. The voice of many waters, the voice of mighty thunderings, rolled the eternal anthem up to the throne of God. And yet I could not feel that such a God as nature here set forth was *mine*. I feel the awe of His power who sitteth above the floods; but should I step foot upon those floods they would sweep me to destruction. I seem to catch a glimmering of his eternity in this majestic plunge of unabated waters; but I am as a single drop of that flood, and plunging over, would vainly strive to regain the level I had lost. I look at the edge of the cataract—within a hand's breadth—and it is terrible. I look over into the abyss, and it is terrible. I hearken to the thunder of the fall, and it is terrible. Look upward to the crystal firmament, and that, too, is terrible. This God whom nature here offers me is the great and terrible God. This noise of great waters is the voice of the ALMIGHTY, and I hear in it no tone of love, no accent of mercy. That sapphire throne is the throne of Infinite Majesty; and I am but a poor, weak mortal, and cannot so much as look upon it. There is no way for *me* to rise above this chasm, above these thunderings, to dwell with such a God. 'Oh give me Christ!' I cried—alone, aloud, upon the ear of midnight, above the roar of waters, the soul, awe-struck and terrified with a material Deity, or an almighty and eternal fate, cried, 'Give me Christ, the God-man, the Creator stooping to the creature; power and majesty arrayed in love!' And suddenly, upon that huge, frightful column that seemed the smoke of the damned, by the rays of the full moon that then slanted athwart the flood and adown the abyss, there sprang from the depths of that abyss up even to the terrible crystal above my head, a luminous arch, as the appearance of the bow that is in the cloud in the day of rain. The prophet's vision burst upon me. In the brightness of that bow I saw the symbol of Christ, even as the Revelator of Patmos, when uplifted by the Spirit to the door that was opened into heaven, 'beheld a throne set in heaven, and one that sat upon it, and he that sat was to look upon like a jaspar and a sardine stone; and there was a rainbow round about the throne in sight like to an emerald."

WOMAN'S POSITION.

We have not yet quite attained even to that rudimentary truth, that "women are not born merely that men might not be lonely, but are in themselves posessors of immortal souls."

The same mistake appears in ambitious woman herself, when, instead of accepting this her glorious distinction, and wearing it as the unrivalled honor, she longs impatiently for some more pompous but ignoble fame. The reason she feels herself insulted by the theory, that man represents the head, and she the heart—as if some advantage thereby referred to man—is ~~because she is~~ not yet thoroughly a Christian; is not willing to acknowledge that the heart is greater, nobler, wiser than the head—goodness than mere intellect, love than logic, purity than eloquence, holy living than able reasoning. She lingers still under the old barbarous error, which sets Napoleon above Howard, Byron over Wesley, Mary Wolstencroft over Sarah Martin, and a wicked orator over a working saint.

Herein we are still stumbling among elements, disloyal to that gospel which is a dispensation to the affections. It is a delusion—lodged so deep in human judgments, that it will be the last to be dispossessed by the triumphant banners of the cross—that the strong brain is nobler than the meek and lowly spirit; that they who "seek after a sign," or "require wisdom," and not "the pure in heart," "shall see God." She commits the same error, when, in the choice of her models for imitation from her own sex, she prefers the brilliancy of Madame de Stael to the calm excellence of Elizabeth Hamilton; envies Lady Blessington, or even Madame Dudevant, above Mrs. Barbauld; and, in her heart, would rather have Jenny Lind Goldschimdt's fame, genius, and admiration, than her charity. Still more grossly does she err, because she then ruins her self-respect and her social and moral independence—when she shows it to be, the first doctrine of her practical catechism, that the chief end of woman is to be married to a man. [Rev. F. D. Huntington.

GERMAN PREACHERS.

Abel Stevens, in his account of the recent Evangelical Conference at Paris, gives the following portraitures of two eminent German preachers:—

"Near by sits Krummacher, the famous German preacher and author. His '*Elijah* the Tishbite' is well known in America. When I told him the other night at a tea party, the number of some of his editions among us, and that it was read in our log cabins in California and Oregon, he seemed hardly to believe me, for the extent of the American press is scarcely known in Europe; and when I assured him that if he would come to New York we could place him in sections of the city where for whole squares he could read German 'signs,' and hear the children playing in German, and if he liked 'lager beer,' drown himself in an ocean of it, he laughed as you might suppose a lion would were it the habit of that noble creature to laugh at all, his mighty voice ringing into the adjacent apartments. But suppose not that there was any thing peculiarly humorous in my remarks, or uncommon in Krummacher's uproarious outbreaks. It is the 'vocal style' of the man. What the watchman said of George Whitefield, can be said of this great German: 'He preaches like a lion!' He not only preaches but prays so, and makes speeches, and even 'says grace' at the table in the same manner. He introduced our public dinner the other day with a 'grace' in German, which was roared out as if addressed to an army half a mile off. Of course this peculiarity surprises every body at first, but you soon get accustomed to it. Whether it arises from good Gothic heartiness, or is a vocal defect, I know not; but be this as it may, Krummacher is considered the most eloquent man now in Europe. He is chaplain to the King of Prussia, and some of his sermons are said to be like earthquakes. He is personally a delightful man. He appears to be between fifty and sixty; his hair is light, but not grey; it is combed sleekly over his ears; his eyes peering through bright gold spectacles, are blue, and expressive of mildness of character, notwithstanding the roaring ferocity of his voice. He is in good condition, inclining a little to episcopal dimensions. There is a peculiar blandness and youthfulness about him which recalls to you the title of 'the ever youthful,' which was applied to his great countryman, the poet Klopstock.

"Glance down from the platform, and you see not far from it, another noted German, but a perfect contrast to Krummacher; it is Tholuck. You would single him out from all this throng as the least important, the least interesting man present, not to say the most ugly and the most inferior. He is small in stature, stoops somewhat, has a low, wrinkled, but broad forehead, and rugged, uninteresting features. He is one of those men whom it seems impossible for the best tailor to improve into ordinary dignity; his clothes hang and dangle about him. Tholuck would be shabby in the robes of royalty. But this great man has done a mighty work, borne a mighty testimony in Germany. His name and his rough person are dear to all good men in Europe.. He is said to be very nervous, and usually in poor health, but he works like a giant. There is a great lesson on that strange agonized face of his. I thought of it as he was relating to me, the other night, the history of one of his American students, who, while in Germany, had passed through the soul-struggles of German doubt. 'If we come out triumphantly from such conflicts,' said the German professor, 'we are strong forever,' and he darted away into the throng of company as if struck by a sudden and irresistible impulse."

ALL EARTHLY INVESTMENTS UNSAFE.

How many instances of this truth have come under the personal knowledge of each one of us. Perhaps of those who with great patience and trouble accumulate wealth, the larger part lose it before they die, and little ever remains to the third generation. A single mistake may deprive a man of the fruits of a half a century of prudence. We know a careful and successful man, who by perseverence and sagacity had got together three-fourths of a million of dollars. He had long retired from trade, and had reached three score and ten, when in an unfortunate moment he entered into an engagement which swept away all his estate. His "riches made themselves wings and fled away." This is not a solitary case by any means. It is a thing of common occurrence. No wisdom or caution can secure against it. The most prudent men in the country are often ruined by mistakes of judgment, or by dishonesty of others, or unforeseen accidents. We were once in the counting house of an old merchant, when a clergyman entered and asked for his advice as to the best investment of a small sum of money. The clergyman observed that his desire was to put his little treasure where it would be entirely safe. The merchant laughed aloud at the "greenness" of his clerical friend, and told him if such was his purpose he must seek investment beyond this world, for security had never been found in it. A very careful gentleman of our acquaintance, with whom saving and secure investment were the sole business of life, would have all his property in real estate, and particularly he preferred ground-rents. These he thought were the safest of all securities. Unexpectedly an unsatisfied judgment of long standing was found against a tract of land which had now become part of a city, where this gentleman had purchased many rents. To satisfy this judgment cost him what to most men would be a large fortune.

But if attained riches do not bring happiness, the pursuit of them nourishes avarices, and avarice is always poor. Solomon says, "There is that maketh himself rich yet hath nothing?" This positive poverty, growing out of excessive value of money and morbid dread of want, is the common consequence of covetousness. It is the "fiend's" arch mock of the soul whom he has deluded with the prospective joys of wealth. Riches are attended with care and trouble. This is the testimony of all who have had great possessions. It cannot be otherwise. Property requires management, and entangles our interests with the interests of others. The rich have what all others want, and the life of him who has to preserve wealth is necessarily a *life of suspicion*, and contention, and anxiety. In the revenues of the wicked is trouble, and all are wicked who make this world their portion. Riches are not a refuge from the ills of life, nor from the wrath of God. Their advantages cover but a few years of an eternal existence. It is supreme folly to make the pursuit of them the business of life. Many have experienced this who would have avoided the sad experience had they pondered the words of Solomon. "Riches profit not in the day of wrath. He that trusteth in his riches shall fall. Labor not to be rich. Cease from thine own wisdom. Wilt thou set thine eyes upon that which is not? for riches certainly make themselves wings: they fly away as an eagle toward heaven."

EATING HOUSE ETIQUETTE.—This forenoon (says the *Herald* of Nov. 24th) a gentleman who is guilty of a darker skin than his Anglo-Saxon brothers, went into a saloon in Wilson's Lane and asked for a cup of coffee. The waiter informed him that it was against the rules of the establishment to furnish any thing for colored persons. This rather astonished the gentleman, who is a rich coffee dealer from San Domingo, and is in the habit of eating first class dinners at Parker's and other first class hotels, and he persisted in his demand so pertinaciously that the proprietor of the saloon sent for an officer at the Second Police Station. The officer repaired to the spot, expecting to find somebody creating a disturbance, but on hearing the story of the gentleman he made no arrest, and the offender against eating house etiquette was allowed to depart in peace.

THE SUNDAY IN ENGLAND.

The subject of Sunday observance is just now attracting considerable attention in England. The principal occasion of the new interest, is the effort of the recently-formed Sunday League for the opening on Sunday afternoon of the Sydenham Crystal Palace, and of Museums, Picture Galleries, and Botanical Gardens throughout the United Kingdom. This League is the legitimate offspring of the demonstrations made in Hyde Park last summer against restrictive Sunday legislation. The petitions to Parliament, which the League has issued for general use, are given below, and set forth the reasons on which the demand is grounded. They are a significant expression of the ideas now current among the English working class.

Another occasion of the new interest in Sunday observance is found in a decision recently made by a high functionary. In September one Nathaniel Williams, an agricultural day laborer, was imprisoned by some local magistrates for reaping his little patch of corn on the Sunday. The conviction took place under a statute of Charles II., forbidding a man from following his "ordinary occupation" on the Sunday. The people and the London press took up the cause of the man Williams, and the Home Secretary wrote to the magistrates, signifying his disapproval of their course, and remitting the man's punishment, on the ground that as his "ordinary occupation" was that of a laborer-for-hire, engaged in reaping another man's corn, he was not pursuing his "ordinary occupation" on the Sunday in reaping his own corn. Strict construction with a vengeance!

Still another cause for Sunday agitation is probably found in the circumstance (of which our readers were apprized some time ago,) that during the fine season of this year two select military bands have been detailed to perform operatic and marshal music in Kensington Garden on Sunday afternoons, for the edification and entertainment of crowds of the upper and middle ranks of West End society. This Kensington Garden band has naturally been a great offense in the ears of the more strictly religious classes throughout England.

And now, to cap it all, the City of London has elected a Jew for Lord Mayor, and people have laughed to see Mr. Salomons, in obedience to old custom, attend divine service at St. Paul's!

—But we are keeping the reader too long from the Petitions of the Sunday League, which are as follows:—

"*Petition for the opening of Museums, Picture Galleries, and Botanical Gardens throughout the United Kingdom on Snnday afternoons:*

"Your petitioners take it for granted that museums and other collections of similar character are established for the instruction and moral improvement of the people; and that in proportion as such institutions are made available for popular instruction do they fulfill the purposes of their origin.

"That the labors and necessary avocations of the great body of the community leave little or no opportunity of visiting such institutions during the week, when they are open to the public, and hence that the main object of their formation is lost to those whom they are intended to benefit.

"The Sunday, as a day of rest and leisure, when the thoughts of men, released from the engrossing labor of mere existence, turn naturally to the beauties of the universe and to its Creator, is the time most fitted for the exercise of the reflective faculties; and your petitioners, being firmly convinced that all true education must tend to the reverence and love of the Deity, believe that if such institutions as above enumerated were open to the people on Sunday afternoon it would be an inestimable boon to the laboring population; would raise up an opposing principle to intemperance and immorality, and in every way advance the condition of the people.

"Your petitioners therefore pray that all restrictions and impediments may be removed, so that museums, picture galleries, botanical gardens, and similar collections generally of parochial or municipal foundations throughout the United Kingdom, be opened to the public on Sunday afternoon.

"And your petitioners will ever pray," &c.

"*Petition for the opening of the Crystal Palace on Sunday afternoon:*

"The petition of the undersigned showeth:

"That among all classes of her Majesty's subjects there is felt to be a necessity for providing means of healthful and innocent recreation on Sunday, in a manner consistent with the religious feelings of the people.

"That after laboring hard for six days in the week, it is no rest, but weariness and vexation, for the workingman to be confined on Sunday to the scenes and circumstances of his accustomed toil; and that while the rich have ample facilities at their disposal, there is a lamentable deficiency of means of relaxation adapted to the physical, intellectual and moral needs of the families of the poor.

"That the Crystal Palace, so splendid in its architecture, so rich in its accumulation of natural and artificial objects of extraordinary beauty and interest, and with its healthful and magnificent gardens, affords the noblest provision for the recreation of the people which any age hath seen; and your petitioners believe that the opening of this great institution on Sunday afternoon would have the happiest and most beneficial effect, and would be an inestimable boon to the working population, whose imperative duties will not permit them to devote any portion of the week to visiting it without a very heavy pecuniary loss, which they cannot afford.

"Your petitioners therefore pray that your honorable house will effect such changes in the law as may enable the Crystal Palace Company to open that institution on Sunday afternoon.

"And your petitioners will ever pray, &c."

"*Petition for the opening of the British Museum, the National Gallery, Marlborough House, and other National Institutions, to the public on Sunday afternoon:*

"The petition of the undersigned showeth:

"That the British Museum, the National Gallery, Marlborough House, and other collections of art and natural objects, the property of the nation and maintained at the public expense, should be readily accessible to the people.

"That under the present arrangement the great majority of the people are unable to profit by the means of instruction there accumulated for their use.

"Your petitioners believe that if the above institutions were opened to the people on Sunday afternoon they would render invaluable aid to public instruction, greatly lessen the inducement to seek objectionable means of relaxation, and, by providing innocent and healthful recreation, more effectually render the Sunday a day of rest for the millions who toil throughout the week.

"So far from leading to an increase in the hours of labor, as has been objected, your petitioners believe that what they pray for (by giving to the people a knowledge of the benefits arising from instruction and intellectual recreation) would have an exactly opposite tendency.

"Your petitioners are fully persuaded that, so far from operating to the detriment of true religion, such a proceeding would largely tend to its promotion, inasmuch as by rendering the lessons of nature and of art accessible to the people they would be taught more deeply, because more intelligently, to reverence the Creator.

"Your petitioners therefere pray that, in order to promote the moral and intellectual improvement of the people, the British Museum, the National Gallery, Marlborough House, and other national collections be opened for public inspection on Sunday afternoon.

"And your petitioners will ever pray, &c."

THE OHIO ASSOCIATION.

The Seventh-day Baptist Ohio Association held its fifth annual session with the Church in Jackson, Shelby Co., Ohio, commencing Oct. 11th, 1855, at 10 o'clock A. M. The introductory discourse was preached by Elder Simeon Babcock, from Luke 11: 2. after which the Association was called to order by the Secretary of last year, (the Moderator being absent,) and adjourned to meet on Sixth-day at 10 o'clock.

Sixth-day morning, met and heard a sermon from B. Clements; organized, and the letters from the churches being called for and read, showed the following to be the statistics:—

Jackson Church.—S. Babcock, pastor; Maxson Babcock and Benjamin Clements, licentiates; John Forsythe, deacon; Eli Forsythe, clerk. Dismissed 9; total 72.

Stokes Church.—The delegation from Stokes stated that a letter had been written, but failed of being forwarded—that the statistics are the same as last year, with one added, which stands thus: S. Babcock, pastor; Wm. Furrow, deacon; Job Kennedy, clerk. Added 1; total 33.

There was a letter brought before the Association by James B. Davis, asking admittance into the Association, with a church of 8 members, purporting to have been organized May 11th, 1855, which was left to a committee of five to take the matter under consideration, and report at the afternoon session. Eld. S. Babcock, B. Clement, E. Forsythe, Wm. Furrow, and M. Babcock, were chosen that committee.

A Committee was then appointed to nominate officers for the ensuing year, which were finally appointed as follows: MAXSON BABCOCK, Moderator; B. CLEMENT and E. FORSYTHE, Secretaries. The officers took their places, and then the Association adjourned to 3 o'clock.

Met pursuant to adjournment, and after prayer by Dea. Wm. Furrow, the Committee on the case of James B. Davis reported, that they have had the matter under serious consideration, and find it to be a somewhat delicate subject, but in view of all the circumstances they cannot report favorable to its reception.

Voted, that S Babcock and S. Lippincott be a Committee on the State of Religion; that B. Clement and E. Forsythe be a Committee on Resolutions; that John Forsythe and J. D. Maxson be a Committee on Preaching Arrangements; that B. Clement be a Committee to consider of and report upon the subject referred to the Western Association at their last Anniversary by this Association.

The Executive Committee reported that nothing had been done, further than to inquire after a minister to labor among us, and in that they failed.

The Treasurer reported no funds in the treasury.

The Corresponding Secretary reported no correspondence.

Voted, that B. Clements write the Corresponding Letter. Adjourned to meet on First-day morning at 9 o'clock.

First-day morning, met, and after prayer by Eld. S. Babcock, the Committee on the State of Religion reported, and their report was adopted.

The Committee on Resolutions reported, and their report was adopted.

The Committee on the subject referred to the Western Association reported, to the effect that the churches now forming the Ohio Association would do well to fall in with the offer made by the Western Association in answer to the request made by this Association at its last Anniversary, and become a part of that body, and that this Association advise the churches to send their delegates to the next meeting, and when we do adjourn it shall be to meet at the call of the Moderator, whose duty it shall be to call this Association at its usual time of meeting, to meet with the church in Jackson, should anything transpire so as to prevent the churches from becoming a part of said Western Association.

The Resolutions.

1st. *Resolved*, That the cause of Temperance still demands our strongest sympathies, our best efforts, and most earnest prayers.

2d. *Resolved*, That the doctrine of Peace is the doctrine of Christianity, and we would be glad to see it overspread the world.

3d. *Resolved*, That Secret Societies are dangerous to the interests of religion.

4th. *Resolved*, That the Missionary Spirit is a part and parcel of Christianity, and that it is the duty of Christians to aid the MissionaryEnterprise by all the means in their power.

5th. *Resolved*, That this Association hails with delight another opportunity to set its seal of disapprobation on American Slavery; and that the afflicting case of Pardon Davis, now suffering in the Louisiana Penitentiary, is but one of the legitimate fruits of the slave system; and while we would pray the authorities of that State to allow him the privilege to worship God as he sees fit, we deny the right they claim to have to rob him of his liberty, as he transgressed no just or proper law, in feeding the hungry or clothing the naked, or in giving the most necessary information to the ignorant; and had he done less, under the circumstances, we believe he would have failed of his duty; and further, we believe the law under which he suffers is not only barbarous and cruel, but of the most hellish character; and while we sympathize with him in his sufferings, we glory in the fact that our denomination has a martyr in the cause of truth and liberty, and would desire to encourage him, and all others in like circumstances, to suffer on to the end, and die a martyr's death, rather than for the sake of bodily ease and comfort give up a single principle of truth and right, remembering that a glorious crown awaits all the faithful, especially those who suffer for Christ and his truth.

Report on the State of Religion.

The Committee on the State of Religion report, that in view of the present state of things which exists among us, we come far short of wielding that influence which should characterize the Christian Church, and have great cause to humble ourselves before God, and mourn over our lack of zeal and energy in the cause of religion, and ask God to forgive us, and help us in future to exert that influence which we should. Yet we believe there are those among us who are still endeavoring to make their way to the haven of repose, whose hearts are deeply affected under the present state of things, and whose prayers ascend to God for the prosperity of Zion.

Corresponding Letter.

The Ohio Association, to the Seventh-day Baptist Churches of sister Associations of like faith and order, and all who love God and keep his commandments:

DEAR BRETHREN,—Through the kind providence of God, we have been permitted to meet again in an associated capacity, for which we desire to render thanks to our Heavenly Father. Our reports show that we have made but little progress since our last meeting, and the circumstances seem to be against us, we being few in number, and isolated in position. Yet we desire to take new courage, and labor on to the final triumph. There exists a good degree of union among us upon the great subject of Christ's kingdom, and our united prayer is, "Let thy kingdom come." We have made arrangements to disband our organization and become a part of the Western Association, but we think of holding yearly meetings for the purpose of worshiping God and encouraging each other on the road to heaven. We desire your prayers in our behalf, that we may be enabled faithfully to discharge our duties as Christians and churches, and would be glad to receive a visit from any of our brethren when they can make it convenient.

To the Editors of the Sabbath Recorder:—

In answer to the inquiries you made in the *Sabbath Recorder* with regard to the churches that are not represented in our minutes, I will just say, that they have gone down in consequence of emigration. The old Pike church went down on account of its anti-temperance principles; all except a few of the hard ones joined the North Hampton church; and the North Hampton church has entirely emigrated. A few members of the old Pike church are still living in the vicinity of North Hampton. Most of the members of the Port Jefferson church have also removed to more western parts. Some others have attached themselves to the Jackson and Stokes churches, as most convenient. The persons who composed Pickaway church have mostly gone West. I believe there are a few left; but they have let their organization go down. There was a little church organized by our ministers in Jay Co., Indiana; they too are all gone westward.

E. F.

NEW TRANSLATION OF THE BIBLE.—Bro. Daniel Babcock, for himself and others, inquiries whether the new translation of the Bible into English, proposed by the American Bible Union, is printed, and how it can be obtained? We believe that the Union has issued only three works in English, viz: Specimen of the Book of Job, 32 pages, 4to., paper cover, price 12 cents; Specimen of the Gospel of Matthew, 40 8vo. pages, paper cover, price 9 cents; and the last six books of the New Testament, a large quarto volume of 253 pages, cloth, price 75 cents, or by mail postpaid $1 15. The Union has also the following works passing through the press, viz: the Book of Job, the Gospel of Matthew, the Epistle to the Ephesians, and the Gospel of John. Orders should be addressed to Wm. H. Wyckoff, 350 Broome-st., N. Y.

A PRESENTIMENT FULFILLED.—We have to record, (says the Kinderhook "Rough Notes,") a most melancholy instance of the power of hallucination over the mind and health of a highly respectable and intelligent young lady of Kinderhook, in this State, who some two years since, while in the enjoyment of robust health, was visited one night at her bedside (as she affirmed at the time) by an apparition, which in solemn accent informed her that at the age of 18 she would be an inhabitant of another and a better world. She made the incident known to her mother, who vainly endeavored to erase the circumstance from the mind of her daughter by treating it as the hallucination of a dream. The daughter, however, averred that she was in possession of her faculties and wide awake at the time of receiving her spiritual visitor; and such was the effect it had upon her mind that from a girl full of life and glee, she became thoughtful and reserved, and gradually sank under its depressing influence, pining gradually, until recently she became a tenant of the grave-yard just as she was entering upon her eighteenth year.

DEATH OF MRS. MINOR.

From a letter just received from Bro. Chas. Saunders, under date of Jaffa, Nov. 9, I have learned of the death of Mrs. Minor, who has become considerably known in our denomination from her efforts in Palestine to establish industrial missionary operations, combining manual labor with religious teachings, thus hoping to benefit the bodies and souls of the destitute and benighted. She died at her residence near Jaffa, Nov. 6th. She had been gradually failing for the last six months, and for the last two months had been confined to her bed most of the time. At first she had chills and fever, then fever without chills, with inflammation of the stomach. This was succeeded by dysentery, and inflammation of the bowels, which lasted without abatement until death relieved her of her extreme sufferings. She was anxious to live, while there was hope; but when that departed, she prayed that she might die soon. Her hopes of eternal blessedness seemed bright, and she spoke many comforting words for those she left.

J. BAILEY.

SICKNESS OF BRO. SAUNDERS.

In the last letter received from Bro. Chas. Saunders, from Jaffa, he informs us, that since his sickness, from which he recovered last March, he has suffered from diseased eyes. For the last three months he has been unable to read or write, and has most of the time staid in his room, with his eyes shaded and the room darkened. His left eye has been so inflamed as to render him unable to use it for reading for two months. He is at present better. He has, from his several attacks, been laid aside from active labors more than a year, much of the time with severe sickness. There has been much sickness in the colony at Jaffa for most of the time since our missionaries have been there.

J. B.

SUNDAY LABOR IN PENNSYLVANIA.—In Mifflin County, Pa., recently, a Justice of the Peace summarily convicted a number of persons for an infraction of the Sunday law, in doing the work necessary to keep in blast the furnace of Etting, Graff & Co. The case was remanded to the Court of Common Pleas of the county by writ of certiorari, which tribunal, after a careful reviewal of the facts, reversed the decision of the Justice of the Peace. Judge Wilson, in delivering the opinion of the Court, said that he was satisfied that the injuries consequent on the stoppage of the blast of such furnaces for twenty-four hours out of seven days would be so great and general as essentially to be fatal to the manufacture of iron in this country, and that the act of assembly prohibiting worldly employment on the Sunday does not impose a fine for the work necessary to keep furnace, in blast.

A HOME QUESTION.—The following home question is proposed, by the *Presbyterian Herald*, to whom it may concern:—

"Can a Christian man or woman, with a good conscience, continue to take a newspaper for two, three, four, five, six, seven, eight, or ten years, causing the editor and publisher to pay out actual cash, besides their own labor, to enable them to send the paper, and the subscribers, during that time, sending no equivalent for it, though the mails are always at their doors, ready to convey what they may wish to send to the publisher, and he is willing to run the risk of its safe arrival, rather than lie out of his money? Is such a course of conduct obeying the apostolical injunction to owe no man anything, but to love one another? Is it doing unto others as they would have others do unto them, their respective positions being exchanged?"

ANNIVERSARY OF THE LANDING OF THE PILGRIMS.—The two hundred and thirty-fifth anniversary of the landing of the Pilgrims at Plymouth was celebrated one evening last week by the New England Society of this city. The exercises were held in the Church of the Puritans, Union square, and was numerously attended by the sons and daughters of New England. The performances were purely of a musical, literary and prayerful character. Dr. Oliver Wendall Holmes was the orator of the evening. His theme was the social habits of the people of New England. A poem was delivered by Rev. John Pierpont, descriptive of the progress of the Pilgrims to and on this continent. At Plymouth, Mass., the anniversary was celebrated with enthusiasm.

NEW MARKET SEMINARY.—The first term in the academic year in this Institution closed on the 14th inst. The examination of the students, which took place in the fore part of the day, was spirited, and showed marks of thorough training in their several studies. The afternoon was devoted to declamation and compositions, all of which showed a discipline of mind and exhibition of talent rarely to be found in an institution of no longer standing.

The second term commenced on the 19th inst., with very flattering prospects, and bids fair to be one of unusual interest. The course of lectures on chemistry, by Wm. C. Whitford, will be continued in this term.

B.

NEW MARKET, Dec. 20, 1855.

THE ANTI-PANTHEIST: False Metaphysics Exposed, and Theopneusty defended. By James L. Scott. Vol. 1, No. 1, January, 1856. Dayton, Ohio: Stephen Deuel, Publisher.

Such is the cover-title of a fifty-two page octavo magazine of which we have received the first number. The design and scope of the work may be learned from the following statement, by the editor, in his introduction, of the subjects which will be considered:—

First: Pantheism, with its unsound positions and false reasoning, will be exposed; the falsity of the *harmonial theory of progression*, out of Christ, discovered, and its laws and defects explained.

Second: Pantheistic Spiritualism, now so effectually operative throughout the world, will be critically examined.

Third: The Composition of the Holy Scriptures. Their Truth and Divine Origin determined.

Fourth: The Exposition of the Scriptures.

DR. KING AND THE GREEK GOVERNMENT.—The New York *Obsevver* says that after so many years of delay, vexation and loss, the claim of Rev. Jonas King, D. D., upon the kingdom of Greece, for pecuniary damages sustained by him, has at last, through the interposition of our Government, been allowed. Although Dr. King has been paid far less than he was in equity entitled to, it is a source of gratification to him and his friends, that the difficulty is at length adjusted amicably by the payment to Dr. King, by the Greek Government, of $25,000 in full of all demands.

METHODIST AID FOR IRELAND.—The Methodists of New York are making a special effort to raise funds for the evangelization of Ireland. Over $15,000 have been subscribed within a few weeks past, and it is proposed to increase the sum to $20,000.

RELIGIOUS INTELLIGENCE.

It is in contemplation by the American and Foreign Christian Union, to suspend their mission in Ireland, since the evangelical ministers and members of the Established Church of Ireland, aided by their English brethren, have within the last few years taken hold of the work of missions in that country with a strong hand; the Irish Mission Society, the Presbyterians in the north of Ireland, the Wesleyans, and the Primitive Methodists, are carrying on operations with great zeal and energy.

The Rev. J. C. Carpenter, of South Londonderry, Vt., writes the *Christian Secretary* that he was settled as pastor of the Baptist church in that place on the first of May last. The Lord soon revived his work, where for years the discordant elements in the church had produced alienation and disaster. In a few weeks order and harmony were restored, and souls have been flocking to Christ. Twenty-two have been baptized since the first of July, and the work still moves on.

The Bombay *Guardian* says: "Much has been done towards a system of colportage in Western India. A beginning has been made. Persons have been employed to visit the various parts of the Conean and Decan, with tracts and books and portions of the Word of God for sale; and the reports of our tract society show that from year to year the proceeds from this source have been increasing in quite an encouraging ratio."

A clergyman who has just returned from China, has been franked nearly the whole way by American ship-owners, on the simple statement that he was a missionary. He sailed from Hong Kong to San Francisco, then via the Isthmus of Panama to New York, and thence to England; the entire cost of this long trip, including cost at hotels, at some of which no charges were made, being £15 0s. 9d.

The American Bible Society has resolved to publish the Gospel by John, and Acts of the Apostles, in the Spanish language, that they may be used as a school-book in St. Domingo. An appropriation has been made also for the purchase of blocks to print the Chinese New Testament at Amoy; and a Swedish Bible will be published as soon as funds can be spared for the purpose.

The *Missionary Herald*, for December, which has just been published by the American Board of Commissioners for foreign missions, reports the amount of donations and legacies to the Board for the month of October, to be $22,100, and the whole amount, from August 1 to October 31, to be $42,938.

In the London papers we find a brief announcement of the death of Rev. Robert Montgomery, the poet, commonly called "Satan Montgomery." He was the author of several long religious poems, only two of which, "Satan," and the "Omnipresence of the Deity," have been reprinted in this country. Among his other works were "Woman, the Angel of Life," "Luther," and "The Universal Prayer."

The Chester (Pa.) *Republican* informs us that in the case of Passmore Williamson *vs.* John K. Kane, Joseph J. Lewis, Esq., the plaintiff's counsel has filed a declaration, claiming damages to the amount of fifty thousand dollars. In all probability the case will go upon the trial list for the February term.

The example of Dr. Alexander of New York, is worthy of commendation and imitation, who is reported to have rejected five rich applicants for admission to his church, on the ground that they were more needed elsewhere.

The widow of ex-Mayor Garrett, of Chicago, Ill., who has lately died, it is stated, has bequeathed the whole of her large estate to the Garrett Biblical Institute, and the Methodist Collegiate Institution connected therewith, located at Evanston, 16 miles north of Chicago.

A gentleman has offered, through the editor of the *New Englander*, $150 for two articles on the Immortality of the Soul—one embracing the argument from nature, and the other the argument from Scripture. These articles are to be published in the *New Englander*.

The donations and legacies received by the Baptist Missionary Union in August and September, amounted to $18,222 59—making for the first six months of the current year, $47,568 83; $38,957 75 received in the corresponding period of 1854.

European News.

One week later news from Europe has been received.

The news by this arrival consists mainly of peace rumors, but the public had no means of estimating their truth, and they are probably of little value.

The Times correspondent writes from the camp before Sebastopol, Nov. 24, saying there is really nothing to write about, as nothing has occurred. Very little firing is exchanged between the north and south sides. The Russian works on the north side are rapidly attaining gigantic dimensions. The engineering operations to destroy the Sebastopol Docks are nearly complete. Stringent regulations are issued to keep spies and loafers out of the Allied camp. Horse races are advertised in the British, and theaters in the French camps. The weather has been fine.

In Russia, the effects of the war have driven the Bank of Odessa to a suspension of specie payments and raised a premium on Silver 15 per cent.

The King of Sardinia has been the guest of Queen Victoria during the week. On Sunday he worshiped in the Sardinian Chapel—Cardinal Wiseman preaching. On Monday he attended the reviews, and on Tuesday he visited London, which was illuminated in his honor. On Wednesday he was made Knight of the Garter, and inspected the camp at Aldershoff. On Thursday he left London for France.

The ship Constitution, of New York, arrived at Liverpool on the 4th, and on the following morning, while lying at anchor in the River Mersey, was observed to be on fire. Assistance was immediately rendered, but she burned all day, and at night was scuttled in twenty feet of water. Part of the contents of the lower hold it was thought would be saved in a damaged state, but otherwise the ship and cargo were a total loss. The cause of the fire was unknown, but was supposed to be from spontaneous combustion. The passengers and baggage were all landed in safety.

THE GREAT EXPRESS ROBERY.—It will be remembered that in the month of September last, the American Express Company was robbed of $50,000 in gold, which it was conveying from Dubuque, Iowa, to the New York branch of the sub-treasury. The company, failing to recover the stolen specie, paid over the amount to the treasurer, but did not at all relax their efforts to ferret out the thieves. The messenger, W. C. White by name, who had charge of the treasure during its transit by night from Chicago to Detroit, resigned his office at the end of the month and came to this State. Mr. Best, a detective officer in the employ of the Company, after a few weeks' investigation, was at last able to write to his employers that two men, Oliver King, who formerly kept a hotel in Lowell, and Wm. C. Ayer, formerly a broker at No. 17 Brattle-square, Boston, had, through a third party who has also been arrested, deposited $5,000 in gold in the Haverhill Bank, and from other circumstances not yet divulged, it was thought that they were in connection with White. It was subsequently ascertained that King, whose previous poverty was well known, had made purchases of houses and other property, and seemed to be rolling in wealth. Upon receipt of this information, the parties were arrested, and considerable money was found in their possession, which is supposed to be the avails of the robbery. All three—White, King, and Ayer—have been required to furnish bail in $15,000 each to appear at the trial.

THE FRANKING PRIVILEGE.—The St. Louis Democrat says: We were quite forcibly struck yesterday morning, in passing the Post-Office, with the beauties of the franking privilege, and could not repress a smile of satisfaction at the enterprise of certain of our representatives at Washington, as we beheld *eight* immense bags of mail matter lying at the door, weighing about *twelve hundred pounds*, all labeled "Free—Henry S. Geyer." It was privately stated to us that the balance of Mr. Geyer's shipment, consisting of a pair of French bedsteads, with bedding to match, had just been taken inside the Post-Office door. Whether these latter came by letter or not, we cannot say.

FROM NICARAGUA.—It is stated that the Minister from Costa Rica to the United States has given notice that his goverment, together with Gautemala, San Salvador, and Honduras, have formed a league for the purpose of expelling General Walker and his compatriots from the country, and that our Government will not receive Mr. French, the new Minister from Nicaragua. It is also said that other serious obstacles to the success of the Walker party are an icipated. But it is conceded that the great agricultural and mineral wealth of Central America will counteract the league of the States above mentioned, and the proclamation of President Pierce deter adventurers from flocking thither.

ROBERT SCHUYLER, well known for his financiering operations in connection with the New Haven Railroad, is reported to be dead. The following is from a private letter:—

"Robert Schuyler died about the middle of last month, at his residence in the environs of Genoa, where he had been living for some time in the strictest incognita with his family. He was not enriched by his monstrous frauds; on the contrary, he received from America the funds necessary for his subsistence. The place of his residence would have been known a long time ago, if certain persons, occupying important positions in the management of several railroads, and especially of the New Haven Railroad, had not been deeply interested in securing his silence and absence from the country. Since his departure from America his health has been on the decline, and he finally died of grief and mortification."

CONGRESS stood in the same position, up to the close of last week, as it did a week earlier—no Speaker, and no immediate prospect of one. But the papers of Second-day morning of this week speak more encouragingly of the prospects ahead. The President's Message may be delivered in a day or two, or it may be delayed indefinitely. Meanwhile the *people* are very impatient to learn what the President has to say about our foreign affairs, which are at present in a critical state.

From South America.

By the arrival of the Empire City we have the following from South America:—

It is stated that a resolution will be introduced into the next Congress of New Granada for the entire suppression of the standing army, and the abolition of the Secretary of War.

El Neo Grenadino says that two objects of reform have been introduced into the Carthagena Legislature. One, the institution of a municipal guard, and the second for the centralization of taxes. The party now in power throughout the republic seem to favor the projects.

From Buenos Ayres we have dates to Oct. 27. Generals Bustos, Lamela, Flores, and other chiefs, were again in revolution, but at last dates Flores was in retreat towards the Ensenada to re-embark for the Oriental coast. Lamela was up in the north, and a good deal of trouble was expected. Other Indian incursions were also dreaded.

From the South Pacific we have dates as late as the 15th ult. Three Peruvian war steamers, built in England, had arrived at Valparaiso.

The republic of Chili continued peaceful.

At Lima there was a report that Arequipa and some of the southern cities of Peru had declared in favor of Gen. Vivanco. Mr. Compton, British consul at Islay, was dead.

In Bolivia the Avila revolution had been put down, and the country was again quiet.

At Callao, an American ship had recently arrived in port with a cargo of miserable Chinese slaves, and it was found that as many as two hundred and one of them had either died from sickness or committed suicide during the voyage.

Four thousand persons had been carried off in the province of Pataz (Peru) by an epidemic classed by the physicians as a fever of a new type.

Advices from Bogota mention that Senor Jose Maria Plata had resigned as Secretary of the Treasury, and Dr. Rafael Nunez had been appointed in his place.

Damages for Maltpractice.

A case has just terminated in the Kings Circuit Court, (Judge Strong presiding,) which has resulted in a verdict of $3,000 damages, against a physician and surgeon, for maltpractice. The parties in the action were Albert A. Wilson, a boy 15 years of age, plaintiff, and Isaac K. Snell, a graduate of the New York Medical College, defendant. The parties reside at Green Point, Brooklyn. In August, 1852, the plaintiff fell from a vessel in Eckford Webb's ship yard, and sustained a fracture of the right arm below the above joint. He was conveyed to his residence near by, and Dr. Snell was called in to attend to him. The arm was bandaged in accordance with the medical usage, and it appears the bandage was left on for some days without being removed, when a discoloration of the fingers was observed, and mortification became apparent. It was charged on the part of the plaintiff, that the bandage was so tight as to impede circulation, and hence the mortification of the fingers, which subsequently came from the hand. The defense brought forth evidence to show that the bandage had been put on in a truly medical and scientific manner. The trial lasted for five days, and the most eminent of the medical fraternity in New York and Brooklyn were placed upon the witness' stand, and gave their opinions as to the effects of tight bandaging and the probable causes of the mortification in the fingers. The Jury brought in a verdict for the plaintiff of $3000 damages. The same case had been tried in June, 1853, before the late Judge Barculo, when a verdict of $2500 was rendered for plaintiff.

Late from Kansas.—From Independence (Mo.) we have news to the effect that the trouble between the anti and pro-slavery men at Lawrence, Kansas, has been amicably settled by the people promising to deliver up offenders, obey the laws of the Territory, recognize the Governor as such, and conduct themselves in future as a law abiding people. They refuse, however, to deliver up their arms. The volunteers from Missouri have been disbanded and returned home. Col. Cumming, Superintendent of Indian Affairs, had arrived at Council Bluffs from the Black Feet country, where he had concluded treaties with several tribes of Indians. The Chicago *Tribune* states that one of the wealthiest citizens of Chicago stands ready to contribute one thousand dollars towards arming and equipping a company of two hundred men for the defense of the life and liberty of the people of Kansas, and that another gentleman has pledged himself for a like amount whenever such company shall be organized, and one thousand dollars more for every company of two hundred up to five, or one thousand men, making in all five thousand dollars.

Land Warrants.—Thompson's Reporter of Dec. 15, says: Land Warrants have settled down to a point where they will, we think, stick for a week or two, but in mid-Winter lower prices will rule. We quote:

	Buying, per acre.	Selling, per acre.
160s	$0 95	$1 00
90s	0 95	1 00
120s	0 90	0 95
40s	1 10	1 15

During the Winter large amounts will accumulate in the hands of speculators, who will compete with each other in selling next Summer and Fall. The new issue will continue yet, for two years, at the rate of 300 to 5000 Warrants per day. In 1848 and 1850, with the less issue than at present, Warrants were slow of sale at 65 cents per acre.

On inquiry at the General Land Office, (says the Washington Union,) we learn that there is no law of Congress giving away the lands in Kansas and Nebraska Territories to foreigners. The 12th and 13th sections of the act of Congress approved July 22, 1864, direct the unsurveyed lands to be exposed to sale from time to time, in the same manner and upon the same terms and conditions as the other public lands of the United States, which sections are now in full force. Lands are not only not given away to foreigners, but they are excluded from the benefits of the preëmption laws, which, in their operation, are confined to citizens of the United States.

In Chicago a few days since, while the Judge of the Recorder's Court was trying a case of horse stealing, his own horse and buggy were stolen from the vicinity of the court room.

SUMMARY.

J. P. Davis, a school-teacher for some years in the Town of Bushwick, who was hired by the School Trustees at a salary of $600 a year, and was discharged by them in 1853 at a week's notice at the end of the first quarter of the third year of his service, brought an action in the Supreme Court, before Judge Strong, in Brooklyn, for $450—the amount of the salary due for the unexpired portion of the year for which he had been engaged. The case was recently decided in his favor and a verdict given for $540—the amount of salary due, together with interest upon the same.

The Wild Cat currency war in Illinois still continues to engage the attention and fill the columns of the Chicago journals. The Chicago Tribune and Chicago Times fight the battle of the legitimate banks of the State with great zeal and ability, and with marked success. We see by one of these papers of the 11th instant, that the banking capital of Illinois has been increased since August last, by the deposit of $1,368,000 in Stocks with the Auditor as a basis of bank issues under the General Banking law of that State.

A dispatch dated Savannah, Tuesday, Dec. 18, says: The schooner Baltic, Captain Pruden, from Nassua, arrived here, reports that the steamship Crescent City from New York, for New Orleans via Havana, on the 3d inst., was wrecked on the 7th, on Mattinala Reef, Bahama Banks. The passengers, crew, and baggage were saved and taken to Nassau by the wreckers.

According to the latest news received from Mexico, it would seem that the Republic is as unsettled as ever. Gen. Uraga, a man of some note, has attempted to bring about another revolution, but, though his scheme was frustrated, and he himself arrested, the Government of Alvarez is not sufficiently popular to be shielded from the dangers that have threatened and generally destroyed all previous administrations. Throughout the whole country there are symptoms, here and there, of insurrectionary movements.

The mail steamer Empire City arrived at New York, Dec. 17th, with over a million and a half in treasure from California. Her advices from San Francisco are no later than those previously received. From Panama we learn that the people have been celebrating the 34th anniversary of the Independence of the Isthmus, and the festivities, had passed off very satisfactorily on the 27th of November.

The affray between the publishers and the newspapers, which, at first, was half in fun, is about to terminate, as such quarrels usually do, wholly in earnest. Messrs. Mason Brothers have commenced a libel suit against the proprietors of the Tribune, and the public will soon know all about the war, and what they libel each for. Messrs. Abbott Brothers have been retained as counsel by Messrs. Mason Brothers. All this comes of Longfellow's "Hiawatha."

We understand, (says the Washington Union,) some postmasters are in doubt whether, under the new law requiring prepayment of all letters to places within the United States, letters addressed to members of Congress may go without being prepaid. The answer, of course, is, that all such letters should be duly dispatched, as the franking privilege remains unchanged.

On the 13th inst., as Mr. Frederick Couch, a wealthy and intelligent farmer, in North East, Dutchess County, New York, was sawing wood at his door with a circular saw, run by horse-power, the saw exploded, and a piece about six inches square struck him in the head, passing entirely through to the chin, killing him almost instantly.

From the Tenth Quarterly Report of the Mercantile Library Association of this city, we learn that during the last three months they have delivered to their members no less than 30,825 volumes, and that the number of persons visiting the Reading Room during the same time was 27,728. Number of volumes now in the Library, 76,000. Number of periodicals and newspapers supplied in the Reading Room, 260.

There are one hundred and seventy places called Washington in the United States, besides the one in the Dictrict of Columbus. This is at least five to every State. And this estimate does not include the dozens of Washington Heights, Washington Hollows, Washington Villes, Washington Corners, Washington Lakes, Washington Mills, Washington Butte, and Washington South Yuba.

A dispatch dated Buffalo, Tuesday, Dec. 18, says: Two trains of the Grand Western (Canada) and Erie and Ontario Railroad came in collision this afternoon. The engine and two or three cars were smashed. Two lives were lost, and several persons wounded. Both trains were behind time.

A dispatch dated New Orleans, Monday, Dec. 17, says: The Supreme Court this morning gave their decision in the case of Mrs. Gaines, reversing the decision of the Second District, and decreeing that Daniel Clark's will of 1813 be probated, and that Mrs. Gaines be put in possession of the property.

It seems that his Imperial Majesty Faustin I. has not renounced the idea of reannexing the Spanish part of Hayti to his Empire. At the date of our last advices he was about to march forth with the entire army, and made no secret of his intention to spend New Year's in San Dominingo City.

The A. B. C. F. M. have suffered a falling off from their usual receipts, of $8,000 for the first four months of the year. The debt at the beginning of the year was $20,000. During the four months thirty-two missionaries have been sent out. Serirous evils must ensue to the missionary cause if this falling off continues throughout the year.

By direction of Bishop Bayley, under the authority of the Archbishop, three consecutive days will be observed by Catholics in New Jersey during this months as days of Thanksgiving in honor of the dogma of the Immaculate Conception.

The ship William Doane, from Philadelphia for Bremen, was abandoned at sea on the 5th of December. She was on her beam-ends, and had five and a half feet of water in her hold. The crew, 15 in number, were all taken off, and arrived at Salem in the brig Water-Witch, from Para.

The Postmaster General has awarded the the contract for furnishing wrapping-paper and twine for the New York and Cincinnati Districts, (twenty States,) to Thomas & Lathrops, of Buffalo, they being the lowest bidders.

The Hartford Courant says: As a teamster, James Murphy, with a two-horse wagon, was carting powder from one building to another on the 20th ult., at Hazard's powder-mills in Enfield, the load exploded, tearing wagon, horses, and driver to atoms. There was about a ton of powder on the wagon, and so powerful was the explosion that an arched bridge over a canal, on which the wagon happened to be when the explosion took place, was depressed about three feet. The powder was in half barrels without any heads to them—so that it was exposed.

We learn by a despatch from Washington that the whole subject of slavery will be brought before the Supreme Court of the United States this winter, in the case of Mr. Booth, the abolition editor who was convicted in the United States District Court of aiding in the escape of a fugitive slave, and was subsequently liberated by the State Court on a habeas corpus. This is one of the most interesting and important cases ever brought before the Supreme Court.

A boy, aged fourteen, was on Monday last caught in the belt of some machinery at a watch-spring manufactory at Newark, and drawn round a shaft which was turning at the rate of eighty revolutions a minute. When he was extricated, it was found that the right arm was torn in pieces, within a few inches of the shoulder, the right thigh fractured, the fibula of the left leg and two of the ribs broken. Amputation was resorted to, and the broken bones were set, but it was not thought that he would recover.

Sir Joseph Reynolds, the great artist, himself confessed, after making it the study of his life, that he had never been able to discover how Raphael and the other great artists had been able to preserve the beauty and brightness of their paintings. The colors of Sir Joshua already look chalky and dead; while those of Titian are equally as vivid and beautiful as when first laid on by the great artist, and paintings which have been buried more than two thousand years in the damp, dark tombs of Egypt, are yet fresh and bright.

The work on the magnificent telescope now in process of construction for Hamilton College, is steadily progressing towards completion. The Rome Sentinel learns that the lenses have been placed temporarily a few times in a tube, and a view taken of the sky through them. It is said that they possess a great magnifying power, and that but a small postion of the moon can be seen through them at once, so large is that orb's appearance when viewed through these glasses.

The law makes no compensation to postmasters for the sale of postage stamps or stamped envelopes, except by the allowance of commission on such as are used in prepayment of postage on letters and packages sent from their offices. The commission allowed on mailable matter prepaid by stamps or stamped envelopes sent from an office is the same as if the prepayment had been effected in money.

A dispatch from Independence, of the 18th inst., says: "The trouble at Lawrence, Kansas, has been settled, by the people promising to deliver up offenders, obey the laws of the Territory, recognize the Governor as such, and conduct themselves in the future as law-abiding people. They refuse, however, to deliver their arms. The volunteers from Missouri have been disbanded and returned home."

The machine for sawing marble, recently invented by Mr. Heald, of Springfield, Mass., is said to operate very successfully, and to meet a long felt desideratum. It is exceedingly simple in construction, consisting merely of arrangements of saws on separate shafts, which may be set at any angle to each other, and thus saw the opposite sides of a pyramidal block at the same time.

A dispatch dated Elizabethtown, N. J., Dec. 12, 1855, says: An accident occurred this afternoon at the gas works in this city, caused by one of the workmen going into the purifying house with a lighted candle, a large quantity of escaped gas being there confined. The explosion, which immediately followed, demolished the building and seriously burned the workmen.

A new motive power—that produced by the expansion of liquified carbonic acid—has lately been proposed by two young French chemists. They propose, by the employment of this agent, to reduce the amount of combustibles to one-tenth, and the volume of apparatus to six-tenths of that required to create an equal amount of force by steam.

The latest Know-Nothing estimate of the division of parties in the United States Senate gives to the black republicans 11 Senators; to the "live whigs," 7; to the Know-Nothing democrats, 2; to the regular democrats, 33; and to the regular out and out Know-Nothings, 1.

The French Government demanded of the Holy See that the reply to the Piedmontese memorandum should not be published contemporaneously with the visit of the King of Sardinia to Paris.

In Philadelphia, on the 20th, an attempt was made to set fire to the Northern Temporary Home for Friendless Children. The fire was fortunately extinguished One hundred children were sleeping in the upper portion of the building.

A boy named Green, of Addison, Steuben Co., N. Y., had his right hand split in two a few days since, by the wheel of a freight train, while engaged in putting a cent on the rail for the purpose of seeing it flattened.

Monster guns are now being manufactured in England, which, with their carriages, will weigh fifty tons each, and will carry a shot half a ton in weight a distance of four miles. It will take two and a quarter barrels of powder for a charge.

The Calais (Me.) Advertiser, in reference to the aspect of the lumber trade, states that there is more lumber of all kinds on the wharves of that city than has been seen for fifteen years.

Judge Stuart, of New York, who was recently tried and acquitted, on the charge of receiving a bribe, has resigned his seat on the Bench, in accordance with the recommendation of the jury.

The report that the original copy of the Declaration of Independence has been stolen from the Patent-Office, and a counterfeit one substituted, is untrue. The original has been there for fourteen years, undisturbed.

The President of the United States has issued a Proclamation against enlistments for service in Nicaragua.

Mr. Ericsson is reported to be still engaged in his caloric enterprise. His new caloric engine is forty horse power, and, compared with its predecessors, has been greatly simplified, and its cumbrous parts dispensed with, not only avoiding friction and diminishing expense, but effecting a great saving in space. Formerly there were four cylinders, with duplicates placed above them on pumps. The latter are done away with under the new arrangement.

A dispatch dated Albany, Dec. 21, 1855, says: The Supreme Court, of the Seventh Judicial District, has just made a decision sustaining the constitutionality of the Prohibitory Liquor Law, as far as brought before them. This decision overrules the decision of Judge Parker on the fifth section of the law, on both points. Prosecuting under the law will be commenced in Rochester immediately.

Mr. Oscar F. Cogswell, of Auburn, was a few days ago boiling alcohol for the purpose of making "hot drops," when, on taking the kettle from the stove, the liquid boiled over, and splashing on Mr. C., took fire from the candle which he held in his hand, and soon enveloped him in flames. He was burned so seriously that he died shortly after.

Among the new inventions of the day is Phillips' patent lever farm gate. It is without braces, mortices, or hinges, and the entire bearing being vertical, all tendency to settle is entirely overcome. It is never swayed or obstructed by snow in winter, and is of very simple structure.

The shortest day in the year is nine hours and four minutes in length. This will occur on the 18th of December, and the length of the day will vary a fraction of a minute for nine days from that time, increasing a single minute on the 27th of December, when the day is nine hours five minutes in length.

A new railroad company has been organized to construct a line from Toledo to Detroit. The direction is composed of gentlemen connected with the Cleveland and Toledo, and Southern Michigan Railroad Companies—the new road being projected with a design to obtain a large business, by a connection with the Great Western Canadian Road.

A dispatch dated Albany, Friday, Dec. 21, says: The Supreme Court of the Seventh Judicial District has just made a decision sustaining the constitutionality of the Prohibitory Liquor Law, as far as brought before them. The decision overrules the decision of Judge Parker on the fifth section of the law, on both points. Prosecuting under the law will be commenced in Rochester immediately.

The returns of the recent census of Illinois, are still incomplete in a few counties, but, estimating these upon the most reliable data, the population of the State reaches 1,271,055, against 851,470 in the year 1850, showing a total increase of 419,585, or in the ratio of 49 per cent. Should the same ratio of increase hold good in the next five years, the population of the State will, in the year 1860, reach 1,800,000.

Ladies, look out whose smelling-bottle you use when among strangers. Fine-looking ladies in mourning sometimes administer chloroform with their proffered perfume, and then seize their victim's watch, porte-monnaie, and jewels. Indeed, it is best not to be faint unless well protected.

In the Marine Court, in New York, the other day, Judge Thompson passed sentence on the twelve Jurors who had agreed to disagree, by fining them twenty dollars, and confining those who refused to pay the impost. Several of the Jurors, who had well-filled porte monnaies, paid up, but others refused, and, it is said, intend to test the authority of the Court to impose such a fine.

There are several Chinese firms in California that have invested over $500,000 in their business; and there is more than two millions of dollars capital invested in the trade between San Francisco and China, owned and controlled by Chinese residing in that city.

There is said to be quite a revival of religion among the convicts of the Auburn State prison. On the 25th ult., fifteen who had expressed hope were baptized. The meetings on the Sabbath are very interesting.

It is estimated that thirty thousand models have accumulated in the Patent Office, nine-tenths of which are of such a nature that drawings can fully represent them, instead of the more costly models that are now required.

The State Canvassers of Wisconsin have declared Gov. Barstow re-elected by 159 majority. The seat will be contested on the ground that Bashford, the Republic candidate, received a clear majority of the legal votes.

The married men in the employ of the Boston and Worcetser Railroad Company, numbering 400, were each presented by the Corporation with a fat turkey for Thanksgiving dinner.

An effort will be made at the next meeting of the State Legislature to set off Long Island as an independent Judicial District.

They give out their Fires by contract in New Orleans. A firm has the job of quenching them all for $100,000 per annum.

Don't let the children take into their mouths handsomely enamelled cards; they are poisonous.

New York Markets—Dec. 24, 1855.

Ashes—Pots $7 50 per 100 lbs Pearls 8 50.

Flour and Meal—Flour 8 12 and 8 38 for State and Western mixed, 8 25 a 8 50 for Michigan and Ohio, 9 50 a 11 50 for extra Genesee. Rye 5 50 a 7 75. Corn Meal 4 18 a 4 25 for Jersey. Buckwheat Flour 2 50 per 100 lbs.

Grain—Wheat, 1 95 a 2 00 for Western and Southern red, 2 00 a 2 15 for white. Rye 1 30 a 1 31. Oats, 48 a 51c. for State, 52 a 54c. for Western. Corn, 96 a 97c. for Western mixed.

Provisions—Pork, 17 50 a 18 00 for prime, 19 75 a 20 00 for mess. Beef 9 00 a 10 00 for country prime, 10 50 a 12 00 for mess. Lard 12½c. Butter, 17 a 23c. for Ohio, 23 a 30c. for State. Cheese 9 a 11½c.

The N. Y. *Times* has a general review of the market under date of Dec. 20, which says:—

As compared with the prices of breadstuffs a week ago, Flour closes 25c. a 62½c. per bbl. lower, the common and medium grades having decreased in value more than the finer qualities. There has been no decided decline during the week in Wheat, but the tendency of prices is steadily downwards. The stock of Wheat is pretty large, and is being freely offered, but not as yet at rates to suit heavy purchasers. Corn has fallen 2c. a 3c. per bushel since this day week, under the pressure of accumulating supplies and a rather slack demand. There is a heavier amount here of New Corn, but much of it is in poor condition, and not fit to ship. Rye and Barley are a trifle cheaper, and close dull. Prime Oats have slightly advanced, but common qualities remain depressed and languid. The supply of Rye, Barley, and Oats is fully adequate to the wants of purchasers.

MARRIED,

In DeRuyter, Dec. 15, 1855, by Eld. J. R. Irish, Mr. George T. Saunders, of Oswego, to Mary S. Fairchild, of DeRuyter.

By Eld. N. V. Hull, at his residence, Dec. 20th, Mr George F. Allen to Miss Olive Burdick, all of Alfred.

DIED,

In Ritchie County, Va., Nov. 15, after a protracted illness, of disease of the chest, Jesse M. Lowther, in the 47th year of his age. He embraced the Sabbath about twelve years ago, and soon connected himself with the Hughs' River Church, since which time he has been a devout and useful member of that Church. He had been for several years, and was at the time of his death, clerk of the church, and had rendered himself useful in many other ways, which, on account of his constant bad health, would seem to those unacquainted with him as a man that cared more for the cause of truth than for all things else, impossible. For several months previous to his death he was unable to attend public worship; yet during this period he manifested that firm reliance on God that always characterizes the true Christian, and often expressed a willingness to depart and "be at rest." In duty to his family, however, he used such means as might restore him to health; but when human sympathy could avail nothing, and the tears of friends and relatives were shed in hopeless resignation to Him who "doeth all things well," he talked calmly of death, and consoled his friends by exhorting them to secure the glorious hope that now consoled him in the "valley and shadow of death." His mind retained its usual vigor till the time of his death. He spent the last twenty-four hours of his life in making the necessary arrangements for the support and education of his family, which was ardently attached to him, as an affectionate husband and an exemplary parent. When this was finished he calmly resigned his consciousness, and his spirit took its flight, we trust, to the realms of unclouded bliss.

J. B.

In Brookfield, Madison Co., N. Y., Dec. 11th, of scrofula, Albert Leroy, son of Albert and Alzina Clarke, aged 18 years, 6 months, and 7 days. Brother Clarke experienced religion nearly four years ago, and united with the 2d Seventh-day Baptist Church in Brookfield, of which he remained a devoted member until death. Seldom, if ever, has a case of more complete triumph over the world, and resignation to the will of God, been witnessed, than was exhibited in this brother's life and death, and especially during the last few months of his suffering. He often expressed, that he had only desired to live to be useful, for which he had been striving to prepare himself, yet if he could better glorify God by dying, he was perfectly willing to die. He no doubt sleeps in Jesus.

In DeRuyter, Nov. 23d, Dea. Lot Crandall, aged 63 years. For many years he had suffered much from an affection of the heart, and had lived in constant expectation of a change. He was a faithful member of the church in Otselic. He not only honord the Lord while living, but in setting his house in order for death he remembered the Lord's cause in the disposal of his substance.

In Tiverton, R. I., Nov. 18, 1855, of consumption, Mrs. Abigail Simmons, aged 67 years and 8 months. Mrs. S. was a member of the Congregational Church, and during a long life exhibited a Christian walk.

Also, at the the same place, Nov. 28, 1855, of fever, James Bailey, late of Wirt, N. Y., aged 62 years and 8 months.

In Lincklaen, Dec. 13th, Anna, wife of Robert Stillman, aged 43 years, 3 months and 9 days. She was a member of the church in DeRuyter.

In Sangersfield, Oneida Co., Dec. 12th, suddenly, of apoplexy, Mrs. Abby M. Owen, aged 65 years.

At New London, Ct., on the 14th inst., of scarlet fever, Welthy Ann Stillman, only daughter of George C. and Welthy Stillman, aged 6 years and 10 months.

"The *brightest* flower that God has made,
And *sweetest* too, is doomed to fade;
Sure, nothing is abiding here,
Not even friends we hold most dear."

LETTERS.

Wm Kennedy, L M Cottrell, C M Lewis, N V Hull, W B Maxson, E W Thrall, N McDevitt, Chas Spicer, B H Stillman, John Sanford, Charles Potter, C D Langworthy, Eli Forsythe, Andrew Babcock (all right), P S Crandall, David Clawson, Lauren H Babcock, Geo B Case, D E Maxson, Delatrius Davis, Perry M Davis.

RECEIPTS.

☞ All payments for publications of the Society are acknowledged from week to week in the Recorder. Persons sending money the receipt of which is not duly acknowledged, should give us early notice of the omission.

YOUNG & JAYNE,
364 Broadway, corner of Franklin-st.

N. B.—Churches and clergymen furnished at wholesale prices. Sept 27—3 m.

Farm for Sale,

Containing about 100 acres, with a fair proportion of woodland, a small orchard of grafted fruit, and a comfortable dwelling and outhouses. It is situated about four miles north of Westerly, R. I., and within a mile of each of the flourishing manufacturing villages of Potter Hill and Ashaway. There are several other manufacturing establishments near, affording a ready market, in the immediate vicinity, for every species of produce. It is convenient to the first Hopkinton Church, as well as to the very excellent male district school.

It will be sold with or without the stock and farming implements, and possession given the ensuing winter or spring, if desired. To those wishing to secure a quiet home in an enterprising neighborhood, and surrounded by such comforts as can only be found in an old settled and thickly populated country, this affords an opportunity seldom offered. For terms and other particulars apply to the subscriber on the premises, or address John E. Potter, No. 15 Sansom-st., Philadelphia, Pa. Benjamin Potter, Ashaway, R. I.

11tf.

Good Crops, Good Prices, Good Books, and Good Times.

BELCHER'S HISTORY OF ALL THE RELIGIOUS DENOMINATIONS IN THE UNITED STATES. Large Octavo 1,024 pp. and nearly 200 engravings.

FLEETWOOD'S LIFE OF CHRIST AND HIS APOSTLES. 704 pp. and 25 engravings.

Probably there has never been a more favorable opening for the sale of books than the present. Large crops have been produced throughout the country, and these are bringing good prices; every body is in high spirits.

The above volumes are printed on fair paper, in clear, large type, are handsomely illustrated, and bound in a neat and attractive style. More than all, their contents bear the ring of the true metal, enabling the agent to sell them to the highest in the land as well as the humblest, with the gratifying feeling on his part that he is conferring a favor rather than receiving one. They have gained and are gaining a world-wide fame; and being sold exclusively by subscription, the agent has the entire benefit of their popularity.

Canvassers, and those wishing to become such, will find it for their interest to secure an agency. We can offer them with other popular works on the most favorable terms. For further particulars apply to or address either of the

Publishers, { John E. Potter, Philadel., Pa.
{ Noyes Spicer, Indianapolis, Ia.

Magnificent Floral Gift.

Subscribers to the "CHRISTIAN DIADEM" for 1855, are entitled to a splendid steel engraving, the ☞ LILLY AND THE ROSE PERSONIFIED, being given *gratis* to all old and new subscribers who send us only ONE DOLLAR, by mail or otherwise.

Six Copies for Five Dollars.

The Diadem is a strictly moral and religious work—designed for the Christian family without regard to any particular denomination.

FIFTY ENERGETIC BUSINESS MEN are wanted immediately to circulate the "Diadem" throughout the Eastern and Western States. To such as can send good references the very best inducements will be given. Address Z. P. HATCH, Publisher, 9 Spruce street, New York. May 24—3m.

Seventh-day Baptist Publishing Soc.'s Publications.

The Sabbath Recorder,

Published Weekly.

Terms—$2 00 *per Annum, in Advance.*

The Sabbath Recorder is devoted to the exposition and vindication of the views and movements of the Seventh-day Baptist Denomination. It aims to promote vital piety and vigorous benevolent action, at the same time that it urges obedience to the commandments of God and the faith of Jesus. Its columns are open to the advocacy of all reformatory measures which seem likely to improve the condition of society, diffuse knowledge, reclaim the inebriate, and enfranchise the enslaved. In its Literary and Intelligence Departments, care is taken to furnish matter adapted to the wants and tastes of every class of readers. As a Religious and Family Newspaper, it is intended that the *Recorder* shall rank among the best.

The Sabbath-School Visitor,

Published Monthly.

Terms per annum—Invariably in advance:

One copy	$ 25
Five copies to one address	1 00
Twelve copies to one address	2 00
Twenty copies to one address	3 00
Twenty-eight copies to one address	4 00
Forty copies to one address	5 00

The Seventh-day Baptist Memorial,

Published Quarterly.

Terms—$1 00 *a Year, 25 Cents a Number.*

Each number of the *Memorial* will contain a lithographic portrait of a Seventh-day Baptist preacher, together with a variety of historical, biographical, and statistical matter, designed to illustrate the rise, progress, and present condition of the Seventh-day Baptist Denomination. Wood-cuts of meeting-houses will be introduced from time to time in connection with the history of the churches.

[The first, second, and third volumes of the *Memorial*—being for the years 1852-3-4—may be had bound, for the subscription price and the cost of binding.]

The Carol:

A Collection of original and selected Music and Hymns, for the use of Sabbath-Schools, Social Religious Meetings, and Families. Compiled by Lucius Crandall. 128 pages octavo; price 35 cents per copy.

The *Carol* is designed principally for Sabbath-Schools, and contains Music and Hymns adapted to all ordinary occasions, and to such special occasions as the sickness of teachers, funerals, anniversaries, &c. A number of pieces suitable to social and public worship, together with a few Temperance Songs, are included in the book. It contains 93 tunes, and 156 hymns.

☞ Orders and remittances for the above should be addressed to the General Agent, George B. Utter, No. 9 Spruce-st., New York.

Postage.

The postage on the Sabbath Recorder is 13 cents a year in the State of New York, and 26 cents in any other part of the United States, payable quarterly or yearly in advance.

The postage on the Sabbath-School Visitor is 3 cents a year in the State of New York, and 6 cents in any other part of the United States, payable in advance.

The postage on the Seventh-day Baptist Memorial is 2 cents a year in any part of the United States when paid in advance, or 4 cents a year when not paid in advance.

Miscellaneous.

From "The Crayon."

Wanderings in the Southwest—No. 6.

San Antonio De Baxar, July 16, 1855.

Our arrangements being completed for a journey of three weeks, through the unsettled region lying between this place and the Rio Grande, we appointed our rendezvous at a ranch on the Medina, about twelve miles from here. The party consisted of six persons, a judge and his son, Sandy, one of the eight survivors of Hays' famous Rangers, and two Mexicans, Antonio and Sechio. The judge provided himself with a two-horse carriage, to carry himself and our stores as far as a carriage could be driven, when he would ride one horse, and pack the other with the necessary stores and camp utensils. I was to find a horse at the ranch, and rode there with the judge. He was in the best of humor, and entertained me with much that was interesting in relation to the lands and his experiences in Texas. The road was in excellent condition, though the rolling lands through which it led were brown from the long drouth. The quails were just leading out their young from the clumps of mesquet bushes, but beside these we saw no game; the country between the San Antonio and the Medina is so much ridden over in search of stray cattle as to drive it farther back; a black wolf only crossed our track as we approached the river. The house was a low thatched cottage, built on a terrace, with the thickly wooded ravine in front, through which the river flowed far below, and a ledge of sandstone in the rear. Sechio was sent to get such horses as were required, and to stake them out so as to have them in readiness for the morning. Here we learned that the night before all the horses from the neighboring settlements above had been carried off by the Indians, that a party of five men, badly armed, and worse mounted, had gone in pursuit and overtaken the Indians, three in number, preparing their breakfast. Instead of charging upon them at once, the only successful mode of fighting them, they delivered their fire at a distance, during which the red skins mounted their best horses and escaped. The white men then returned for reinforcements, and a party of twenty had gone in pursuit. Sechio saw three the same day on foot in the immediate vicinity of the ranch. As a precaution, the horses we were to use on the morrow were staked out late in the evening, in a secluded place, and the *caballada* of about fifty horses and mules turned out late into the thickets of mesquet, so that if the Indians had been prowling about they would not find them where they expected. The company were soon scattered about upon skins and blankets for the night, and I chose my bed under the shelter of a wide spreading live oak, above the terrace where the wagon was left. About midnight Sandy arrived with letters for me from home, for which he had waited until the arrival of the mail. I perused them by the flickering flame of a tallow candle, and returned to my blanket, but not to sleep. My thoughts were on the wing, keeping company with the owls. I arose at daybreak and walked through the sleepers. All, even the dogs, were wrapped in that deep sleep of the dawn, which was always the favorite time of savage attack. The sky was overcast with grey clouds, as is usual in this region in summer, until they are scattered by the increasing heat of the sun. I strolled out to the place where we had picketed our horses, to be sure that they were quite secure, then down to the river to bathe. The interval before breakfast was occupied in preparing our arms. The Judge had a heavy double-barrelled gun, his son a "six-shooter," Sandy a rifle and "six-shooter;" I had a light fowling-piece and "six-shooter," Antonio only an old dragoon pistol, and Sechio a much ridiculed flint-lock rifle. In cleaning Sandy's rifle the cone was broken, and the nearest place at which it could be repaired was Castroville; its place could not be supplied, and it was necessary to send it to that place. Judge jr. was sent with Antonio to get it repaired, and we appointed the "Chacan Water Hole," seventeen miles distant, as the next rendezvous.

At breakfast we were startled by the report of a gun at the door; having heard a wrangling before breakfast among the Mexicans on account of a knife, we were at no loss to divine the meaning of the report. Secho had, in a passion, fired my fowling-piece, which happened to be loaded with fine bird-shot, at his antagonist, who had sought shelter behind a tent, and the shot were spent on the canvass. Sechio is decidedly a character; in his childhood he was taken prisoner in Mexico by the Camanches, during one of their forays into that country, with a man who was liberated after having his nose cut off. He remained among them until Taylor's invasion of Mexico, when a party of Americans made an attack upon the camp of Camanches where Sechio was held. In his effort to escape he was shot through the arm, being mistaken for an Indian, but he plead that he was a Christian, and for that time it saved his life, whether the same plea will save his soul, "Quien sabe?" as he would say in his language. Sandy found him in Mexico a peon, with a debt of eight hundred dollars, which was consigning him to slavery for life, and being pleased with his energy and daring, bought his liberty and brought him with him to Texas. He is still young, very short, and square-built, with strongly-marked Indian features.

A *vaquero*, who had been sent out to gather the horses returned with but two mules, and it was two o'clock before the lost animals were found, and we were ready to start. Our road led up the Medina on the left bank, but before we had gone five miles, it was discovered that my horse was lame, and Sechio was sent back with him to the ranch to supply his place, and meet us at the appointed rendezvous, while I rode his mule. "Sandy," says I, "that seems hard to send that boy on such an errand so late in the day, and to meet us at such an indefinable place as a 'water-hole;' he will never be able to find us." "Trust him for that, his instincts are as keen as a bee's; you can't lose him. He will not follow our trail, but will strike a line for the camp, and will be there as soon as we." I did not like the mule; I never did like the abnormal race, and this one was Sechio's favorite, and the attachment seemed to be mutual, but between us there was no love lost. There was one particular gait that suited her, but to which I had a special aversion. When I spurred her to take a gait that suited me better, she would send me too far ahead of my party, and if I checked her, she would drop back into a snail's pace, and put me far behind. I was forced to give her her way, at which she would drop back her long ears and switch her tail with delight, while she said in deeds more efficient than words, "Old Greenhorn, I'll give you some—you don't come it over me as you do over the short-eared kind." I found there was but little to be gained by quarreling with a mule.

The country on the Medina is in high repute for its fertility, although it is not uniform in that respect. The best land is said to be that where the Mesquet and Hackberry or wild China trees abound. The country, abounding with the various species of oak found here, has a lighter and more sandy soil, but is remarkably picturesque. Sometimes, solitary oaks of large size, throwing their branches out so far and low that they rest upon the ground, their ends buried beneath it—at other times they grow small and many crowded together, where cattle may gather in an extended and unbroken shade. We followed up the Medina to the point where the old Presidio road crosses, and this was to be our guide as far as the Leona river.

From the Medina to the Chacan Creek, a distance of about six miles, the country is hilly, of light sandy soil, sometimes flinty and scattered over with oaks, and, in some places, shrubs. About sundown we reached the Chacan, a creek when it rains violently, but, at other times, furnishing occasional "water-holes." This one is known, *par excellence*, by that name, because it is the only one in the valley, for many miles, that does not become dry at some seasons. Here we unsaddled and turned our horses out into a fine growth of Mesquet grass, under the care of Sechio, who came upon the spot almost at the same time with us. Antonio soon had a fire; and coffee making, corn cake steaming under a heap of coals, and bacon, that *sine qua non* of a woodsman's camp fare, and, as an article of diet, the worst that a white man ever invented was hissing and snapping in a pan. There you have now a peep into our fare. If we have any better we must depend up on our guns and fishing-tackle;—and he ought to congratulate himself who can always, in the wilderness, get enough of so simple fare as that. But, we did have here an unexpected luxury. A young man had a small stock of cattle in the vicinity, and his log cabin was hard by—and, upon his invitation, we helped ourselves to a plentiful supply of milk.

I was anxious to get a specimen of a chuck-wills-widow, and I heard one in a tree so close to me that I thought I should be able to shoot it, dark as it had become, but the sound kept at the same apparent distance from me, and led me into a thicket that grew at the head of the pond, and then I heard it off in another direction. All my efforts have, as yet, been ineffectual in securing that interesting bird. He is universally called here after the name of his northern congener, the whip-poor-will, though no articulation could be more distinct than that with which it pronounces its own name. Its sweet note is heard all night long in the thickets along every water-course, where it is concealed by day so as to be rarely seen. He who has once heard its song, while he lies wrapped in his blanket under the silent moon, and stars plowing the clouds, will feel its witchery awakening memories that would have slumbered, and leaving an impression that he will retain when the fatigues of travel, the hard ground on which he slept, and the harder bread and bacon on which he fed, shall be forgotten. I sometimes hear the mocking-bird by night, but in lonely thickets near the water, the chuck-wills-widow *always*. But, singing-birds, nor even "wills-widow" herself, could keep way-weary travelers from sleeping.

We started early the next morning, and rode over a hilly country mostly fertile, with post oak in abundance, and good grazing for cattle or sheep everywhere. The valley of the Black Creek is especially a beautiful wide flat with rich, dark loam, with a heavy growth of grass, but the creek was wanting. The hills are sandy, and more or less covered with chapparel as we approach the Hondo; and such is the favorite region of the rattle-snake—they are numerous between the Medina and the Rio Grande. This morning one sounded the alarm, just in front of our horses, and coiled himself in a clump of thorny bushes. It was the first I had seen in Texas—and, having fired both barrels of my gun, I cautiously approached to haul him from his covert with a long stick, but there was nothing to fear, I had shot his head off, and, taking his rattles as a trophy, we rode on. The common rattle-snake, though it attains as large size as in any part of the United States, is slow in its movements, and indisposed to act the offensive; they will escape without doing you harm, if you will give them an opportunity. I soon lost all fear of them, and would kill them with a small stick. My horse had a perfect horror of them, and had evidently been bitten by one; a crooked stick thrown down before her, or the noise of a rattle, would make it dangerous to an incautious rider. There is much popular misapprehension in regard to the effects of the bite of the rattle-snake, and hence of empyricism in its treatment. It is a common thing for dogs and other domestic animals to be bitten by them, but it is rarely that their bite is fatal. I know one dog that has been bitten several times, for he would attack them on every occasion; he received no treatment, but has become fearful of a snake. A Mexican was bitten during our absence, while sleeping on a cart at the ranch of Judge J. The reptile had crawled upon the cart to find a chicken, and, without doubt, the Mexican threw his hand over him. He was bitten in one finger. When we returned, his finger was a little swollen, but no constitutional effects followed the bite. I cannot say the same for the remedy, for the man was made drunk with whiskey; stimulants, such as the carbonate of ammonia, or whiskey, are no doubt useful just in counteracting the depressing influence of the poison, but I am very doubtful whether as many invividuals do not recover without treatment as with it—and I am quite certain that when used to the extent of intoxication, it only co-operates with the poison in depressing the vital energies. Those cases of death from the bite of the rattlesnake, that have come to my knowledge, have been sudden; the poison had, probably, been injected in a vein, and carried directly to the centre of circulation, and so through all the system, and in such cases the best treatment does not avail. Such a case occurred some years since in New York, and the individual, a physician himself, was intoxicated at the time he was bitten, and died in two hours.

We reached the Hondo, a tributary of the Nueces, about noon, and unsaddled where there was a little knoll, shaded by trees, in the middle of the ravine. There was no running water, but a good supply was found not far off, and we set about preparing dinner. Just then, we were interrupted by the arrival of the scouting party of twenty who had been hunting the Indians; they had been gone over two days, and were returning to take a better start. As they turned their horses out, and spread themselves on the side of the river, I thought I had never realized so fully how far I was removed from the usages of conventional life—nowhere, in all my wide wanderings, had I seen a picture of such wild outlawdom for outlaws they really are, because the government fails to protect them; and they had assembled with such arms as they could hastily gather, leaving their cattle to stray and their corn-field to waste, to obey the first law of Nature.

Strolling up the creek, I saw a large Mocasin snake shelter itself under a heap of dry drift wood, and I set it on fire. The snake perished by the fire, rather than attempt to escape; but there ran out a blue rat, which I killed. It was a species that was new to me, and indigenous to the country. The gray rat, so common in all sea ports, and originally from Europe, has not yet found its way so far as San Antonio, and this one avoids the habitation of man. From its throat I perceived a black larva of some insect, about to make its exit. It was about an inch long, and half an inch in diameter. It is known by the name of "wolf," and infests stock as well as small animals. It was a hideous looking creature, and I kept it to allow it to develop under my own eye. We resumed our journey about the middle of the afternoon, and traveled about twenty miles to the Rio Frio. The country over which we rode does not differ materially from that which we passed over in the morning, though the chapparel is more abundant on the hills. This chapparel is composed of a great variety of small-leaved thorny shrubs, with rigid branches, and is impenetrable to man or beast. They form in themselves a complete study for a botanist, and the rabbit, quail, and rattlesnake make them their favorite resort. In the wide-spread valleys the grass is long, and mesquet bushes interrupt the sight; deer were to be seen scattered through them at frequent intervals, but never in large herds as on the plains near the coast. Arriving at the Frio, we saw an Indian lodge, some months deserted. This river is a fine, clear, running stream, with cypress trees growidg along its margin, and with high wooded banks. We crossed, and camped on the elevated plain on the opposite side. We were agreeably surprised to find here a hunter, named Forester, with a small party, and an ox team. We had followed his trail all day, and wondered who, besides ourselves, could be traveling with wheels in this unfrequented region. The trees around his wagon were hung with carcasses of deer and wild turkeys. As we had not hunted, he sent us a fine turker. Sandy and myself went to the river to catch fish, but though there was an abundance of fine fish there, the gars, those rapacious half fish and half alligators would destroy our hooks, and we caught nothing. It was dark when we unsaddled, and we ate a late supper by the light of our camp fire. In the morning, a young buck came close to our camp, and stood still to be shot. The hams only were taken, and the remainder was left to the vulture. Forester shot here a largh Jaguar, the fiercest and most beautiful of the feline race in America.

From the Frio to the Leona there was no recent trail. For seven miles we rode over a plain which had been recently burned off, and the half-burned trees were yet smoking; except the narrow strips of land which skirted the river, and in which we had passed the night, the whole distance was a wide blackened waste, the dried trees were consumed, and the living were blasted and brown. The grass had been burned so close, that you would doubt whether it had ever grown there, and a recent shower had mingled the ashes with the dark loam, and the earth was as naked as when it was made. As we reached the hills where the growth of grass is less luxuriant, the fire was arrested, and the chapparel is never burned for this reason. Passing the dividing ridge from which the surface slopes to the Leona, the grass is again luxuriant. Here we have a fine view of the country, drained by the Leona. For many miles we saw only trees, even as far as the eye could reach, and through these we could trace the the windings of the river by the superior growth of the trees on its banks. As we descended, we soon became buried in a low growth of Mesquets. The soil was rich and low, grass thin, and weeds rank. It is called bottom land—just the place for those savage beasts after which it takes its name, Leona. For three miles before we reach the river, it is nearly flat, and the old road, which our Ranger had traveled during the border wars, was with difficulty distinguished, even by his practiced eye, and had often to be abandoned from the the thickets which had grown up in it, and the sloughs that traverse it. Before we reached the river I was in a worse condition than those who excited my sympathy so much in the scouting party we met on the Hondo. While dodging one limb, another would bear away a trophy from my back. We chose our camping ground in a bend of the river, nearly cut off from the main land by a lagoon. The banks of the river are low, and covered with live oaks and ash trees, with the thorny vines of the *similax* interwoven with the undergrowth that makes it difficult of access, and we chose the best position for shade that we could find. Two miles above us, on the other side of the river, lived a man named Westfall. For four years he has dwelt alone, thirty miles from any settler, and out of the way of any traveler. He is well known in Western Texas as Leather-stocking; we were anxious to reach his house, and leave there the carriage, which we could carry no farther; but the old bridge had been carried away, and there was a necessity to construct another. It was too late to attempt anything that day, and we hunted and fished with indifferent success. Tracks of the bear and other wild animals were plenty in the mud of the river bank, and we scattered ourselves about for the night, feeling secure from Indians in a region so long deserted by both red and white men, and trusting to a fire to protect us from any other foes.

Musquitoes, so numerous on the coast, are rare at this distance from it, but parasitic insects infest the thickets on the banks of the river. A kind that I have never been able to detect with the naked eye, bury themselves under the skin, and cause an irritation that continues for weeks, unless they are killed by the application of oil or other remedy. Wood ticks are very plenty, and I occupied myself until I fell asleep in picking them from me, and throwing them over to the judge, who had some hundred pounds of flesh to spare.

J. D. B. S.

Remarkable Personages.

A correspondent of the Louisville (Ky.) *Democrat*, writing from Madison, December 3, 1855, relates the following:—

"Having during the last ten years heard the history of Mr. David Wilson—who formerly resided at Carrollton, Ky.—repeated frequently, and which seemed to me fabulous, or which at least taxed my credulity very much, and happening a few days ago to meet with Mr. Alexander Wilson of North Madison, with whom I have been acquainted for several years, I spoke of his father, and he said what I had heard was correct. He told me that he (Alexander) was the 45th child of David, and David was the father of 47 lawful children. He lived to the age of 107 years, and during his lifetime had five wives. By his first wife he had eighteen children. A few years before he died he expressed a desire to remove to Indiana, but was opposed by his fifth and last wife. He however took a trip to find a new location to suit him, and when he returned home he found that his wife had packed up some of the goods and chattels and retnrned to her friends in Kentucky. He went after her and endeavored to persuade her to return to his house, but she would not go. In a short time, however, she relented and then wished to return to his house; but he would have nothing to do with her—and so they remained separated till his death. Very few of his children died in their infancy or youth; and there are now 35 of them living, who are all men and women full grown. David Wilson was a man of pure good health and robust physical constitution. At the age of 105 years he could mow an acre a day for a week at a time without evincing much fatigue. He appeared to have not a rib. The whole region of his breast was shielded by a plate of solid bone, and he could receive the most severe and powerful blows upon it without being hurt. He frequently, for the gratification of others, suffered them to strike him most violently in the breast without being made to feel in the least uncomfortable. During our border wars he was taken prisoner by the Indians, and they attempted to stab him in the breast, but found the solid bone impenetrable. His minute history would be interesting if collected and published. He was one of the most remarkable men that ever lived in America. His progeny was very numerous, and he attained a green old age. At the age of 107 years, when he died, none of his faculties of mind or body were materially impaired."

A correspondent of the Kentucky *Statesman* gives the following sketch of an old citizen in Pulaski County, named Elijah Deny, who is perhaps the oldest man in Kentucky:

"He was 118 years of age on the 10th of September, and is as active as many men of 40. He works daily upon a farm, and throughout his whole life he has been an early riser. He informed the writer that he had never drank but one cup of coffee, and that was in the year 1848. He served seven years in the war of the Revolution, and was wounded at the siege of Charleston; he was also at the siege of Savannah and at the battle of Eutaw Springs; he was also present at the battles of Camden, King's Mountain and Monk's Corner. He served under Col. Horry and Col. Marion, and was an eye witness of the sufferings and death of Col. Isaac Hayne of South Carolina, an early victim of the Revolution. He is sprightly and active, and would be taken at any time to be a man of middle age. He is a strict member of the Baptist Church, and rides six miles to every meeting of his church. He has four sons and five daughters, all living, the eldest being now in his 78th, and the youngest in his 51st year. Such is a brief sketch of this aged soldier and republican, who is perhaps the only surviving soldier of Francis Marion, Sumpter, and Horry."

Fraud in Russia.

The *Pays* publishes the following letter, dated St. Petersburg, Nov. 11:—

"In my letters I have often alluded to the fraud and corruption which is the death of Russia. This evil is rooted, it extends so widely to every branch of the service of the Czar's army, that the troops, despite the efforts of the Sovereign, are in want of nearly every thing. I was assured a few days since that Alexander II., despite the usual mildness of his character, got into a regular fury on learning what took place, and resolved to act with extreme severity against any person, no matter what his rank, found guilty of fraud. I know the country well, and all his power will not be of any avail to put a stop to these abuses. The evil is too deep-rooted on the Muscovite soil. All will combine together to deceive the most vigilant eye.

The subjoined few facts of recent occurrence, the exactitude of which I guarantee, will show the extent of the evil.

A Livonian officer of very good family, intrusted with the provisioning of the army in Tauris, went from province to province buying oxen, cows, and sheep, which he had sent to Odessa and Cherson. Wishing to make a rapid fortune, he hit upon the following fraud. He proposed to some of the peasants to leave them their cattle for a consideration agreed upon. The cattle were booked as delivered, and he gave a false receipt for the price of them. He then put them down as "died on the road." By this means he pocketed—first, the money of the peasants; secondly, the money of the Government. It was clever, but not honest. Suspicions were at last aroused. When it was mentioned to the Czar, he would not at first believe that one of his superior officers was capable of committing a crime the consequences of which to the army were incalculable. The rumors, however, grew so loud that a serious investigation was ordered. The officer was commanded to proceed immediately to head-quarters at Odessa. He was not so slow as not to smell a rat. He felt some hesitation at obeying the order, but over night he hit upon a plan, and, while staying at an hotel near Odessa, his room caught fire so cleverly that the flames, which purify all things, destroyed the accounts. He arrived at head-quarters with a certificate that his papers were burnt. What more could be expected? We are assured that the fire spared the roubles in his pouch. He was acquitted. Poor fellow! as Moliere would say.

Another anecdote, the truth of which I will guarantee:

A dealer in flour, in the vicinity of Kiew, provides some thousand sacks of flour to the commander of the place, and asks an exorbitant price. He is refused payment. He is brought up for usury and fraud. The affair is a serious one; he is liable to a very severe penalty and a journey to Siberia in perspective. He was as calm, however, as if his conscience was pure and his cause a good one. At the appointed day he appeared before the Judge, and proved by his books, A plus B, that to accept the supply the officers had exacted for themselves 80,000 silver roubles, or 240,000 francs. Very flattering this for the officers of the Russian army! The trader was acquitted and his honor saved; the money way paid; he gained nothing on the transaction.

How to Keep Harness.

In answer to an inquiry for information as to the best mode of cleaning and oiling harness, &c., we publish the substance of an article given in the *Rural New Yorker*:—

"Observing the good condition and fine appearance of the harness of Mr. Baker, proprietor of the most extensive livery establishment in Rochester, we requested him to impart to us, for publication, the *modus operandi* by which so desirable an object was achieved. In compliance therewith, he stated the course adopted as the best and most economical, after twenty years' experience in a business which required considerable attention to tackling apparatus. His process of oiling and washing harness is substantially as follows:

"Take neats foot oil and ivory or patent black—the latter well pulverized, or to be made so before using. Mix thoroughly, adding the black until the oil is well colored or quite black. In cool weather the oil should be warmed somewhat before mixing. With a sponge apply a light coat of the mixture—only what the leather will readily absorb, unless the harness is very dry, in which case a heavier coating may be necessary. After the harness is dry—which will be in from two hours to a half or a whole day, depending upon the weather and previous condition of the leather—wash thoroughly with soap suds. In making the suds, use *Castile soap and cold rain water*. Warm water should never be used on harness leather. Apply the suds with a sponge. Rub off with buckskin. This will give your harness a nice, glossy surface, and the leather will retain a good color and continue pliable for months. If it becomes soiled with mud or sweat, an application of soap and water as above directed (without oiling) will be sufficient to give it a bright appearance.

Two applications of this oil and black mixture a year, (or once every six months,) will be sufficient to keep harness, as ordinarily used, in good order. It may be necessary for livery men and others who use harness constantly, to apply the oil oftener—but in most cases two oilings a year, and washing with suds when soiled, will keep a harness in good trim for sight and service. This process will pay a large dividend, in extra service and durability—to say nothing of improved appearance.

Ald. B. assures us that the same, or a very similar application, is just the thing for carriage tops which are made of *top leather*. The only difference in treatment is, that less oil should be used, or rather a lighter coating applied; and it should be washed off *before drying in*, top leather being thin and much more penetrable than harness. Of course this mixture would not answer for enameled leather, of which some carriage tops are constructed."

Inter-Oceanic Communication.

The exploring expedition of Lieut Strain demonstrated the impossibility of opening a communication between the Atlantic and Pacific by a canal across the Isthmus of Panama. Sanguine theorists still clung to the hope that the route over the Nicaraguan Isthmus would prove more practicable; but a writer in *Harper* gives the finishing blow to all such anticipations. The inter-oceanic canal and the North Western passage are no longer problems seeking solution:—

"Modern investigations have dispelled many of the illusions which have existed in reference to that project, and shown that the difficulties in the way of its realization have hitherto been but very imperfectly comprehended. They have shown that the river San Juan can never be made navigable for ships, and that the great difficulty in the way of the proposed work is not, as had been previously supposed, between the lake and the Pacific, but between the Atlantic and the lake—a distance of 128 miles, for 100 miles of which it would be necessary to dig a canal, through a country unhealthy and in the highest degree unfavorable to the prosecution of this work. It has also been found that, while such a canal would greatly facilitate the commerce of the United States, by shortening the passage of ships to the western coasts of America, to the Sandwich Islands, and the East Indies, yet that, so far as Europe is concerned, the aggregate saving over the route by way of Cape Good Hope would be inconsiderable, and in no degree equal in value to the tolls which the canal would require, in order to keep it open and in repair. The voyage from England to Canton would be 200 miles longer by way of the proposed canal than it now is by way of Cape Good Hope; to Calcutta it would be 3,900 miles longer, and to Singapore 2,300 miles! Under such a state of facts, it is folly to suppose that the enterprise will ever receive the commercial or political support of the powers of Europe, who are already too much embarrassed by American maritime competition, to lend their aid in reversing the favorable physical superiority which they now possess over the United States in the trade with the East."

Inflammatory Rheumatism.—A gentleman wishes us to publish the following for the relief of suffering humanity. He says he has known a number of cures made by it, and all in a short time: Half an ounce of pulverized saltpetre, put in half a pint of sweet oil. Bathe the parts affected, and a sound cure will speedily follow.

To Preserve Dead Game.—Take out the intestines and fill the inside with unground wheat, and place the fowl in a heap or cask of the same grain in such a manner as to insure its being completely covered. In this way fowls may be preserved perfectly sweet for months. The feathers should be removed.

In Chicago, a Mr. Merrington sued the Corporation for damages because he fell on a broken sidewalk, and recovered $3,000. A new trial was granted, and he got $6,000.

The family of Mr. Asaph Wales (ten in number) is said to have been the only one remaining in Norfolk in which a case of yellow fever did not occur during the lamentable epidemic there.

New York and Erie Railroad.

ON and after Wednesday, Sept. 19, and until further notice, Passenger Trains will leave the pier foot of Duane-st., New York, as follows:

Dunkirk Express at 6.30 A. M. for Dunkirk.

Buffalo Express at 6.30 A. M. for Buffalo.

Mail at 8½ A. M. for Dunkirk and Buffalo, and all intermediate stations. Passengers by this Train will remain over night at Owego, and proceed the next morning.

Rockland Passenger at 3 P. M. (from foot of Chambers-st.) via Piermont, for Sufferns and intermediate stations.

Way Passenger at 4 P. M. for Newburgh and Otisville and intermediate stations.

Night Express at 5½ P. M. for Dunkirk and Buffalo.

Emigrant at 6 P. M. for Dunkirk and Buffalo and intermediate stations.

On Sundays only one express train, at 5½ P. M.

These Express Trains connect at Elmira with the Elmira and Niagara Falls Railroad, for Niagara Falls, at Buffalo and Dunkirk with the Lake Shore Railroad for Cleveland, Cincinnati, Toledo, Detroit, Chicago, &c., and with first-class splendid steamers for all ports on Lake Erie.

D. C. McCALLUM, General Sup't.

Ayer's Pills.

FOR all the purposes of a Family Physic. There has long existed a public demand for an effective Purgative Pill which could be relied on as sure and perfectly safe in its operation. This has been prepared to meet that demand, and an extensive trial of its virtues has conclusively shown with what success it accomplishes the purpose designed. It is easy to make a physical *Pill*, but not so easy to make the best of all *Pills*—one which should have none of the objections, but all the advantages of every other. This has been attempted here, and with what success we would respectfully submit to the public decision. It has been unfortunate for the patient hitherto that almost every purgative medicine is acrimonious and irritating to the bowels. This is not. Many of them produce so much griping pain and revulsion in the system as to more than counterbalance the good to be derived from them. These *Pills* produce no irritation or pain, unless it arises from a previously existing obstruction or derangement in the bowels. Being purely vegetable, no harm can arise from their use in any quantity; but it is better that any medicine should be taken judiciously. Minute directions for their use in the several diseases to which they are applicable are given on the boxes. Among the complaints which have been speedily cured by them we may mention Liver Complaint, in its various forms of Jaundice, Indigestion, Langor and Loss of Appetite, Listlessness, Irritability, Billious Headache, Billious Fever, Fever and Ague, Pain in the Side and Loins, for in truth, all these are but the consequence of diseased action of the liver. As an aperient, they afford prompt and sure relief in Costiveness, Piles, Colic, Dysentery, Humors, Scrofula and Scurvy, Colds, with soreness of the body, Ulcers and impurity of the blood; in short, any and every case where a purgative is required.

They have also produced some singularly successful cures in Rheumatism, Gout, Dropsy, Gravel, Erysipelas, Palpitation of the Heart, Pains in the Back, Stomach, and Side. They should be freely taken in the spring of the year, to purify the blood and prepare the system for the change of seasons. An occasional dose stimulates the stomach into healthy action, and restores the appetite and vigor. They purify the blood, and, by their stimulant action on the circulatory system, renovate the strength of the body, and restore the wasted or diseased energies of the whole organism. Hence an occasional dose is advantageous even though no serious derangement exists; but unnecessary dosing should never be carried too far, as every purgative medicine reduces the strength, when taken to excess. The thousand cases in which a physic is required cannot be enumerated here, but they suggest themselves to the reason of every body; and it is confidently believed this Pill will answer a better purpose than any thing which has hitherto been available to mankind. When their virtues are once known the public will no longer doubt what remedy to employ when in need of a cathartic medicine.

Being sugar wrapped they are pleasant to take, and being purely vegetable, no harm can arise from their use in any quantity.

For minute directions, see the wrapper on the Box.

Prepared by Dr. J. C. AYER, Practical and Analytical Chemist, Lowell, Mass.

Price 25 Cents per Box. Five Boxes for $1 00.

Ayer's Cherry Pectoral,

FOR the rapid cure of Coughs, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption. This remedy has won for itself such notoriety for its cures of every variety of Pulmonary diseases, that it is entirely unnecessary to recount the evidences of its virtues in any community where it has been employed. So wide is the field of its usefulness, and so numerous the cases of its cures, that almost every section of the country abounds in persons publicly known, who have been restored from alarming and even desperate diseases of the lungs by its use. When once tried its superiority over every other medicine of its kind is too apparent to escape observation, and where its virtues are known, the public no longer hesitate what antidote to employ for the distressing and dangerous affections of the pulmonary organs which are incident to our climate. And not only in formidable attacks upon the lungs, but for the milder varieties of *Colds, Coughs, Hoarseness, &c.* and for Children it is the pleasantest and safest medicine that can be obtained.

As it has long been in constant use throughout this section, we need not do more than assure the people its quality is kept up to the best that it ever has been and that the genuine article is—

The Sabbath Recorder,
PUBLISHED WEEKLY
By the Seventh-day Baptist Publishing Society,
AT
NO. 9 SPRUCE-STREET, NEW YORK.

Terms:

$2 00 per year, payable in advance. Subscriptions not paid till the close of the year, will be liable to an additional charge of 50 cents.

☞ Payments received will be acknowledged in the paper so as to indicate the time to which they reach.

☞ No paper discontinued until arrearages are paid, except at the discretion of the publisher.

☞ Communications, orders, and remittances, should be directed, post paid, to

Geo. B. Utter, No. 9 Spruce-st., New York.

Liabilities of those who take Periodicals.

The laws declare that any person to whom a Periodical is sent, is responsible for payment, if he receives the paper, or makes use of it, even if he has never subscribed for it, or has ordered it to be stopped. His duty in such a case is not to take the paper from the office or person with whom the paper is left, but to notify the publisher that he does not wish for it.

If papers are sent to a post-office, store or tavern, or other place of deposit, and are not taken by the person to whom they are sent, the postmaster, store or tavern-keeper, &c., is responsible for the payment until he returns the papers, or gives notice to the Publisher that they are lying dead in the office.

GEOLOGY AND THE BIBLE.

Reply to Eli S. Bailey--No. 3.

In brother Bailey's last article on *Geology and the Bible*, he charges me with doing him injustice, and I take up my pen at this time most especially to say, that if I have done him the *least injustice*, no man on earth could regret it more than I. And I am sure brother B. will believe me when I say, that nothing has been farther from my intention. In all the defense of my views which his criticisms have made it my duty to put forth, I have studied to reciprocate all that urbanity and kindness *which* has characterized those criticisms. I could have no motive to deal unfairly with these criticisms of my views. On the contrary, I have every inducement to give them their fullest weight, for certainly, if my views will not stand the test of the most searching criticism, it is my most imperative duty to abandon them. Hence I most heartily thank my esteemed friend for his well-meant effort to show the unsoundness of the views I have set forth.

This question derives its principal importance, however, from the fact, that the views are not merely the views of an humble individual, but of the scientific world in general, and are incorporated into the world's literature. They are set forth in almost every text-book on Geology which has gained currency in the scientific world. They are taught in almost every college and academy to which the patronage of the public has given a permanent existence. It has not been the work of a day, nor the task of the illiterate, to establish these views. It has cost the labor of centuries, and the energies of the world's best intellect. They have stood the test of the ablest and severest criticism, and passed the ordeal of the most unrelenting proscription. It is, then, a question of no small magnitude. And if, after all, these fundamental teachings of science are not true, the world will be under everlasting obligations to him who shall show their falsity. But if it shall appear that the views under consideration are false, then science must come to a still more severe reckoning; for no truths of science are better established. Astronomy must unsay its heresies; Chemistry must review its lessons; and Physiology must abate its pretensions; and all that the world calls advancement must be abandoned, and the labor of centuries must be undone, and a new beginning made.

Seeing that my pen is in my hand, I will briefly notice brother B.'s last criticisms; and as I proceed will most cheerfully accept his "corrections of my misrepresentations," and retract them if I shall find that I have in any way misrepresented him.

My reviewer first affirms, that, as I have taken the affirmative of the question, I am bound, not only to show that the Scriptures may admit of a rendering that will not contradict my theory, but that the Holy Spirit intended they should be used in that sense, or that they do sustain my theory. This he affirms I have never done. With this view I respectfully differ. I *am* bound to show that the Scriptures do not contradict my theory, and that I have done, not only by views of my own, but by reference to the most learned and pious commentators of the Scriptures that have ever written. I am surprised that this part of my argument has been entirely overlooked, but I *will not* charge my esteemed opponent with misrepresentation. I am not bound to prove that the "Holy Spirit intended to sustain my theory." I do not suppose the Holy Spirit intended to teach science or scientific truth at all; nor do I suppose it intended to oppose it. It is sufficient to show, that the Mosaic account of creation, when fairly interpreted, does not conflict with the view of the world's age as taught by science. This I think I have done. I shall not repeat the argument.

Brother B. next asks, "Can any person read the account of the six days' work, as recorded in the first chapter of Genesis and the twentieth chapter of Exodus, without prejudice, and say that neither God nor Moses meant to say that in six days the Lord made heaven and earth, the sea, and all that in them is? It is utterly impossible!" This is a strange way of meeting an argument. Nobody denies but Moses *says* exactly so. The question is concerning the *meaning* of that saying. The infatuated Catholic, in defending the dogma of transubstantiation, cries out, "Can any person read the words of Christ in the eleventh chapter of first Corinthians, and twentieth chapter of Matthew, without prejudice, and say that Christ did not mean to say, Take, eat; *this is my body*? It is utterly impossible!" Now, brother B. would find no difficulty in meeting such an interrogation. But the same principles of interpretation which he will employ to meet that, will equally serve to meet his own interrogation. It is simply begging the whole question. I have shown by a careful analysis of the first chapter of Genesis, that the creating fiat recorded in the first verse of that chapter, and the six days' work recorded in the subsequent verses, are distinct and different acts, having an interval of time between them, as shown by the second verse; and further, that in Exodus, Moses refers only to the second of these transactions, or to the six days' work, which consisted of *fitting* up or *remodeling* the earth from the material which had existed since the creating fiat, in the first verse, called them into existence. The verb *bara*, translated "created," in the first of Genesis, means absolute creation out of nothing, (Dr. Clark's Com., vol. 1;) but the verb *awsaw*, translated "made," in the 20th of Exodus, means fitted up, or remodeled from pre-existent material, as when we say of the mechanic, "he made a wagon." This view I have substantiated by reference to the best biblical scholars of the world. I have quoted a part of Dr. Harris' admirable philological argument on these passages, and also the conclusions of numerous others equally competent to decide this question. But what is of more consequence than all this, I have named a large number of eminent divines who adopted this view a long time before Geology was known as a science, and who consequently decided on *philological grounds alone*. But all this seems not to be noticed. No effort has been made to show that the argument which I made use of was not well made, nor that the authorities quoted were not reliable. But all this has been met with a single interrogation, involving the begging of the whole question at issue. Such a mode of meeting the question will not be likely to convince men of error.

But it is said I have only quoted the opinions of these men, but have not quoted the philological reasons for these opinions. Of course I have not quoted them at length; nor could I in a newspaper article. But I have quoted sufficient to indicate the fact, that from a careful cappliation of philological principles they had arrived at these conclusions; and this is all that can be asked of me.

Brother B. says he has read Hitchcock, and Harris' Pre-Adamite Earth, and does not recollect to have found any philological reasons or criticisms on the texts in question. I beg leave to refer brother B. to those works again, and also to others, where he will certainly find "what he has always wanted." In Hitchcock's "Religion of Geology," beginning with page 33d, and ending with page 40th, is a most able, and, to my mind, convincing, philological argument on the very point in question, and from that page on through the chapter is a summary of the geological facts which go to give credence to the view arrived at from philological considerations. If brother B. will turn again to Harris' Pre-Adamite Earth, page 273, he will find a very able philological argument on the texts in question, from which he arrives at the conclusion I have set forth. I wish every reader of the *Recorder* could read that argument, but I cannot quote it at length. The reader is also referred to Dr. John Pye Smith's "Scripture and Geology," sect. 6th, part 2d. Dr. Smith says (page 502,) "A philological survey of the Bible brings out the result." He then states the results, such as Hitchcock and Harris have arrived at, and such as I have endeavored to illustrate. On the same page he says, "I am forming no hypothesis in geology. I only plead that the ground is clear, and that the Scriptures interpose no bar to observation and reasoning upon the mineralogical constitution of the earth, and the remains of organized creatures, which its strata disclose. If these investigations," he continues, "should lead us to attribute to the earth and the other planets and astral spheres an antiquity which millions or ten thousand millions of years might fail to represent, *the divine record forbids not these deductions.*"

Thus I might quote scores of authors, of world-wide renown, whose investigations have led them to the same conclusion; but it is not my present purpose to multiply testimony, but simply to intimate, that I have not imagined it, but that it *really exists*, and forms the better part of our standard literature, adorning almost every well-selected library in the land. With the *arguments* of such men before me, I shall be pardoned for not changing my view when my esteemed critic has only opposed his *opinion* to the contrary. *Argument* must be overthrown by *argument*. Reason must be met by reason.

But I pass to notice brother B.'s first charge of misrepresentation. "Brother Maxson has done me great injustice in representing me as holding that rocks were made as they now are, and that human feet had made tracks in solid rock; whereas I have exhibited no theory whatever." First, as to the tracks. Have I done my brother injustice in this particular? This will depend upon whether his words justify my conclusion or not. To his words, then, be the appeal. In his first reference to them, speaking of Devil's Rock, at Wickford, R. I., he says, "There is a perfect *impression* of a human foot, toes and all. There is likewise a perfect impression of the foot of an ox or cow." Now, what is meant by the word "impression?" (See Webster.) 1st. The act of impressing, as one body upon another, as a figure made by impression; 2d. Mark, indentation, stamp, made by pressure, as a seal makes an impression on wax." Now, if there is the *impression* of a human foot in the granite rock at Wickford, then a human foot must have made it—so I understand language. But in referring to these tracks again, in comparison with bird's tracks described by Prof. Hitchcock in the stratified rock, he says, "But when tracks of men and quadrupeds are found in *granite* rocks, they are declared to be simply the result of chance. And why? Because to admit they were made by men and quadrupeds would upset their theory of the age and formation of the earth." Now, with such language as this before the reader, he may judge, without further comment, whether I have done "great injustice" in representing brother B. as holding that human feet had made tracks in solid rocks. I certainly *meant* no injustice.

In the next place, did I do "great injustice" by representing my correspondent as holding "that rocks were made as they now are?" To his own words be the reference made. He says, in reply to my explanation of those tracks, that I have unwittingly furnished an argument against my own theory; "for if human tracks do exist in granite rocks by accident, it should not be deemed irrational to conclude that God created the earth, consisting of unstratified and stratified rocks, &c., at the beginning." This, I acknowledge, is not clearly stating his belief in the theory, but it does point that way, but perhaps not sufficiently to justify my conclusion. But another passage, it seems to me, makes my conclusion inevitable. "The whole Mosaic record speaks of creation and its modifications as the immediate work of omnipotence, and not as the result of secondary causes." Now, if this language does not teach that the stratified and unstratified rocks were created in that form, and that stratification is not the result of "secondary causes," I do not know how language could be framed to teach that. It seems to me that in this I have done no injustice. The reader will at once see, that the language points in the direction of my conclusion. We are very liable to be misunderstood when we find fault with other men's views, but refuse to offer better ones.

I am next called to account for "a seeming want of candor" in stating that Sir William Herschel has seen stars so distant that their light must have been nearly two million years in reaching the earth, and in insisting on this as a fact to be believed, and only to be invalidated by actual measurement, which should show a fallacy in Sir William's measurement. I can assure my brother, that the want of candor was *only* "seeming." I know of no alternative. Sir William says he has found stars at such a distance that their light must have been nearly two million years in reaching the earth. I have quoted his language from the Philosophical Transactions for 1802, page 498 Now this is to be believed, or some error must be found in the measurement of Herschel. That error can *only* be detected by taking the measurement over again, and reviewing the calculations. The only question is, whether Sir William Herschel's measurement is to be relied on. Dr. John P. Smith relied on it. Humboldt, the oldest and most learned naturalist in the world, relied on it, and quoted it in his world-renowned "Cosmos." I have no lack of candor in relying on this measurement of Herschel, and in asking all who doubt it to make a better one; nor am I at all ignorant of the labor it has cost to arrive at correct astronomical calculations. They are all the more valuable on this account, and not to be discarded because they conflict with our preconceived notions of Scripture interpretations.

Brother B. says I seem to make myself merry over his remarks on Niagara Falls. Whatever of merriment I might have felt seems to be heartily reciprocated in his effort to get me into a glass house, and smash my windows down. Our position on this point is simply this: There is Niagara River, pouring a vast quantity of water over a precipice 165 feet in perpendicular height. The rock which forms the barrier is composed at the bottom, and extending nearly to the top, of soft shale, and at the top of hard limestone. Now, below the Falls this gorge extends about seven miles, and then the waters rush out and glide smoothly on about four miles into Lake Ontario. Now there is the most indubitable evidence that the river has produced this whole gorge. That evidence I have given, quoting in part from Sir Charles Lyell, who visited it at two different times. The evidence which he has given, and which was entirely satisfactory to *his* mind, as it is to Hitchcock, Comstock, St. Johns, and all geologists, my respected friend has not even alluded to, and has contented himself with an effort to extricate himself from an apparent contradiction, or at least to hide it behind one which he fancies I have fallen into. I have said, that the Falls are wearing back the rock about one foot a year by actual measurement, and at that rate it must have taken nearly forty thousand years to wear away the whole gorge, as it most manifestly has done. Now, unless it can be shown that it has worn faster in former times than at present, it affords striking proof of the world's great age. Bro. B. has rather chosen to deny that it has worn the whole gorge, and says, "It appears reasonable to suppose that the water has worn away the rock something like ten rods." This I took to be a sanction of my argument, for it appears just exactly as reasonable that every succeeding rod below the ten was worn away by the water, as that the ten rods were. There is the adequate cause, at this moment, producing the effect, and it is opposed to all sound philosophy to seek another cause when an adequate cause is present and at this moment producing part of the effect. "It is reasonable to conclude" that it produced the whole effect.

My friend attempts to convict me of inconsistency by reference to my view of the delta of the Mississippi. This, with the alluvial deposit near the mouth of the river, according to Lyell, must have been about 130,000 years in the course of formation, at the present rate of deposit. Now, if I can be made to say that the Mississippi and the Niagara rivers have been running the same length of time, then I am involved in the same inconsistency as I supposed brother B. to be, viz., of supposing the Niagara to have been running thousands of years, and tumbling down the abyss at Queenstown, without wearing away the rock at all. Now such a supposition I admit to be absurd, for I suppose that the rock began to wear back at the very moment when the mighty torrent first leaped over it. It could not have been otherwise. Now, it only remains to ascertain whether I have set the Niagara to flowing at the same time with the Mississippi. I have given the opinion, that the region about Niagara has been raised from the bed of the ocean, and I consider it one of the established facts of science, that this whole continent, with the exception perhaps of a few of its highest mountain peaks, has once been under the bed of the ocean. But that, therefore, the Niagara and Mississippi have been running the same length of time, is the most palpable non sequitur that could be conceived of. I suppose the Mississippi to have been running for ages before the waters of Lake Erie broke their barrier and began to run over into Lake Ontario. I do not suppose, by any means, that it has been running ever since the land emerged from the ocean. Nor is it necessary to suppose any such thing; for a very slight cause, which would have affected but a small territory, might have set it to flowing. A single glance at the natural features of the country about the region of the two lakes will make this clear. Lake Erie is situated but about 30 miles from Ontario, at an elevation of about 300 feet above it, and an arm of the lake several miles wide extends down almost to the Falls, or nearly half the distance between the lakes. Now a very slight elevation of Lake Erie, or even the action of its own waves, driven down this arm, might have been sufficient in time to have sent the waters down through the soft alluvium deposit which covered the rock in which the gorge is now being worn. That it once ran on the top above where the gorge is, as it now runs on the top before it reaches the Falls, I have shown in a former article, in the quotation from Lyell. Nor is this a solitary instance of lakes breaking their barriers and forming rivers. Several instances are on the records of history, and many others on the records of Geology. The theory, then, that these two rivers commenced flowing at the same time, I have never advanced, nor ever believed; nor does the fact that this continent once arose from under the ocean afford any sanction whatever to such a theory. I of course am responsible for none of the *consequences* of the theory, and consequently my house is not so "glassy" as my friend had supposed. The difficulty lies in the wrong inference which *he* has drawn from a fact which I incidentally stated. For that wrong inference he is responsible.

With his view of the geography of the country, I do not so much wonder at his inference. He says, "It is known to every one acquainted with the geography of the country, that the Mississippi and St. Lawrence or Niagara have their source in nearly the same region; many of their tributary streams arising within a few rods of each other," &c. It is not strange that a wrong inference should come from such geography as this. Here the Niagara and St. Lawrence rivers are confounded and treated as one, when a broad lake, 190 miles in length, separates them at their nearest points. It is affirmed, that the tributaries of the two streams in question arise within a few rods of each other, but I cannot find that the Niagara has a single tributary in the world which rises within hundreds of miles of the Mississippi or any of its tributaries. It arises in an arm of Lake Erie, at its east end, while the Mississippi rises in Lake Itasca, a thousand miles to the north-west. I will make no suggestion about living in glass houses.

My argument drawn from the formation of Coral Reefs, is disposed of by the simple assertion that "it does not amount to a demonstrated probability." That the reader may the better judge whether this summary statement invalidates my argument or not, I will briefly re state it. Coral Reefs and Islands are formed by the accumulation of the shells and mineral matter deposited by microscopic animalculæ which live in the water. This is a "fact to be believed," ascertained by actual observation. Now, as I have shown in a former article, these reefs and islands exist in vast quantities, some of them extending more than a thousand miles in length, and many hundred feet in depth. Now, the rate at which these little animals thus build up these vast reefs is known by observation, and thus it appears that much more than six thousand years has been employed in building them. I have referred to the Peninsula of Florida as an illustration, the growth of which Prof. Agassiz has ascertained to be about one foot in a hundred years; and by estimating the amount of reef already formed, he finds that a hundred thousand years have been employed in building the whole reef. Now this, to Agassiz, one of the most eminent of living scholars, was highly conclusive proof. To brother B. it "does not amount to so much as demonstrated probability." This shows how differently different minds are affected by the same evidence.

In conclusion, brother B. expresses the opinion that the geological theory is founded on hypothesis and not on scientific facts, and then gives what he understands to be the theory, in the following words: "After stating (what no man denies) that the earth was created in a chaotic state, (if I understand them correctly,) they lay it down as the basis of their theory, that the modifications or changes which the earth has undergone in order to fit it for the abode of man, proceeded in the same manner or as slowly as similar changes do now, and that God worked by secondary agencies. Overthrow this hypothesis, and their theory is destroyed. Establish it, and the Bible is overthrown. This, I apprehend, is a misconception of the theory in question. The theory I have given in the language of its most eminent advocates; but seeing it is misapprehended, I will give it in the concise language of the late President of Homerton Divinity College, London, Dr. John Pye Smith:

"1st. The first sentence of the Mosaic record is a simple, independent, all-comprehending axiom to this effect, that matter has not existed from eternity, but had a beginning; that that beginning took place by the all-powerful will of one Being, the self-existent, independent, and infinite in all perfection; *and that the date of that beginning is not made known.* 2d. That at a recent period our planet was brought into a state of disorganization, detritus, or ruin from a former condition. 3d. That it pleased the Almighty, out of that ruin to adjust the surface of the earth to its now existing condition—the whole extending through the period of six natural days."

This theory is stated with equal clearness by Harris, and also by Hitchcock, and adopted by all the most eminent Geologists of the age. This theory clearly recognizes the miraculous work of the six days. All that was done in them was by the direct agency of God, so that the words of the Psalmist are literally true, "He said, Let there be light, and there was light," &c. It also claims that the creating fiat which brought matter into existence was long anterior to that time, and that during that interval the earth underwent many changes, the evidence of which is now found in the rocks; that it had fallen into chaos, and it was over this chaos that the Spirit of God brooded, preparatory to the magnificent miracles of the six days; that since that time nearly all its changes have been produced by secondary agencies, such as are now everywhere at work; and that the same had been at work before the miraculous events of the six days. Such is the theory, and in the language of the distinguished President of Amherst College, "No longer to be regarded as the dreams of fancy, but the legitimate deductions from long and careful observations of *facts*."

I will close this article by placing the language of Hugh Miller, one of the most eminent scholars of the present day, in contrast with the opinion that "the geological theory" (of the earth's age) "is founded on hypothesis instead of scientific facts." "It is, a deduction—a result—not the starting assumption, or given sum, in a process of calculation, but its ultimate finding or answer. Clergymen of the orthodox churches, such as the Sumners, Sedgwicks, Bucklands, Conybeares, and Pye Smiths of England, or the Chalmerses, Duncans, and Flemings of our own country, must have come to the study of this question of the world's age with at least no bias in favor of the geological estimate. The old, and, as it has proven, erroneous reading of the Mosaic account, was by much too general a one early in the present century, not to have exerted upon them, in their care as ministers of religion, a sensible influence of directly an opposite nature. And the fact of the complete reversal of their original bias, and of the broad, unhesitating finding on the subject which they ultimately substituted instead, serve to intimate to the uninitiated the strength of the evidence to which they submitted. There can be nothing more certain, than that it is minds of the same class, engaged in the same inductive track, that yielded in the first instance to the astronomical evidence of the earth's motion, and, in the second, to the geological evidence regarding the world's age."

Thus I have tried to set forth to the readers of the *Recorder*, as well as I could, a few of the points involved in one of the most interesting questions of the present century. I have but just hinted at it in one or two of its points. The doctrine of the world's age, as I have set it forth, I believe to be invulnerable, and that all classes of men will come to acknowledge its truthfulness. I have only sought to set forth the simple truth as it is held by the scientific world, and, as I said at the beginning, I have had no desire to gain any victories in argument. I have had a simple desire to promulgate the truth, through a medium especially devoted to that purpose. If I have been tedious, it must be remembered, that I have been assailed by almost a half score of critics and reviewers, and have only, in as brief a manner a possible, defended my views against their attacks. For every criticism and opposing view that has been offered in candor and kindness, I am heartily thankful, and shall always deeply regret if I have met these opposing views in any other than a spirit of candor and kindness.

In relation to the "Literary Omnibus" proposed by brother B., I have but little interest, as I do not understand what he means.

In regard to the question of free discussion, I have a proposition to make to those who do not want to pay for the printing of views opposed to their own. It is this, that if they will send me their names, and a bill of the cost of all papers containing views of my own not in accordance with their own, I will pay those bills, on this one condition, that they deduct the price of papers containing their own views not in accordance with my own; for it is a poor rule that won't work both ways. If this be the rule, certainly they ought not to discuss the question of "free discussion" at the expense of those who believe their views to be erroneous in the extreme. I am not disposed, however, to adopt this rule; for often, in reading views opposed to my own, I find my own to be erroneous, and then I thank the Lord for the newly found treasure. It often happens, that "our established tenets and customs" are wrong, and of all things in the world need most to be "invaded." If they cannot stand the test of criticism, they are not worth holding. We had better let them go. If they are true, collision with opposing views will only make them shine the brighter. Let us all earnestly seek the truth, and, above all, let us not forget the great fountain whence it flows; and, deriving it thence, let us use it for his glory, and the upbuilding of his kingdom on earth.

D. E. Maxson.

"I TRIED HARD TO GET GOD."

A writer in the *American Messenger* gives the following account of the experience of an aged man, which forcibly illustrates the attempt of many awakened souls to make themselves holy by their own efforts. The true method of salvation by Christ is so clearly set forth by it, that those who have not learned the secret of success in seeking a clean heart would do well to learn the way to the Saviour from the old man's simple statements:

"An old colored man entered our store the other day. He came in leaning on a staff, hat in hand, and the little hair that clustered around his temples was whitened by the frosts of time, giving a venerable appearance to his calm and happy countenance. Our conversation soon turned on the great salvation, and led to some interesting facts in his history.

"He said that, at the time of his becoming religious, he was unable to read a word in the Bible; that he was a slave in Virginia, but used to get people to read for him. He further said, 'I wanted to be good, and for seven years I tried hard to be good, that I might be one of the Lord's children; but I found that I was so wicked, that although I tried to be good, I did not become so. I used to be afraid that at some time the Lord would reveal himself to me, and then I was so afraid of the Lord finding me such a sinner. I wanted to get to the Lord and say, 'Massa, here I am,' but I was not good enough. One day somebody read to me from the Bible what Joshua said, 'As for me and my house, we will serve the Lord.' Then I determined to go to the Lord anyhow, and falling down on my face, told him I could not be good, for I had tried; and that I was one of the most wretched sinners that ever lived, and so deserved to be sent to hell; and that it was just that I should be. Then I seemed to hear a voice say, 'Ye believe in the Father, believe also in me,' in Jesus. It was the first time I knew why he died. I now learned that he died for me, and that he died to bear that load of guilt I had been trying to throw off. Then I knew why they nailed him to the cross, and that it was his great love for sinners that brought him from heaven. It has been many years since I found the Lord, and now I am old and poor, yet I am willing to live as long as God will permit me, and all I ask is to be able to persuade men to love Jesus. I love every one, and am not willing that any one should be lost.'"

FIRST VIEW OF JERUSALEM.

From Hackett's "Illustrations of Scripture."

"Of earthly sights," wrote Dr. Arnold, "Rome ranks the third, Athens and Jerusalem are the other two; the three places of God's election, two for things temporal, and one for things eternal. Yet, even in things eternal, the two former were allowed to minister." It had already been my privilege to spend a month in the capital of the Roman world; it was reserved for me, on my return from the East, to linger for a while in the ancient home of Attic arts and learning; but now, on the afternoon of April the second, I was about to behold the greatest of these "earthly sights"—Jerusalem, "the city of the great King"—the scene of events the greatest that have entered into human history. I will presume on sufficient sympathy between myself and the reader to allow myself to state exactly how I felt at that moment. Our approach was along the Jaffa road, from the north-west. I knew, from the changing aspect of the country, which grew wilder and wilder as we ascended one height after another, that we could not be far from the limit of our journey. I have read of many travelers, who, on approaching the holy city, have been impatient to obtain the first view; who have hurried forward to outstrip their companions, and be the first to cry 'Jerusalem, Jerusalem!' My impulse was just the reverse of this. I fell back into the rear of the company, allowed the others to precede me, turned my face, in fact, for a while, in the opposite direction; and, though I had then only to lift up my eyes, and gratify a desire which had been for years one of the strongest of my heart, and which had incited me to cross seas and continents, I shrank, at last, from giving up the Jerusalem of my imagination for a reality, which, I knew too well, must be attended with some disappointment. The truth is, no place of which we have read and thought much can correspond exactly with our anticipations; and, though it may prove, after a fuller acquaintance, to be as worthy of our interest and admiration as we had supposed, yet, if it differs at first sight from our previous notions, that difference itself diminishes our pleasure, and causes us to feel disappointed. Yet, after all, the first sight of Jerusalem, though it may not turn out to be the exact original of the picture in the traveler's mind, is novel and interesting. As seen from the direction in which we advanced, it appears to lie on the side of a hill sloping towards the east. The walls, notched with battlements, the entire circuit of which lies at once beneath the eye; the turrets of the Church of the Sepulchre; the minarets; the lofty cupola of the Mosque of Omar; the towering castle of David; the domes and terraced roofs of the houses, come suddenly into view, and produce a startling effect. It should be added that the bold form of Olivet, as it rises over the city, on the left, and the distant hills of Moab in dim perspective, belong to the scene which greets the eye from this particular position."

CHANGES IN THE ENGLISH LANGUAGE.

Few scholars, even, are aware of the great changes through which the English language has passed in successive centuries. We give, from the *British Banner*, specimens of the Lord's Prayer, as used at various periods in English history:—

A. D. 1258.—Fader ure inheune, haleweide beith thi neune, cumen thi kuneriche thi wille beoth idon in heune, and in erthe. The eueryeh dawe bried, gif ous thilk dawe. And vorzif ure dettes as vi vorzifen ure dettoures. And lene ous nought into temptatioun bot delyvor ous of uvel. Amen.

A. D. 1300—Fadir our in hevene, Halewyd by thi name, thi kingdom come, thi wille be don as in hevene and in erthe. Oure urche dayes bred give us to day. And forgive us oure dettes, as we forgive our dettoures. And lede us not into temptation, Bote delyvere us of yvel. Amen.

A. D. 1380—Oure fadir that art in heunes halowid be thi name, thi kingdome come to, be thy wille don in erthe as in heune, geve to us this day oure bread *oure other substaunce*, forgeue to us oure dettis as we forgaune to oure dettouris, lede us not into temptationn; but delyuer us from yeul. Amen.

A. D. 1534.—O oure father which arte in heven hallowed be thy name. Let thy kingdome come. Thy wyall be fulfilled as well in earth as it ys in heven. Geve vs this daye oure dayly breede. And forgeve vs our treaspases, even as we forgeve our treaspacers. And lede vs not into temptacioun; but delyver vs from evell. For thyne is the kyngedome and the power and the glorye for ever. Amen.

A. D. 1582.—Ovr father which art in heauen, sanctified be thy name. Let thy kingdom come. Thy will be done, as in heuen, in earth also. Giue vs to day our supersubstantial bread. And forgiue vs our dettes, as we also forgiue our detters. And lead vs not into temptation. But deliuer vs from evil. Amen.

A. D. 1611.—Our father which are in heauen, hallowed be thy Name. Thy kingdome come. Thy will be done, in earth, as it is in heauen. Giue vs this day our dayly bread. And forgiue vs our debts as we forgiue our debtors. And lede vs not into temptation, but deliuer us from euil. For thine is the kingdome, and the power, and the glory for euer. Amen.

OUR CONTROVERSY WITH S. S. GRISWOLD—NO. 2.

In his article of May 24th, Bro. G. represents us as "assuming the improbability that the divine government would be so arranged as to require a miracle in order to its execution, and arguing the contrary, from the fact that 'mankind have a natural capacity of being recompensed according to the course of nature.'" Now we beg leave to say that, in assuming the improbability of such an arrangement of the divine government, we had reference to government *as founded in the nature of things*; and we are not yet convinced, that we have advanced any thing inconsistent with this idea. Our reviewer shows that, after having stated this principle, we nevertheless proceed to "assume such a theory of a future resurrection as of necessity necessitates [we are not responsible for this tautology] a miracle the most stupendous," &c., and labors to make this proposition contradictory of the other. To his own mind this appears contradictory, no doubt, but there is a reason for this. He has recently got hold of a new theory of the resurrection, and his head is full of it. According to this new theory, the resurrection, instead of being a miracle, is accomplished by the operation of a natural law. Of course, it is not a benefit secured to mankind solely by the mediation of Christ, as evangelical Christians have always supposed, nor is the doctrine of it peculiarly a gospel doctrine. On the contrary, it belongs to the Religion of Nature. To be consistent, therefore, it must be maintained that the gospel is nothing more than a republication of Natural Religion—an idea which our reviewer does not openly avow, but seems as if he wished to; for in the close of his article he appears to throw out, as an objection to our theory, that it presents "Revealed Religion as either not according to the course of nature, or something additional to the course of nature, consequently not a natural religion." We do not wonder, therefore, that our reviewer imagined a great contradiction in our views.

But why did he not attend a little more carefully to our meaning? What we advanced proceeded on the supposition of a clear and well-marked distinction between the Religion of Nature and Christianity. Not that Christianity was supposed to be *contrary* to Natural Religion, or that it abrogated its claims. But we looked upon it as something *additional* to the Religion of Nature. Now we are well satisfied that this distinction is a just one; and while Christianity reveals the resurrection of the dead, Natural Religion does not. While the former necessitates the resurrection of man in the body, in order to the award of such retributions as are due to him considered as the subject of a government administered by Jesus Christ the Mediator, the latter necessitates it not. Where the contradiction in our views is, therefore, we are not able to see.

We have not argued any where, or at any time, that man's responsibility to Revealed Religion rendered him irresponsible to the claims of Natural Religion. On the contrary, Revealed Religion as embodied in Christianity proceeds upon the obligation of man to Natural Religion. Hence it is a fatal objection to Christianity to suppose that it places the impenitent sinner in a condition where the penalty of Natural Religion cannot be inflicted upon him for his transgressions. On this account we objected to the theory of the Annihilationists, inasmuch as it implied the impossibility of recompensing men hereafter, without the intervention of a miracle. And what have we said contrary to this? We have maintained the necessity of the resurrection, in order that hereafter the soul might be recompensed through the medium of the body; that is, in order to the execution of the divine government *as modified by the mediation of Jesus Christ*. But we have not maintained its necessity in order to the execution of divine government *as founded in the nature of things*. Where, then, is the contradiction?

If we said that "a miracle in no case would be necessary to bring man into a state where he could be recompensed," we are willing to admit the seeming inconsistency of such a statement with our position that the resurrection is necessary in order to the full recompense of man upon gospel principles. And whatever benefit this admission will afford to our reviewer, he is welcome to. But strong as the qualifying expression "in no case" is, we apprehend that some limitation of its meaning might be found in the connection in which it was used. We supposed certain extreme cases, (see *Recorder* of Feb. 15th,) in which, upon the principle of annihilation or sleep of the soul, the rewards and punishments of divine justice were effectually frustrated. And assuming the improbability that the divine government, as founded in nature, was so constructed as to render the recompenses of the future impossible in these extreme cases, we argued that it was constructed so as to render the recompenses of the future impossible "*in no case*;" meaning *in no other case that could arise under the divine government as founded merely in the nature of things*. Perhaps we were at fault in not expressing our meaning more fully, but we trusted to the discernment and candor of our readers, not supposing it necessary to label the picture after having drawn it.

T. B. B.

EDUCATION—PHYSICAL.

Physical education implies physical health, growth, and habitude. Although the physical is the lowest extreme of our being, yet its education must be carefully attended to, from the intimate and important relations existing between it and our higher faculties. It stands as sentinel and servant to the faculties within. Our physical must ever be subservient to our higher powers, and must be educated accordingly. Its development cannot be carried so high or continued so long as that of our spiritual natures; yet it should receive all that care and culture which the health and development, the necessities or the advantages of our being may demand.

Mankind, in their earlier approaches towards civilization, Epicureans and sensualists, exalt, deify the body—its powers, pleasures, and exercises. To such, physical enjoyment and culture seem most attractive. The sensualist gives himself up to the indulgence of the appetites. He looks not beyond the senses for gratification. The athlete, in the palmy days of Grecian civilization, was carefully trained for bodily exercise and victory at the games. If he were successful, applause, and crowns, and stautes, awaited him. His name was enrolled among the great. An Olimpiad was named after him. Poets sang his praises. Pensions, peculiar privileges, and honors, were granted him. All of his fellow citizens partook of his glory. Such deference to bodily power and skill is still the tendency in the lower forms of civilization.

On the other hand, in the religious development of humanity there is a tendency to consider our physical natures as but a hinderance, a clog—our bodies a vile thing, to be hated and abused and tortured, and to be sloughed off as soon as possible. There is ever a tendency to asceticism—a tendency to become anchorites, and to chain and incarcerate our bodies and inflict upon them the severest penance, in hopes of securing thereby greater sanctity—superior advances in divine life.

These are extremes. The golden mean is a sound, a cultured, a powerful mind, in a sound, a cultured, a powerful body. Consumptive fires have, doubtless, added unwonted brightness to the flames of genius; but this brightness soon, very soon, went out in unmitigated darkness. Cold, morose clouds of dyspepsia, envelop the soul, until the spirit is soured and all its cheerful fires extinguished, simply from the sin of indigestion. All such ills are an evil rather than a good, or, if a good, they in disguise—a good in a spiritual, a religious sense, not in the natural. It was not thus in the beginning. In the natural, primal arrangement of things, a healthy growth, development, activity, was the law. •

SAD EFFECTS OF DELUSION.

Two sad cases, showing the effects of delusion, have come to light within the past week, and have created much excitement in the regions where the events transpired.

The first was in Philadelphia, where a young man named Crowley, who had become partially insane through the influence of spiritualism, attacked his mother with a hatchet, and mutilated her in an awful manner, for the purpose, as he says, of "knocking some sense into her." Fortunately, the wounds are not likely to prove fatal.

The other case occurred in New Haven, Ct. It seems that a Mrs. Rhoda Wakeman, a woman some 70 years of age, is the seer, prophetess, or leader, of a small band of believers in some new religious doctrines, and the meetings of the members of the faith are held at her dwelling. On Sunday, Dec. 24th, as usual, the faithful met, and among the number was Mr. Justus Matthews, a workman in the pistol factory at Whitneyville. The meeting was kept up nearly all night, and, about 9 o'clock next morning, Mr. Matthews was found by his son, in the front room of the house, dead, with his throat cut from ear to ear. The investigation of the case shows that Mrs. Wakeman professed to be greatly distressed on account of a *bad spirit*, or spirit of enchantment, with which she fancied Matthews was possessed. Her brother, Samuel Sly, thought that "the bark of hazel, in connection with alder, concocted together into a tea, was powerful to remove enchantments." He therefore obtained a hazel club, and, selecting his time, knocked Matthews on the head with it. Afterward, Sly says, he was "urged on by some spirit to use a knife and fork upon him," which he accordingly did until Matthews was dead. Before the Coroner's Jury, Sly confessed the murder, and professed to narrate all the facts "in the fear of the Lord." The "prophetess," Rhoda Wakeman, also, gave her testimony, which is such a strange medley that we copy it for the study of those who are curious in extraordinary developments of the human mind:—

"I shall be 70 years old next November—have lived in New Haven 17 years—have had 17 children, nine of whom are now living; have been a widow 20 years. I formerly resided in Greenfield—then moved to New Haven; my brother has also resided there; he is about 50 years of age. I have been a 'messenger' from God about 30 years; experienced religion at that time, and walked with Jesus Christ ever since; first experienced religion because my husband abused me and I expected to die, and he finally killed me. After my husband killed me I was dead seven hours, and then raised; two angels stood beside me when I went to Heaven, and touched me with their bright swords and I rose again; saw there all that were dead, and there they were under the cloud of death; when I was there this cloud parted, and my spirit went one way and theirs the other; they all then held up their little right hands, and I rejoiced. The two angels turned to me and then I went up to Heaven; there was a red light and many white clouds there; Christ came to me when I was in Heaven, with his nails in his hands, and spoke peace to my soul. Because he spoke peace to my soul I raised up, and another spirit came to me and spoke, saying: 'Make your peace with God.' I then kept on praying; he soon took me to Paradise and told me all about Adam and Eve, and all the other spirits. This light then came on me so that I had to look up, and the spirits said I was numbered as one of them; was taken up to Heaven from this place of light, and then saw Christ and all the holy angels; Christ had on the thorns and looked as he was when crucified; then saw God sitting upon his throne in all his glory. About the throne were all the angels in their white robes, and they were all happy spirits there. This spirit then came and took me back to earth, and when I got back to earth again I saw my dead body lying on the floor. I felt bad because I had come back to this wicked world to live again. I soon saw my wicked husband, who said, 'By God, she's raised!' Soon after I saw two angels who came to me and spoke to me kindly, and then Christ appeared to me and I fell down before him. And oh! how happy I felt! and how happy I then was! I went to God with my case last night, and had a revelation from Him. That man was in league with the devil. He (meaning Matthews) got his evil spirit from Amos Hunt. Hunt attempted to poison me. (She went on and gave a long, rambling account of Amos Hunt's poisoning her.) The first thing I knew of the murder was when they came up stairs searching for a hatchet. I knew that my brother had a stick of witch-hazel in the house. He sells the bark and lives by so doing. I was sick that night and expected to die, and asked them to take Matthews out of the house. He had such a bad spirit that he was taking away my divine spirit, and killing me by it. Amos Hunt was the man of sin, and he put his spirit on Matthews. If I should die the judgment would come! This man of sin cursed God, and when he died there was a black spot on the throne of God! In my revelations from God, last night, He said, if I was condemned in this case the world would be immediately destroyed! In this revelation I was told by God that my brother did kill Matthews, and that he did it to save the world!"

TRACT OPERATIONS IN NEW YORK.

The New York City Tract Society held its 29th Anniversery on the 19th ult., when reports were made of which the following is an abstract:—

The past year we have employed and sustained 26 missionaries. One of these is our missionary to seamen, who supplies the shipping with tracts and other religious matter, which is not only read at sea, but frequently scattered in different and far distant lands. Two of the missionaries devote their attention to immigrants, whom they meet as soon as they reach our shores, supply them with tracts, and give them necessary cautions and good advice in their native tongue, and also, through the kind permission of the Commissioners, hold religious services with them in Castle Garden. Another, with an assistant, attends to the German residents. Another is a converted Jew, who labors among his brethren of the house of Israel, and has been the blessed means of bringing some of them to receive as the promised Messiah, and embrace as their Saviour, that Jesus whom their fathers crucified. The others are ward missionaries and assistants.

The average number of visitors during the year has been 1,097, and it appears from the reports of the missionaries, that since our last anniversary 1,777,173 tracts, containing 7,108,695 pages, in various languages, have been distributed; 1,185 Bibles and 984 Testaments supplied to the destitute, on behalf of the New York Bible Society; 6,418 volumes lent from ward libraries; 2,154 children gathered into Sunday, and 388 into day schools, and 242 persons into Bible classes; 1,689 persons induced to attend church; 224 temperance pledges obtained; 1,961 religious meetings held; 40 backsliders reclaimed; 265 persons hopefully converted, and 210 converts united with evangelical churches.

It often happens that persons are willing to attend a prayer meeting at a private house, who, from want of better clothing, or other causes, are unwilling to go to our more public places of worship. For their accommodation we have district prayer-meetings and mission stations.

The Treasurer's report of the main Society shows the following bills of items:

Amount Paid for Missionary Services	$13,713
Paid American Tract Society	24,75

The total receipts of the year were $17,294, and the expenditures, $16,879. Balance in the Treasury, $415.

Comprehensiveness of Religion.—The *Christian Advocate and Journal*, in an able article, exposing the hollowness of Modern Deism, has the following statement of the aims and results of the Christian Faith:—

"The Bible is our religion; and our faith in it, at first historical, has become a matter of personal consciousness from the experimental assurance that its truths are exactly what we want to raise human nature from its degradation, and save it from its sin. We want a religion that can quiet conscience, while it makes it more sensitive; which can make us holy, and yet leave us men; which can woo to another life, while it heightens the enjoyment of this. We want a religion that addresses the understanding, and yet is intelligible to the simple; that powerfully sways our emotional nature, and yet provides against extravagance; that brings immediately before the imagination visions of eternal joy, and yet gives new activity to the ordinary works of material life. We want a knowledge of God that will fill with awe, and yet save from terror; that will induce continual caution, and yet create perennial love. We want a system that humbles without degrading, and exalts without inflating; that offers pardon without encouragement to sin, and grants salvation as a boon, while it offers it as a reward to the laborious. These and many other requisites to our natural and moral condition we find in the religion of the Bible."

The Youth's Cabinet for January commences the eleventh volume. It has been enlarged and improved, and is the neatest and most interesting juvenile magazine printed. Each number contains 36 pages, profusely illustrated. Edited by Francis C. Woodworth; published by D. A. Woodworth, 118 Nassau street, New York. Terms, $1 a year.

"**The Presbyterian House.**"—This is the name given to a building in Philadelphia, which has recently been appropriate to the purposes of the New School Presbyterians. The New York *Evangelist* has an appeal on the subject, from which we copy the following:—

"The effort for the one hundred thousand dollars for church erection, has been as fully completed as the nature of the case requires, and the whole church reposes in the consciousness of its being raised. It comes along slowly, but the pledges of the men who raised $80,000 at the first effort are not to be discredited, when they promise to send the remaining $20,000 by January. We rejoice in it, both for its own sake, and as a pledge that the recognized enterprises of the church are sanctioned by the people, and will be carried through. Now that it is done, we think it high time that we look after the condition of the 'Presbyterian House Fund.' A year ago last May, the General Assembly pledged the faith of the whole church for $12,500. Has it been paid? If not, who sustains the weight of the unpaid portion of it? Is the house not forfeited to those who made the purchase originally? We can readily understand why this matter should have been lost sight of in the effort for church erection and church extension; but now that these are so nearly disposed of, would it not be well to understand the condition of this important department of our Christian work? It is understood that Philadelphia has nobly redeemed her pledge of one half of the $25,000, which will make this noble property ours."

Finances of the American Board.—The Prudential Committee of the American Board of Commissioners for Foreign Missions, have issued an appeal for pecuniary assistance. The following paragraph from the appeal will show how much occasion there is for it:

A brief statement of the pecuniary condition of the Board, at the end of October, was published in the Journal of Missions for December. At that time there had been a falling off in the receipts, to the amount of $4,000. To this may now be added a deficiency in the receipts for November of nearly $4,000 more; thus making for the first four months of the financial year, a diminution of income, compared with last year, of about $8,000, which, with the previously existing debt of $20,000, makes the present indebtedness of the Board not less than $28,000. In connection with this fact it should also be stated, that since the meeting of the Board at Utica, *thirty-two missionary laborers* have been sent to different parts of the world, who must be provided for; and that the unavoidable expenditures of nearly all the missions are increasing, and in some instances rapidly.

Baptist Missions in Burmah.—A Baptist missionary in Burmah thus writes to the Macedonian in this country:—

"The cause of Christ still advances at all the new stations in Burmah. The Burmans still listen. A few day since two were baptized. At Prome, over one hundred have been baptized. Brother Thomas has baptized from forty to fifty. Great numbers have been baptized in brother Vinton's field. Bassein is also blest. At a recent meeting a thousand Christians were present. In the region of Toungoo some thirty or forty zayats have been built, and three thousand are asking baptism. The native pastor, Dumoo, has just written to me, that about one thousand had been baptized on the mountains of Shwaygyeen. About as many have been baptized in Toungoo, while three thousand are still requesting the rite."

Mr. Judd in Hayti.—The following paragraph from the *Christian Watchman and Reflector* shows that the successor of Bro. Jones at Port-au-Prince, Hayti, is not without his troubles:—

"A series of resolutions passed by the Baptist church in Port-au-Prince has been forwarded to us for publication. These resolutions assert on the part of the church strong confidence in Rev. W. L. Judd, their pastor, and late missionary of the Free Mission Society. The connection of Mr. J. with that Society has been sundered—on what ground the resolutions do not inform us, though they speak of 'persecutions raised against him by certain ambitious men, enemies of the cross of Christ,' and complaint is made of the refusal of the Board of the Society, by the church, who declare 'a want of respect' for their decisions, and also a 'contempt for protestations signed both by members of the church and respectable citizens from without.' Of the merits of this alienation we cannot, of course, speak."

Cotton Factory in India.—A cotton-spinning factory, on the regular Manchester model, has been opened in Western India. It is near Broack; is worked by steam; has 1,500 spindles; and will give permanent employment for 500 hands. The whole has been built, and the machinery all put up, in ten months. The Bombay *Gazette* says:—

"We are to have mills of a similer character in Bombay shortly; they are now in course of erection for a joint stock company of local origin. If efficiently and economically managed, they can hardly fail of success. Under these conditions, a mill of the same kind near Calcutta, at Fort Gloucester, yields large profits, and its yarns sell in the Calcutts markets at least as high as those of Lancashire."

Kansas Affairs.—The threatened bloodshed at Lawrence, Kansas, was averted by a compact between Governor Shannon and the people of Lawrence. The document has not yet been made public; and considerable interest is felt in its details. The camps at Wakarusa and Franklin have been broken up, and the Missourians have returned to their homes with bitterness in their hearts against Gov. Shannon, whom they now accuse of being an abolitionist. The Free-State Volunteers of Lawrence have also been disbanded, with an understanding that they will be paid for their services during the time they were on military duty in defense of their city against an armed mob. Thus the matter rests now; and no one who has carefully read the history of the late outbreak, can fail to be convinced that the Free-State men, by their firm and resolute conduct, have achieved a signal triumph and obtained a guarantee for future peace.

☞ We find the following article in the *Christian Watchman and Reflector*, credited to *Zion's Advocate*.

Seventh-day Baptists.—This branch of the great Baptist family, better known in former times by the name of Sabbatarians, appear to be in a flourishing state. The membership in this country amounts to about 6,000 or 7,000, residing in Rhode Island, Connecticut, New York, New Jersey, Virginia, Ohio, and Wisconsin. They number about 70 ministers ordained, and 17 licentiates, besides which they are receiving several every year from other denominations. Indeed, their dependence for educated men has been on others until within a very few years. Now, however, they have large schools (Academies) at Milton, Wis, at DeRuyter and Alfred, N. Y., and at the latter place are about to establish a College and Theological School.

Their associated churches are 67, showing a constant healthy increase during the present century. In 1800 there were eight churches, in 1820 twelve, in 1840 forty-two, in 1850 fifty-eight, in 1855 sixty-seven.

For missionary purposes they raised in the year ending with August last, $3,400, being about 40 cents to a member, besides what was done by churches and associations for domestic missions in their own regions. Their most interesting missions are the foreign in Palestine and China.

Arctic Intelligence.—If any doubts remain as to the fate of the intrepid Arctic navigator, Sir John Franklin—whose exploits and sufferings have rendered his name more famous throughout the world than will ever be that of the recognized discoverer of the North-west passage—they will undoubtedly be set at rest by a narrative recently published relating thereto. It is a brief history of the progress and results of an expedition sent out in 1854, under the command of Mr. James Green Stuart, chief trader of the Hudson's Bay Company, to explore the region where it was supposed the remains of Sir John and his companions were to be found. The exploring party, after enduring the rigors of the extreme northern latitudes with incredible courage, succeeded in reaching Montreal Island, where were found relics of the long-lost navigators, confirming the reports received from the Esquimaux by Dr. Rae, who was the first to publish the tidings of their fate.

In connection with this subject we may notice the arrival at New London, Ct., of the English discovery ship Resolute, one of the vessels composing Sir Edward Belcher's squadron, sent out in search of Sir John Franklin, and which, having become locked in the Polar ice, was abandoned by that officer. She was fallen in with by an Americrn whaler, the captain of which took possession of her. Her value is estimated at one hundred thousand dollars. Captain Belcher was tried by court martial, at his own solicitation, for abandoning his ship; and although not censured for his conduct, the tribunal to which he appealed, after a patient investigation, did not justify it.

Fillibustering and the Government.—The great topic in New York, last week, was the course of the Government in preventing the steamer Northern Light from sailing at her usual time for Nicaragua. It seems that the Government was led to believe that a large party of emigrants would sail in her for Nicaragua, to join Walker's army in revolutionizing the country. The officers of the steamer refused to detain her beyond the usual hour of sailing, in order that she might be searched. A revenue cutter was therefore placed so as to intercept her before she could get out of the Narrows, and after two or three shots from the cutter she came to, and was brought back to the city. She was found to have on board, (said to be unbeknown to her officers,) nearly a hundred fillibusters, several of whom were arrested. After a day's detention, the vessel was released on giving bonds to the amount of $100,000. The funniest part of the matter is said to be, that while the Government officers were looking after the Northern Light, another steamer, chartered for the purpose, got out of port with several hundred fillibusters on board, bound for Nicaragua.

The Lemmon Slave Case.—The Richmond *Enquirer* of Dec. 28 says: In compliance with the joint resolution adopted by the General Assembly in 1853, the Governor has appointed Andrew Stevenson, Esq., the associate counsel, with the Attorney-General, to prosecute ~~before~~ the Supreme Court of the State of New York the appeal taken from the decision of a Judge in that State, by which Jonathan Lemmon, a citizen of Virginia, was deprived of his slaves. It is understood that the Governor of New York, under a resolution of the Legislature of that State, has appointed the Hon. E. D. Culver and Joseph Blunt, associates with Hon. Ogden Hoffman, Attorney-General of New York, to manage the case on behalf of the appellees. The case is a reserved case in the court, and will be ready for argument at its term, which will commence on the first of January. Mr. Stevenson, it is understood, has accepted the appointment

Products of the Industry of Boston.—The returns to the Secretary of State of the products of the industry of Boston for the year ending June 1. 1855, as compiled for the Boston Almanac, shows that iron, exclusive of that for nails, was manufactured to the value of $1,525,000; steam engines and boilers, $1,835,000; iron railing, iron fences, safes, &c., $562,500; glass ware, $1,190,000; pianofortes and other musical instruments, $1,984,700; watches, gold and silver ware, and jewelry, $617,900; saddles, trunks, harnesses, &c., $757,200; brushes, $225,000; upholstery, $1,550,800; sails, of American fabric, $431,172; sugar, refined, $2,000,000; chair and cabinet ware, $1,063,800; tin ware, $416,500; linseed oil, $500,000; camphene and burning fluid, $500,000; flour, $870,000; boots and shoes, $193,000; building stone, $323,000; marble, prepared, $311,000; horses (4,800) $761,625; cows (132) $5,405; casks, $158,000; distilled liquors, $2,495,000; beer, $238,000; friction matches, $50,000; bakeries, 935,000; clothing, $8,500,000.

Dr. Kane declines to accept the one thousand dollars offered as a contribution by George Peabody, of London, toward a public testimonial for the Arctic expedition. Mr. Peabody also offers five hundred dollars to begin a subscription for the sailors in the expedition.

RELIGIOUS INTELLIGENCE.

Mr. James F. Whitney, editor of the N. Y. *Pathfinder*, who was a leading spiritualist, has lately come out with a renunciation of the doctrine of spiritualism. He says that he has been "at the head of the most extensive establishment in existence for the investigation of the phenomena, publishing one of the leading journals, devoted entirely to the cause, and employing about the premises no less than eight mediums, for public sittings, for investigation and instructions, and this establishment being carried on at an expense of over two hundred dollars a week." And now, as result of his intimate acquaintance with the subject, he pronounces the whole affair base and demoralizing.

A writer in the N. Y. *Observer* states that a very interesting revival is now in progress in the several churches at that place, and that the spirit of God is poured out with unusual power upon the community. The German population is sharing largely in the influences of this season, and many cases of conversion of deep interest have occurred among them. The work is extending also to Kingsboro, and indications of a similar state of things have been manifested at Johnstown, not far distant.

A Protestant Congregation of Hungarians was recently gathered in Constantinople, chiefly converts from Popery, and at present numbering 150 persons, 120 of these *being* communicants, with every prospect of rapidly increasing. The Rev. John Dudas, their pastor, is charged by them on a mission to collect funds from the benevolent for the erection of a chapel and school, for the preaching of the Gospel, and for the education of the young.

It is stated that the Rev. Dr. Duff very narrowly escaped shipwreck by a tempest in the Mediterranean, while on his way from Trieste to Alexandria. The vessel was driven from her track, her fires extinguished, and the waves breaking over her, rendered unmanageable among the islands of the Levant. The steamer at length reached Alexandria, four days behind her time. This is the fourth narrow escape which Dr. Duff has had at sea.

Missionary advices state that the fall of Sebastopol has quieted the adherents of the old Armenian church, who before had hoped that the triumph of Russia would annihilate Protestantism in Turkey. Another most extraordinary sign of the times, which is referred to in every recent letter, is the readiness of Mohammedans to read the Bible. It is impossible to tell whereunto this may grow.

In a single town in Spain there are, it is stated, nearly four thousand persons who have abandoned papal worship, and who assiduously study the holy Scriptures as their only role. In other towns there are many persons, including not a few of the clergy, who protest against the tyranny and superstitions of the Church of Rome, and declare themselves desirous of further light.

The ladies of Bangor, Me., are raising funds to erect a chapel for the Theological Seminary in that place, which shall also contain a deposite for the library of 10,000 volumes, towards which they have contributed $1,200. They have collected $700 for the chapel, and intend increasing it to a thousand.

It is said that some of the subjects of the Czar are inclined to doubt his mission as the head of the Church, and that he has issued a government circular to the Russian clergy; "He who doubts the Czar to be the sole protector of the Orthodox Church is declared to be an apostate."

The most energetic measures are being taken for the extension of Romanism in Canada. Land is being bought in every direction, and chuches, nunneries, and schools established. It would seem as though this Lower Province were becoming the rendezvous of priests, monks and nuns, from all parts of the world.

Rev. J. W. Alexander, D. D., preached an impressive sermon before the City Tract Society, in his own church, on a recent Sunday evening, from the parable of the Good Samaritan, when a collection and subscription was received towards sustaining the operations of the society for the year 1856, amounting to $1,500.

Mr. William D. Roberts, who died during the epidemic at Norfolk, and was a member elect of the Virginia Legislature, bequeathed three four-story brick buildings, valued at $12,000, to the Female Orphan Asylum of Norfolk.

Rev. Mr. Grover, of the Methodist Episcopal church, has resigned his position as a member of the Ohio Conference, and joined the Protestant Episcopal church. It is understood that a change in his views of church government has led to this result.

We learn from the Calcutta Christian Observer that it is proposed to hold, at Calcutta, in September next, a general Conference of all the missionaries laboring in the province of Bengal. It is to commence on the 4th, and contiuue for four days. The proposed meeting will be of the character of those of the Evangelical Alliance.

The landing of the Pilgrims at Plymouth was celebrated, for the first time in Canada, by the New England Society of Montreal, on the 22d ult. A grand dinner was given, at which Americans and Canadians carried out reciprocity, and drank with equal enthusiasm the patriotic toasts of England and America.

Wm. J. Bowditch, Esq., trustee under the will of Miss Plummer, has $25,000 in his hands, to be appropriated, according to the will of the deceased, in the establishment of a farm school for the reform of boys in Salem. The sum is not considered sufficient, and the Salem Gazette makes an appeal to the public for further benefactions.

The new State Idiot Asylum, at Syracuse, N. Y., which was lately opened, is in a flourishing and prosperous condition. This institution now contains about eighty patients, all of whom are instructed in reading, writing and cyphering, as far as their constitutional and intellectual strength will admit.

It is stated that during the recent prevalence of the yellow fever at Norfolk, seven clergymen, twenty four heads of families, both father and mother, and 2,000 of its former population, fell victims to the pestilence.

At a recent sale of the State lands lying in Iroquois county, Illinois, they brought the average price of six dollars per acre. A few years ago we understand they were refused at twelve cents State scrip.

General Intelligence.

European News.

The U. S. M. Steamer Pacific, with one week later news from Europe, arrived at New York, Dec. 28th.

There had been a skirmish in the Crimea, a very brief account of which was telegraphed by Marshal Pelissier from Sevastopol. The affair occurred on the 8th ult., and resulted in the defeat of the Russians, who, after an attack on Baga-Orkonsta-Skraka, were repulsed, leaving behind them thirty prisoners and a large number of dead and wounded.

Kars had fallen by famine, and it is surmised that Gen. Williams and the garrison are in the hands of the Russians. It is, however, merely surmise—for the latest advices come only to the precise point where, the last morsel within the walls having been consumed, a flag of truce was being sent to Gen. Mouravieff, offering to capitulate.

There is nothing else noticeable from the Crimea. Both armies are comfortably housed, and both are well provisioned. Firing continues between the north and south sides of Sevastopol.

Respecting the prospects of peace we have a mass of crude and contradictory statements, made on such feeble grounds that they have ceased to even influence the Bourse. Admitting that negotiations are on foot, nothing indicates that they have advanced a step. Meanwhile the preparations for war do not slacken.

Russia has opened subscriptions for a loan of 50,000 of roubles. The loan is a 5 per cent. stock, offered at 86.

St. Petersburg advices of Nov. 29 mention that since the ground has been covered with snow, vast trains of sleighs have entered the Crimea by Perekop and the Spit of Arabat, with provisions and stores for the army. The Allies have constructed 26 batteries to attack the north forts, and have 360 guns in position on the Tchernaya.

California News.

The steamer George Law, with California mails to Dec. 5th, and $1,405,392 in treasure, arrived at New York Dec. 28th.

The intelligence from California is unimportant, and contains little beyond the ordinary incidents of every-day life. On the 26th ult., the French, English and Sardinian residents of San Francisco celebrated the fall of Sebastopol by a grand banquet, which seems to have terminated in a general row. The excitement in relation to Table Mountain has not yet subsided, and fresh discoveries of gold continue to be made.

In Oregon and Washington Territories the Indian war is waged with undiminished ferocity by the savages. Whole families have been cruelly murdered, and the greatest consternation prevails among settlers in unprotected parts of the country. General Wool is in Portland, and is organizing a plan of campaign against the Indians.

Important discoveries of gold have been made both on the Isthmus of Panama and in the Republic of Chili.

The Ship "Resolute."

The discovery ship, sent out by the English Government, in search of Sir John Franklin, and abandoned in the Arctic Regions by her officers and crew, a year or two since, has fallen into the hands of a Yankee, (Captain Budington, of New London,) and has been brought to that port. Captain Budington was cruising for whales in the Northern seas, when he fell in with the Resolute, drifting. Giving his own vessel in charge of the first mate, he went on board with fifteen of his crew, to navigate her home. His own vessel, the George Henry, reached New London before he did. The Chronicle says:

"When the two vessels parted company, they were in about latitude 62° N.—some two degrees south of the spot where the Resolute was first found. The Resolute was a new vessel when she left England, was built in the most substantial manner, and was excellently well found. When found by Capt. Budington, she was at least one thousand miles from the spot where she was abandoned by her officers and crew. The George Henry had a hard time of it after leaving her consort, but arrived safe, though leaking badly. She lost her rudder in the ice soon after parting with the Resolute, and there being no carpenter on board, the Captain and mate managed in about half a day to make a rough substitute for one, and have brought the bark home with it, though it has been unshipped three or four times and left the bark at the mercy of the waves for long intervals, which greatly retarded the passage home."

The N. Y. *Times*, speaking of the arrival of the Resolute, says:—

"The recovery of the Arctic relief ship Resolute, and her safe voyage to this country, an account of which we have already published, will be likely to create a good deal of excitement in England, as it will throw new light on the conduct of Sir Edward Belcher, the Commander of the Expedition in search of Sir John Belcher and his subordinates in command of the two ships which accompanied by a Court Martial on their return to England, last year, for having abandoned their vessels. Capt. Kellett, who commmanded the Resolute, and Capt. McClure, who succeeded in discovering the Southwest passage, were both fully and honorably acquitted, and the latter has since been knighted by the Queen; but Sir Edward Belcher, under whose instructions the others had merely acted in abandoning their vessels, was merely acquitted, but not fully, or honorably, and his sword was returned to him without a word of comment from the President of the Court. It was thought, at the time, to be very harsh treatment of a brave officer, and the restoration of one of his ships in so remarkable a manner, will awaken a new discussion in respect to his conduct, for Capt. Budington, the hardy sailor who has brought her home, gives it, as his opinion, that the ship could not have been released any sooner, than she was by accident, if her crew had remaining in her; and it would have been impossible for them to have done so, from a lack of fuel and provisions. The finding of the ship and her safe voyage to New London adds another romantic episode to the history of Arctic navigation. By a remarkable coincidence, the intelligence of the discovery of the remains of Sir John Franklin, and the recovery of the Resolute, which had been sent out to his rescue, both reached this City in the same hour, and were carried to England by the steamer on Wednesday; the Resolute sailed from London, and was brought back to New London.

Remains of Sir John Franklin.—The St. Paul *Free Press* of Dec. 11th, says that on the previous evening Mr. Stewart arrived from Red River, on his way to Canada, bearing dispatches for Sir George Simpson, containing information of the discovery of the point where Sir John Franklin and his party perished. It was on the coast opposite Montreal Island. Their bones lie buried in the sand within an extent of twelve miles. This is the fifth winter since they perished, and the drifting sands of that barren region, being in lat. 68° north, have piled in successive layers on the bones of these noble and ill-fated men. Mr. Stewart describes the region as dreary in the extreme—not a blade of grass nor a stick of timber met the eye. No game of any kind could be found. The Esquimaux, from whom their information was obtained by signs, pressed their fingers into their cheeks, and placing their hands on their stomachs, endeavored to indicate the manner of their horrible death. They were charged with killing them, but merely answered with their sighs. It was a very expeditious trip, it being only thirteen months since the party left the Red River settlements.

Death of a Miser—An Heir Wanted.—The Upper Sandusky Vindicator says: "The well-known miser, John Herryman, a citizen of this place, died very suddenly on Friday night of last week. The deceased was a German, who, by some means, had amassed a handsome fortune, which we have heard variously estimated at from twenty-five to fifty thousand dollars, but unfortunately for the public as well as himself, he belonged to the lowest grade of misers. Of his history, place of nativity, of friends, nothing is known, and any allusion to these matters, even by his most intimate friends, always exasperated him. He leaves, so far as at present is known, no one to inherit his estate, which will, in all probability, escheat to the State. No will has yet been discovered, and it is not likely he left any. The manner of life and parsimonious habits of the deceased are almost incredible. For the last sixteen years he has constantly worn the same blue, linsey-woolsey wamus and pantaloons, carefully run or darned all over with strong thread so as to prevent the possibility of wearing out, except on some important occasions, such as land sales or something of that nature, when they gave place to a suit of black velvet, that he often boasted had served him faithfully for forty years. He contracted the disease of which he died by walking over the bad roads during the most inclement weather of the season, all the way to Putnam and Henry Counties, to pay his taxes on the land he owned there, without sufficient clothing to protect him from the cold. In fact, we are informed that he scarcely ever wore a shirt or undergarment, and that the one he had on when he died had not been changed for over three months.

A Child Lost.—The Morgantown *Union* gives the following interesting account of the loss of a child of Franklin Gray, in Preston County, Va.:—

"The child (of two years of age,) attempted to follow its father to a neighbor's, a mile distant. The mother, missing the child, became alarmed, and at once instituted search. She followed her husband, but heard no tidings of the lost one. Father and mother, spreading the alarm, joined by sympathizing neighbors, set out on a search, and all that day and night they continued, the search, but morning came, and still the little wanderer was not found. Court was in session at Kingswood, (the County Seat,) and on Saturday morning adjourned to allow all in attendance to aid in restoring the child to its anxious parents. The party, numbering now about two hundred persons, searched the woods all day, but not till the hunt had been well nigh abandoned, as evening was coming on apace, could any information be had of the child's condition or whereabouts. Mr. B. Hawley, as he was returning home, and within half a mile of Mr. Gray's house, found the child, but it was dead! It had perished from exposure, having been without food, wandering in the cold dreary woods, from Friday morning.

Trial for a Murder Committed Fourteen Years Ago.—At the last Assizes in Whitby, C. W., a man named Reuben Crandall, of Reach, and his two sons, were tried for the murder of Stephen Smith—a crime committed fourteen years since. The principal accused is a wealthy farmer, and had been suspected at the time of the murder, but no evidence was obtained against him. A man named John Elliott Buck, who had worked for Crandall, and between whom some enmity lately arose, now came forward and swore that he saw the murder committed, and represented it to have been attended with a great degree of atrocity. The witness, it is said, is not a very reliable person, and his testimony was disproved by several other persons, who declared that the man who was said to have been killed, was seen alive over six months afiet the period fixed as that of his disappearance by the witness Buck. On this evidence the Jury had little difficulty in rendering a verdict of acquital, which they rendered in about nine minutes after leaving their seats.

Interesting Suit.—The Norwich *Courier* gives the result of a trial before the Superior Court in that city, in which a handsome young lady, Miss Ellen R. Wheeler, was plaintiff, and Ralph Coates was defendant—both parties belonging in North Stonington. The case in brief was, that more than a year ago Coates lost several pieces of veal, as he believed, through the carniverous propensities of fair Ellen's dog—a noble Newfoundland. Armed with a gun, Coates went to a neighbor's, where Ellen and her dog were visiting, and seized the dog by the throat, to drag him out. Ellen threw her arms around the dog to save him, and was dragged out with him and lacerated in going over the door steps. Coates then shot the dog, and this suit was to recover $500 damages. The Jury gave the full sum sued for, and would have given it had it been twice as much.

Queen Victoria has acceded to the request of the Colony of Van Dieman's Land to change the name of that island and colony to Tasmania.

SUMMARY.

An interesting murder trial took place in Burlington, Iowa, in November last. The accused was a man named John J. Jones, seventy-three years of age. He had been a soldier under Gen. Jackson, and was with the old hero in several of his campaigns against the Indians. Jones was charged with murdering Horatio W. McCardle, a neighbor, some fifteen years ago. He made his escape and was not heard of until a short time before his arrest. Capital punishment having been abolished in Iowa, the prisoner was sentenced to hard labor in the penitentiary during the remainder of his life.

A curious point of law has just been decided by a County Court Judge at Exeter, England. The question was whether an inhabitant of a town was at liberty to keep animals whose noise proved a serious annoyance to their neighbors. It was shown on the part of Mr. Abraham that his neighbor, Mr. Minty, had a cock which crowed 150 times in 25 minutes. The learned Judge thought this was an amount of crowing which human nature was not bound to put up with, and awarded to the plaintiff 1s. damages.

Professor Morse has been presented by the Emperor of Austria with the great gold medal of science, and art. On one side is a medallion head of the young Emperor, crowned with laurel, with the inscription, "Francisous Josephus I. D G., Austriæ Imperator;" and on the obverse, a wreath of laurel surrounding the imperial crown, with the inscription, "*Literis et artibus.*" This is the fourth token of acknowledgment from European sovereigns accorded to, and received by, Professer Morse.

A depth of 586 feet has been attained in the Artesian Well at New Orleans, and, contrary to expectation, a new layer of sand has been touched. The sand is of a greyish color, with but a very trifling admixture of sea-shells. In conseqence of the looseness of the sand in which the augurs are now at work, it is found impossible to penetrate any further, until the pipe has been sunk to the bottom of the existing excavation.

A tub of butter, weighing about 200 pounds, was recently discovered several feet beneath the surface of the earth, at Winsted, Conn. The spot upon which it was found had been occupied some twenty years before by a country store, and the supposition is that the butter has remained buried all that time. The cask was partially decayed, but its contents were sweet, and without any unpalatable taint or flavor.

The Union complains of the cost of living in Washington, and says:—The rents of rooms, in desirable situations, are ridiculously high, and appear to be imposed with the view of depriving the unfortunate occupant of the ability to make his expenses square with his receipts. From $12 to $15 per month is the average price asked for the rent of a commodious bed-room. A handsomely furnished parlor commands from $20 to $50 per month.

The Community of Hopedale, or the "Republic of Practical Christians," as they term themselves, contemplate the establishment of a large association in the West, having already selected a suitable location. The Nauvoo Icariens have also purchased 4,000 acres of land in Iowa, and the colony of Icariens already on the spot are reported to be in a thriving condition. The Icariens intend, if possible, to gain possession of 100,000 acres in Iowa, and eventually remove their whole establishment thither.

The editor of a paper published at Portland, Maine, has been shown a new and curious "Air Gun." It has the appearance of an ordinary cane, though rather large. The upper portion has an air chamber, and when charged with air by a little force-pump, will drive fifteen separate shots before reloading. The lower half of the cane forms the barrel, easily loaded with ball, like an ordinary rifle. The piece is cocked by means of a short wrench. Bullets are driven with such force as to pass through an inch board at every shot.

A gentleman proposes to pave the streets of New York with pebble stones packed in iron boxes, that are carefully adapted to each other, and over which as a cement melted iron is poured. The several blocks are to be cast in dovetails, so that when they are placed in the street, they cannot be moved in any direction, though they may be lifted, to get at the water and gas pipes under the surface.

A complete census is being taken of the houses of ill-fame in the city of New York. The undertaking has been entrusted to the officers of the Police Department in whose beats these houses of shame exist. The report will include the name, age, place of nativity, and, if alien, the reasons of immigration, with the date of arrival here, with all accounts of moneys provided for such immigration. It will state the ability or inability to write and read, the social state, &c.

An enterprise is now completed by the house of S. De Agreda, Jove & Co., of South street, which opens a direct communication with the Venezuelan republic. A steamer called the Tennessee, of 1,208 tons burden, has been purchased, and is to sail early in January, as a pioneer upon this line. Its terminus is Porto Cabello, touching at St. Thomas, Porto Rico and Laguayra, and will leave this port monthly.

Any person having the franking privilege for their private communications, may frank a registered letter; but their frank does not cover the registration *fee*, which must always be paid. Except in the case of public documents, a Member of Congress cannot send nor receive free any letter or packet weighing over two ounces. The excess above two ounces on any such private packet, to or from a Member of Congress, must be charged and collected.

The Colonizationists, whose delight it is to magnify their Colony on the shore of Africa, have made strenuous efforts to bring the native iron of Liberia into notice and to a market. Skillful mineralogists and chemists have lately given opinions, derived from careful analyses, to the effect that the specimens submitted to their inspection were true native, and not meteoric iron. The quality is said to be good, and great hopes are beginning to be built.

S. M. Booth, abolition editor of the Wisconsin *Free Democrat*, has assigned over his property, but says he shall pay all his debts except the fines imposed upon him for aiding in running off slaves.

At attempt was made, a few night ago, to rob the store of Jaffray & Sons, at the corner of Broadway and Rector-street, N. Y. The burglars first effected an entrance by means of skeleton keys, to the store No. 53 Broadway, passed up to the roof, and entered the store of Jeffray & Sons through the scuttle. They made an attempt to open Messrs. J. & Son's safe, but being unsuccessful, ransacked the store, selected about $25,000 worth of goods, which they took through a back door and placed on a hand-cart waiting in Rector-street. Becoming alarmed, however, they left the goods and their skeleton key, and left.

A most singular circumstance occurred in the house of Mr. Wm. Crawford, of Pittsburg. A young daughter of his, a mere infant, was lying in the bed asleep, when she was attacked by a huge Norway rat, which began to inflict bites on her arm and hand. A little boy in the same bed awoke and endeavored to drive the animal away, but he too was bitten in three or four places on the hand. The girl's hand from the wrist to the end of the thumb was bitten in a dozen different places, and she is quite seriously injured.

A man in Boston, a few days since, left home and entrusted to his wife about $400 in bank bills, for safe keeping; she placed it in the fireplace where a fire was seldom kindled, thinking that as safe a place as any in the house; the husband returned in the temporary absence of the wife, and kindled a fire in the fireplace; the money was nowhere very shortly, and the lady had an opportunity to speculate upon the value of her new Fire Proof Safe!

Henry Grinnell, who fitted out the several Arctic expeditions from this country in quest of Sir John Franklin, expended in those enterprises about ten thousand dollars, the Government assuming the rest of the expense. The house of which he is a member, Grinnell, Minturn & Co., will clear three-quarters of a million of dollars upon orders from the British Government for grain—orders sent to that house by reason of Mr. Grinnell's connection with it.

The Cincinnati system of calling for and delivering railroad passengers at their hotels or residences is the most convenient and economical of any city in the world. For twenty-five cents the driver of a clean, handsome omnibus, drawn by fine, spirted horses, raps you in the morning, anywhere within a range of two or three miles from the depot, and sets you down, bag and baggage, at the cars. For the same trifle he delivers you at your door again, on your return from a journey.

The Chicago Times and Journal contains a full report of a meeting held in that city, to secure the building of a railroad, six feet guage, from Oswego to Syracuse, 35¼ miles. From Syracuse to Binghamton, on the New York and Erie Railroad, there is a road already in operation, so that it needs but the building of 35¼ miles of road to connect Lake Ontario with New York by a broad guage road requiring no change of cars or transhipment of merchandise.

The Boston Advertiser announces that Hon. Stephen Salisbury, President of the American Antiquarian Society, has made a donation to that society of five thousand dollars, as a "Book-binding Fund," the annual interest to be devoted to binding books, tracts, pamphlets, newspapers, &c. Mr. Salisbury gave to the association the land on which its hall stands, besides contributing five thousand dollars to the cost of the building, and in many ways has greatly enriched its library.

A dispatch dated Middletown, Conn., Dec. 30, 1855, says: The gas works in this place took fire about 2 o'clock this morning, from the purifier. The chain, to which was attached the weight, broke, and the weight fell upon the purifier, making a hole, and letting off the gas. A terrific explosion followed, tearing off the roof and forcing out the walls of the building.

Lieutenant Meade, U. S. Topographical Engineers, has designed a new iron lighthouse for the Florida Reefs. It is now in process of construction by Philadelphia manufacturers. The structure will be 150 feet in height, and 50 feet in diameter at the base. It is built in the form of an octagon, strengthened by eight cast iron columns outside, from which braces and ties extend.

A Kansas Emigration Society has been formed at Gainesville, Miss., at a public meeting there, which adopted resolutions thanking the Missouri borderers for what they have done in Kansas. The object of the society, as stated by the resolutions, is to raise money to defray the expenses of emigrants from the South to Kansas, "to meet their foes at the ballot box, and, if necessary, with rifle balls."

On the 23d of December, the British ship Resolute, abandoned in the Arctic ice, was brought by Captain Budington into the port of New London, Conn., with all her armaments, stores and equipments on board. She is a new and handsome vessel, and worth $100,000. When found she had drifted over 1,000 miles from the place where she was abandoned.

A telegraphic dispatch from New Orleans announces the arrival at that port of the Daniel Webster, from San Juan, Nicaragua, with a fortnight's later intelligence from San Francisco. No news of importance is reported. The Indians in the Southern part of California and in Oregon, are yet unsubdued, and continue to be very troublesome.

Among 3,000 hogs slaughtered in one day by one establishment at Louisville, were seven, averaging 530 pounds gross, the largest weighing 836 pounds. The monsters walked to market, a distance of about 100 miles.

The wheat now held by the millers of Rochester, N. Y., is valued at over $1,000,000. The milling business for 1855 has been uncommonly lucrative, and their profits foot up over $500,000.

Through the liberality of Mr. Nathan Jackson, Williams College has been enriched by a beautiful structure, designed as a Museum of Natural History.

The Governor of Louisiana has issued his proclamation, requesting that the 3d day of January next be observed as a day of thanksgiving.

The large five-story brick building No. 13 Spruce-st., New York, was destroyed by fire on Thursday evening, Dec. 27th. Loss about $20,000.

An establishment at Worcester is about to commence the manufacture of straw goods. Some 300 females will be employed in the work.

A dispatch dated Albany, Dec. 29, 1855, says: A copy of an order in council, dated at the the Court of Windsor Castle, November 21, 1855, was this morning received at the office of the Prohibitionist, in this city. In it her Majesty gives her official sanction to the Prohibitory Liquor Law of the province of New Brunswick, and directs the Governor, or Commander-in-Chief, and all other persons whom it may concern, to be governed thereby accordingly. The law takes effect on the first of January next.

A dispatch dated Boston, Dec. 29, 1855, says: At Falmouth, Maine, on Thursday evening, a Mr. Coffin and two young ladies named Haskell, while "coasting," were precipitated over the bank of a river, a distance of forty feet, and Coffin and one of the ladies were drowned, and the other was so badly injured that it is feared she cannot survive.

Christopher Robinson, formerly of Lynn, Mass., obtained a decree of divorce on the 6th inst., at the Circuit Court in Owen County, Indiana. The divorce was granted exclusively on the ground of incompatibility of character. The jury returned a verdict for the plaintiff after five minutes' deliberation. The decision is final and without appeal. Both parties being represented by able counsel, the case excited considerable interest.

The comparative danger of standing on the platform of railroad cars, is shown by the report of the State engineer and Surveyors of New York; by which it appears that over twelve million passengers were carried over their main railroads during the last year, out of which immense number, twelve were killed, and of whom eleven were standing on the platform.

A gentleman of Washington, recently received a letter from Portadown, county Armagh, Ireland, making inquiries in relation to the heirs of John White, who emigrated from the country of Armagh, Ireland, somewhere about the year 1814 or '15, and who is believed to have left two sons, Abner and William. There is about a million and a half of money, for the lucky Whites, who can "prove property."

At a recent term of the United States Circuit Court for Rhode Island, the court sustained the position that upon the death of a grandchild without children, intestant, his grandfather will take the ancestral estate, rather than the uncles and aunts, though the estate came into the family through the grand maternal branch, the wife of that grandfather.

It is indeed surprising, says the Kansas Herald of Freedom, to see the crowds which are daily wending their way into the Territory. If the reports which reach us from all quarters are reliable, and we believe they are, our population will nearly equal 70,000 by the first of December, instant, and the spring emigration will make us equal from 90,000 to 100,000.

New York Markets—Dec. 31, 1855.

Ashes—Pots $7 50. Pearls 8 50.

Flour and Meal—Flour 8 18 a 9 31 for various grades of States, 8 12 a 8 25 for mixed Western, 8 25 a 8 56 for Ohio, Michigan, and Indiana, 9 75 a 11 50 for extra Genesee. Rye Flour 5 50 a 7 25. Corn Meal 4 12 for Jersey. Buckwheat 2 37 a 2 62 per 100 lbs.

Grain—Wheat 1 95 for Western red, 2 20 for Western white. Rye 1 31. Corn 91 a 93c, for old Western mixed, 80 a 90c. for new Southern yellow and white.

Provisions—Pork 16 00 for prime, 18 50 for mess Beef 9 00 a 10 00 for country prime, 10 50 a 12 00 for country mess. Lard 12½c. Butter 18 a 23c. for Ohio, 23 a 28c. for common to good State, 28 a 30c. for prime. Cheese 9 a 11c.

MARRIED,

In Leonardsville, N. Y., by Eld. W. B. Maxson, on the evening of the 22d ult., Mr. John Corbett to Mrs. Adelaide Burdick, all of Leonardsville.

DIED,

In Christiana, Wis., on the 22d of October, Lydia Ann Colgrove, aged ten months and two days.

In Westerly, R. I., on the 16th ult., of dropsy on the brain, Everett A., son of Stanton and Antoinette M. Clarke, aged 2 years and 2 months.

In Christiana, Dane Co., Wis., on the first of December, of typhus fever, Orson Crandall, son of Joseph S. and Olive Crandall, aged eighteen years. The subject of this notice was a member of the Church of Christiana, and was respected and beloved by all who knew him.

In West Edmeston, N. Y., Dec. 22, 1855, David Maxson, in the 53d year of his age. Last winter our deceased brother became alarmed in consequence of scrofula in his mouth. He consulted his physician, who pronounced it a cancer. For a short time he was encouraged to hope that he could obtain relief; but soon he was compelled to surrender himself to the ravage of this most fatal disease. During these months of dissolution he has borne his sufferings with Christian patience, leaning upon the promises of God. Bro. Maxson made a profession of religion in early life; and he has constantly manifested his desire for its prosperity by his interest in the cause of benevolence and his efforts for the salvation of sinners. The third Brookfield church, by his death, has lost a devoted member, and the community a generous citizen. Though his family and friends mourn, yet they are consoled while they remember his example of patient suffering and submission to God. L. M. C.

LETTERS.

Thomas Perry, H P Burdick, A B Burdick, J E Potter, W B Maxson, E R Clarke, Z Campbell, Henry Barber, E R Maxson, Charles Potter, B G Stillman, E G Potter, N D Kildow, N V Hull, R G Burdick, J Barrett, S P Stillman (right.)

RECEIPTS.

☞ All payments for publications of the Society are acknowledged from week to week in the Recorder. Persons sending money the receipt of which is not duly acknowledged, should give us early notice of the omission.

FOR THE SABBATH RECORDER:

M Wells, DeRuyter	$2 00	to vol. 12	No. 52
Wid B C Maxson "	2 00	12	52

Carpet Warehouse.

YOUNG & JAYNE, No. 364 Broadway, corner of Franklin Street, (opposite Taylor's Saloon,) offer for sale a very choice and extensive assortment of *CARPETINGS, OIL-CLOTHS, CURTAIN MATERIALS, MATTRESSES, &c.,* at the lowest rates. Purchasers are respectfully solicited to examine the stock.

Misrepresentations, either expressed or implied, are strictly prohibited in this establishment.

YOUNG & JAYNE,
364 Broadway, corner of Franklin-st.

N. B.—Churches and clergymen furnished at wholesale prices. Sept 27—3 m.

Alfred Highland Water-Cure.

THIS establishment, for the cure of Chronic Diseases, is conducted by H. P. Burdick, M. D. The facilities in this "Cure" for the successful treatment of Diseases of the Liver, Spine, Nerves, Female Diseases, Bronchitis, Incipient Consumption, &c., are not excelled in any establishment. Patients will have the benefit of skillful Homeopathic prescriptions—an advantage found in but few "Water-Cures." Especial attention will be given to diseases commonly called *surgical cases*, such as Hip Diseases, White Swellings, Cancers, (in their early stages,) and Caries and Nearosis of bone.

Connected with the establishment is a Dental Shop, where all calls in that profession will be attended to.

Address, H. P. BURDICK,
Alfred, Allegany Co., N. Y.

Central Railroad of New Jersey,

IN connection with the Lehigh Valley Railroad, opened to Mauch Chunk—WINTER ARRANGEMENT, commencing Nov. 19, 1855. Leave New York for Mauch Chunk from Pier No. 2 North River, at 7 30 A. M. For Easton, at 7 30 A. M. and 3 15 P. M. For Somerville, at 7 30 and 10 45 A. M., and 3 15 and 4 30 P. M. The above trains connect at Elizabeth with trains on the New Jersey Railroad, leaving New York from foot of Courtlandt street, at 7 30 and 11 A. M., 3 and 4 P. M.

Leave Plainfield for New York at 7 05 and 9 05 A. M., and 1 40 and 6 13 P. M.

JOHN O. STERNS, Superintendent.

Hudson River Railroad.

TRAINS leave Chambers street daily, for Albany and Troy. On and after MONDAY, Nov. 19, 1855, the trains will run as follows: Express Train 7 A. M., connecting with Northern and Western Trains. Mail Train 8 30 A. M. Through Way Train, 12 M. Express Train 5 P. M. For Hudson 3 30 P. M. For Poughkeepsie—Way Freight and Passenger Train, 12 30 P. M. For Peekskill, 5 30 P. M. For Sing Sing, at 4 20 and 9 P. M. For Dobbs' Ferry, 7 15 and 11 A. M. The Dobbs' Ferry, Sing Sing, Peekskill, and Hudson Trains stop at all the Way Stations. Passengers taken at Chambers, Canal, Christopher, and 31st streets. SUNDAY MAIL TRAIN at 4 P. M., from Canal street, for Albany, stopping at all the Mail Stations. M. L. SYKES, Jr., Superintendent.

Magnificent Floral Gift.

SUBSCRIBERS to the "CHRISTIAN DIADEM" for 1855, are entitled to a splendid steel engraving, the ☞ LILLY AND THE ROSE PERSONIFIED, being given *gratis* to all old and new subscribers who send us only ONE DOLLAR, by mail or otherwise.

Six Copies for Five Dollars.

The Diadem is a strictly moral and religious work—designed for the Christian family without regard to any particular denomination.

FIFTY ENERGETIC BUSINESS MEN are wanted immediately to circulate the "Diadem" throughout the Eastern and Western States. To such as can send good references the very best inducements will be given. Address Z. P. HATCH, Publisher, 9 Spruce street, New York. May 24—3m.

Seventh-day Baptist Publishing Soc.'s Publications.

The Sabbath Recorder,

Published Weekly.

Terms—$2 00 per Annum, in Advance.

The Sabbath Recorder is devoted to the exposition and vindication of the views and movements of the Seventh-day Baptist Denomination. It aims to promote vital piety and vigorous benevolent action, at the same time that it urges obedience to the commandments of God and the faith of Jesus. Its columns are open to the advocacy of all reformatory measures which seem likely to improve the condition of society, diffuse knowledge, reclaim the inebriate, and enfranchise the enslaved. In its Literary and Intelligence Departments, care is taken to furnish matter adapted to the wants and tastes of every class of readers. As a Religious and Family Newspaper, it is intended that the *Recorder* shall rank among the best.

The Sabbath-School Visitor,

Published Monthly.

Terms per annum—Invariably in advance:

One copy	$ 25
Five copies to one address	1 00
Twelve copies to one address	2 00
Twenty copies to one address	3 00
Twenty-eight copies to one address	4 00
Forty copies to one address	5 00

The Seventh-day Baptist Memorial,

Published Quarterly.

Terms—$1 00 a Year, 25 Cents a Number.

Each number of the *Memorial* will contain a lithographic portrait of a Seventh-day Baptist preacher, together with a variety of historical, biographical, and statistical matter, designed to illustrate the rise, progress, and present condition of the Seventh-day Baptist Denomination. Wood-cuts of meeting-houses will be introduced from time to time in connection with the history of the churches.

[The first, second, and third volumes of the *Memorial*—being for the years 1852-3-4—may be had bound, for the subscription price and the cost of binding.]

The Carol:

A Collection of original and selected Music and Hymns, for the use of Sabbath-Schools, Social Religious Meetings, and Families. Compiled by Lucius Crandall. 128 pages octavo; price 35 cents per copy.

The *Carol* is designed principally for Sabbath-Schools, and contains Music and Hymns adapted to all ordinary occasions, and to such special occasions as the sickness of teachers, funerals, anniversaries, &c. A number of pieces suitable to social and public worship, together with a few Temperance Songs, are included in the book. It contains 93 tunes, and 156 hymns.

☞ Orders and remittances for the above should be addressed to the General Agent, George B. Utter, No. 9 Spruce-st., New York.

Postage.

The postage on the Sabbath Recorder is 13 cents a year in the State of New York, and 26 cents in any other part of the United States, payable quarterly or yearly in advance.

The postage on the Sabbath-School Visitor is 3 cents a year in the State of New York, and 6 cents in any other part of the United States, payable in advance.

The postage on the Seventh-day Baptist Memorial is 2 cents a year in any part of the United States when paid in advance, or 4 cents a year when not paid in advance.

Miscellaneous.

From "The Crayon."

Wanderings in the Southwest—No. 7.

The morning dawned with an east wind, and a slight fall of rain upon our faces awoke us. The Judge, Sandy, and Sechio, rode back on our trail some miles, to visit some land located in the vicinity to which the judge held a claim. It was expected that I should have a good supply of fish for dinner against their return. In the clear, blue waters of the river, I could see fine fish, but they would not take the hook.

I remember that the day before I had followed the report of a couple of guns to a lagoon, some distance from the camp, and found Sandy and Sechio had fired upon a snake-bird *(Plotus,)* and were watching on the bank to see the dead bird rise to the surface, while the curious animal was watching them with its head just out of the water at a safe distance. Knowing that the bird is a fish feeder, I did not doubt that I could catch fish where he could. I found the place, and threw in my line, just where the darter fell; nor did I wait long; my little blue and red float disappeared from the surface. I had no reel, and the struggles that followed were decided by physical strength, in which science had no part; nevertheless, I think it would have delighted your piscatorial friend the "Angler," to have had a hand in it. I secured one green perch, known here as trout, weighing about four pounds, and lost my hooks. Returning to the camp, I got a very large hook and stronger line, and landed fish enough for three days' consumption. At length my large hook gave out under the weight of a huge cat fish. More *earnest* fishing one will not often see. There were indications of rain, and I returned with my game just in time to wake up the camp guard, and protect our stores from a heavy fall of rain.

About three o'clock, the party who had been out returned, having been bewildered in the chapparel, denuded by thorns, and but for the instincts of Sechio, would not have been able to find the camp. They reported that a trail of a dozen horses had followed ours down to the bottom, when it was lost. Had the party been white men, they would have come into camp, as our wagon trail told who we were, and their avoiding us, after following it so far as to ascertain just where we were, made it certain that they were foes. It was determined to lose no time in effecting a crossing of the river. The stream is about one-third the size of the San Antonio, at the town of that name, but its channels is miry and destitute of a ford. The old bridge had been carried away, and it was necessary to construct one sufficiently strong to carry our horses over. An axe soon cleared away the young trees that had grown up in the way, and several, sufficiently long to serve as string-pieces, were prepared. A few hours more of daylight would have enabled us to cross to the high grounds of the west bank; but night set in with lowering clouds threatening rain. A good supply of dry wood was gathered preparatory to a wet night. A line was drawn between two trees, to which one edge of a pair of blankets was pinned, while the other was staked to the ground, to windward, to protect our heads, and a huge fire blazed at our feet. The horses were picketed in a semi-circle outside of the camp. I volunteered to stand the first watch, and when the last man had taken his place on the ground, I took my seat on a fallen tree, about one hundred yards beyond the horses, having them between me and the light of our fire. The night was very dark, as dark as a rainy, moonless night might be, and the red glare of the fire on the surrounding trees, with the sparks reeling through the branches, made the darkness beyond and around more fearful. I thought to a certainty that the savages would make an attempt to steal our horses on the first opportunity, and my hand was constantly on my six-shooter, and my eye was alternately peering into the blackness on one side, and surveying the dark outline that intervened between me and the fire on the other. The wind and rain increased, and about midnight it began to fall in torrents, without thunder or lightning. The cry of nocturnal beast and bird was hushed in the steady roar of the falling rain. I went to the fire to pile on a fresh supply of fuel. My companions slept soundly, and I resumed my station for another hour, when I called Sechio to relieve me, and lay down with my head on the meal-bag under the blanket, and was soon asleep. When I awoke I found myself enveloped in the blanket, which the wind had blown down, the water had extinguished the fire, and it was so dark that I could not tell the direction of the place where it had been. I called to Sechio, but he had abandoned his post, and taken refuge in the wagon. The torrents fell even more determined than before. Blankets offered no protection, but only weighed me down.

It had occurred to me when we came to this river, that the proper channel could hold but a small part of the water that must flow through it at certain times, and it seemed to me impossible that it could carry off even that which fell in our immediate vicinity now, and if this rain was as general as the length of time it had been falling would lead us to think, a flood was inevitable, but the utter helplessness of our position in such darkness kept me still, until Sandy spoke. "Is not this an awful rain," said he. "Yes," said I, "and I have been thinking what we shall do if the river overflows." "There is no danger; I have been camped just above this, when it rained for eight days, and it did not overflow." We thought no more of Indians; no sane Indian would come into this bottom on such a night, and for myself I could not banish the conviction that there was great danger of being drowned before daylight. We know that the love of life is not equally strong in all individuals, but I do not remember ever to have seen a man who had not a choice as to the mode of his death. The thought of being drowned like a kitten, and floated away into an unknown wilderness, forced itself upon me with an appalling reality. I listened to the rushing of the water, and fancied myself striking out for some invisible land, grasping at shrubs and shadows as I was swept by, and longing for one gleam of daylight to reveal the true state of things about us.

This was bad enough, the low places were full of water, and the rubbish was drifting past us in a direction parallel to the river. We saw the brands of our last night's fire floating about us, our guns under water. Air bubbled up from the ground with a noise of rushing water. The horses were snorting with impatience and terror, floundering in the mud and water, and seemed to have a better conception of the danger which surrounded them than their masters. The Judge still slept, though the water was lifting each corner of his mattrass. Sechio slept in the wagon, Antonio leaned drowsily against a tree, having not been fully awake. The time had come for some decided action. "We must get to higher ground," said I to Sandy, "or we shall all drown."

"There is no higher ground within three miles, and we shall have to cross several sloughs now full of water, and the horses will mire everywhere," he replied. The conclusion was, that when driven to it we must get into trees. The Judge was now fully roused, and having satisfied himself that the river had overflown its banks, determined to make an attempt to reach higher ground. Word was given at once to saddle. Such things as had not yet floated away were placed in the wagon, and the latter was made fast to a tree, and we struck out each one as he got ready, Sechio leading the way; the water was now over the whole ground, and by floundering and swimming we reached the margin of the first slough. Here the flood had taken a short cut across the isthmus of the peninsula bend where we had camped, and I paused to see how Sechio managed to reach the opposite bank. Shouts of distress were heard in the rear, when presently Antonio's mule came swimming past without his rider. I endeavored to arrest him but he seemed to think it every mule's, as well as every man's, duty to look out for himself in emergencies like the present. One after the other we all reached the side where Sechio stood, and followed the road until we found land above water, when the horses were turned loose, and we sat down on our saddles, uncertain how long we could be permitted to rest here. The rain still poured down with unabated violence. We had neither food nor the means of getting fire; and each one sat under his blanket trembling with the long continued shower-bath that penetrated to our skin. Sechio, after rescuing his friend Antonio, went out in search of the trunk of a dead yucca, which contains a tinder dry at all times, and with the flint-lock rifle he struck a fire, being protected by a blanket held over him, and with great skill managed to get a fire started from the wet materials. Under its influence our apathy gave way, and we all set to work to collect fuel, which being piled up in a cone, one end of each stick resting on the ground, served to shed off the water. Thus we had an illustration of the superior resources of the untutored child of the woods to the science of the white man. The rain moderated about noon, and at four o'clock the sun showed us its face. But the water had surrounded us, and was within a few inches of our camp. Everywhere out of the old road the horses would sink down in the quick-sand, and as well as ourselves were suffering for food. At night we cut bushes, and piled them around the fire to sleep upon. The next morning the sun came out warm, and the forenoon was spent in drying and cleaning such arms as we had brought away with us in our hasty flight. I had saved only my revolver, secured by a belt to my waist, and I am certain that I should not have saved it had I not forgotten that it hung there, so I took Sechio's flint-lock rifle to find some animal in the same unfortunate situation as ourselves, to relieve the cravings of hunger. Sandy went out in another direction with the same object. At a distance of a few rods I found a fresh track of deer, and followed it for some time in its crooked trail, until it occurred to me that if I should lose my way in such an homogeneous thicket, where I had no elevated landmarks in sight, it would be a serious accident. I took out my pocket compass, and found a variation of at least 180°! I appealed to the sun, but had no conception as to the time of day, and could not tell whether it was in the right place or not. I listened for some noise from camp, for I could not have gone beyond hearing, I shouted—there was no response. In despair I pulled out my "life preserver," and tried to fire one after the other all the barrels, but the dull click of the hammer told me that the capsules were all spoiled. I had no alternative but to follow my own tracks back. This was not difficult, for the most part, as the ground was soft; at length I came to a place where my steps were double, and I soon made so many that I could not distinguish the primitive ones, and I was in despair, when I saw the smoke of our fire, and the Judge asleep under the shade of a blanket. Having corrected the compass, I took a fresh start, and succeeded in finding a multitude more of deer tracks beside those of turkeys, a black bear, and a large feline, probably the panther, and at length after great exhaustion, during which the compass was constantly trying to deceive me, I succeeded in returning safely to camp. Sandy arrived soon after with a large doe, and our apprehensions of starvation gave way as steak after steak was broiled on the coals and disposed of without salt. What remained was cut into continuous strips, and hung over the fire to dry for future use. We all felt well enough now to laugh, and Texas once more appeared as a "glorious country." It appears inconformable with the law of progress, and man should never be satisfied with his condition, and we had no sooner had a sufficiency of venison than we desired some salt on the next we ate. The next morning the river was reported fallen, and Antonio was to make the attempt to reach the wagon, and if possible bring off some small stores that were regarded as indispensable. He was a good swimmer, and he took the best horse. A bag containing bacon, another with cornmeal, another with coffee, and sugar, and salt, were to be brought out if possible. Sandy urged him not to forget the coffee and his box of cigars, the Judge wanted some tobacco that was in his carpet-bag hanging on a tree. I had no request to make, my saddle-bags containing my instruments, collections, my sketch book, wallet, in fact all the valuables I had with me, I had seen placed on the seat of the wagon, above everything else, and the worst that could happen to it was to get wet, and I had rather trust it there than with him. He had been gone for several hours, when we heard him shouting, and the horse snorting, as though nearly exhausted. The bushes prevented us from seeing what was passing, but Sechio ran to the aid of his friend, while Sandy followed the sound of the horse, which had reached one side of the flood, but was floundering among the thickets and bogs below the road. He was brought in with a remnant of the meal-bag hanging to the pommel of his saddle. For a long time we heard the Mexican struggling in the water, and at length Antonio came with the loss of his shirt, and empty handed. "Where," said Sandy, with consternation, "is the coffee?" "With your cigars," replied Antonio, pointing down the river "Cigars!" said the Judge, "why did you overload him with your cigars?" The loss of the coffee was a harder blow than the loss of a horse would have been. It is almost the only luxury the woodsman knows. Soon after Sechio came up from an ineffectual attempt to recover the Judge's carpet-bag. "Have you lost my carpet-bag with my clothes, razors, maps, and everything?" and his mind seemed to be lost in taking an inventory of all the little articles of comfort it contained. "And you loaded him with your carpet-bag too?" asked Sandy, as he pulled off one of his shirts to give to Antonio. I laughed at the retort, although the next announcement was, that all the articles on the wagon seat were carried away by the upsetting of the same. The water subsided so rapidly that the next morning we visited the ground of our unlucky camp, and searched for the missing articles, but found nothing of value that could float. I picked up a living specimen of an *achatina*, that is new to me and rare here. The shell is about two inches long and pale white. I have occasionally met with the dead shell, but this was the first living one, and it is the only specimen of any kind that I have from our excursion.

We extricated our wagon, and had no alternative but to return with all despatch. We were glad to get on higher ground, and breathe purer air. The plains that were burned off, and were so sterile when we crossed them, were now green with the young shoots of grass. The quail was just revisiting the haunts where she had left her young brood to the flames, and the wild turkey ran like a thief with nothing to hide him from our eye. Wild horses had returned, and scoured the plain with mane and tail streaming in the wind, and deer stood still quietly watching us, grey as the shadows of twilight that were gathering when we again reached our old camp on the Frio. I was surprised to find this river had not risen, but Sandy said the time for it had not come, and determined upon fording it that night, late as it was. I am informed that it rose soon after, and was not fordable for some days. We camped in a fine grass valley, about a mile from the river, and Sechio came in soon after with a turkey. "Why," asked Sandy, "have you shot a setting turkey?" The boy replied, "what for she run?" It was a good change, poor as it was and saltless, from the dried deer meat. Two days brought us again at the rancho on the Medina, from which we started. Some time after our return, we learned that three days after we left the Leona, a party of twelve Lipans attacked the house of Westfall, or "Leather-stocking," two miles from our camp, and shot him through the lungs, and killed a guest. Westfall, after lying three days, dragged himself to Fort Inge, at the head of the river, thirty miles distant. There can be but little doubt that this was the same party that followed our trail, and the date of this attack corresponded with the time that it would have been possible to have crossed the river.

J. D. B. S.

The Wyandot Corn—Great Yield.

From the Washington Union.

This truly singular production was first introduced to the notice of the public in 1853, by Mr. J. R. Thomas, of Waverly, Illinois, who received nine grains from the Wyandot Indians through a California emigrant, which he planted in a sandy soil, and the product was fifty-eight full-grown ears. In 1854 there were raised from twenty-five grains, planted on the 20th of May, one hundred and thirty-two ears, and from one-fourth of an acre thirty-two bushels and three pecks of shelled corn. It only received the common cultivation of other kinds of corn.

This corn is represented to possess the following peculiarities. We copy as follows from the circular of Mr. Thomas:

"First it requires but one grain to be planted in each hill; more than one is useless. Second, each grain yields from three to eight full-grown stocks, equal in length and strength, being from nine to twelve feet high, and proceed directly from the grain. Third, each stalk bears from two to four ears, of a large and beautiful pearl-white corn, the meal of which is equal in appearance to flour manufactured from wheat. Each hill will yield from eight to twenty ears. From an equal quantity of seed planted, it will produce double the quantity of ears that can be raised from any other kind of corn grown. The quantity of fodder which it bears is immense, and for stock-feeding it is superior to all other varieties. The kernel is shaped similar to the 'yellow flint,' the grain soft, twelve-rowed, and small cob. Ear from twelve to fifteen inches long.

"If planted five feet apart each way, (and which is near enough,) it will require about 2,500 grains, or one quart of the seed, per acre. Allowing each grain to produce but six ears, (and my yield for the present year, 1855, will average ten ears to the hill,) and the produce of 2,500 hills is 15,000 ears; and allowing 120 ears to the bushel of corn, and the result will be 125 bushels per acre. By actual measurement, it has been conclusively proved that three of the average-sized ears of the Wyandot corn will make one quart, or ninety-six ears to the bushel—say one hundred ears—and the result is changed from 125 to 150 bushels per acre, the latter being nearest correct."

Bomb Lances for Whaling Business.

The extent to which gunpowder is now being employed in the manufacture or rather in the capture of oil, is perhaps little suspected by the mass of our readers. Guns for driving the harpoon have, we believe, been pretty generally abandoned, but we are assured by a manufacturer of fuse, who has lately contracted for making a quantity especially adapted to this submarine and blubbery location, that the bomb-lance is now being quite extensively employed by many vessels, and that some have sent home from the Sandwich Islands for further supplies. The bomb-lance is discharged from a very heavy musket, and is driven point foremost into the vitals of the animal, where it explodes after the lapse of a few seconds. The quantity of powder usually contained is about four ounces, and the fuse is set on fire by the explosion of the powder in the gun. Brand's patent bomb-lance is the one under notice, and consists of a thin cylindrical shell of iron armed with a sharp and heavy point of a triangular section. The iron shell is originally open at its rear end, but after receiving the powder and inserting a suitable piece of fuse the whole is stopped water-tight by a layer of melted lead. The main difficulty appears to be to find a place for a sufficient length of fuse. If allowed to project loosely outside, the water or the animal fluids in the wound would be likely to extinguish it, and it is a singular fact that all that portion tightly enclosed within the lead burns instantly and is therefore of no service in postponing the period of explosion. The method adopted is to insert two of these leaden partitions, between which a considerable length of fuse may be stored. Thus arranged, and provided wiith wadding which expands into wings to steady and direct the missile while flying through either air, water, or fish, the lightness is sufficient to allow its discharge from a piece which may be handled by any stong man. Aimed at a vital point beneath the surface of the water, the fuse is ignited and burns at the rate of about seven inches per second, while the boat retreats like a musketo from an enraged alderman. The manufacture of these bombs and of the instruments for their discharge, has been for some time carried on at Norwich, Conn.

Laudanum Drinking.

We have in this village (says the Elmira *Advertiser*) one of the most singular human beings (all things considered) to be found in this corner of the world. He is a dwarf, about eighteen years of age, quite small and deformed, and not exactly an opium eater, but a laudanum-drinker. He has been a victim of this habit for years, and all attempts to prevent his indulgence in the stupefying drug have been in vain. The desire for more and more has steadily gained on him, until at the present time he actually drinks two ounces of laudanum every day; and what is still more remarkable, *all at one time!* This enormous potation is swallowed at a regular hour in the afternoon of each day; a pipe and tobacco then follow, and smoking is in order till midnight, unless indeed the subject —which is some times the case—falls asleep, when he is helped to bed. The only object for which this strange creature seems to live, is the deadly narcotic, and his only care and ambition are centered in procuring the little means required to buy the two-ounce draught. As it has been found impossible to place any effectual barrier between the drug and the drugged, the attempt has been abandoned, and it has been thought best to hereafter interpose no obstacles in the way of free indulgence. In accordance with this determination, we understand that the victim—whose yellow and haggard visage gives fearful evidence of the presence of the coiled serpent which alternately writhes and slumbers in his bosom—has made a contract for the daily supply at reduced prices with one of our drug stores, from which he draws the "living death"—whose influences have been likened to shadowy glimpses of heaven followed by the realities of hell—with the most punctilious punctuality.

Decision Relative to Bounty Lands.

It will be seen from the subjoined letter addressed to several Members of Congress, that the Secretary of the Interior has decided that the volunteers engaged in the removal of the Cherokees are entitled to bounty land under the provisions of the first section of the act of March 3, 1855:—

DEPARTMENT OF THE INTERIOR,
Washington, Dec. 18, 1855.

GENTLEMEN,—In compliance with the request contained in your communication of the 3d inst., a re-examination of the question, whether those engaged in the removal of the Cherokees are entitled to bounty land under the provisions of the first section of the act of March 3, 1855, was made by this Department, and I concluded to refer the matter to the Attorney-General of the United States for his official opinion. This opinion is received, and is to the effect that the language of said act, to wit: "Each of the survivors of the militia or volunteers, or State troops of any State or Territory called into military service and regularly mustered therein, and whose services have been paid by the United States," intends not only militia or volunteers whose military service was performed under the general command of the United States and in time of war, but also such as rendered military service, whether in war or not, and whether under the immediate authority of the United States or of a State or Territory, but who shall have been paid for such service by the United States.

Upon a review of the whole subject, aided by the opinion of the Attorney-General and the views expressed by you, I am satisfied that the construction above given to the act is correct, and have so instructed the Commissioner of Pensions.

I am, respectfully, your obedient servant,
B. McCLELLAND.

Feeding out Roots.

There is probably a greater crop of roots, such as turnips, rutabagas, &c., raised in Maine during the present year, than for any one year previous, for some time. These roots will be fed to cattle during the winter, and it may not be amiss to think of the best mode of doing this. There are two modes generally adopted for doing this. The easy man chops up a pint or two every day with his jacknife or barn shovel, and throws them over to the cattle "hit or miss," and lets them eat them so. In the spring he looks at his cattle, and says, I don't think roots are any "great shakes" to feed cattle with. The careful man purchases a root cutter, passes them through it in sufficient quantities to give his bullock a full meal—sometimes, if he be extra careful, he cooks them and feeds out in that way. In the spring he looks at his cattle, and says, Roots are excellent for cattle in the winter, but it requires a good many of them and a good deal of care in feeding them out. So does any thing else. The question with him will next be how can I economize this good business so as to make the roots do the most good? On this point many good farmers have often queried, and many experiments have been tried. Mr. Lawrence, of Circhester, Eng., has made some experiments in feeding turnips to cattle in winter, from which it appears that to give a bullock a full feed of roots alone, is not so good as to give a less quantity with cut hay, or straw, (chaff, as they call it in England.) [Me. Far.

HOW TO MAKE ONE FARM EQUAL TO THREE.—In a recent address by G. T. Stewart, Esq., before the Ohio Agricultural Society, he thus speaks on this subject:—

"Many farmers are destroying the productiveness of their farms by shallow work. As they find that their crops are diminishing they think only of extending their acres of surface, as they supposed their title deeds only gave them a right to six inches of earth. If they will take those deeds, study their meaning, and apply the lesson to their fields, they will soon realize in three fold crops, the fact that the law has given them three farms where they supposed they had only one, in other words that the subsoil, brought up and combined with the top soil, and enriched with the atmospheric influences, and those other elements which agricultural science teach them to apply to their ground, will increase three fold the measure of its productiveness."

How we Raised the Crop.

A correspondent of the *Ohio Farmer* thus describes the effect of deep plowing:—

Some twelve years since my father bought a farm, which was worked to death, as the neighbors said. Well, we soon found out how it had been worked, when we put a heavy team and plow at work, and the virgin soil was turned up six inches below the four inches worked to death. Our neighbors prophesied a failure, and when our crops vied with and exceeded their own, they were full of surmisings as to the wonderful strangers so successful in renewing such still-killed soil.

'What manure did you put on that field?' a neighbor asked of my father, one morning, as they were looking at the deep green waving corn growing so rank within.

'Plowed deep, plowed deep,' answered he, 'there 's nothing like plowing deep, and thoroughly pulverizing the soil to bring good crops in all kinds of weather.'

That field had been used as a meadow some fifteen years, producing from one-fourth to one-half a ton of hay to the acre. We broke it up, planted one year, sowed to oats the next, with clover and timothy, and the third year cut two tons of fine hay to the acre.

Another field had been used for oats the same length of time. We plowed deep, but had poor oats, as so much deep new soil was turned up, never having been exposed to the weather, a hard and almost impenetrable crust having been formed at the depth of three or four inches, where the plow had scraped for years. As soon as possible we grassed it, and had excellent meadows, where others thought nothing but a bad weed—devil-gut—could grow.

All the pasture land had a vigorous growth of elders on, but we fixed them by plowing, carefully picking up the roots, drawing them in piles to some large log or stump heap, and and enjoying a beautiful bonfire after they had become well dried.

PACKING BUTTER.—We are requested to give the best mode of packing butter in order to be kept sweet during the summer. It is well known that the first step to success in producing good butter, is to work out all the butter-milk. We cannot expect butter to keep well that is not well made. The next step is to see that your butter is packed in tubs made of wood that will not impart its flavor to the butter, and last, exclude all air from it, and success is certain. We annex a receipt for preserving butter, used in Scotland with great success. The Scotch are noted for their good butter. [Northern Farmer.

"Take two quarts of the best common salt, one ounce of sugar, and one ounce of this composition for one pound of butter, work it well into the mass, and close it up for use. Butter cured with this mixture appears of a rich and marrowy consistence and fine color, never acquires a brittle hardness nor tastes salty. Dr. Anderson says: 'I have eaten butter cured with the above composition that has been kept for three years, and it was as sweet as at first.' It must be noted, however, that butter thus cured requires to stand three weeks or a month before it is used. If it is sooner opened, the salts are not sufficiently blended with it, and some times the coolness of the nitre will be perceived, which totally disappears afterwards."

THE DOMINIONS OF THE CZAR.—Although it is the boast of Great Britain that upon her dominions the sun never sets, yet we suspect that the idea is rather a conceited abstraction. Russia is one and continuous, from Kamtschatka to Warsaw—from Archangel to Sebastopol. The Russian Czar is absolute master —not in any figurative sense, but in as complete a sense as one human being can be master of another—of some fourteenth part (the exact proportion matters little) of the whole human race. What was Alexander of Macedon to this? He merely overran part of the world, and frightened it into obedience during his lifetime; the Russian Czar is the one soul that animates the great mammoth body of this vast empire; and what his name is seems to matter little—Peter, Paul, Alexander, Nicholas; he himself, as an incarnate idea, is indestructable. [Blackwood.

MOUSTACHE WORN BY CLERGYMEN.—The author of "No'es and Qneries" remarks:—"When the episcopal wig came into fashion, it would seem that the beard was no longer worn by clergymen. In looking over a collection of prints, I find Wickliffe, William Tyndale, Dean, Donne, George Herbert, Robert Herrick, Robert Berton, Bishop Jeremy Taylor, Archbishop Spottiswood, Thos. Fuller, Usher, the Primate, and Robert South, all using the moustache; as did John Knox and Bunyan. The Jesuits in India, I believe, still wear it. I have been unable to trace the latest instances of a clergyman wearing his gown and cassack in the streets; the custom apparently died out in the reign of one of the early Georges."

SALT MANUFACTURED AT SYRACUSE.—The quantity of salt manufactured this year at the Onondaga Salt Works, Syracuse, N. Y., will reach 6,000 000 bushels. If other salts in this country furnish in proportion, the partial failure of the crop in the West India Islands will not materially affect the supplies in market. The average annual product of solar and fine salt is about 5,500,000 bushels, showing an excess the present season of 500,000. The average price will be about $1 40 per barrel, making the whole crop worth $1,600,000. The salt manufactured at these springs is of a superior quality, and generally finds a good market; if, however, sales are small, the price never falls below $1 25 per barrel of 280 pounds.

ONE WAY TO COOK CHICKENS.—The following is highly recommended: "Cut the chicken up, put it in a pan and cover it over with water; let it stew as usual, and when done make a thickening of cream an flour, adding a piece of butter, and pepper and salt; have made and baked a pair of short cakes, made as for pie crust, but rolled thin and cut in small squares. This is much better than chicken pie, and more simple to make. The crust should be laid on a dish, and the chicken gravy put over it while both are hot."

New York and Erie Railroad.

ON and after Wednesday, Sept. 19, and until further notice, Passenger Trains will leave the pier foot of Duane-st., New York, as follows:

Dunkirk Express at 6.30 A. M. for Dunkirk.

Buffalo Express at 6.30 A. M. for Buffalo.

Mail at 8¼ A. M. for Dunkirk and Buffalo, and all intermediate stations. Passengers by this Train will remain over night at Owego, and proceed the next morning.

Rockland Passenger at 3 P. M. (from foot of Chambers-st.) via Piermont, for Sufferns and intermediate stations.

Way Passenger at 4 P. M. for Newburgh and Otisville and intermediate stations.

Night Express at 5½ P. M. for Dunkirk and Buffal

Emigrant at 6 P. M. for Dunkirk and Buffalo and intermediate stations.

On Sundays only one express train, at 5½ P. M.

These Express Trains connect at Elmira with the Elmira and Niagara Falls Railroad, for Niagara Falls, at Buffalo and Dunkirk with the Lake Shore Railroad for Cleveland, Cincinnati, Toledo, Detroit, Chicago, &c., and with first-class splendid steamers for all ports on Lake Erie.

D. C. McCALLUM, General Sup't.

Ayer's Pills.

FOR all the purposes of a Family Physic. There has long existed a public demand for an effective Purgative Pill which could be relied on as sure and perfectly safe in its operation. This has been prepared to meet that demand, and an extensive trial of its virtues has conclusively shown with what success it accomplishes the purpose designed. It is easy to make a physical *Pill*, but not so easy to make the best of all *Pills*—one which should have none of the objections, but all the advantages of every other. This has been attempted here, and with what success we would respectfully submit to the public decision. It has been unfortunate for the patient hitherto that almost every purgative medicine is acrimonious and irritating to the bowels. This is not. Many of them produce so much griping pain and revulsion in the system as to more than counterbalance the good to be derived from them. These *Pills* produce no irritation or pain, unless it arises from a previously existing obstruction or derangement in the bowels. Being purely vegetable, no harm can arise from their use in any quantity; but it is better that any medicine should be taken judiciously. Minute directions for their use in the several diseases to which they are applicable are given on the boxes. Among the complaints which have been speedily cured by them we may mention Liver Complaint, in its various forms of Jaundice, Indigestion, Langor and Loss of Appetite, Listlessness, Irritability, Billious Headache, Billious Fever, Fever and Ague, Pain in the Side and Loins, for in truth, all these are but the consequence of diseased action of the liver. As an aperient, they afford prompt and sure relief in Costiveness, Piles, Colic, Dysentery, Humors, Scrofula and Scurvy, Colds, with soreness of the body, Ulcers and impurity of the blood; in short, any and every case where a purgative is required.

They have also produced some singularly successful cures in Rheumatism, Gout, Dropsy, Gravel, Erysipelas, Palpitation of the Heart, Pains in the Back, Stomach, and Side. They should be freely taken in the spring of the year, to purify the blood and prepare the system for the change of seasons. An occasional dose stimulates the stomach into healthy action, and restores the appetite and vigor. They purify the blood, and, by their stimulant action on the circulatory system, renovate the strength of the body, and restore the wasted or diseased energies of the whole organism. Hence an occasional dose is advantageous even though no serious derangement exists; but unnecessary dosing should never be carried too far, as every purgative medicine reduces the strength, when taken to excess. The thousand cases in which a physic is required cannot be enumerated here, but they suggest themselves to the reason of every body; and it is confidently believed this Pill will answer a better purpose than any thing which has hitherto been available to mankind. When their virtues are once known the public will no longer doubt what remedy to employ when in need of a cathartic medicine.

Being sugar wrapped they are pleasant to take, and being purely vegetable, no harm can arise from their use in any quantity.

For minute directions, see the wrapper on the Box.

Prepared by Dr. J. C. AYER, Practical and Analytical Chemist, Lowell, Mass.

Price 25 Cents per Box. Five Boxes for $1 00.

Ayer's Cherry Pectoral,

FOR the rapid cure of Coughs, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption. This remedy has won for itself such notoriety for its cures of every variety of Pulmonary diseases, that it is entirely unnecessary to recount the evidences of its virtues in any community where it has been employed. So wide is the field of its usefulness, and so numerous the cases of its cures, that almost every section of the country abounds in persons publicly known, who have been restored from alarming and even desperate diseases of the lungs by its use. When once tried its superiority over every other medicine of its kind is too apparent to escape observation, and where its virtues are known, the public no longer hesitate what antidote to employ for the distressing and dangerous affections of the pulmonary organs which are incident to our climate. And not only in formidable attacks upon the lungs, but for the milder varieties of *Colds, Coughs, Hoarseness, &c.* and for Children it is the pleasantest and safest medicine that can be obtained.

As it has long been in constant use throughout this section, we need not do more than assure the people its quality is kept up to the best that it ever has been and that the genuine article is—

THE PRESIDENT'S MESSAGE.

Fellow Citizens of the Senate and
of the House of Representatives:

The Constitution of the United States provides that Congress shall assemble annually on the first Monday of December, and it has been usual for the President to make no communication of a public character to the Senate and House of Representatives, until advised of their readiness to receive it. I have deferred to this usage until the close of the first month of the session, but my convictions of duty will not permit me longer to postpone the discharge of the obligation enjoined by the Constitution upon the President, "to give to the Congress information of the state of the Union, and recommend to their consideration such measures as he shall judge necessary and expedient."

It is matter of congratulation that the Republic is tranquilly advancing in a career of prosperity and peace.

FOREIGN RELATIONS.—CENTRAL AMERICA.

Whilst relations of amity continue to exist between the United States and all foreign powers, with some of them grave questions are depending, which may require *the consideration* of Congress.

Of such questions, the most important is that which has arisen out of the negotiations with Great Britain, in reference to Central America.

By the convention concluded between the two governments on the 19th of April, 1850, both parties covenanted, that "neither will ever" "occupy, or fortify, or colonize, or assume or exercise any dominion over, Nicaragua, Costa Rica, the Mosquito coast, or any part of Central America."

It was the undoubted understanding of the United States, in making this treaty, that all the present States of the former republic of Central America, and the entire territory of each, would thenceforth enjoy complete independence; and that both contracting parties engaged equally, and to the same extent, for the present and for the future; that if either then had any claim of right in Central America, such claim, and all occupation or authority under it, were unreservedly relinquished by the stipulations of the convention; and that no dominion was thereafter to be exercised or assumed in any part of Central America, by Great Britain or the United States.

This government consented to restrictions in regard to a region of country, wherein we had specific and peculiar interests, only upon the conviction that the like restrictions were in the same sense obligatory on Great Britain. But for this understanding of the force and effect of the convention, it would never have been concluded by us.

So clear was this understanding on the part of the United States, that, in correspondence contemporaneous with the ratification of the convention, it was distinctly expressed, that the mutual covenants of non-occupation were not intended to apply to the British establishment at the Balize. This qualification is to be ascribed to the fact, that, in virtue of successive treaties with previous sovereigns of the country, Great Britain had obtained a concession of the right to cut mahogany or dye woods at the Balize, but with positive exclusion of all domain or sovereignty; and thus it confirms the natural construction and understood import of the treaty as to all the rest of the region to which the stipulations applied.

It, however, became apparent, at an early day after entering upon the discharge of my present functions, that Great Britain still continued in the exercise of assertion of large authority in all that part of Central America commonly called the Mosquito coast, and covering the entire length of the State of Nicaragua, and a part of Costa Rica; that she regarded the Balize as her absolute domain, and was gradually extending its limits at the expense of the State of Honduras; and that she had formally colonized a considerable insular group known as the Bay Islands, and belonging, of right, to that State.

All these acts or pretensions of Great Britain, being contrary to the rights of the States of Central America, and to the manifest tenor of her stipulations with the United States, as understood by this government, have been made the subject of negotiation through the American Minister in London. I transmit herewith the instructions to him on the subject, and the correspondence between him and the British Secretary for Foreign Affairs, by which you will perceive that the two governments differ widely and irreconcileably as to the construction of the convention, and its effect on their respective relations to Central America.

Great Britain so construes the convention, as to maintain unchanged all her previous pretensions over the Mosquito coast, and in different parts of Central America. These pretensions, as to the Mosquito coast, are founded on the assumption of political relation between Great Britain and the remnant of a tribe of Indians on that coast, entered into at a time when the whole country was a colonial possession of Spain. It cannot be successfully controverted, that, by the public law of Europe and America, no possible act of such Indians or their predecessors could confer on Great Britain any political rights.

Great Britain does not allege the assent of Spain as the origin of her claims on the Mosquito coast. She has, on the contrary, by repeated and successive treaties, renounced and relinquished all pretensions of her own, and recognized the full and sovereign rights of Spain in the most unequivocal terms. Yet these pretensions, so without solid foundation in the beginning, and thus repeatedly abjured, were, at a recent period, revived by Great Britain against the Central American States, the legitimate successors to all the ancient jurisdiction of Spain in that region. They were first applied only to a defined part of the coast of Nicaragua, afterwards to the whole of its Atlantic coast, and lastly to a part of the coast of Costa Rica; and they are now re-asserted to this extent, notwithstanding engagements to the United States.

On the eastern coast of Nicaragua and Costa Rica, the interference of Great Britain, though exerted at one time in the form of military occupation of the port of San Juan del Norte, then in the peaceful possession of the appropriate authorities of the Central American States, is now presented by her as the rightful exercise of a protectorship over the Mosquito tribe of Indians.

But the establishment at the Balize, now reaching far beyond its treaty limits into the State of Honduras, and that of the Bay Islands, appertaining of right to the same State, are as distinctly colonial governments as those of Jamaica or Canada, and therefore contrary to the very letter as well as the spirit of the convention with the United States, as it was at the time of ratification, and now is, understood by this government.

The interpretation which the British government, thus in assertion and act, persists in ascribing to the convention, entirely changes its character. While it holds us to all our obligations, it in a great measure releases Great Britain from those, which constituted the consideration of this government for entering into the convention. It is impossible, in my judgment, for the United States to acquiesce in such a construction of the respective relations of the two governments to Central America.

To a renewed call by this government upon Great Britain, to abide by, and carry into effect, the stipulations of the convention according to its obvious import, by withdrawing from the possession or colonization of portions of the Central American States of Honduras, Nicaragua, and Costa Rica, the British government has at length replied, affirming that the operation of the treaty is prospective only, and did not require Great Britain to abandon or contract any possessions held by her in Central America at the date of its conclusion.

This reply substitutes a partial issue, in the place of the general one presented by the United States. The British Government passes over the question of the rights of Great Britain, real or supposed, in Central America, and assumes that she had such rights at the date of the treaty, and that those rights comprehended the protectorship of the Mosquito Indians, the extended jurisdiction and limits of the Balize, and the colony of the Bay Islands, and thereupon proceeds by implication to infer, that if the stipulations of the treaty be merely future in effect, Great Britain may still continue to hold the contested portions of Central America. The United States cannot admit either the inference or the premises. We steadily deny, that, at the date of the treaty, Great Britain had any possessions there, other than the limited and peculiar establishment at the Balize, and maintain that, if she had any, they were surrendered by the convention.

This Government, recognizing the obligations of the treaty, has of course desired to see it executed in good faith by both parties, and in the discussion, therefore, has not looked to rights, which we might assert, independently of the treaty, in consideration of our geographical position and of other circumstances, which create for us relations to the Central American States, different from those of any Government of Europe.

The British Government, in its last communication, although well knowing the views of the United States, still declares that it sees no reason why a conciliatory spirit may not enable the two Governments to overcome all obstacles to a satisfactory adjustment of the subject.

Assured of the correctness of the construction of the treaty constantly adhered to by this government, and resolved to insist on the rights of the United States, yet actuated also by the same desire, which is avowed by the British Government, to remove all causes of serious misunderstanding between two nations associated by so many ties of interest and kindred, it has appeared to me proper not to consider an amicable solution of the controversy hopeless.

There is, however, reason to apprehend, that, with Great Britain in the actual occupation of the disputed territories, and the treaty therefore practically null, so far as regards our rights, this international difficulty cannot long remain undetermined, without involving in serious danger the friendly relations, which it is the interest as well as the duty of both countries to cherish and preserve. It will afford me sincere gratification, if future efforts shall result in the success, anticipated heretofore with more confidence than the aspect of the case permits me now to entertain.

RECRUITMENT.

One other subject of discussion between the United States and Great Britain has grown out of the attempt, which the exigencies of the war in which she is engaged with Russia induced her to make, to draw recruits from the United States.

It is the traditional and settled policy of the United States to maintain impartial neutrality during the wars, which from time to time occur among the great powers of the world. Performing all the duties of neutrality towards the respective belligerent states, we may reasonably expect them not to interfere with our lawful enjoyment of its benefits. Notwithstanding the existence of such hostilities, our citizens retain the individual right to continue all their accustomed pursuits, by land or by sea, at home or abroad, subject only to such restrictions in this relation, as the laws of war, the usage of nations, or special treaties may impose; and it is our sovereign right that our territory and jurisdiction shall not be invaded by either of the belligerent parties, for the transit of their armies, the operations of their fleets, the levy of troops for their service, the fitting out of cruisers by or against either, or any other act or incident of war. And these undeniable rights of neutrality, individual and national, the United States will under no circumstances surrender.

In pursuance of this policy, the laws of the United States do not forbid their citizens to sell to either of the belligerent powers articles, contraband of war, or to take munitions of war or soldiers on board their private ships for transportation; and although, in so doing, the individual citizen exposes his property or person to some of the hazards of war, his acts do not involve any breach of national neutrality, nor of themselves implicate the government. Thus, during the progress of the present war in Europe, our citizens have, without national responsibility therefor, sold gunpowder and arms to all buyers, regardless of the destination of those articles. Our merchantmen have been, and still continue to be, largely employed by Great Britain and by France, in transporting troops, provisions, and munitions of war to the principal seat of military operations, and in bringing home their sick and wounded soldiers; but such use of our mercantile marine is not interdicted either by the international, or by our municipal law, and therefore does not compromit our neutral relations with Russia.

But our municipal law, in accordance with the law of nations, peremptorily forbids, not only foreigners, but our own citizens, to fit out, within the limits of the United States, a vessel to commit hostilities against any state with which the United States are at peace, or to increase the force of any foreign armed vessel intended for such hostilities against a friendly state.

Whatever concern may have been felt by either of the belligerent powers, lest private armed cruisers, or other vessels, in the service of one, might be fitted out in the ports of this country to depredate on the property of the other, all such fears have proved to be utterly groundless. Our citizens have been withheld from any such act or purpose by good faith, and by respect for the law.

While the laws of the Union are thus peremptory in their prohibition of the equipment or armament of belligerent cruisers in our ports, they provide not less absolutely that no person shall, within the territory or jurisdiction of the United States, enlist or enter himself, or hire or retain another person to enlist or enter himself, or to go beyond the limits or jurisdiction of the United States with intent to be enlisted or entered, in the service of any foreign state, either as a soldier, or as a marine or seaman on board of any vessel of war, letter of marque or privateer. And these enactments are also in strict conformity with the law of nations, which declares, that no state has the right to raise troops for land or sea service in another state without its consent, and that, whether forbidden by the municipal law or not, the very attempt to do it, without such consent, is an attack on the national sovereignty.

Such being the public rights and the municipal law of the United States, no solicitude on the subject was entertained by this government, when, a year since, the British Parliament passed an act to provide for the enlistment of foreigners in the military service of Great Britain. Nothing on the face of the act, or in its public history, indicated that the British government proposed to attempt recruitment in the United States; nor did it ever give intimation of such intention to this government. It was matter of surprise, therefore, to find, subsequently, that the engagement of persons within the United States to proceed to Halifax, in the British province of Nova Scotia, and there enlist in the service of Great Britain, was going on extensively, with little or no disguise. Ordinary legal steps were immediately taken to arrest and punish parties concerned, and so put an end to acts infringing the municipal law and derogatory to our sovereignty. Meanwhile suitable representations on the subject were addressed to the British government.

Thereupon it became known, by the admission of the British government itself, that the attempt to draw recruits from this country originated with it, or at least had its approval and sanction; but it also appeared that the public agents engaged in it had "stringent instructions" not to violate the municipal law of the United States.

It is difficult to understand how it should have been supposed that troops could be raised here by Great Britain, without violation of the municipal law. The unmistakable object of the law was to prevent every such act, which, if performed, must be either in violation of the law, or in studied evasion of it; and, in either alternative, the act done would be alike injurious to the sovereignty of the United States.

In the meantime, the matter acquired additional importance, by the recruitments in the United States not being discontinued, and the disclosure of the fact that they were prosecuted upon a systematic plan devised by official authority; that recruiting rendezvous had been opened in our principal cities, and depots for the reception of recruits established on our frontier; and the whole business conducted under the supervision and by the regular cooperation of British officers, civil and military, some in the North American provinces, and some in the United States. The complicity of those officers in an undertaking, which could only be accomplished by defying our laws, throwing suspicion over our attitude of neutrality, and disregarding our territorial rights, is conclusively proved by the evidence elicited on the trial of such of their agents as have been apprehended and convicted. Some of the officers thus implicated are of high official position, and many of them beyond our jurisdiction, so that legal proceedings could not reach the source of the mischief.

These considerations, and the fact, that the cause of complaint was not a mere casual occurrence, but a deliberate design, entered upon with full knowledge of our laws and national policy, and conducted by responsible public functionaries, impelled me to present the case to the British government, but in order to secure, not only a cessation of the wrong, but its reparation. The subject is still under discussion, the result of which will be communicated to you in due time.

I repeat the recommendation submitted to the last Congress, that provision be made for the appointment of a commissioner, in connexion with Great Britain, to survey and establish the boundary line, which divides the territory of Washington from the contiguous British possessions. By reason of the extent and importance of the country in dispute, there has been imminent danger of collision between the subjects of Great Britain and the citizens of the United States, including their respective authorities in that quarter. The prospect of a speedy arrangement had contributed hitherto to induce on both sides forbearance to assert by force what each claims as a right. Continuance of delay on the part of the two governments to act in the matter will increase the dangers and difficulties of the controversy.

Misunderstanding exists as to the extent, character, and value of the possessory rights of the Hudson's Bay Company and the property of the Puget's Sound Agricultural Company, reserved in our treaty with Great Britain relative to the Territory of Oregon. I have reason to believe that a cession of the rights of both companies to the United States, which would be the readiest means of terminating all questions, can be obtained on reasonable terms; and, with a view to this end, I present the subject to the attention of Congress.

The colony of Newfoundland, having enacted the laws required by the treaty of the 5th of June, 1854, is now placed on the same footing, in respect to commercial intercourse with the United States, as the other British North American provinces.

The commission, which that treaty contemplated, for determining the rights of fishery in rivers and mouths of rivers on the coasts of the United States and the British North American provinces, has been organized and has commenced its labors; to complete which there is needed further appropriations for the service of another season.

SOUND DUES.

In pursuance of the authority, conferred by a resolution of the Senate of the United States passed on the 3d of March last, notice was given to Denmark, on the 14th day of April, of the intention of this Government to avail itself of the stipulation of the subsisting convention of friendship, commerce, and navigation between that Kingdom and the United States, whereby either party might, after ten years, terminate the same at the expiration of one year from the date of notice for that purpose.

The considerations which led me to call the attention of Congress to that convention, and induced the Senate to adopt the resolution referred to, still continue in full force. The convention contains an article, which, although it does not directly engage the United States to submit to the imposition of tolls on the vessels and cargoes of Americans passing into or from the Baltic sea, during the continuance of the treaty, yet may, by possibility, be construed as implying such submission. The exaction of those tolls not being justified by any principle of international law, it became the right and the duty of the United States to relieve themselves from the implication of engagement on the subject, so as to be perfectly free to act in the premises in such way as their public interests and honor shall demand.

I remain of the opinion that the United States ought not to submit to the payment of the Sound dues, not so much because of their amount, which is a secondary matter, but because it is in effect the recognition of the right of Denmark to treat one of the great maritime highways of nations as a close sea, and the navigation of it as a privilege for which tribute may be imposed upon those who may have occasion to use it.

This government, on a former occasion not unlike the present, signalized its determination to maintain the freedom of the seas, and of the great natural channels of navigation. The Barbary States had, for a long time coerced the payment of tribute from all nations, whose ships frequented the Mediterranean. To the last demand of such payment made by them, the United States, although suffering less by their depredations than many other nations, returned the explicit answer, that we preferred war to tribute, and thus opened the way to the relief of the commerce of the world from an ignominious tax, so long submitted to by the more powerful nations of Europe.

If the manner of payment of Sound dues differ from that of the tribute formerly conceded to the Barbary States, still their exaction by Denmark has no better foundation in right. Each was, in its origin, nothing but a tax on a common natural right, extorted by those, who were at that time able to obstruct the free and secure enjoyment of it, but who no longer possess that power.

Denmark, while resisting our assertion of the freedom of the Baltic Sound and Belts, has indicated a readiness to make some new arrangement on the subject, and has invited the governments interested, including the United States, to be represented in a convention to assemble for the purpose of receiving and considering a proposition, which she intends to submit, for the capitalization of the Sound dues, and the distribution of the sum to be paid as commutation among the governments, according to the respective proportions of their maritime commerce to and from the Baltic. I have declined in behalf of the United States to accept this invitation, for the most cogent reasons. One is, that Denmark does not offer to submit to the convention the question of her right to levy the Sound dues. A second is, that, if the convention were allowed to take cognizance of that particular question, still it would not be competent to deal with the great international principle involved, which affects the right in other cases of navigation and commercial freedom, as well as that of access to the Baltic. Above all, by the express terms of the proposition it is contemplated, that the consideration of the Sound dues shall be commingled with, and made subordinate to, a matter wholly extraneous, the balance of power among the governments of Europe.

While, however, rejecting this proposition, and insisting on the right of free transit into and from the Baltic, I have expressed to Denmark a willingness, on the part of the United States, to share liberally with other powers in compensating her for any advantages, which commerce shall hereafter derive from expenditures made by her for the improvement and safety of the navigation of the Sound or Belts.

I lay before you, herewith, sundry documents on the subject, in which my views are more fully disclosed. Should no satisfactory arrangement be soon concluded, I shall again call your attention to the subject, with recommendation of such measures as may appear to be required in order to assert and secure the rights of the United States, so far as they are affected by the pretensions of Denmark.

FRANCE.

I announce with much gratification, that, since the adjournment of the last Congress, the question, then existing between this government and that of France, respecting the French consul at San Francisco, has been satisfactorily determined, and that the relations of the two governments continue to be of the most friendly nature.

GREECE.

A question, also, which has been pending for several years between the United States and the Kingdom of Greece, growing out of the sequestration, by public authorities of that country, of property belonging to the present American consul at Athens, and which had been the subject of very earnest discussion heretofore, has recently been settled to the satisfaction of the party interested and of both governments.

SPAIN.

With Spain, peaceful relations are still maintained, and some progress has been made in securing the redress of wrongs complained of by this government. Spain has not only disavowed and disapproved the conduct of the officers who illegally seized and detained the steamer Black Warrior at Havana, but has also paid the sum claimed as indemnity for the loss thereby inflicted on citizens of the United States.

In consequence of a destructive hurricane, which visited Cuba in 1844, the supreme authority of that island issued a decree, permitting the importation, for the period of six months, of certain building materials and provisions, free of duty, but revoked it when about half the period only had elapsed, to the injury of citizens of the United States, who had proceeded to act on the faith of that decree. The Spanish government refused indemnification to the parties aggrieved until recently, when it was assented to, payment being promised to be made so soon as the amount due can being ascertained.

Satisfaction claimed for the arrest and search of the steamer El Dorado has not yet been accorded, but there is reason to believe that it will be, and that case, with others, continues to be urged on the attention of the Spanish government. I do not abandon the hope of concluding with Spain some general arrangement, which, if it do not wholly prevent the recurrence of difficulties in Cuba, will render them less frequent, and whenever they shall occur facilitate their more speedy settlement.

MEXICO.

The interposition of this government has been invoked by many of its citizens, on account of injuries done to their persons and property, for which the Mexican republic is responsible. The unhappy situation of that country, for some time past, has not allowed its government to give due consideration to claims of private reparation, and has appeared to call for and justify some forbearance in such matters on the part of this government. But, if the revolutionary movements, which have lately occurred in that republic, end in the organization of a stable government, urgent appeals to its justice will then be made, and, it may be hoped, with success, for the redress of all complaints of our citizens.

CENTRAL AMERICA.

In regard to the American republics, which, from their proximity and other considerations, have peculiar relations to this government, while it has been my constant aim strictly to observe all the obligations of political friendship and of good neighborhood, obstacles to this have arisen in some of them, from their own insufficient power to check lawless irruptions, which in effect throws most of the task on the United States. Thus it is that the distracted internal condition of the State of Nicaragua has made it incumbent on me to appeal to the good faith of our citizens to abstain from unlawful intervention in its affairs, and to adopt preventive measures to the same end, which, on a similar occasion, had the best results in reassuring the peace of the Mexican States of Sonora and Lower California.

TREATIES.

Since the last session of Congress a treaty of amity, commerce, and navigation, and for the surrender of fugitive criminals, with the kingdom of the Two Sicilies; a treaty of friendship, commerce, and navigation with Nicaragua; and a convention of commercial reciprocity with the Hawaiian kingdom have been negotiated. The latter kingdom and the State of Nicaragua have also acceded to a declaration, recognising as international rights the principles contained in the convention between the United States and Russia of the 22d of July, 1854. These treaties and conventions will be laid before the Senate for ratification.

TREASURY.

The statements made in my last annual message, respecting the anticipated receipts and expenditures of the Treasury, have been substantially verified.

It appears from the report of the Secretary of the Treasury, that the receipts during the last fiscal year ending June 30, 1855, from all sources, were sixty-five million three thousand nine hundred and thirty dollars; and that the public expenditures for the same period, exclusive of payments on account of the public debt, amounted to fifty-six million three hundred and sixty-five thousand three hundred and ninety-three dollars. During the same period, the payments made in redemption of the public debt, including interest and premium, amounted to nine million eight hundred and forty-four thousand five hundred and twenty-eight dollars.

The balance in the Treasury at the beginning of the present fiscal year, July 1, 1855, was eighteen million nine hundred and thirty-one thousand nine hundred and seventy-six dollars; the receipts for the first quarter, and the estimated receipts for the remaining three quarters, amount, together, to sixty-seven million nine hundred and eighteen thousand seven hundred and thirty-four dollars; thus affording, in all, as the available resources of the current fiscal year, the sum of eighty-six million eight hundred and fifty-six thousand seven hundred and ten dollars.

If, to the actual expenditures of the first quarter of the current fiscal year, be added the probable expenditures for the remaining three quarters, as estimated by the Secretary of the Treasury, the sum total will be seventy-one million two hundred and twenty-six thousand eight hundred and forty-six dollars, thereby leaving an estimated balance in the treasury on July 1, 1856, of fifteen million six hundred and twenty-three thousand eight hundred and sixty-three dollars and forty-one cents.

In the above estimated expenditures of the present fiscal year are included three million dollars to meet the last instalment of the ten millions provided for in the late treaty with Mexico, and seven million seven hundred and fifty thousand dollars appropriated on account of the debt due to Texas, which two sums make an aggregate amount of ten million seven hundred and fifty thousand dollars, and reduce the expenditures, actual or estimated, for ordinary objects of the year, to the sum of sixty million four hundred and seventy-six thousand dollars.

The amount of the public debt, at the commencement of the present fiscal year, was forty million five hundred and eighty-three thousand six hundred and thirty-one dollars, and deduction being made of subsequent payments, the whole public debt of the Federal Government remaining at this time is less than forty million dollars.

The remnant of certain other Government stocks, amounting to two hundred and forty-three thousand dollars, referred to in my last message as outstanding, has since been paid.

I am fully persuaded that it would be difficult to devise a system superior to that by which the fiscal business of the Government is now conducted. Notwithstanding the great number of public agents of collection and disbursement, it is believed that the checks and guards provided, including the requirement of monthly returns, render it scarcely possible for any considerable fraud on the part of those agents, or neglect involving hazard of serious public loss, to escape detection. I renew, however, the recommendation, heretofore made by me, of the enactment of a law declaring it felony on the part of public officers to insert false entries in their books of record or account, or to make false returns, and also requiring them on the termination of their service to deliver to their successors all books, records, and other objects of a public nature in their custody.

Derived as our public revenue is, in chief part, from duties on imports, its magnitude affords gratifying evidence of the prosperity, not only of our commerce, but of the other great interests upon which that depends.

The principle that all moneys, not required for the current expenses of the government should remain for active employment in the hands of the people, and the conspicuous fact that the annual revenue from all sources exceeds, by many millions of dollars, the amount needed for a prudent and economical administration of public affairs, cannot fail to suggest the propriety of an early revision and reduction of the tariff of duties on imports. It is now so generally conceded that the purpose of revenue alone can justify the imposition of duties on imports, that, in re-adjusting the impost tables and schedules, which unquestionably require essential modifications, a departure from the principles of the present tariff is not anticipated.

ARMY.

The army, during the past year, has been actively engaged in defending the Indian frontier, the state of the service permitting but few and small garrisons in our permanent fortifications. The additional regiments authorized at the last session of Congress have been recruited and organized, and a large portion of the troops have already been sent to the field. All the duties, which devolve on the military establishment, have been satisfactorily performed, and the dangers and privations incident to the character of the service required for our troops have furnished additional evidence of their courage, zeal, and capacity to meet any requisition, which their country may make upon them. For the details of the military operations, the distribution of the troops, and additional provisions required for the military service, I refer to the report of the Secretary of War and the accompanying documents.

Experience, gathered from events which have transpired since my last annual message, has but served to confirm the opinion then expressed of the propriety of making provision, by a retired list, for disabled officers, and for increased compensation to the officers retained on the list for active duty. All the reasons which existed, when these measures were recommended on former occasions, continue without modification, except so far as circumstances have given to some of them additional force.

The recommendations, heretofore made for a partial reorganization of the army, are also renewed. The thorough elementary education given to those officers, who commence their service with the grade of cadet, qualifies them, to a considerable extent, to perform the duties of every arm of the service; but to give the highest efficiency to artillery requires the practice and special study of many years; and it is not, therefore, believed to be advisable to maintain, in time of peace, a larger force of that arm than can be usually employed in the duties appertaining to the service of field and siege artillery. The duties of the staff in all its various branches belong to the movement of troops, and the efficiency of an army in the field would materially depend upon the ability with which those duties are discharged. It is not, as in the case of the artillery, a specialty, but requires, also, an intimate knowledge of the duties of an officer of the line, and it is not doubted that, to complete the education of an officer for either the line or the general staff, it is desirable that he shall have served in both. With this view, it was recommended on a former occasion that the duties of the staff should be mainly performed by details from the line; and, with conviction of the advantages which would result from such a change, it is again presented for the consideration of Congress.

NAVY.

The report of the Secretary of the Navy, herewith submitted, exhibits in full the naval operations of the past year, together with the present condition of the service, and it makes suggestions of further legislation, to which your attention is invited.

The construction of the six steam frigates, for which appropriations were made by the last Congress, has proceeded in the most satisfactory manner, and with such expedition, as to warrant the belief that they will be ready for service early in the coming spring. Important as this addition to our naval force is, it still remains inadequate to the contingent exigencies of the protection of the extensive sea coast and vast commercial interests of the United States. In view of this fact, and of the acknowledged wisdom of the policy of a gradual and systematic increase of the navy, an appropriation is recommended for the construction of six steam sloops-of-war.

In regard to the steps taken in execution of the act of Congress to promote the efficiency of the navy, it is unnecessary for me to say more than to express entire concurrence in the observations on that subject presented by the Secretary in his report.

POST OFFICE.

It will be perceived by the report of the Postmaster General, that the gross expenditure of the department for the last fiscal year was nine million nine hundred and sixty eight thousand three hundred and forty-two dollars, and the gross receipts seven million three hundred and forty-two thousand one hundred and thirty-six dollars, making an excess of expenditure over receipts of two million six hundred and twenty six thousand two hundred and six dollars; and that the cost of mail transportation during that year was six hundred and seventy-four thousand nine hundred and fifty two dollars greater than the previous year. Much of the heavy expenditures to which the Treasury is thus subjected, is to be ascribed to the large quantity of printed matter conveyed by the mails, either franked, or liable to no postage by law, or to very low rates of postage compared with that charged on letters; and to the great cost of mail service on railroads and by ocean steamers. The suggestions of the Postmaster General on the subject deserve the consideration of Congress.

INTERIOR.

The report of the Secretary of the Interior will engage your attention, as well for useful suggestions it contains, as for the interest and importance of the subjects to which they refer.

The aggregate amount of public land sold during the last fiscal year, located with military scrip or land warrants, taken up under grants for roads, and selected as swamp lands by States, is twenty-four million five hundred and fifty-seven thousand four hundred and nine acres; of which the portion sold was fifteen million seven hundred and twenty-nine thousand five hundred and twenty-four acres, yielding in receipts the sum of eleven million four hundred and eighty-five thousand three hundred and eighty dollars. In the same period of time, eight million seven hundred and twenty-three thousand eight hundred and fifty-four acres have been surveyed; but, in consideration of the quantity already subject to entry, no additional tracts have been brought into the market.

The peculiar relation of the general government to the District of Columbia renders it proper to commend to your care not only its material, but also its moral interests, including education, more especially in those parts of the district outside of the cities of Washington and Georgetown.

The commissioners appointed to revise and codify the laws of the District have made such progress in the performance of their task, as to insure its completion in the time prescribed by the act of Congress.

Information has recently been received, that the peace of the settlements in the Territories of Oregon and Washington is disturbed by hostilities on the part of the Indians, with indications of extensive combinations of a hostile character among the tribes in that quarter, the more serious in their possible effect by reason of the undetermined foreign interests existing in these Territories, to which your attention has already been especially invited. Efficient measures have been taken, which, it is believed, will restore quiet, and afford protection to our citizens.

In the Territory of Kansas there have been acts prejudicial to good order, but as yet none have occurred under circumstances to justify the interposition of the Federal Executive. That could only be in case of obstruction to Federal law, or of organized resistance to Territorial law, assuming the character of insurrection, which, if it should occur, it would be my duty promptly to overcome and suppress. I cherish the hope, however, that the occurrence of any such untoward event will be prevented by the sound sense of the people of the Territory, who, by its organic law, possessing the right to determine their own domestic institutions, are entitled, while deporting themselves peacefully, to the free exercise of that right, and must be protected in the enjoyment of it, without interference on the part of the citizens of any of the States.

The southern boundary line of this Territory has never been surveyed and established. The rapidly extending settlements in that region, and the fact that the main route between Independence, in the State of Missouri, and New Mexico, is contiguous to this line, suggest the probability that embarrassing questions of jurisdiction may consequently arise. For these and other considerations, I commend the subject to your early attention.

CONSTITUTIONAL THEORY OF THE GOVERNMENT.

I have thus passed in review the general state of the Union, including such particular concerns of the Federal government, whether of domestic or foreign relation, as it appeared to me desirable and useful to bring to the special notice of Congress. Unlike the great states of Europe and Asia, and many of those of America, these United States are wasting their strength neither in foreign war nor domestic strife. Whatever of discontent or public dissatisfaction exists, is attributable to the imperfections of human nature, or is incident to all governments, however perfect, which human wisdom can devise. Such subjects of political agitation, as occupy the public mind, consist, to a great extent, of exaggeration of inevitable evils, or over zeal in social improvement, or mere imagination of grievance, having but remote connection with any of the constitutional functions or duties of the Federal government. To whatever extent these questions exhibit a tendency menacing to the stability of the Constitution, or the integrity of the Union, and no farther, they demand the consideration of the Executive, and require to be presented by him to Congress.

Before the Thirteen Colonies became a confederation of independent States, they were associated only by community of transatlantic origin, by geographical position, and by the mutual tie of common dependence on Great Britain. When that tie was surrendered, they severally assumed the powers and rights of absolute self-government. The municipal and social institutions of each, its laws of property and of personal relations, even its political organization, were such only as each one chose to establish, wholly without interference from any other. In the language of the Declaration of Independence, each State had "full power to levy war, conclude peace, contract alliances, establish commerce, and to do all other acts and things which independent States may of right do." The several colonies differed in climate, in soil, in natural productions, in religion, in systems of education, in legislation, and in the forms of political administration; and they continued to differ in these respects when they voluntarily allied themselves as States to carry on the war of the revolution.

The object of that war was to disenthral the United Colonies from foreign rule, which had proved to be oppressive, and to separate them permanently from the mother country; the political result was the foundation of a federal republic of the free white men of the colonies, constituted, as they were, in distinct, and reciprocally independent, State governments. As for the subject races, whether Indian or African, the wise and brave statesmen of that day, being engaged in no extravagant scheme of social change, left them as they were, and thus preserved themselves and their posterity from the anarchy, and the ever-recurring civil wars, which have prevailed in other revolutionized European colonies of America.

When the confederated States found it convenient to modify the conditions of their association, by giving to the general government direct access, in some respects, to the people of the States, instead of confining it to action on the States as such, they proceeded to frame the existing constitution, adhering steadily to one guiding thought, which was, to delegate only such power as was necessary and proper to the execution of specific purposes, or, in other words, to retain as much as possible, consistently with those purposes, of the independent powers of the individual States. For objects of common defence and security, they intrusted to the general government certain carefully defined functions, leaving all others as the undelegated rights of the separate independent sovereignties.

Such is the constitutional theory of our government, the practical observance of which has carried us and us alone, among modern republics, through nearly three generations of time without the cost of one drop of blood shed in civil war. With freedom and concert of action, it has enabled us to contend successfully on the battle-field against foreign foes, has elevated the feeble colonies into powerful States, and has raised our industrial productions, and our commerce which transports them, to the level of the richest and the greatest nations of Europe. And the admirable adaptation of our political institutions to their objects, combining local self-government with aggregate strength, has established the practicability of a government like ours to cover a continent with confederate States.

The Congress of the United States is, in effect, that congress of sovereignties, which good men in the Old World have sought for, but could never attain, and which imparts to America an exemption from the mutable leagues for common action, from the wars, the mutual invasions, and vague aspirations after the balance of power, which convulse from time to time the governments of Europe. Our co-operative action rests in the conditions of permanent confederation prescribed by the Constitution. Our balance of power is in the separate reserved rights of the States, and their equal representation in the Senate. That independent sovereignty in every one of the States, with its reserved rights of local self-government assured to each by their co equal power in the Senate, was the fundamental condition of the Constitution. Without it the Union would never have existed. However desirous the larger States might be to re-organize the government so as to give to their population its proportionate weight in the common counsels, they knew it was impossible, unless they conceded to the smaller ones authority to exercise at least a negative influence on all the measures of the government, whether legislative or executive, thro' their equal representation in the Senate. Indeed, the larger States themselves could not fail to perceive, that the same power was equally necessary to them, for the security of their own domestic interests against the aggregate force of the General Government. In a word, the original States went into this permanent league on the agreed premises, of exerting their common strength for the defence of the whole, and of all its parts; but of utterly excluding all capability of reciprocal aggression. Each solemnly bound itself to all the others, neither to undertake, nor permit, any encroachment upon, or intermeddling with, another's reserved rights.

Where it was deemed expedient, particular rights of the States were expressly guaranteed by the constitution; but, in all things beside, these rights were guarded by the limitation of the powers granted, and by express reservation of all powers not granted, in the compact of union. Thus, the great power of taxation was limited to purposes of common defence and general welfare, excluding objects appertaining to the local legislation of the several States; and those purposes of general welfare and common defence were afterwards defined by specific enumeration, as being matters only of corelation between the States themselves, or between them and foreign governments, which, because of their common and general nature, could not be left to the separate control of each State.

Of the circumstances of local condition, interest, and rights, in which a portion of the States, constituting one great section of the Union differed from the rest, and from another section, the most important was the peculiarity of a larger relative colored population in the southern then in the northern States.

A population of this class, held in subjection, existed in nearly all the States, but was more numerous and of more serious concernment in the South than in the North, on account of natural differences of climate and production; and it was foreseen that, for the same reasons, while this population would diminish, and, sooner or later, cease to exist, in some States, it might increase in others. The peculiar character and magnitude of this question of local rights, not in material relations only, but still more in social ones, caused it to enter into the special stipulations of the constitution.

Hence, while the general government, as well by the enumerated powers granted to it, as by those not enumerated, and therefore refused to it, was forbidden to touch this matter in the sense of attack or offence, it was placed under the general safeguard of the Union, in the sense of defense against either invasion or domestic violence, like all other local interests of the several States. Each State expressly stipulated, as well for itself as for each and all of its citizens, and every citizen of each State became solemnly bound by his allegiance to the constitution, that any person, held to service or labor in one State, escaping into another, should not, in consequence of any law or regulation thereof, be discharged from such service or labor, but should be delivered up on claim of the party to whom such service or labor might be due by the laws of his State.

Thus, and thus only, by the reciprocal guaranty of all the rights of every State against interference on the part of another, was the present form of government established by our fathers and transmitted to us; and by no other means is it possible for it to exist. If one State ceases to respect the rights of another, and obtrusively intermeddles with its local interests,—if a portion of the States assume to impose their institutions on the others, or refuse to fulfil their obligations to them,—we are no longer united friendly States, but distracted hostile ones, with little capacity left of common advantage, but abundant means of reciprocal injury and mischief.

Practically, it is immaterial whether aggressive interference between the States, or deliberate refusal on the part of any one of them to comply with constitutional obligations, arise from erroneous conviction or blind prejudice, whether it be perpetrated by direction or indirection. In either case it is full of threat or of danger to the durability of the Union.

CONSTITUTIONAL RELATIONS OF SLAVERY.

Placed in the office of Chief Magistrate as the executive agent of the whole country, bound to take care that the laws be faithfully executed, and specially enjoined by the constitution to give information to Congress on the state of the Union, it would be palpable neglect of duty on my part to pass over a subject like this, which, beyond all things at the present time, vitally concerns individual and public security.

It has been matter of painful regret to see States, conspicuous for their services in founding this Republic, and equally sharing its advantages, disregard their constitutional obligations to it. Although conscious of their inability to heal admitted and palpable social evils of their own, and which are completely within their jurisdiction, they engage in the offensive and hopeless undertaking of reforming the domestic institutions of other States, wholly beyond their control and authority. In the vain pursuit of ends, by them entirely unattainable, and which they may not legally attempt to compass, they peril the very existence of the constitution, and all the countless benefits which it has conferred. While the people of the Southern States confine their attention to their own affairs, not presuming officiously to intermeddle with the social institutions of the northern States, too many of the inhabitants of the latter are permanently organized in associations to inflict injury on the former, by wrongful acts, which would be cause of war as between foreign powers, and only fail to be such in our system, because perpetrated under cover of the Union.

It is impossible to present this subject as truth and the occasion require, without noticing the reiterated, but groundless, allegation, that the South has persistently asserted claims and obtained advantages in the practical administration of the general government, to the prejudice of the North, and in which the latter has acquiesced. That is, the States, which either promote or tolerate attacks on the rights of persons and of property in other States, to disguise their own injustice, pretend or imagine, and constantly aver, that they, whose constitutional rights are thus systematically assailed, are themselves the aggressors. At the present time, this imputed aggression, resting, as it does, only in the vague, declamatory charges of political agitators, resolves itself into misapprehension, or misinterpretation, of the principles and facts of the political organization of the new Territories of the United States.

What is the voice of history? When the ordinance, which provided for the government of the territory northwest of the river Ohio, and for its eventual subdivision into new States, was adopted in the Congress of the confederation, it is not to be supposed that the question of future relative power, as between the States which retained, and those which did not retain, a numerous colored population, escaped notice, or failed to be considered. And yet the concession of that vast territory to the interests and opinions of the northern States, a territory now the seat of five among the largest members of the Union, was, in great measure, the act of the State of Virginia and of the South.

When Louisiana was acquired by the United States, it was an acquisition not less to the North than to the South; for while it was important to the country at the mouth of the river Mississippi to become the emporium of the country above it, so also it was even more important to the whole Union to have that emporium; and although the new province, by reason of its imperfect settlement, was mainly regarded as on the Gulf of Mexico, yet, in fact, it extended to the opposite boundaries of the United States, with far greater breadth above than below, and was in territory, as in everything else, equally at least an accession to the northern States. It is mere delusion and prejudice, therefore, to speak of Louisiana as acquisition in the special interest of the South.

The patriotic and just men, who participated in that act, were induced by motives far above all sectional jealousies. It was in truth the great event, which, by completing for us the possession of the valley of the Mississippi, with commercial access to the Gulf of Mexico, imparted unity and strength to the whole confederation, and attached together by indissoluble ties the East and the West, as well as the North and the South.

As to Florida, that was but the transfer by Spain to the United States of territory on the east side of the river Mississippi, in exchange for large territory, which the United States transferred to Spain on the west side of that river, as the entire diplomatic history of the transaction serves to demonstrate. Moreover, it was an acquisition demanded by the commercial interests and the security of the whole Union.

In the meantime, the people of the United States had grown up to a proper consciousness of their strength, and in a brief contest with France, and in a second serious war with Great Britain, they had shaken off all which remained of undue reverence for Europe, and emerged from the atmosphere of those transatlantic influences which surrounded the infant Republic, and had begun to turn their attention to the full and systematic development of the internal resources of the Union.

Among the evanescent controversies of that period, the most conspicuous was the question of regulation by Congress of the social condition of the future States to be founded in the territory of Louisiana.

The ordinance for the government of the territory northwest of the river Ohio had contained a provision, which prohibited the use of servile labor therein, subject to the condition of the extradition of fugitives from service due in any other part of the United States. Subsequently to the adoption of the constitution, this provision ceased to remain as a law; for its operation as such was absolutely superseded by the constitution. But the recollection of the fact excited the zeal of social propagandism in some sections of the confederation; and, when a second State, that of Missouri, came to be formed in the territory of Louisiana, a proposition was made to extend to the latter territory the restriction originally applied to the country situated between the rivers Ohio and Mississippi.

Most questionable as was this proposition in all its constitutional relations, nevertheless it received the sanction of Congress, with some slight modifications of line, to save the existing rights of the intended new State. It was reluctantly acquiesced in by Southern States as a sacrifice to the cause of peace and of the Union, not only of the rights stipulated by the treaty of Louisiana, but of the principle of equality among the States guarantied by the Constitution. It was received by the Northern States with angry and resentful condemnation and complaint, because it did not concede all which they had exactingly demanded. Having passed through the forms of legislation, it took its place in the statute book, standing open to repeal, like any other act of doubtful constitutionality, subject to be pronounced null and void by the courts of law, and possessing no possible efficacy to control the rights of the States, which might thereafter be organized out of any part of the original territory of Louisiana.

In all this, if any aggression there were, any innovation upon pre-existing rights, to which portion of the Union are they justly chargeable?

This controversy passed away with the occasion, nothing surviving it save the dormant letter of the statute.

But, long afterwards, when, by the proposed accession of the Republic of Texas, the United States were to take their next step in territorial greatness, a similar contingency occurred, and became the occasion for systematized attempts to intervene in the domestic affairs of one section of the Union, in defiance of their rights as States, and of the stipulations of the constitution. These attempts assumed a practical direction, in the shape of persevering endeavors, by some of the representatives, in both houses of Congress, to deprive the southern States of the supposed benefit of the provisions of the act authorizing the organization of the State of Missouri.

But, the good sense of the people, and the vital force of the constitution, triumphed over sectional prejudice, and the political errors of the day, and the State of Texas returned to the Union as she was, with social institutions which her people had chosen for themselves, and with express agreement, by the re annexing act, that she should be susceptible of subdivision into a plurality of States.

Whatever advantage the interest of the Southern States, as such, gained by this, were far inferior in results, as they unfolded, in the progress of time, to those which sprang from previous concessions made by the South.

To every thoughtful friend of the Union,—to the true lovers of their country,—to all who longed and labored for the final success of this great experiment of republican institutions,—it was cause of gratulation that such an opportunity had occurred to illustrate our advancing power on this continent, and to furnish to the world additional assurance of the strength and stability of the constitution. Who would wish to see Florida still a European colony? Who would rejoice to hail Texas as a lone star, instead of one in the galaxy of States? Who does not appreciate the incalculable benefits of the acquisition of Louisiana? And yet narrow views and sectional purposes would inevitably have excluded them all from the Union.

But another struggle on the same point ensued, when our victorious armies returned from Mexico, and it devolved on Congress to provide for the territories acquired by the treaty of Guadalupe Hidalgo. The great relations of the subject had now become distinct and clear to the perception of the public mind, which appreciated the evils of sectional controversy upon the question of the admission of new States. In that crisis intense solicitude pervaded the nation. But the patriotic impulses of the popular heart, guided by the admonitory advice of the Father of his Country, rose superior to all the difficulties of the incorporation of a new empire into the Union. In the counsels of Congress there was manifested extreme antagonism of opinion and action between some representatives, who sought by the abusive and unconstitutional employment of the legislative powers of the government to interfere in the condition of the inchoate States, and to impose their own social theories upon the latter; and other representatives, who repelled the interposition of the general

OUR CONTROVERSY WITH S. S. GRISWOLD—NO. 3.

He agrees with us, that "no part of the finally executed punishment of sin consists in natural death," but in attempting to account for the existence of natural death, he takes common ground with those who deny the depravity of the human heart. He says, "Natural death is the legitimate effect of material organization, and is more or less premature, as such organization conforms to or violates the laws of its vitality." He means, unquestionably, that there is a natural tendency to waste and decay in the human body; that the action of heat, cold, drought, damps, and other influences, will eventually decompose it, and reduce it to its primitive dust, even though his moral life be perfectly conformed to the divine law.

No doubt this view seems to Bro. G. much more philosophical and rational than any other. But like all others who adopt it, he appears to take for granted the premise from which it results. He assumes that the agencies which are now at work to wear out the human frame, and which eventually triumph over the most vigorous, have operated with the same relative power from the beginning. But this is what we are not prepared to admit. Bro. G. himself knows that there is a principle in the human system, enabling it not only to resist the agencies which are at work to destroy it, but to grow in strength, advancing from the weakness of childhood to the sturdiness of manhood, in spite of them. In ordinary cases, man attains his full vigor at the age of forty or forty-five.

Now, can any philosopher tell why this principle of growth stops at such an age, so that the man henceforward declines in strength? Why does it not continue in action forever? Facts, to be sure, show that it does not; but can any reason be assigned why it should not? If the man, from the period of childhood to the age of forty or fifty, becomes every day more tough, elastic and hardy, notwithstanding the destructive influences of climate and other things, is there any good reason for his not doing so still longer?

The antediluvians lived, some of them, nearly a thousand years. The recuperative energies of their bodies, certainly, did not begin to fail when they were only half a century old. Some five or six hundred years must have passed before they attained their full vigor—supposing that (as now) man begins to decline, after a little more than half of his life has been spent. What reason is there in mere philosophy why mankind should not *now* be five hundred years in coming to maturity?

Will it be said that the destructive influences bearing upon the human frame, in the antediluvian age, were not as numerous, nor as powerful, as they are now? Then why not suppose that, in the Paradisaical age, they were still less numerous and powerful? Why not suppose that *destructive* influences were entirely absent from the garden of Eden? Why not suppose that all the influences brought to bear upon the body there were of a *supporting* nature? This is but supposition, it is true. It is also but supposition as to the reason why the antediluvians attained such a great age. Yet the fact that they did attain such longevity will not be disputed; and all we are concerned to show is, that any *philosophical* reason which will account for it, is equally conclusive in favor of the proposition that the first human pair were constituted immortal.

The truth is, however, that philosophy is lame on this question. It cannot tell why the antediluvians lived to such an age, nor can it determine it to be impossible for men now to live as long. There is no reason, in mere philosophy, why the influences that strengthen and develop the human system to-day will not do the same to-morrow, and again next day, and so on *ad infinitum*. Indeed, as far as mere philosophy is concerned, we see not why the researches of the alchymists in pursuit of an elixir that would destroy man's liability to disease, and perpetuate his life forever, were not in accordance with wisdom. It is only in the light of divine revelation that their folly is manifested. Guided by revelation, we learn, not only that it is appointed unto men once to die, but that death has passed upon all men because all have sinned.

True wisdom determines, therefore, that death remains in the world as long as sin does, notwithstanding the remark of Bro. G., that "there is no perceivable consecutive connection between moral transgression and physical suffering or death"—a remark which may be true enough, if by "consecutive" he means (as we suppose) a *natural* connection, as between cause and effect. But while there may be no such natural or necessary connection between moral transgression and physical suffering or death, as that philosophy is able to decide that the one must result from the other, there is nevertheless an *established* connection; and that is all we contend for. There is no "perceivable consecutive connection" between the commission of murder and death by the halter, yet civil government has established such a connection. So there may be no "perceivable consecutive connection" between sin and natural death; nevertheless, God, in the way of government, has ordered and established a connection between them. Not that natural death is the established *penalty* of sin, as the gallows under civil government is of murder, only that there is an established *connection* in the one case as much as in the other. T. B. B.

OBLIGATION TO WALK AS CHRIST DID.

"He that saith he abideth in Him, ought himself so to walk even as He walked." 1 John 2: 6.

The term "walk" has reference to a person's conduct. "He that saith he abideth in Christ," is he who professes to be his disciple. The sentiment of this text, then, is, that every professed disciple if Christ is bound to imitate him in all his examples—to pursue that course of conduct which he pursued. We should do this, lest "the light that is in us become darkness." We must do this in order to be true representatives of the Saviour. We must do this to prevent men from mistaking the road to hell for the road to heaven. Let us, then, for a little while, contemplate the manner of Christ's walk while on the earth.

1st. *His treatment of his enemies.* "When he was reviled, he reviled not again; when he suffered, he threatened not, but committed himself to him that judgeth righteously." "He was led as a sheep to the slaughter, and as a lamb dumb before his shearer, so he opened not his mouth." When expiring in agony, he cried out in behalf of his tormentors, "Father, forgive them, for they know not what they do." Here, then, is an example for Christians now to imitate. Are we opposed, persecuted, slandered, insulted, wronged? So was Jesus, much more than we have ever been. Yet he endured all his sufferings and insults, with a spirit of meekness and forgiveness. And he has commanded us to "love our enemies, to do good to them that hate us, and pray for them that despitefully use us and persecute us." Jesus gave the highest proof of love to us; for "while we were yet enemies, he died for us." Reader, it is highly important, if you would be forgiven of God, if you would gain a fitness for heaven, if you would be like Christ, that you get all hatred of your fellow men out of your heart, that you cherish no hard feelings towards those who have injured you, or those who you think have injured you.

2d. *His resignation and meekness.* Though trials surrounded him constantly, he ever exhibited a spirit of resignation and meekness. Though poverty was his lot, yet he did not complain. Though flesh shrunk back, in view of the cup he must drink—though he agonized in prayer, and said, "O my Father, if it be possible, let this cup pass from me," "nevertheless," he added, "not my will, but thine, be done." Thus should the disciples of Christ, amidst their poverty, perplexities, trials, and distresses, endure with patience and resignation these sorrows, "looking unto Jesus." Especially should we willingly and meekly suffer for Christ's sake, who "hath borne our grief and carried our sorrows."

3d. *His endurance of temptation.* Satan assaulted him, but he resisted and overcame the great enemy. "He was tempted in all points like as we are, yet without sin." And as he suffered, being tempted, he is able to succor them that are tempted." Satan is still going about, to seduce the people of God from doing right in a multitude of ways, presenting baits of worldly honor, wealth, ease and pleasure, but, by the grace of God, we must contend against him, and never yield to any of his temptations.

4th. *Jesus wept over sinners.* The hardness of men's hearts was a source of grief to him. At one time, as he came in sight of Jerusalem, he wept over the devoted city, and said, "If thou hadst known, even thou, in this thy day, the things that belong to thy peace, but now they are hid from thine eyes." "He wept that we might weep." How unbecoming, how unlike Jesus, to spend our time in mirth and folly, while sin continues to curse our world, while war rages, while "on the side of the oppressor there is power," while "man's inhumanity to man makes millions mourn." Our own nation is superlatively guilty before God; profane swearing and Sabbath-breaking abound, and piety languishes. How becoming that we put on sackcloth and mourn over the condition of a sinful world!

5th. *His condescension and humble spirit.* "Though he was rich, yet for our sakes he became poor, that we through his poverty might be rich." "The glory he had with the Father before the world was," he laid aside. He made himself of no reputation, and humbled himself to death, even the death of the cross!" He was born in a stable, and cradled in a manger. In after years he was a homeless wanderer. He associated with publicans and sinners, the lower order of people, and then "the poor had the gospel preached to them." He said of himself, "I am meek and lowly in heart." Here, Christian reader, is an example for you and me to imitate, to be "meek and lowly in heart," as Jesus was. "Let us not mind high things, but condescend to men of low estate." Let us seek to elevate the condition of the poor and degraded, rather than to elevate ourselves in the eyes of those who are called the great ones of the earth. Then shall we be content to occupy the humble sphere God has designed for us to occupy. Then shall we be willing to employ all our powers and possessions in glorifying God. Then shall we have no desire to imitate our worldly and fashionable neighbors, in buying carriages, building houses, or putting on ornaments or costly array, or procuring superfluities of any kind; for we shall have "this mind which was also in Christ Jesus." We shall then feel that we are only stewards of these earthly possessions, and are bound to use them for the glory of the great Owner. Yea, we shall feel, "when we have done all that is commanded," that "we are unprofitable servants, that we have done no more than our duty."

6th. *His prayerfulness.* The poet says:

> "Cold mountains and the midnight air
> Witnessed the fervor of his prayer."

And an Apostle has said that "he, in the days of his flesh, offered up prayers and supplications, with strong crying and tears, to him that was able to save him from death." What a rebuke to those professors at the present time who have no retired place for secret prayer, no family devotions, and but few faint desires for help from God.

7th. *His self-denying benevolence.* While here on earth "he went about doing good," healing diseases, removing suffering, and "preaching the gospel of the kingdom." In order to do this, he laid his glory aside, became "a man of sorrows and acquainted with grief;" he was the subject of derision and contempt, and finally, to accomplish man's salvation, "endured the cross;" "he bore our sins in his own body." His benevolence was of the self-denying kind. We are commanded to have the same mind. How is it, then, while so many suffering ones need help, while so many perishing in sin and ignorance need to be instructed in the way of life, that so many professed Christians are making the accumulation of property the great end of their labors and anxieties, live in all the splendor of fashion, gratifying their appetites to the full; in short, "seek their own things, not the things which are Jesus Christ's?" And if they bestow upon objects of charity, it is that which costs little or no self-denial? Is this walking as Christ walked? Is it not rather walking "after the course of this world?"

Reader, are you shaping your course so as to imitate Jesus in these respects? Remember, "if you suffer with him, you shall also reign with him." Remember, too, "if you have not the spirit of Christ, you are none of his." If you imitate the world, you may have your "portion in this life," but none in heaven. C. A. O.

DUTY TO PASTORS.

Rev. J. J. Butler, one of the editors of the *Morning Star*, furnishes that paper with an article on "Duty to Pastors," which suggests some things worthy of consideration by the people of other denominations as well as the Freewill Baptists. The present is a favorable season of the year, in most of our churches, to do something for the benefit of pastors; and we hope the suggestions of the following article will not be lost.

We are not alarmists or complainers or fault-finders. We are not disposed to dwell needlessly on unfavorable aspects in the present, or auguries of evil in the future. It is best to look on the bright side, let patience have her perfect work, and trust in God. Still it is not possible to repress feeling always; nor would it be right, if possible. That many faithful ministers of the gospel are annually brought down to premature graves, or compelled prematurely to quit the pastoral office, from causes which they cannot remove, but which the people might, is obvious to all; yet there is a most painful indifference to the fact. We are not speaking of ministers who bring such evil upon themselves by their own fault, or who voluntarily leave their sacred calling.

There is too frequently an unaccountable carelessness, not to say recklessness, on this subject. A people enjoy the labors of a faithful pastor whom they greatly esteem, yet will allow him to toil on month after month and year after year, with just enough to meet the absolute necessities of life, making no provision for the infirmities of age, or for the education of his children. If he has a little property, they will see him spend the last penny, and perhaps involve himself in debt, while they are accumulating by hundreds and thousands. And if money is to be raised for some benevolent object, from whom but these same ministers must it come?

Men in society will subscribe ten, twenty, thirty dollars a year for the support of their pastor, while he perhaps expends a hundred dollars annually besides his salary. Where is the equality? Here is a pastor who in some worldly calling could readily make hundreds more than he receives for preaching, yet his salary comes hard and slow. Where is the justice of such procedure?

Are ministers alone or mainly responsible for sustaining and spreading the gospel? Are they alone called to make sacrifices? We know of no evidence or reason why private members are not equally responsible according to their means and opportunities. If a faithful pastor is crushed, in consequence of the lack of co-operation of his people, and the consequence is that the church languishes, and souls are lost, the watchman has cleared his skirts, but some will have to answer for blood.

What is to be the issue of the present tendency of things in this respect, we would not attempt to divine. It is a deeply distressing subject. It is one attended with much delicacy to pastors, it is an unpleasant one to contemplate in any aspect. Yet it is of the highest practical importance.

The complaints are numerous of fluctuation and change, ministers leaving the sacred office, the ministry and the churches declining, few candidates for the sacred office, few laborers in the gospel harvest. But what wonder? In view of the worldliness, and parsimony, and covetousness of the times, the wonder is that so many are able to stand at their posts so long.

You may consult the annals of the world in all ages, and you cannot find a class of men who have exhibited more heroic self-denial, who have toiled harder, accomplished more, and in every way been more deserving than evangelical pastors and ministers. They seek not their reward here, but surely they ought to have a fair chance with their fellow men.

"THE INDEPENDENT" commences the year 1856 in an entire new dress. The paper is now eight years old, and has between twenty and twenty-five thousand subscribers. The success it has achieved is deserved, and we rejoice in it.

REVIVAL IN NEW YORK.—A series of meetings has been in progress in the Cannon Street Baptist Church, New York, during the past six weeks. The pastor, Rev. J. Banvard, was assisted by Elder Jabez S. Swan, who preached every evening, and twice and sometimes thrice on Sunday during the whole time. At the close of each evening sermon, a prayer meeting was held, at which the anxious were invited forward for prayers. These meetings were of an exceedingly interesting character. There were always a goodly number to come forward, some of whom with tears and sobbings confessed their guilt and asked the prayers of God's people. The spirit of grace and supplications was poured out, and not unfrequently the brethren would continue their petitions for special cases until late in the night. On the first Sunday of the meetings the request was made in the Sunday School, by the Superintendent, A. Denike, for all those who desired the prayers of the church to signify it by rising; and the whole school rose en masse, with but one or two exceptions. This was an unexpected development. Many of them the same evening went forward for prayers, and have been hopefully converted. The work extended to an interesting class of young men, who have taken hold of the cause with no little earnestness. Baptism was administered every Sunday either by the pastor or by Elder Swan. The whole number of those who have expressed hope in the Saviour is about fifty, and though the Elder has finished his labors, the work is still going on.

WHAT SOME EDITORS HAVE TO DO.—The editor of the *Watchman and Evangelist*, a Presbyterian paper published at Louisville, Kentucky, recently procured a new press; and as it came to hand at a late hour, he was obliged to turn machinist and set it in motion with his own hands. The circumstance led him to make various comments in the labors of editors, from which the following paragraph is copied:—

The query rises in our mind just now, do our readers know the work "we" have to perform? You call us an editor—and whether we think we are or not, we have that work to perform, according to the best of our ability. In addition to which we have to superintend the mechanical department of our printing office; read proofs of newspapers, magazines, books and job printing; do an amount of writing in keeping books, correspondence, &c., for which a clerk would claim a salary sufficient to support quite an expensive family; deal with butchers, market-men, butter-women, grocers, flour merchants, coal dealers, and paper mills, landlords and landladies, until, at times, pocket-book and pocket suffer a collapse of a most threatening character; then comes the financiering to meet all these demands and pay the workmen their weekly earnings; and worried mind drives wearied body, until mentally and physically we feel ourselves upon the very verge of another collapse. For all this toil of mind and body—which we most sensibly feel pressing us while hastily penning these few lines—do you suppose, reader, we expect to be compensated in this world? No, never. We look for higher, better pay, than all your dollars can bestow. Acting as your servant for all our toils and pains we get but our food and clothing; to this we are honestly entitled; and it is your duty to see that we get it promptly. For the rest, we are willing

> "To suffer on our three score years,
> Till our Deliverer comes."

RELIGIOUS PAPERS IN THE COUNTRY.—The following suggestions, by a pastor in Wisconsin, to the editor of the Chicago *Herald*, are worthy of consideration:—

"Many of the subscribers of religious journals reside in the city of its publication, or in other places in circumstances where they have access to much religious and secular reading other than the paper which they take; but vastly the greater number are scattered throughout the sparsely settled regions of the country, belong to the small and feeble churches, where they have little or no religious or secular reading other than the weekly paper. Now, we do not get so much knowledge as influence from a religious journal. The influence which principally characterizes it, and which is most enduring, will be the spirit which it diffuses. Here, more than anywhere else, it enstamps itself upon the mind and heart of the habitual reader. We are in no danger of over-estimating the value of a sanctified periodical press, especially in those localities where there is little other reading.

"In my little church of seventy members, 32 religious papers are taken, (exclusive of the publications of benevolent societies.) A religious paper is taken in every family, and these papers in their silent way are exerting a mighty influence. I can see the peculiar influence of these papers on these families respectively. They do much, and in some families *more than the Bible*, to mould and fashion and educate church members, and members of families who are yet out of the church. This parish is not peculiar in these respects. The same is the case in every parish. Country pastors and country churches have an intense interest in this matter."

SERMON ON NOTHING.—We have often heard of sermons, and sometimes have been unfortunate enough to hear such, as had little or nothing valuable in them; but we have never before known an instructive sermon preached upon *nothing* as a text. One of our exchanges gives the following incident, as an actual occurrence:—

"Frederick the Great, being informed of the death of one of his chaplains, a man of considerable learning and piety, and determined that his successor should not be behind him in these qualifications, took the following method of ascertaining the merits of one of the numerous candidates for the appointment:—He told the applicant that he would himself furnish him with a text the following Sunday, when he was to preach at the royal chapel, from which he was to make an extempore sermon. The clergyman accepted the proposition. The whim of such a probationary discourse was spread abroad widely, and at an early hour the royal chapel was crowded to excess. The king arrived at the end of the prayers, and on the candidate's ascending the pulpit, one of his majesty's aides-de-camp presented him with a sealed paper. The preacher opened it, and found nothing therein. He did not, however, lose his presence of mind; but turning the paper on both sides, he said: 'My brethren, here is nothing, and there is nothing; out of nothing God created all things;' and proceeded to deliver a most admirable discourse upon the wonders of creation."

THEATRES AND SUNDAYS IN GERMANY.—The *Watchman and Reflector* has occasional letters giving Pictures of German Life, written by a student in that country. The following is an extract from one of them:—

Here in Germany the theatre is as much a regular place of resort for all classes, and is considered as respectable and proper, as the church or vestry is in one of our New England villages. I remember hearing an anecdote when I was here before, of which I remember the substance only. It was as I recollect it on this wise:

An American clergyman, in conversation with Neandear, the great historian of Christianity, spoke of the desecration of the Sabbath here, and especially of the theatres being open on Sunday. Neander made some reply, which led the other to exclaim in astonishment, "Why! you would not go to the theatre on the Sabbath!" "I have no taste for the theatre any way," was Neander's reply, "but if I had I should not hesitate to go on that account."

The most curious specimen of German feeling on the matter of Sunday, which I have met with personally, happened a few months since, when I was invited by a professor in one of the universities, to meet a Protestant Theological professor at his house for a game of whist on that evening!

MISSION FOR THE AFGHANS.—The Old School Presbyterian *Record* says that the Executive Committee have had under consideration the question of commencing missionary efforts for the Afghans. This people inhabit the country between Persia and India, and were contemplated by the first missionaries of the Board in India, as eventually to be included within the sphere of their labors. Indeed, several Afghan youths were under instruction in the first school of the Mission at Lodiana, in the year 1834. It is not yet practicable for missionaries to live in Afghanistan, but considerable numbers of the Afghans are accessible at some places in the Punjab. It is proposed to form a mission for their benefit, but having in view as its chief object, the conversion of their countrymen. Amongst the measures considered practicable at present, and also of great importance, are those which contemplate the translation of the Sacred Scriptures into their language, the Rushto. The population of Afghanistan is estimated at five million, nearly all Mohammedans.

WORSHIP IN RUSSIA.—Pewed seats are unknown in Russian churches, and there are no chapels of ease for fashionable Christians. While abhorring the superstitions that are current, both among nobles and serfs, we may imitate with profit the profound reverence which forms an important element in their public worship:—

"There are no seats in any of the Greek churches, and even the Emperor himself must stand during the service. The priests are almost all majestic looking men—tall, with hair falling over their shoulders, and beard sometimes half way to their waists. They are not allowed to wear any ornament. In the center of the church, on Good Friday, is placed a body of the Redeemer, either painted or in relief, and the people come in and kiss the wounds, and a book which is laid upon the breast. Their sorrow seems real. Their sad faces and earnest manner show what they feel."

SLAVERY IN THE EAST.—Of the advance made of late years by the Mohammedan nations toward civilization, there is no stronger proof than their repudiation of domestic slavery, for which the Mohammedan religion, especially in its doctrine of the plurality of wives, holds out many temptations and inducements. Yet slavery, within a few years past, has been formally abolished by the Bey of Tunis; it has been greatly restricted in Turkey; and now, according to the following paragraph from *Galignani's Messenger*, it has been abolished also in Egypt:—

"A letter from Alexandria states that the Egyptian Government has recently put into execution the decision come to by the Divan relative to the abolition of slavery. Not only is it not allowed any longer to buy or sell slaves in Egypt, but all those in possession of private individuals were informed that they were free"

THE SABBATH-SCHOOL VISITOR for January is the first number of a new volume. Now is the time to subscribe for it. The following is the table of contents for January:—

Jericho, Ancient and Modern, with a cut.
Perseverence.
The Child's Christian Alphabet.
Raratonga.
Biographical Sketch of Thomas S. Titsworth.
The New Year.
Pity the Neglected.
A Beautiful Thought.
The Stranger's Visit.
How to be Happy.
Sulky Tempers.
Strength of a Kind Word.
My Father.
What a Picture!
Missionary Beds.
Sagacity of a Dog.
The Power of Kindness.
Alfred the Great, &c., &c.

CONGRESS is not yet in working order. The President, having tired of waiting for the House of Representatives to choose a Speaker, sent his Message to the Senate on the last day of the year. Since that time, the House has occupied itself mainly in considering whether or not to receive the Message.

THE LEGISLATURE OF NEW YORK spent all of last week in an unsucessful attempt to organize. The difficulty is to elect a Speaker for the Assembly. Probably the present week will see one chosen by a plurality vote.

The treasury of the London Missionary Society last year received more than twelve thousand four hundred pounds, or $62,000—being a fifth part of the Society's income—from the Mission Churches and stations.

The Kansas Settlement.

The newspapers have said a good deal that is conflicting about the grounds upon which the recent difficulty in Kansas was settled—some representing that the concessions were all on the part of the free-state men, and others that they were on the part of the pro-slavery men. The following copy of the Agreement between Gov. Shannon and the People of Lawrence shows precisely how the matter was arranged:—

Whereas, there is a misunderstanding between the people of Kansas, or a portion of them, and the Governor thereof, arising out of the rescue, near Hickory Point, of a citizen under arrest, and some other matters—

And, whereas, a strong apprehension exists that said misunderstanding may lead to civil strife and bloodshed—

And, whereas, it is desired by both Gov. Shannon and the citizens of Lawrence and vicinity to avert a calamity so disastrous to the interests of the Territory and the Union, and to place all parties in a correct position before the world—

Now, therefore, it is agreed by the said Governor Shannon and the undersigned, citizens of said Territory, in Lawrence now assembled, that the matter now in dispute be settled as follows, to wit: We, the said citizens of said Territory, protest that the said rescue was made without our knowledge or consent; but that, if any of our citizens in the town of Lawrence were engaged in said rescue, we pledge ourselves to aid in the execution of any *legal* process against them. That we have no knowledge of the previous, present, or prospective existence of any organization in the said Territory for the resistance of the laws; and that we have not designed, and do not design, to resist the legal service of any criminal process therein, but pledge ourselves to aid in the execution of the laws, when called on by proper authority, in the town or vicinity of Lawrence, and that we will use our influence in preserving order therein; and we declare that we are now, as we ever have been, ready at any time to aid the Governor in securing a posse for the execution of such process: Provided, that any persons thus arrested in Lawrence or vicinity, while a foreign force shall remain in the Territory, shall be only examined before a United States District Judge of said Territory, in said town, and admitted to bail. And, provided further, that all citizens arrested without legal process by the Sheriff's posse shall be set at liberty. And, provided further, Governor Shannon agrees to use his influence to secure to the citizens of Kansas Territory remuneration for any damages suffered, or unlawful depredations, if any such have been committed by the Sheriff's posse, in Lawrence or vicinity.

And, further, Governor Shannon states that he has not called upon persons resident in any other State to aid in the execution of the laws; that such as are here in this Territory are here of their own choice; and that he does not consider that he has any authority or legal power to do so, nor will he exercise any such power, and that he will not call on any citizens of another State who may be here. That we wish it to be understood that we do not herein express any opinion as to the validity of the enactments of the Territorial Legislature.

WILSON SHANNON,
C. ROBINSON,
J. H. LANE.

RELIGIOUS INTELLIGENCE.

The King of Sardinia, in his late visit to England, was cordially received; probably, the more so from his excommunication by the Pope. "Not only has he maintained, inviolate, the constitution established by his father," says the *Freeman*, "and thus secured civil liberty in the States under his control—he has also promoted religious liberty, by freeing public instruction from the control of the Jesuits, and by passing a law for the gradual suppression of the monasteries."

The *Puritan Recorder* has a letter from Mr. Walter Dickson, formerly of Groton, Mass., now prosecuting an agricultural and religious mission among the Jews at Jaffa, near Jerusalem, which speaks in terms of great encouragement of the enterprise. He also mentions the interesting fact that the Mosque of Omar, which has been religiously closed against all but faithful Mussulmen, is now thrown open to all people. The event is regarded as very significant by the observers of signs.

It is stated in the London *Morning Chronicle*, that an envoy from Madagascar is now in Rome, with letters also for the French Government, to which he is proceeding. The nature of his errand is left to be inferred from the statement, of the truth of which, however, no evidence is given, that "the Sovereign of Madagascar has been converted to the Church of Rome, and has driven all the Protestants out of his State!"

In order to relieve several of the weaker churches in Philadelphia from debt, and to assist in carrying forward other enterprises, the Presbytery of Philadelphia resolved, not long since, to endeavor to raise the sum of $25,000, to be appropriated to these objects. The effort has been entirely successful, the subscriptions having been completed within a few days.

The Worcester *Spy* reports that the Hon. Stephen Salisbury has recently given to the American Antiquarian Society the sum of five thousand dollars, as a fund for binding the books and papers of that institution. This, with former donations made by Mr. Salisbury to the same society, amounts to about fifteen thousand dollars.

Within twenty years, 100 churches have been planted along the coast of Africa, numbering about 12,000 converts. Hundreds of natives have received a Christian education in schools. It is just twenty years since evangelical operations commenced in the Madura Collectorate, and the present fruits are 5,000 nominal Christians and 500 church-members, with more than 100 native helpers, in the service of the Mission.

The London *Record* affirms as a matter of fact, that two Episcopal clergymen of the diocese of Exeter, regularly employed a reporter to take down the sermons of a popular dissenting minister, and to transmit them for their use, for the edification of their own people.

The Committee of the Glasgow Bible Society has given to the Chinese Evangelization Society the handsome sum of £500 for the purpose of publishing and distributing Gutzlaff's version of the entire Bible in Chinese.

General Intelligence.

European News.

Four days later news from Europe, being to Dec. 19th, has come to hand.

The most important intelligence received is that the peace question has assumed a somewhat definite shape. Count Esterhazy has left Vienna for St. Petersburg with proposition, and it is stated that Austria, in the event of Russia's refusing to accept her ultimatum, will withdraw her Ambassador from the Court of the Czar.

The fall of Kars from famine, reported by the previous arrival, has been confirmed, and all the garrison are prisoners in the hands of the Russians. Nothing new has occurred in the Crimea. Gen. Coddrington states in his latest dispatch that the Russians keep up a heavy fire from the north forts of Sevastopol.

The English papers contain a notice of the death of Colonel Sibthrop, late Member of Parliament for the County of Lincoln, and widely known from his invariable opposition to the Crystal Palace scheme whenever the topic was brought up in the House.

Reports to Congress.

The Secretary of War (Hon. Jeff. Davis) urges increased compensation to army officers, and a revision of the law respecting their *allowances*. Also, that the provision of the last Congress, increasing the pay of the rank and file, be extended to all enlisted men. Also, an increase of the medical corps, and the addition of five military storekeepers. He recommends a judicious continuance of sea-coast defenses, and especially renews the suggestion for the fortifying of Ship Island to defend the approaches to New Orleans. He presents, also, a neat and forcible argument in favor of the Pacific Railroad, as a means of national defense, but avoids recommending its construction by Governmental aid, although he distinctly intimates a disposition to favor such aid. He shows the actual strength of the army to be 15,752 men. Enlistments during the last twelve months, 10,546; enlistments refused, 20,522; number of casualties, 5,500. Disposition of the troops remain pretty much as stated in last annual report.

The Report of the Secretary of the Navy (the Hon. James C. Dobbin) recommends the construction of additional steam sloops-of-war; expresses entire satisfactio [illegible] the result of the apprenticeship syste [illegible] the legislation of the last Congress for the Navy; maintains the abolition of corporeal punishment; and recommends an increase of the Marine Corps, and the increase of seamen to 10,000 men. He sustains the general action of the Naval Retiring Board, but intimates his readiness to aid in restoring any officers in special cases who have been unjustly treated.

The Postmaster-General (Judge Campbell) suggests that the franking privilege be restricted to public documents and letters on public business merely; also, the charge of full rates upon newspapers in all cases, instead of half rates, when paid quarterly in advance. He recommends compulsory prepayment, by stamps, of postage on books, pamphlets, circulars, and all other transient matters. He again urges the six months' notice to the Collins steamers in discontinuance of the extra pay voted them in July, 1852. He presses this subject at some length.

"Land Office Business."

The following statements, compiled from the Annual Report of the Secretary of the Interior, give some idea of the significance of the expression, so common at the West, "a land office business":—

The quantity of land sold at graduated prices for the last fiscal year was 8,720,474 acres, and the amount received for it was $2,358,918. In the year ending Sept. 30, 15,315,283 acres of land have been surveyed, the true boundary line between Alabama and Florida has been established, and preparations have been made by the correction of old surveys to discontinue the office of Surveyor-General in several of the districts. The quantity of land already subject to entry was so large that no new land has been brought into the market:

	Acres.
The quantity of lands sold for cash during the last fiscal year was	15,729,524.88
Received therefor, $11,485,384 75.	
Located with military scrip and land warrants	1,345,580.00
Swamp lands selected for States	7,470,746 62
Selected on donations for railroads, &c.	11,558.00
Making a total of	24,557,409.50

This is an increase of 8,693,789.81 acres over the previous year, of lands sold for cash, and a decrease of 2,071,222.26 acres located with scrip and warrants. The quantity that will be entered the present fiscal year will be much larger under the recent bounty land law.

The amount of lands sold during the second and third quarters of the present calendar year is about 6,264,163 acres; being an increase of about 827,625 acres (in cash, $477,442 06) on that of the corresponding quarters of the preceding year.

The quantity of land covered by warrants, issued to soldiers of all the wars in which the United States has been engaged, is 37,958,412 acres. For the satisfaction of Virginia land warrants, there have been taken 1,460,000 acres. Recently scrip has been issued to satisfy this class of warrants. In 1846 a quantity of land one and a half sections in width on each side of the Fox River and the lakes through which it passes, was granted to the State of Wisconsin for improving the Fox and Wisconsin rivers, and connecting them by a canal. This grant included 260,433 acres. The Land Office, under subsequent acts, gave Wisconsin a width of five sections, and increased the length of the grant so as to make it 284,269 acres; but when the Company, which succeeded to the rights of the State, asks for the same grant along the Wisconsin, the Department thinks the Company unreasonable, and rejects the project of giving them 350,000 acres more. The Secretary recommends that officers connected with the sale and survey of the public lands should be prohibited from becoming purchasers. The swamp-land grants create considerable difficulty, but in this, as in other instances, the Secretary advises a generous policy. The California Land Commission are making very good time, and will not want any more money. A new Commission must be issued to adjust Indian land titles, as the old one did not do its work. The Pension Office has done a very heavy business, and clerks have been detailed from the Land Office. The number of applications under the recent act were, up to Nov. 20, 225,944; of which 84,500 had been examined, and 59,892 allowed. The number of warrants issued was 55,917, covering 6,578,320 acres.

Keeping Thanksgiving in Kentucky.

The Cincinnati *Commercial* publishes the following horrible narration:—

On the Kentucky Thanksgiving day a couple of young men of Marysville, whose family connections are described as of the "highest respectability," were on a drunken spree at the Parker House, in that place, and, protracting their frolic until a very late hour, after all the household had retired to bed, attempted to arouse the barkeeper to procure more liquor; and failing in this, and succeeding in finding a yellow man, one of the waiters, asleep, they concluded to set fire to him in order to awaken him! With this view they took a camphene lamp, and, pouring the fluid over his whiskers, ignited it, and the poor fellow's neck and head became instantly wrapped in an intense blaze, which continued until the fluid was consumed. The sufferings of the victim were dreadful in the extreme. No refinement of torture could have produced more excruciating misery. But, strange to say, death did not release him from torment until after the lapse of two weeks. The poor creature was the slave of Mr. Ball, keeper of the Parker House, who says, as our informant tells us, that no human suffering could exceed that of his boy during the fortnight that he lived after the burning. The young men "respectably connected," whose drunkenness resulted in this horror, are said to allege that they burned the negro by accident; that when holding the lamp to his face they managed to break it and spill the fiery fluid upon him. The young men are rich. They have agreed to pay Mr. Ball $1,200 for the loss of his servant. Our informant says that no one in Maysville speaks of this transaction without a shudder of horror, but that no movement has been made toward a legal investigation of the matter, and that the "high position" of the parties implicated will overawe any such movement.

The American Gun Machinery for the English Government.

From the Springfield (Mass.) Republican, Dec. 20.

We have had occasion to allude several times within the last two years to the movements of the English government in revolutionizing their system of manufacturing small fire arms, so as to make it conform to the American system. There is a difference of half a century of mechanical progress between the two systems, in favor of the American. The English make an inferior article, at greater cost, by hand labor entirely, lock, stock, and barrel. The Americans a superior article, at a lower cost, altogether by machinery, and that machinery the most ingenious, intricate and remarkable of any ever invented and put in use in the civilized world. The germ of it lay in the inventions of Thomas Blanchard, formerly of this city, which have been ripened and developed by the ingenious mechanics of the United States Armory here, the chief of them in the work being Cyrus Buckland, the master mechanic of the establishment.

Some two years ago, the English government, determined upon a grand national armory for the manufacture of small arms, after the American plan, sent out to this country a commission of army officers and engineers for inspection and arrangement in connection with the new born purpose. These gentlemen had free access to our establishments, and finally determined to copy the American principles of manufacture throughout. To do this, they engaged James M. Burton, for some years chief engineer and mechanic at the Harper's ferry (Va.) armory, and he is now in that country in the discharge of its duties. They also ordered built here complete sets of the machinery in use at our armories. Robbins & Lawrence, of Windsor, Vt., were employed to build some one hundred "milling machines" used to cut the gun locks and execute the other iron parts of the gun. These are a common machine, in this country at least, and were some months since completed and sent abroad. This branch of the contract amounted to some thirty or forty thousand dollars.

But the more important and intricate machinery—that for the manufacture of the gun stock—was entrusted to the Ames Manufacturing Company, of Chicopee This has just been completed, and was dispatched to England in the steamer of this week. The elements of national and local pride enter so largely into this lot of machinery that we may be excused for speaking of it with some speciality. It consists of 25 different machines, three of which are duplicates. The rest constitute "the set," and through each of them does the gun stock have to pass in the manufacture. Taken into the first a rough piece of wood, it comes out of the last completely finished and ready for lock, barrel, ramrod, &c. No hand labor is required upon it, save to apply the sandpaper that gives it the finishing smoothness. Moreover, each stock made by it is just like every other. Though modelled upon the like machinery at the armory here, this lot for the English government embraces numerous improvements in details that are of great value.

The machinery is capable of turning out 250 stocks per day, each machine requiring the average of a minute to execute its peculiar office. Previously to shipment, it was put up and thoroughly tried at the shops of the Ames company, and worked to perfection.

The cost to the English government of this superb lot of machinery is about $50,000. We regard it as one of the brightest achievements of the Ames manufacturing company, and we believe they so regard it also.

Mr. Oramel Clark, one of the best workmen in the stocking department of the armory, has been employed to go out to Europe, and take the charge of the machinery and its operation. He was also employed to superintend the construction, and has devoted the last six months faithfully to the duty. He says it is the best lot of machinery ever made in the United States. Mr. Clark has been engaged to remain a year in England, and is paid $1,500 a year for his services, with expenses out and back for himself and family, and a house while there. He sailed with the machinery this week, and was accompanied, also, by David Brown, lately a workman at the Springfield armory, who is to be employed in the English armory in superintending and working the machinery devoted to the metal parts of the gun.

The new government armory of England, into which this machinery and its new operations are to be introduced, is located at Enfield lock, nine miles north of London. It is intended, ultimately to employ 800 operatives, and turn out 500 muskets daily. Captain Warlow, of the Royal (British) Artillery, is at the head of it. Captain H. J. W. Jervis, of equal rank in the same corps, has represented the English government in this country during the manufacture of the machinery, and remains to look to the completion of a contract for 25,000 rifles for the same government, which are in progress at the establishments of Robbins & Lawrence, at Windsor, Vt., and Hartford, Conn.

CHINESE SCENERY.—The following article foreshadows the time when a trip to the Celestial Empire will be a favorite excursion for fashionable tourists:—

"Two American gentlemen have recently penetrated the country for some distance in the neighborhood of Shanghai. They write as follows: 'The country has been charming—hills, valleys, groves, and streams, being found in pleasing variety. The sides of the mountains are sometimes terraced very neatly, each ascending step a cultivated field. The mountains have a naked appearance, though many of them are covered with the bamboo, so common in this country. The streams are all rapid and clear, flowing over a pebbly or rocky bed. On their banks are numerous small paper manufactories. The principal machinery consists of an over-shot water wheel, with a huge trip-hammer, which pulverizes the material, chiefly bamboo, of which the paper is made.' Of a view from the top of Heaven's Eye Mountain, which is two hundred miles south-west of Shanghai, and which is nearly a mile above the level of the sea, they thus write: 'The view surpasses all that we had previously seen As far as our vision extended, in all directions, there were mountains. The intervening valleys were cultivated, many of them ornamented by streamlets, which glittered in the rays of the morning sun like a thread of silver.'"

ANOTHER RAILROAD ACCIDENT.—An accident occurred on the Ohio and Pennsylvania Railroad on Monday, Dec. 31st. About 4½ P. M. a passenger train going west came in collision with a freight train coming east, at Darlington Summit. The freight train was out of time, and the conductor was probably endeavoring to reach a switch within a short distance. The collision occurred on a heavy curve and both trains were under full headway, consequently the locomotives and some of the cars were smashed to atoms. Four persons were killed, namely: Mr. Stokes, agent of the Newcastle and Erie Stage Company; a man named Johnston, brother of the landlord of the Enon Valley Hotel; an Irishman, and another whose name has not been ascertained. About sixteen were more or less injured. The engineer of the passenger train was badly hurt in the back, and the fireman had one arm shattered. A Mr. John Veach is among those dangerously wounded. The accident was caused by the watch of the conductor of the freight-train being *three-quarters of an hour* too slow.

THE BURMESE RUBY.—A correspondent of the Calcutta *Citizen*, speaking of the reception of the English embassy by the Burmese King, says: "The only thing remarkable at the interview was an inanimate object, and that was a ruby in the center of the pagoda crown of his Majesty. It was as large, if not larger, than a hen's egg, and far more valuable than the great Koh-i-noor; it was beautifully cut, and almost as round as a marble; it was torn off the ear of the Karen Queen by Alumpra. It was a pendent, being suspended by a a wire casing through her right ear. It is of the purest water, and more than 2,000 years old, if the traditions concerning it are believed. It came originally from Assam, and belonged to the great Garrow King Moung Sa, who ruled the whole of Chin India. This ruby will, I prophesy, in ten years, be worn by our Queen."

SUMMARY.

A dispatch dated Pittsburgh, Wednesday, Jan. 2, 1856, says: Last night, at 11 o'clock, the frame dwelling of John Kiegan, in Temperanceville, near this city, was destroyed by fire with all its contents. Two children perished in the flames, being literally burned to cinders. Two other children were thrown out of the window by their grandmother to save them, and she afterward jumped out herself. All three were slightly injured.

We hear unfavorable accounts from Gensee County of the growing wheat. One correspondent says: "In this old wheat-producing County of Genese probably the prospect never looked more gloomy. The copious rains of last Fall, together with the so-far open Winter, have so stunted the plants that at the most there can be but an ordinary crop. If this weather continues all Winter the coming crop must be very light."

The papers give particulars of a most horrible double murder, penetrated in Woodbridge, Conn., on Tuesday afternoon, Jan. 1st. An insane man named Charles Sanford is the murderer, and Enoch Sperry and Ichabod Umberfield, both old and worthy citizens, were the victims. It is alledged that the murderer has been under the influence of the Wakemanites, whose murder of Matthews, in New Haven, we have so recently recorded.

It seems that the Missourians do not think proper to allow the people of Kansas to vote on the proposed State Constitution, and so the Border Ruffians went over, the other day, and broke up the ballot-boxes, nearly killed the clerks, and indulged in other law-and-order pleasantries.

The Mississippi and Milwaukee Railroad receipts for December were $46,000 against $29,000 in December of 1854. The receipts for the year were $688,000 against $465,000 in 1854, exceeding the estimate $117,000.

A dispatch dated Savannah, Tuesday, Jan. 1, 1856, says: The Hon. John M. Berrien, ex-United States Senator from Georgia, and Attorney-General under Jackson, died here this forenoon, after an illness of 12 days.

H. N. Kenyon, of Huntington, Vt., recently lost 5 cows, by strangulation. They were bowed up over night, when the supporting timbers under the floor gave way, letting down, and choking them to death.

Gov. Clark has appointed Elisha S. Capron City Judge for this city, in place of Judge Stewart, resigned.

The School Fund of New York State, amounts to $2,425,311 97; the income of which, $310,000, is equally divided among the schools of the State. The Literature Fund is $268,620 12—the income, $43,981 89, is divided between the academies in the State, and applied for the purchase of books, maps, globes, &c. The United States Deposit Fund—$4,014,520 71—income $254,960, is divided between common schools, Indian schools, academies, State normal schools, Teachers' institutes, &c.

The Canal Fund of the New York State consists in the State Canals, and their value is estimated at forty millions. Their income is in tolls, and may net this year two millions in round numbers. They owe a debt of seventeen millions on construction account. The Commissioners of the Canal Fund are the Lieutenant Governor, the Secretary of State, the Comptroller, the Treasurer, and the Attorney General.

The Sioux tribe of Indians have delivered up to Gen. Harney the murderers of the mail party near Fort Lamaria. The scene, as described by Gen. H., was a tragic one, not unlike that of Regnius giving himself up to Carthagenian vengeance for his country. Three of the murderers of the mail party came to the fort dressed in full war costume, painted for their death-song, and gave themselves up, or to use their own expressive language, "threw their lives away for the good of the tribe."

An application will be made to the New York Legislature to grant a perpetual lease of Reservoir square, on which the Crystal Palace now stands, to the American Institute. The Crystal Palace Association hold it for five years from 1852, from the Corporation. The Association desires to sell the Palace to the Institute, the officers of which will buy on condition that $80,000 of the purchase money ($25,000) is raised by subscription, and the Legislature will grant the land.

Inquiry having been made as to whether lands in Kansas are locatable with bounty land warrants, we learn that the public lands in that territory will be subject to location with bounty land warrants after they shall have been surveyed, offered at public sale, and become subject to private entry; that at present there are no lands subject to private entry in the territory, and consequently none now subject to location with warrants.

A Kansas Emigration Society has been formed at Gainesville, Miss., at a public meeting there, which adopted resolutions thanking the Missouri borderers for what they have done in Kansas. The object of the Society, as stated by the resolutions, is to raise money to defray the expenses of emigrants from the South to Kansas, "to meet their foes at the ballot-box, and, if necessary, with rifle balls."

A dreadful murder was committed on Sunday evening, Dec. 30th, near New Brunswich, N. J, the victim being the eldest son of Patrick Henry, one of the Almshouse Governors of New York. The body was found lying with head and shoulders immersed in water, at a spot called Sandy Point, with the head bruised and the throat cut from ear to ear. A man named Fox, residing at New Brunswick, has been arrested as the murderer, on a coroner's verdict.

Mr. George A. O. Pierce, while coasting on the hill back of "Tommy's Rocks," near the Catholic church in Roxbury, was thrown from a sled down a steep bank upon some stones, and his skull was fractured so badly that he died in about two hours after. His wife was with him, but had slipped from the sled in time to escape the fall.

A gentleman of Hartford weighed a branch of a tree that had been broken by the weight of ice upon it, and found that it weighed eleven pounds. The ice was then melted off, and the branch weighed only half a pound! This great proportion of ice accounts for the destruction of trees and branches.

A competent writer has affirmed recently, that the number of members received into the Baptist churches for some years past, from other denominations, exceeds two thousnnd annually; and that the number of ministers so received by change of conviction, is equal to one for every week in the year.

A few members of the Mantua Presbyterian Church, Philadelphia, made up a very generous donation in gold to the Rev. Mr. Johnston, their highly esteemed pastor, on Christmas day, and the pastor's wife and his tea-table were also remembered and richly furnished in this grateful expression of their regard.

We learn from the Woonsocket *Patriot*, that about three months since, Mr. Eleazer Brown, of Uxbridge, stuck a small blackberry thorn in his finger, inflicting a slight wound, which grew worse, and finally mortified, causing his death. He was 82 years of age.

The Queen has consented to the creation of two new Bishoprics in Upper Canada. A portion of the funds necessary for the endowment of the Sees will be granted by the British Government, and the remaining portion will be raised by private subscription.

The South Carolina Conference of the Methodist church met at Marion on the 29th Nov., and adjourned on the 3d Dec. Upwards of $26,000 was raised during the past year for missionary purposes, and $2,500 for the tract cause.

Within a radius of five miles around Sevastopol it is supposed that more blood has been split, more lives sacrificed, and more misery inflicted, in a year, than on any other equal extent of the earth's surface, in the same time, since the days of Noah's flood.

From Kansas we learn that on the occasion of voting for the adoption of the free State constitution much disorder prevailed. It is stated that on the river there was some fighting, and at Leavenworth a collision occurred between the pro and the anti-slavery parties.

The *Boston Recorder*, of the 27th ult., says that upwards of five thousand dollars was collected in the various Methodist Episcopal Churches in this city and vicinity, on a recent Sunday, for the cause of Protestantism in Ireland.

The Seminole Indians, in Florida, are giving more trouble. They recently attacked an exploring party, killed seven men, and ran off with their beasts.

Dr. John O. Choules died on Saturday night in this City, at the residence of Nelson Robinson, Esq., where he was spending a few days on a visit.

There has been discovered on the farm of Mr. James Peage, about six miles from Staunton, Virginia, an apparently inexhaustible supply of nitrate of lime. Some specimens on examination proved to contain large portions of pure saltpeter, and in all the nitrate is strongly evident.

The New York *Chronicle* says, those who put a whole body of divinity into one sermon, always preach pretty much the same thing—while they who confine themselves to the illustration and application of a single point, will be always able to present something new.

The ship "Modern Times" is loading at Boston for Australia, and for her cargo she carries out eleven thousand barrels of flour! This is probably the largest shipment of flour ever made in one vessel from Boston.

The Unitarian Church at West Cambridge, Mass., under the charge of the Rev. Mr. Smith, was destroyed by fire Jan. 1st. It was only partially insured.

New York Markets—Jan. 7, 1856.

Ashes—Pots $7 12 a 7 25; Pearls 8 00.

Flour and Meal—Flour 8 31 a 8 43 for common to good State, 8 37 a 8 75 for Indiana and Ohio, 9 75 a 11 50 for extra Genesee. Rye Flour 5 50 a 7 25. Corn Meal 4 00 for Jersey.

Grain—Wheat 1 90 a 2 00 for Western red, 2 07 a 2 16 for white Ohio, 2 20 a 2 24 for white Genesee. Rye 1 31 for Northern. Barley 1 18 a 1 23. Oats 42 a 45c for Jersey, 49 a 52c. for Western. Corn, 78 a 83c. for Jersey yellow, 93c. for Western mixed. White Beans 2 37 a 2 75.

Provisions—Pork, 14 00 a 14 50 for prime, 17 00 for mess. Beef 9 00 a 10 00 for country prime, 10 62 a 12 00 for country mess. Dressed hogs 7¾ a 8c. Butter 17 a 22c. for Ohio, 23 a 25c. for dairy, 26 a 28c. for fresh made.

Potatoes—1 25 per bbl. for Western reds, 1 50 a 2 00 for Mercers and Carters. Turnips 56c. a 1 00 per bbl.

Seeds—Clover 13½ a 14c. Timothy 3 00 a 3 25 per bushel. Rough Flaxseed 1 20 a 1 30.

Tallow—13 a 13¼c.

Wool—31 a 32c. for native, 40 a 43c. for full-blood Merino, 41 a 44c. for American Saxony Fleece.

MARRIED,

In Clarkville, Madison Co., N. Y, Dec. 29th, by Eld. J. Clarke, Mr. JARY CRANDALL, of Brookfield, N. Y., to Miss V. ELVIRA BABCOCK, of the former place.

By the same, in Brookfield, Madison Co., N. Y., Jan. 1st, 1856, Mr. PERIS R. BROWNELL, of Clarkville, Madison Co., N. Y., to Miss ANN C. BURDICK, of the above place.

In Williamsburg. N. Y., on New Year Eve, by Eld. L. Crandall, Mr. RANDOLPH DUNHAM, of Plainfield, N. J., to Mrs. HANNAH ROGERS, of Williamsburg.

Jan. 1, 1856, by Eld. Samuel Davison, Mr. DAVID M. STILLMAN, of Southampton, Illinois, to Miss ELECTA SAUNDERS, of Farmington, Illinois.

DIED,

At his residence in Adams, on the 8th Dec., 1855, Mr. RANSOM COON, in the 50th year of his age. Brother Coon was one whose worth and Christian integrity were known and acknowledged by all who knew him. In his death the church mingles her tears with those of his bereaved family. On the evening of Dec. 5th he was at his accustomed place in the prayer meeting—then and there left his testimony in favor of Christ—returned home, and retired as usual to bed. In the morning it was found impossible to awake him; and he continued to sleep until half past twelve Sabbath morning, when we trust he awoke in a brighter world than this. J. S.

In Petersburg, Rensselaer Co., N. Y., Dec. 19th, Mr. GEORGE CRANDALL, of influenza, aged seventy-seven years and seven days.

☞ In our obituary notices, Dec. 27th, appeared the name *Mrs. Abby M. Owen*, of Sangersfield. It should have been *Mr. Alby M. Owen*.

LETTERS.

Joseph Goodrich, W B Gillett, T F West. M L Potter, Stillman Burdick, P S Crandall, James Summerbell, Joshua Clarke, G W Kennedy, Clark Needham, (right,) L M Cottrell, L A Davis, J B Cottrell, Thos W Brandt, L R Babcock, S P Stillman, John Whitford, D P Curtis, D Clawson, H Thorngate, N McDevit.

RECEIPTS.

☞ All payments for publications of the Society are acknowledged from week to week in the Recorder. Persons sending money the receipt of which is not duly acknowledged, should give us early notice of the omission.

MEALS AT ALL HOURS OF THE DAY.

LODGING ROOMS,

From $2 to $3 per Week, or 50 Cts. per Night.

BELA SAWYER, Sup't. JOHN S. SAVERY, Proprietor.

Bibliotheca Sacra,

AND AMERICAN BIBLICAL REPOSITORY.—The Thirteenth Volume commenced Jan. 1, 1856. This volume will be enlarged to 900 pages; will be printed on a new, large, and beautiful type, and on paper superior to that of any previous volume. This Quarterly contains articles of permanent value, by some of the ablest writers in the country.

In its department it has no superior, and no Minister can afford to be without it.

It is the most learned, the largest, and the cheapest Quarterly of its kind in the country.

TERMS—$3 per annum in advance.
$4 if not in advance.

W. F. DRAPER, Andover, Mass.

Carpet Warehouse.

YOUNG & JAYNE, No. 364 Broadway, corner of Franklin Street, (opposite Taylor's Saloon,) offer for sale a very choice and extensive assortment of

CARPETINGS, OIL-CLOTHS, CURTAIN MATERIALS, MATTRESSES, &c.,

at the lowest rates. Purchasers are respectfully solicited to examine the stock.

Misrepresentations, either expressed or implied, are strictly prohibited in this establishment.

YOUNG & JAYNE,
364 Broadway, corner of Franklin-st.

N. B.—Churches and clergymen furnished at wholesale prices. Sept 27—3 m.

Alfred Highland Water-Cure.

THIS establishment, for the cure of Chronic Diseases, is conducted by H. P. BURDICK, M. D. The facilities in this "Cure" for the successful treatment of Diseases of the Liver, Spine, Nerves, Female Diseases, Bronchitis, Incipient Consumption, &c., are not excelled in any establishment. Patients will have the benefit of skillful Homeopathic prescriptions—an advantage found in but few "Water-Cures." Especial attention will be given to diseases commonly called *surgical cases*, such as Hip Diseases, White Swellings, Cancers, (in their early stages,) and Caries and Necrosis of bone.

Connected with the establishment is a Dental Shop, where all calls in that profession will be attended to.

Address, H. P. BURDICK,
Alfred, Allegany Co., N. Y.

Central Railroad of New Jersey,

IN connection with the Lehigh Valley Railroad, opened to Mauch Chunk—WINTER ARRANGEMENT, commencing Nov. 19, 1855. Leave New York for Mauch Chunk from Pier No. 2 North River, at 7 30 A. M. For Easton, at 7 30 A. M. and 3 15 P. M. For Somerville, at 7 30 and 10 45 A. M., and 3 15 and 4 30 P. M. The above trains connect at Elizabeth with trains on the New Jersey Railroad, leaving New York from foot of Courtlandt street, at 7 30 and 11 A. M., 3 and 4 P. M.

Leave Plainfield for New York at 7 05 and 9 05 A. M., and 1 40 and 6 13 P. M.

JOHN O. STERNS, Superintendent.

Hudson River Railroad.

TRAINS leave Chambers street daily, for Albany and Troy. On and after MONDAY, Nov. 19, 1855, the trains will run as follows: Express Train 7 A. M., connecting with Northern and Western Trains. Mail Train 8 30 A. M. Through Way Train, 12 M. Express Train 5 P. M. For Hudson 3 30 P. M. For Poughkeepsie—Way Freight and Passenger Train, 12 30 P. M. For Peekskill, 5 30 P. M. For Sing Sing, at 4 20 and 9 P. M. For Dobbs' Ferry, 7 15 and 11 A. M. The Dobbs' Ferry, Sing Sing, Peekskill, and Hudson Trains stop at all the Way Stations. Passengers taken at Chambers, Canal, Christopher, and 31st streets. SUNDAY MAIL TRAIN at 4 P. M., from Canal street, for Albany, stopping at all the Mail Stations. M. L. SYKES, Jr., Superintendent.

Magnificent Floral Gift.

SUBSCRIBERS to the "CHRISTIAN DIADEM" for 1855, are entitled to a splendid steel engraving, the ☞ LILLY AND THE ROSE PERSONIFIED, being given *gratis* to all old and new subscribers who send us only ONE DOLLAR, by mail or otherwise.

Six Copies for Five Dollars.

The Diadem is a strictly moral and religious work—designed for the Christian family without regard to any particular denomination.

FIFTY ENERGETIC BUSINESS MEN are wanted immediately to circulate the "Diadem" throughout the Eastern and Western States. To such as can send good references the very best inducements will be given. Address Z. P. HATCH, Publisher, 9 Spruce street, New York. May 24—3m.

Seventh-day Baptist Publishing Soc.'s Publications.

The Sabbath Recorder,

Published Weekly.

Terms—$2 00 per Annum, in Advance.

The Sabbath Recorder is devoted to the exposition and vindication of the views and movements of the Seventh-day Baptist Denomination. It aims to promote vital piety and vigorous benevolent action, at the same time that it urges obedience to the commandments of God and the faith of Jesus. Its columns are open to the advocacy of all reformatory measures which seem likely to improve the condition of society, diffuse knowledge, reclaim the inebriate, and enfranchise the enslaved. In its Literary and Intelligence Departments, care is taken to furnish matter adapted to the wants and tastes of every class of readers. As a Religious and Family Newspaper, it is intended that the *Recorder* shall rank among the best.

The Sabbath-School Visitor,

Published Monthly.

Terms per annum—Invariably in advance:

One copy	$ 25
Five copies to one address	1 00
Twelve copies to one address	2 00
Twenty copies to one address	3 00
Twenty-eight copies to one address	4 00
Forty copies to one address	5 00

The Seventh-day Baptist Memorial,

Published Quarterly.

Terms—$1 00 a Year, 25 Cents a Number.

Each number of the *Memorial* will contain a lithographic portrait of a Seventh-day Baptist preacher, together with a variety of historical, biographical, and statistical matter, designed to illustrate the rise, progress, and present condition of the Seventh-day Baptist Denomination. Wood-cuts of meeting-houses will be introduced from time to time in connection with the history of the churches.

[The first, second, and third volumes of the *Memorial*—being for the years 1852-3-4—may be had bound, for the subscription price and the cost of binding.]

The Carol:

A Collection of original and selected Music and Hymns, for the use of Sabbath-Schools, Social Religious Meetings, and Families. Compiled by Lucius Crandall. 128 pages octavo; price 35 cents per copy.

The *Carol* is designed principally for Sabbath-Schools, and contains Music and Hymns adapted to all ordinary occasions, and to such special occasions as the sickness of teachers, funerals, anniversaries, &c. A number of pieces suitable to social and public worship, together with a few Temperance Songs, are included in the book. It contains 93 tunes, and 156 hymns.

☞ Orders and remittances for the above should be addressed to the General Agent, GEORGE B. UTTER, No. 9 Spruce-st., New York.

Postage.

The postage on the Sabbath Recorder is 13 cents a year in the State of New York, and 26 cents in any other part of the United States, payable quarterly or yearly in advance.

The postage on the Sabbath-School Visitor is 3 cents a year in the State of New York, and 6 cents in any other part of the United States, payable in advance.

The postage on the Seventh-day Baptist Memorial is 2 cents a year in any part of the United States when paid in advance, or 4 cents a year when not paid in advance.

Miscellaneous.

President's Message,

Concluded from the First Page.

government in this respect, and maintained the self-constituting rights of the States. In truth, the thing attempted was, in form alone, action of the general government, while in reality it was the endeavor, by abuse of legislative power, to force the ideas of internal policy, entertained in particular States, upon allied independent States. Once more the constitution and the Union triumphed signally. The new Territories were organized without restrictions on the disputed point, and were thus left to judge in that particular for themselves; and the sense of constitutional faith proved vigorous enough in Congress not only to accomplish this primary object, but also the incidental and hardly less important one, of so amending the provisions of the statute for the extradition of fugitives from services, as to place that public duty under the safe-guard of the general government, and thus relieve it from obstacles raised up by the legislation of some of the States.

Vain declamation regarding the provisions of law for the extradition of fugitives from service, with occasional episodes of frantic effort to obstruct their execution by riot and murder, continued for a brief time, to agitate certain localities. But the true principle of leaving each State and Territory to regulate its own laws of labor according to its own sense of right and expediency, had acquired fast hold of the public judgment, to such a degree, that by common consent, it was observed in the organization of the Territory of Washington.

When more recently, it became requisite to organize the Territories of Nebraska and Kansas, it was the natural and legitimate, if not the inevitable, consequence of previous events and legislation, that the same great and sound principle, which had already been applied to Utah and New Mexico, should be applied to them;—that they should stand exempt from the restrictions proposed in the act relative to the State of Missouri.

These restrictions were, in the estimation of many thoughtful men, null from the beginning, unauthorized by the constitution, contrary to the treaty stipulations for the cession of Louisiana, and inconsistent with the equality of the States.

They had been stripped of all moral authority, by persistent efforts to procure their indirect repeal through contradictory enactments. They had been practically abrogated by the legislation attending the organization of Utah, New Mexico, and Washington. If any vitality remained in them, it would have been taken away, in effect, by the new territorial acts, in the form originally proposed to the Senate at the first session of the last Congress. It was manly and ingenious, as well as patriotic and just, to do this directly and plainly, and thus relieve the statute book of an act, which might be of possible future injury, but of no possible future benefit; and the measure of its repeal was the final consummation and complete recognition of the principle, that no portion of the United States shall undertake, through assumption of the powers of the general government, to dictate the social institutions of any other portion.

The scope and effect of the language of repeal were not left in doubt. It was declared, in terms, to be "the true intent and meaning of this act not to legislate slavery into any Territory or State, nor to exclude it therefrom, but to leave the people thereof perfectly free to form and regulate their domestic institutions in their own way, subject to the constitution of the United States."

The measure could not be withstood upon its merits alone. It was attacked with violence on the false or delusive pretext, that it constituted a breach of faith. Never was objection more utterly destitute of substantial justification. When, before, was it imagined by sensible men, that a regulative or declarative statute, whether enacted ten or forty years ago, is irrepealable,—that an act of Congress is above the constitution? If, indeed there were in the facts any cause to impute bad faith, it would attach to those only, who have never ceased, from the time of the enactment of the restrictive provision to the present day, to denounce and to condemn it; who have constantly refused to complete it by needful supplementary legislation; who have spared no exertion to deprive it of moral force; who have themselves again and again attempted its repeal by the enactment of incompatible provisions; and who, by the inevitable reactionary effect of their own violence on the subject, awakened the country to perception of the true constitutional principle, of leaving the matter involved to the discretion of the people of the respective existing or incipient States.

It is not pretended that this principle, or any other, precludes the possibility of evils in practice, disturbed as political action is liable to be by human passions. No form of government is exempt from inconveniences; but in this case they are the result of the abuse, and not of the legitimate exercise, of the powers reserved or conferred in the organization of a Territory. They are not to be charged to the great principle of popular sovereignty; on the contrary, they disappear before the intelligence and patriotism of the people, exerting through the ballot box their peaceful and silent but irresistible power.

If the friends of the constitution are to have another struggle, its enemies could not present a more acceptable issue than that of a State, whose constitution clearly embraces "a republican form of government," being excluded from the Union because its domestic institutions may not in all respects comport with the ideas of what is wise and expedient entertained in some other State. Fresh from groundless imputations of breach of faith against others, men will commence the agitation of this new question with indubitable violation of an express compact between the independent sovereign powers of the United States and of the republic of Texas, as well as of the older and equally solemn compacts, which assure the equality of all the States.

But, deplorable as would be such a violation of compact in itself, and in all its direct consequences, that is the very least of the evils involved. When sectional agitators shall have succeeded in forcing on this issue, can their pretensions fail to be met by counter pretensions? Will not different States be compelled respectively to meet extremes with extremes? And, if either extreme carry its point, what is that so far forth but dissolution of the Union? If a new State, formed from the territory of the United States, be absolutely excluded from admission therein, that fact of itself constitutes the disruption of union between it and the other States. But the process of dissolution could not stop there. Would not a sectional decision, producing such result by a majority of votes, either northern or southern, of necessity drive out the oppressed and aggrieved minority, and place in presence of each other two irreconcileably hostile confederations?

It is necessary to speak thus plainly of projects, the offspring of that sectional agitation now prevailing in some of the States, which are as impracticable as they are unconstitutional, and which, if persevered in, must and will end calamitously. It is either disunion and civil war, or it is mere angry, idle, aimless disturbance of public peace and tranquility. Disunion for what? If the passionate rage of fanaticism and partisan spirit did not force the fact upon our attention, it would be difficult to believe, that any considerable portion of the people of this enlightened country could have so surrendered themselves to a fanatical devotion to the supposed interests of the relatively few Africans in the United States, as totally to abandon and disregard the interests of the twenty-five millions of Americans—to trample under foot the injunctions of moral and constitutional obligation,—and to engage in plans of vindictive hostility against those who are associated with them in the enjoyment of the common heritage of our national institutions.

Nor is it hostility against their fellow citizens of one section of the Union alone. The interests, the honor, the duty, the peace, and the prosperity of the people of all sections are equally involved and imperilled in this question. And are patriotic men in any part of the Union prepared, on such an issue, thus madly to invite all the consequences of the forfeiture of their constitutional engagements? It is impossible. The storm of phrensy and faction must inevitably dash itself in vain against the unshaken rock of the Constitution. I shall never doubt it. I know that the Union is stronger a thousand times than all the wild and chimerical schemes of social change, which are generated, one after another, in the unstable minds of visionary sophists and interested agitators. I rely confidently on the patriotism of the people, on the dignity and self-respect of the States, on the wisdom of Congress, and above all, on the continued gracious favor of Almighty God, to maintain, against all enemies, whether at home or abroad, the sanctity of the Constitution and the integrity of the Union.

FRANKLIN PIERCE.

WASHINGTON, December 31, 1855.

DO YOU EAT PORK?—Physicians have just discovered that the tape worm only troubles those who eat pork. The *Gazette Medicale* asserts that the Hebrews are never troubled with it; that pork butchers are peculiarly liable to it, and that dogs fed on pork are universally so afflicted; in fact, it turns out that a small parasite worm, called crystecersas, (from two words signifying a small insect and a tail,) which much affects pork, no sooner reaches the stomach than, from the change of diet and position, it is metamorphosed into the well-known tape worm; and the experiments of M. Kuchenmeister, of Zittoria, upon a condemned criminal, have established the fact beyond all contradiction. Pork eaters will please make a note.

Canada is rapidly becoming more independent of England. Out of 363,000 pounds of tea imported into Canada last year, only 66,000 came by way of sea, the remaining through the United States. Of £301,000 worth of sugar, only £145,000 worth came by sea. Of molasses, only £23,000 out of an import of £66,000. Of coffee, only £5,900 out of an import of £42,000.

Horses and Wolves.

In a state of freedom says the *Portfolio*, the horse is a powerful enemy to contend with. Valient in disposition, and showed by nature with a consciousness of his strength, he is able to wage fearful war when occasion requires. The horses of the Russian steppes, which are congregated together under the care of a herdsman, in large droves or "taboons," are often called upon, especially in the spring season, when the foals are delicate, and the wolves rendered desperate by hunger, to defend their young from the attacks of these ravenous animals. A traveler in Russia says that at such times—

"The Russian wolf trusts rather to cunning than to strength. For a party of wolves openly to attack a taboon at noon-day would be to rush upon certain destruction, and, however severely the wolf may be pressed by hunger, he knows his own weakness too well to venture on so absurd an act of temerity. At night, indeed, if the taboon happen to be a little scattered, and the wolves in tolerable numbers, they will sometimes attempt a rush, and a general battle ensues. An admirable spirit of coalition then displays itself among the horses. On the first alarm, stallions and mares come charging up to the threatened point, and attack the wolves with an impetuosity that often puts the prowlers to instant flight. Soon, however, if they feel themselves sufficiently numerous, they return, and hover about the taboon till some poor foal struggles a few yards from the main body, when it is seized by the enemy, while the mother, springing to its rescue, is nearly certain to share its fate. Then it is that the battle begins in real earnest. The mares form a circle, within which the foals take shelter. We have seen pictures in which the horses are represented in a circle, presenting their hind hoofs to the wolves, who thus appear to have the free choice to fight or let it alone. Such pictures are the mere result of imagination, and bear very little resemblance to the reality, for the wolf has, in general, to pay much more dearly for his partiality to horse-flesh. The horse, when they attack wolves do not turn their tails towards them, but charge upon them in a solid phalanx, tearing them with their teeth, and trampling on them with their feet. The stallions do not fall into the phalanx, but gallop about with their streaming tails and erected manes, and seem to act at once as generals, trumpeters and standard bearers. Where they see a wolf they rush upon him with reckless fury, mouth to mouth, or if they use their feet as weapons of offence, it is always with the front, and not with the hinder hoof that the attack is made. With one blow the stallion often kills his enemy or stuns him. If so, he snatches the body up with his teeth, and flings it to the mares, who trample upon it till it becomes hard to say what kind of an animal the skin belonged to. If the stallion, however, fail to strike a home blow at the first onset, he is likely to fight a losing battle, for eight or ten hungry wolves fasten on his throat, and never quit him till they have torn him to the ground; and if the horse be prompt and skillful in attack, the wolf is not deficient in sagacity, but watches for every little advantage, and is quick to avail himself of it; but let him not hope, even if he succeeded in killing a horse, that he will be allowed leisure to pick the bones; the taboon never fails to take ample vengeance, and the battle almost invariably terminates in the complete discomfiture of the wolves, though not, perhaps, till more than one stallion has had a leg permanently disabled, or has had his side marked for life with the impress of his enemy's teeth.

These grand battles happen but seldom, and when they do occur, it is probably always against the wolf's wish. His system of warfare is a predatory one, and his policy is rather to surprise outposts, than to meditate a general attack. He trusts more to his cunning than his strength. He will creep cautiously through the grass, taking especial care to keep to leeward of the taboon, and he will remain crouched in ambush till he perceives a mare and her foal grazing a little apart from the rest. Even then he makes no attempt to spring upon his prey, but keeps creeping nearer and nearer, with head leaning on his fore feet, and wagging his tail in a friendly manner, to imitate as much as possible the movements and gestures of a watch dog. If the mare, deceived by the treacherous pantomime, venture near enough to the enemy, he will spring at her throat, and dispatch her before she has time to raise an alarm; then seizing on the foal, he will make off with his booty, and will often be out of sight before either herd or herdsman suspect his presence. It is not often, however, that the wolf succeeds in obtaining so easy a victory. If the mare detect him, an instant alarm is raised, and should the tabuntshik be near, the wolf seldom fails to enrich him with a skin, for which the fur merchant is at all times willing to pay his ten or twelve roubles. The wolf's only chance on such occasions, is to make for the first ravine, down which he rolls head foremost, a gymnastic feat that the tabuntshik on his horse cannot venture to imitate."

The Gulf-Stream.

Lieut. Maury has proved beyond any reasonable doubt, that the Gulf-Stream has an important influence in tempering the climate of Western Europe. Hugh Miller, in a notice of Maury's recent volume, published by the Harper's, confirms the theory, which he has advocated so ably. He says:—

"Britain and Ireland owe the genial, equable warmth that ripens year after year their luxuriant crops, and renders their winters so mild that the sea never freezes around their shores, not, at least directly, to the distant sun. Like apartments heated by pipes of steam or hot water, or greenhouses heated by flues, they derive their warmth from a heating agent laterally applied. They are heated by warm water. The Great Gulf Stream, which, issuing from the Straits of Florida, strikes diagonally across the Atlantic, and, impinging on our coasts, casts upon them not unfrequently the productions of the West Indies, and always a considerable portion of the warmth of the West Indies, is generally recognized as the heating agent which gives to our country a climate so much more mild and genial than that of any other country whatever similarly situated. Wherever its influence is felt—and it extends as far north as the southern shores of Iceland, Nova Zembla, and the North Cape—the sea in Winter tells of its meliorating effects, by never freezing; it remains open, like those portions of a reservoir or canal into which the heated water of a steamboiler is supposed to escape. In some seasons—an effect of unknown causes—the Gulf Stream impinges more strongly against our coasts than at others, and it did so in 1775, when Benjamin Franklin made his recorded observations upon it—the first of any value which we possess; and again during the three mild winters that immediately preceded the last severe one, and which owed their mildness, apparently to that very circumstance. It was found during later seasons, that the temperature of the sea around our western coasts rose from one and a half to two degrees above its ordinary average; and our readers must remember how, during these seasons, every partial freezing that set in at once yielded to a thaw whenever a puff of wind from the west carried into the atmosphere the caloric of the water over which it swept. The amount of heat discharged into the Atlantic by this great ocean current is enormous. 'A simple calculation,' says Lieut. Maury, 'will show that the quantity of heat discharged over the Atlantic from the waters of the Gulf Stream in a Winter day, would be sufficient to raise the whole column of atmosphere that rests upon France and the British Islands from the freezing point to Summer heat.' 'It is the influence of the stream upon the climate,' he adds, 'that makes Erin the Emerald Isle of the sea, and clothes the shores of Albion with evergreen robes; while in the same latitude, on the other side, the shores of Labrador are fast bound in fetters of ice.'"

Management and Breeding of Sheep.

At this season of the year, sheep demand more than ordinary attention. They should be placed in the fold at night, and be allowed what straw or other dry food they will eat. If possible, let them run on the highest and driest land on the farm. Wet meadows are injurious to sheep at all times, but particularly so in the fall and spring of the year.

Wool is a drug, and many—unwisely, as we think—are slaughtering their sheep. If a farmer, however, thinks it is for his interest to lessen his flock, all very well; but let him guard against the error of disposing of his *best* sheep because their carcases happen to command a little higher price. To carefully select out the best ewes and keep them for breeding, and sell the old and poor ones, would be better economy.

The high price of good mutton is drawing the attention of farmers to those breeds of sheep which mature early, and afford mutton rather than wool. No one can question that the Leicester or South Down sheep of any of the breeds of "long" or "middle" wool sheep, will fat easier and produce more, not to say better mutton, for the food consumed, than the Merino or other fine wooled breeds. It is well known that highly organized matter, whether vegetable or animal, is obtained only by a great consumption of matter or force. We obtain a given amount of vegetable matter in the white turnip at a less expense to the soil than the same amount of matter in the sugar beet, mangel wurtzel, or carrot, because the latter is much more highly elaborated. We believe the same law holds good in the animal kingdom. In a scientific sense, therefore, fine mutton or fine wool cannot be produced as cheaply as coarse mutton or coarse wool. The Sussex or true South Down is probably the finest and most highly organized breed of mutton sheep, and the Cotswold the coarsest, and Mr. Lawes' experiments demonstrate that much more mutton and wool, such as it is, can be obtained for the food consumed, from the Cotswold than from the South Down. There seems to be a gradual gradation, which is quite remarkable. Sussex Downs are a finer breed than Hampshire Downs, Hampshire Downs than Cotswolds, and Cotswolds than Leicesters, and the experiments referred to show that more food is required to produce 100 lbs. of mutton with Sussex Downs than with Hampshires, more with Hampshire Downs than with Leicesters, and more with Leicesters than with Cotswolds. The price of the mutton in Smithfield market, however, followed the same scale, and counterbalanced the seeming gain, the Sussex Down mutton commanding three cents per pound more than the Cotswold.

It is highly probable that Merinoes, being a still more highly organized breed than the South Down, would require still more food for the production of mutton and wool. Their mutton and wool, therefore, must command a higher price than coarse, or they cannot be produced. This is contrary to the opinion of many writers, and we shall be glad if they will discuss the subject through our pages. We have not now space, however, to elaborate this idea.

Mutton is in demand. In a year or two fine wool will also be in demand at fair prices. Under these circumstances it will be impolitic to sacrifice the fine wooled sheep and stock the farm with the coarse wooled mutton breeds; for before you may have many for sale, fine wool may be again in the ascendant. Would it not be a wiser course to carefully examine, at this time, the docks, and select out every poor sheep for immediate disposal. All the wethers that are in thriving condition should be placed by themselves, and allowed a liberal diet. Before next February they will command a high price for the butcher. The ewes we would divide into two lots. If the flock is derived from the common stock of the country, crossed with fine wooled bucks, will find some ewes with fine and heavy fleeces, while others are larger and coarser and possess more of the characteristics of the mutton breeds. The former should be placed by themselves and at the proper season, say middle of December, have the best fine wooled buck at command placed with them.

The others we would immediately put to a coarse wooled buck; South Down or Leicester. The lambs would come about the first of April, and if provided with dry, comfortable quarters, and nutritious food, would be worth by the middle of June in any of our large cities from three to five dollars ahead.

We know many farmers who have adopted this method with much success, and our principal object in throwing out these hasty remarks is to induce them to give their experience to our readers.

[Country Gentleman.

WHO DOES THE WORK?—In answer to this question, Thomas Carlyle says:—

"The unsuccessful man is often so because he is too wide for real success. He has too many plans; he is fond of too many pursuits. The man who succeeds is generally the narrow man; the man of one idea—who works out nothing but that; sees everything only through the light of that; in short, the fanatic. By fanatics, whether military, commercial, or religious, and not by liberal-minded men, at all, has the world's work been done in all ages. Amid modern cants, one of the most mistaken is the cant about the 'mission of genius,' the 'mission of the poet.' Poets, we hear in some quarters, are the anointed kings of mankind, at least so the little poets sing, each to his little fiddle. There is no greater mistake. *It is the practical, prosaic fanatic who does the work*, and the poet, if he tries to do it, is certain to put down his spade every five minutes to look at the prospect, and pick flowers, and moralize on dead asses, till he ends a 'Nero in spite of himself,' fiddling melodiously while Rome is burning."

Aftermath, or Second Hay Crop.

The intrinsic value of aftermath, does not, by the generality of our farmers, appear to be properly appreciated. After many year's experience, I am inclined to regard good aftermath one of the best and most salutary articles of food for young animals, that the farm affords. Many, I am aware, will dissent from this view in consequence of the injudicious methods usually adopted in curing it. To be cut in clear, dry weather, and permitted to remain in the swath till the grass has wilted; it should then be turned, and when wilted throughout, be carefully and evenly spread. A few turnings will be sufficient to "make it," or bring it to that state which will warrant its being put in cock. When the grass is very succulent, a small quantity of salt sprinkled on as the cocks are found, will tend greatly to accelerate the curative process, and add also very considerably to the nutriousness of the hay. Owing to the large quantity of moisture contained in aftermath, it is rarely well cured, and being thrown into close and compact cocks—often when the weather is damp—the acid fermentation which results from the presence of excessive moisture, greatly deteriorates the article and renders it unfit for use as a food for stock.

In the autumn of 1834, I had a piece of soil on which there was produced a most abundant crop of aftermath, the grasses being mostly red clover and herds-grass. I had previously been induced to consider the article as nearly valuless; but at the suggestion of a neighbor—a man of much practical experience—I determined to make an experiment, and ascertain, as near as circumstances would enable me to do so, the value of the same for feeding purposes. The grass was mowed early in the morning, and was allowed to remain, the weather being very warm, till about five o'clock in the afternoon, when it was turned to prevent the portions that had received the benefit of the air and of the solar rays from the injurious effects of the heavy night dew, which if it effects no other injurious result, renders the fibre crisp, and less disposed to become elastic and solid when finally cured. The next day, the swarths were spread, care being had to shake out thoroughly all the dense and compact portions, and to disseminate the whole evenly and lightly over the ground supposing the same course would be judicious here as in the details of ordinary hay-making, I kept the mass stirring during the day, and at night, before the dew commenced falling, the whole was put in cock. The same process was pursued the next day, with the exception that on putting the hay in cock, a pint of fine salt was sprinkled over the layers as they were deposited by the fork. In this condition, it remained two days, when it was carted to the barn and mowed about six quarts of salt being added, as there was some succulence which I apprehended might prove injurious to the hay, especially as I designed it for calves and young cattle. I commenced feeding it to the latter immediately on their being taken from the pasture—the hay being chaffed and mixed with rasped roots—principally carrots and ruta baga turnips, with a small quantity of corn and cob meal. The feed was prepared the day previous to feeding it out, until the weather became so cold as not to admit of it, when warm water was added. I never yet have seen a more rapid development of flesh and muscle than was induced by this method of feeding, nor have I seen animals kept in better health. The calves—eight in number—did equally well, and its effect upon cows, though perhaps not so markedly apparent, was yet very favorable.

Whether, on the whole, the cutting of aftermath, and its appropriation as a means of sustenance for stock, is more economical, and permitting it to decay on the soil, is a question as yet rather problematical. The quantity of decomposible matter contained in the produce of an acre of well set grass, would no doubt greatly augment the *humus* of the soil, provided it were allowed to remain on the ground, though it would be far more effectual could it be put beneath the surface. The presence of a large mass of undecayed vegetable matter on the surface of a mowing field, is certainly not desirable, and although it may act beneficially by keeping the soil light around the roots, and protecting to a limited extent from cold, during winter, its removal is nevertheless to be recommended when the crop can be applied as above.

[Cor. Germantown Telegraph.

The Two Greetings.

I was recently traveling in a stage-coach through one of the small towns situated upon the Kennebec. The day was hot and sultry, and having ridden far, I was about stretching myself upon my seat for a nap, when I was aroused by the entrance of a male passenger. It was a young man, apparently not over eighteen, dressed in the usual garb of the farmer; but from his dress alone I should not have known him; for he had not the healthy, hardy appearance of a New England farmer, but a thin, sallow countenance, a lustreless eye, a dry, hollow cough that told that consumption was upon his track. From his unusual appearance, I began to feel a desire to know something of his history. I was soon gratified. Through a garrulous old lady, by whom he had seated himself, I gleaned the following:

His mother was a widow in comfortable circumstances, living in the town through which we were now passing. She had two sons. And he—William, was the elder by several years.

William, feeling that that fatal disease, consumption, was upon him, some three months since, at the earnest request of his mother, had gone to one of our seaport towns, hoping that it might improve his health. For the first few weeks after his arrival, either that the change of air or different scenes had in some degree aroused him, or that he merely wished to gladden the heart of his poor mother, he had written hopeful letters home that he thought he was rapidly recovering. But if he really thought this, he soon found his mistake Although he felt himself sinking rapidly day by day, yet he continued to hope, as long as any chance for hope remained, but at last had given up in despair, and was now returning home to die. To die, thought I; must he, so young, once so full of hope, must he leave kind friends, his own sweet home, far more sweet to him at the thought that he must leave it forever—and pass to that bourne from which no traveler returns.

Ah, how sad the thought must be to him,
That he so young must die.

I was aroused from these gloomy reflections by the stopping of the coach before a substantial looking farm-house The inmates were partaking of their evening meal—but from the slight confusion and joyful exclamations within, I supposed they had recognized some one of our passengers. And I was right, for at that moment a fine, robust looking young man sprang lightly from the coach, and was met by the old farmer with extended hand; and, as each in turn took the hand of the young man, a heartfelt welcome proceeded from each mouth as they led, or rather dragged him into the house. All was happiness, all was joy, all pleasure there.

Then the driver mounted his box, and cracking his whip to the weary horses, we rode slowly on our way. Again the coach is stopped, and we are before another farmhouse. It is the home of William, our fellow passenger. Would that I could do full justice to that greeting; would that I could affect others by the recital of it, as beholding, it affected me But I cannot. His mother soon came forth to greet him. Sadly she took his hand; her lips moved, but she could not speak, her heart seemed ready to burst—tears, bitter, burning tears, rolled down her cheek, each telling its tale of sorrow and woe. Then his brother came forward—but reader, I will not weary your patience longer; suffice it to say that there was not a dry eye among the passengers, and even the hardy driver was seen to brush a tear from his rough cheek, as he mounted his box and drove slowly away.

Stall-Feeding of Sheep.

Mr. J. W. Colburne, of Springfield, Vermont, writes to the editor of the *Country Gentleman*, at Albany, New York, that he, being stimulated by what he had read in that paper of what one of his neighbors had done in the way of stall-feeding, had tried his hand at it this past winter, and had kept an account of the results.

In reading the items of the cost of the feed given by Mr. Colburne to his sheep, it will be seen that he reckons the cost of his hay at $10 per ton, and his corn at nearly double what it is worth in this State under ordinary circumstances. But we regard the fact of these fine-wooled sheep being brought to market in such fine condition, as proving that they may be kept with profit for their mutton as well as for their wool, and showing that there is not the least excuse for any farmer in this State to raise a poor coarse-wooled sheep, unless he is so careless and unambitious that he is willing to let every body else get ahead of him.

This intelligent Vermont farmer says:—"I culled one cow from my limited number of four, dried her 1st September; fed with pumpkins and short grass until 20th November; then with corn-stalks, hay, and corn in the ear (ground) until the 22d of March, when I sold her to go to Brighton market, with the following results:

Value of cow on 1st September	$15 00
Grass $2, three cart-loads pumpkins, $2	4 00
Hay and other coarse feed through the winter	7 00
Corn with the expense of carrying three miles to mill	24 00
Total cost of cow when fatted	$50 00

Estimated to weigh 1,000 lbs.; sale on foot at the barn, $72; profits, $22.

Her blood was three-fourths Native, one-forth Durham. She was large, and very fat; worth at Brighton, $7 00 per 100 lbs. which left $3 for drift, by railroad—just a fair compensation.

I also stall-fed 123 wethers, all of my own raising, four years old last May and June—a cross between the full-blood Spanish Merino and Saxony; very fine quality of fleece—a race which all wool-growers know never attain to a large size, I was offered $2 per head for them in November, and my neighbors considered it a very generous offer; it was all they could have brought at that time. I commenced feeding them with corn unground on the 24th of November, and followed it without change (except in quantity) until the 29th of March, when they went to Cambridge market, with the following results:

Sale 123 head at $6 60 per head		$811 80
Value of sheep in November	$246 00	
20 tons English hay of good quality	200 00	
200 bushels of corn at 80c (the market price)	160 00	
Cost of getting them to market by railroad	44 28	
		650 28
Profit,		$161 52

Or a fraction over $1 31 per head.

It is a satisfaction to the grower to be enabled to say, that these sheep, considering the superiority of blood for wool-growing purposes only, the fineness in texture of fleece, and the number raised and fatted in one flock, were deemed by the sheep dealers at Cambridge, equal if not superior to any ever taken to that market, from any one flock in Vermont.

And now a word as to the manner of feeding. My sheep and cattle yards have open sheds, with a southern or eastern exposure. Cattle are stabled nights, and mostly stormy days; sheep go out and in at their pleasure; pure aqueduct water in each yard, with a box of St. Ubes' salt constantly supplied, which I consider quite as essential in winter as summer; yards and sheds kept dry by straw and other coarse litter. A large stable connected with my sheep-yard enables me to shut them off when putting hay into their racks, or grain into their troughs, so that they all go to their feed together and share as equally as possible. I commenced this flock of wethers with twenty quarts of corn per day, and from time to time increased gradually as they would bear it, without producing the scours, until they would take 70 quarts per day, with as much good hay as they would eat without waste. It will not pay the cost and trouble to grind any kind of grain for sheep, though it always should be done for cattle or hogs. No whole grain passes the stomach of a sheep undigested. The ewes belonging to this flock of wethers (those of the same year's growth) were sold when two years old to go to Western New York, where I have no doubt they will contribute to the improvement in fine wool.

About six times the usual amount of winter wheat, it is said, has been sown in Western Missouri this year.

New York and Erie Railroad.

ON and after Wednesday, Sept. 19, and until further notice, Passenger Trains will leave the pier foot of Duane st., New York, as follows:

Dunkirk Express at 6.30 A. M. for Dunkirk.

Buffalo Express at 6.30 A. M. for Buffalo.

Mail at 8¼ A. M. for Dunkirk and Buffalo, and all intermediate stations. Passengers by this Train will remain over night at Owego, and proceed the next morning.

Rockland Passenger at 3 P. M. (from foot of Chambers-st.) via Piermont, for Sufferns and intermediate stations.

Way Passenger at 4 P. M. for Newburgh and Otisville and intermediate stations.

Night Express at 5½ P. M. for Dunkirk and Buffal

Emigrant at 6 P. M. for Dunkirk and Buffalo and intermediate stations.

On Sundays only one express train, at 5½ P. M.

These Express Trains connect at Elmira with the Elmira and Niagara Falls Railroad, for Niagara Falls, at Buffalo and Dunkirk with the Lake Shore Railroad for Cleveland, Cincinnati, Toledo, Detroit, Chicago, &c., and with first-class splendid steamers for all ports on Lake Erie.

D. C. McCALLUM. General Sup't.

Ayer's Pills.

FOR all the purposes of a Family Physic. There has long existed a public demand for an effective Purgative Pill which could be relied on as sure and perfectly safe in its operation. This has been prepared to meet that demand, and an extensive trial of its virtues has conclusively shown with what success it accomplishes the purpose designed. It is easy to make a physical *Pill*, but not so easy to make the best of all *Pills*—one which should have none of the objections, but all the advantages of every other. This has been attempted here, and with what success we would respectfully submit to the public decision. It has been unfortunate for the patient hitherto that almost every purgative medicine is acrimonious and *irritating* to the bowels. This is not. Many of them produce so much griping pain and revulsion in the system as to more than counterbalance the good to be derived from them. These *Pills* produce no irritation or *pain*, unless it arises from a previously existing obstruction or derangement in the bowels. Being purely vegetable, no harm can arise from their use in any quantity; but it is better that any medicine should be taken judiciously. Minute directions for their use in the several diseases to which they are applicable are given on the boxes. Among the complaints which have been speedily cured by them we may mention Liver Complaint, in its various forms of Jaundice, Indigestion, Langor and Loss of Appetite, Listlessness, Irritability, Billious Headache, Billious Fever, Fever and Ague, Pain in the Side and Loins, for in truth, all these are but the consequence of diseased action of the liver. As an aperient, they afford prompt and sure relief in Costiveness, Piles, Colic, Dysentery, Humors, Scrofula and Scurvy, Colds, with soreness of the body, Ulcers and impurity of the blood; in short, any and every case where a purgative is required.

They have also produced some singularly successful cures in Rheumatism, Gout, Dropsy, Gravel, Erysipelas, Palpitation of the Heart, Pains in the Back, Stomach, and Side. They should be freely taken in the spring of the year, to purify the blood and prepare the system for the change of seasons. An occasional dose stimulates the stomach into healthy action, and restores the appetite and vigor. They purify the blood, and, by their stim[illegible] action on the circulatory system, renovate th[illegible] of the body, and restore the wasted or di[illegible]gies of the whole organism. Hence an occasi[illegible]e is advantageous even though no serious derangement exists; but unnecessary dosing should never be carried too far, as every purgative medicine reduces the strength, when taken to excess. The thousand cases in which a physic is required cannot be enumerated here, but they suggest themselves to the reason of every body; and it is confidently believed this Pill will answer a better purpose than any thing which has hitherto been available to mankind. When their virtues are once known the public will no longer doubt what remedy to employ when in need of a cathartic medicine.

Being sugar wrapped they are pleasant to take, and being purely vegetable, no harm can arise from their use in any quantity.

For minute directions, see the wrapper on the Box.

Prepared by Dr. J. C. AYER, Practical and Analytical Chemist, Lowell, Mass.

Price 25 Cents per Box. Five Boxes for $1 00.

Ayer's Cherry Pectoral,

FOR the rapid cure of Coughs, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption. This remedy has won for itself such notoriety for its cures of every variety of Pulmonary diseases, that it is entirely unnecessary to recount the evidences of its virtues in any community where it has been employed. So wide is the field of its usefulness, and so numerous the cases of its cures, that almost every section of the country abounds in persons publicly known, who have been restored from alarming and even desperate diseases of the lungs by its use. When once tried its superiority over every other medicine of its kind is too apparent to escape observation, and where its virtues are known, the public no longer hesitate what antidote to employ for the distressing and dangerous affections of the pulmonary organs which are incident to our climate. And not only in formidable attacks upon the lungs, but for the milder varieties of *Colds, Coughs, Hoarseness, &c.* and for Children it is the pleasantest and safest medicine that can be obtained.

As it has long been in constant use throughout this section, we need not do more than assure the people its quality is kept up to the best that it ever has been and that the genuine article is—

The Sabbath Recorder.

EDITED BY GEO. B. UTTER AND THOS. B. BROWN. "THE SEVENTH DAY IS THE SABBATH OF THE LORD THY GOD." TERMS—$2 00 PER ANNUM, IN ADVANCE.

VOL. XII.—NO. 32. NEW YORK, FIFTH-DAY, JANUARY 17, 1856. WHOLE NO. 604.

The Sabbath Recorder.

THAT OLD HAT.

Mrs. Mason and Mrs. Kent had accidentally met in the parlor of Mrs. Wells, a member of the same church as themselves. As they walked from the house in company, the conversation naturally turned upon the visit just made.

"I think," said Mrs. Kent, "that Mrs. Wells must be a very excellent woman; she seems to have such earnestness and spirituality. I shall cultivate her acquaintance; it will be profitable, I think. To tell the truth, I am ashamed to say, that I have hardly met her advances half way. I was not conscious of any prejudice; but something in her manner repelled me. I thought her excessive suavity artificial, but I fear I have done her injustice; it is *perhaps* the natural result of overflowing *kindness* of heart."

"I imagine your first impressions were the most correct," replied her companion; "there are some persons whose countenances and manners are a far better index to their character than their conversation."

"Then you do not like her; I thought, from the manner in which she spoke to you, that you were intimate."

"You received then the impression she designed to make; and perhaps paid me the compliment of supposing that I swallowed her fulsome flatteries. I entered no disclaimer, because I did not think them worth replying to. They only disgust me, and I am vexed that any one could have so low an opinion of me, to say such things at my face."

"You are severe."

"Perhaps so; but I own I have no patience with such fawning. I find it hard to be civil when she says such absurd things as she did to-day."

"May she not be sincere?—perhaps it proceeds from an excessive kindliness of feeling."

"Let her show kindness, then, where it is needed. But I will say no more; I ought not to prejudice you. Are you going home?"

"No; I have not quite finished my collections for the Tract cause, and shall make a few calls on my way. I believe that poor Jane Colton lives in this street, so I must leave you. I am almost ashamed to ask her for money, she is so very poor; but I suppose she will feel hurt if she is not called upon."

"She would indeed," replied Mrs. Mason; "you will find her ready for you, her mite neatly wrapped up and laid away. I was just thinking of her when you spoke of ——, but good morning, I will not detain you."

"Why should my remarks about Mrs. Wells have brought Jane Colton to mind?" thought Mrs. Kent, as she looked inquiringly at the numbers upon the doors of a long row of small tenement houses, till she came to 54. She knocked at the first door in the open entry, and a weak but rather fretful voice bade her "come in."

"Does Jane Colton live here?" she said, opening the door; "oh, Jane, it is you; how do you do to-day?"

"About the same as usual, ma'am," replied Jane; "but that's never well. I think I grow weaker every day, and shall soon have to give up work. But I'm glad to see you, Mrs. Kent, you've spoken many a kind word to me in church, but I never see you in my poor place afore. Won't you sit?"

She placed a chair, and Mrs. Kent sat down, while Jane, excusing herself, went on with her stitching, saying:

"You see I can't afford to be idle, ma'am, a minute on my well days; for some days I can't take a needle, with the pain in my side and my back."

"I called, Jane, to see if you wished to give anything to the Tract Society this month," said her visitor; "it seems hardly right to ask you, but I thought you would expect a call."

"So I did, and I have been looking for it several days, for it's getting late in the month. Here is all I have," said she, taking a small parcel tied up in paper from the bottom of her work-basket; "it's only eleven cents. I hoped to make it a shilling, but I shan't have no money till I get this shop-work done; and I'll have to buy some flour, for I'm a'most out of bread." Seeing that Mrs. Kent hesitated to take it from her, she said, "O, I shan't want; God always takes care of that; He never let me want yet, since I began to serve Him. I used to want often, but that was when I was a dreadful wicked cretur, and never cared a bit about doing right."

"Well, Jane, He has promised," said Mrs. Kent, "that our bread and water shall be sure, and that they that trust Him shall never be ashamed; but how is it that you are so very destitute just now? Have you had no work before this that you are doing, this week?"

"Yes, I worked two days for Mrs. Wells; one day ironing, and one day mending up things; but I did n't get paid."

"But you should have told Mrs. Wells that you needed your money, and I am sure she would have given it to you."

"Well, she thought she paid me, her kind of way. She said she'd noticed my hat was shabby going to church, and I'd ought to have a better, and so she gave me that old thing—" pointing to what might have been in its day a very nice Leghorn hat, but was now brown with age and careless usage. "She said I might get it fixed up for a trifle; but, dear knows where I'm to get the trifle; and then there's many a thing I wants more than a new hat. If it is shabby, nobody minds what old Jane Colton has got on her head."

"But, Jane, you should have told her you preferred the money, and she would no doubt have given it."

"Dear ma'am, you do n't know her. She's dreadful soft in the parlor to ladies, but she's right sharp in the kitchen. She makes the girls stir round pretty quick sometimes; she gets wonderful angry when things do n't go to her mind."

"But, Jane, I do not quite like to hear this; is it quite right for you to speak so of a fellow Christian?"

"Well, maybe it ain't, Mrs. Kent, and more too as she has been wonderful kind to me in times past by. She persuaded me to go to church first; and once when I was ill a-bed for two months, she never got tired of giving. I thought then I could have served her on my knees, but it seems as if she was always ready to give, but never ready to pay. Now there's a stove I took of her for a week's work, and how I'm a-going to make it do this winter in the coldest, the land knows. I think there is just as much religion in paying debts right, as there is in giving, and talking, and praying."

"We will not talk any more about this, Jane, and perhaps it will be better for you to pray over it, and not think too much about it; Mrs. Wells probably thinks she has paid you well. When you have finished this shop-work come to my house, and I think I can give you some sewing to do at home." Laying a bank bill lightly upon the old work basket, the collector for the Tract Society left the room, bearing with her as a precious gift the eleven hard-earned pennies of poor Jane Colton.

The spell which Mrs. Wells' graceful and earnest sentences had cast over the warm heart of this young Christian lady was rudely dispelled. Above all other virtues she valued sincerity, and though she often afterwards heard from her lips high and holy sentiments, and listened to her gifted prayers in the ladies' little praying circle, all fell like ice upon her heart, for they would, spite of herself, call up invariably visions of poor Jane Colton and *that old hat*. She buried the story in her own bosom, but her desire for the friendship of Mrs. Wells was at an end.

Who can tell the value of the example of a symmetrical Christian character? Its influence no words can estimate. "By their fruits ye shall know them," said He that spake as never man spake. And are these fruits only to be looked for in the outside, public life of the Christian? We must not only "let our light shine before men" in the outer world, but in the inner sanctuary of home, let it be manifest in every word and action that Christ dwelleth in our hearts. Religion is a thing to be carried by a Christian man to his counting-room or law office, and by a Christian woman to her nursery and her kitchen. It must move us all to gentleness with our children, as well as to all faithfulness in laboring in direct efforts for the cause of our Divine Master. Mrs. Wells' religion consisted more in feeling, and in works of mercy, than in the faithful performance of the duties of life. Our God is better pleased when we withhold not more than is meet, than when we scatter with a liberal hand. There are so many rewards to acts of benevolence in the gratitude of the recipient of our griefs or our sympathy, and in the simple pleasure which a kind act always throws back upon the heart, that to "love mercy" is very easy; but to "do justly" in all things, requires a higher, sterner exercise of piety.

> "The worldly wisdom of the foolish man
>   Is like a sieve that does alone retain
> The grosser substance of the worthless brain;
>   But thou, my soul, let thy brave though disdain
> So coarse a purchase: O be thou a fan
>   To purge the chaff, and keep the winnowed grain:
> Make clean thy thoughts, and dress thy mixed desires;
> Thou art Heaven's tasker; and thy God requires
> The purest of thy flower as well as of thy fires."

The Christian should strive so to live, that the daily records of his life might be written upon tablets of brass, reflecting the beams of the Sun of Righteousness, turning every letter into purest gold. We can do more for Christ by holy living than by the most earnest efforts to do good, without consistency in small matters. [N. Y. Observer.

PROTESTANTISM IN FRANCE.

At the recent meeting of the Evangelical Alliance in Paris, William Monod, of Rowen, said:—

"That however paradoxical it might appear, France is the natural and best auxiliary of Protestantism in Europe: 1st. By her *history*, which makes conspicuous the faith of our persecuted ancestors, and prefers against the faith of the persecutors an indictment which can never be refuted; for whilst Popery triumphed over Protestantism, it was itself wounded to death. 2d. By her *political constitution*. France was the first country to proclaim liberty of conscience and of worship. For the last sixty years, every successive government—the National Assembly, Napoleon I., the Bourbons, Louis Philippe, and Napoleon II., have all proclaimed it. Let France dare to practice what she has proclaimed, and the holy cause of this liberty will triumph, for, in order to triumph, Protestantism only wants a hearing. 3d. By her *literature*. Her language is universally known, and that, in a great measure, is owing to the Reformation; the works of the Reformers are admitted by Europe; then the persecution which dispersed them spread abroad the French tongue, until a door for the gospel was thus opened in every country. Her literature is constantly becoming more European; true, it is not always Christian; but it strikes more violent blows at Rome than ever Protestantism did, for in such controversy Christians would not indulge. It might be said that Catholicism also has its influential writers; true, but Bossuet's works are not so Roman Catholic, after all; and where would you find the Pope's supremacy, or the worship of saints and images, in Fenelon, Massillon, and Pascal, who were not without some taste of Rome's persecutions themselves? Is there any popular writer of the present day who does not do his best to subvert Popery? Not that he joins cause with them, but he states facts. The most accredited and the most popular journals are against Rome; the *Debats*, the *Siecle*, the *Presse*, and we have no better servant to our cause than the *Univers*. 4th. By her *moral and religious state*. France is not without some religious worship; true, but it is without religion. Now, there are two ways of being without religion, either because the religion of truth has been put aside, or because the religion of error has been trampled on; in other words, either from hatred for the gospel, or from disgust for superstition. Now France is without religion, not because she will have none, but because she is too much enlightened to keep that which has been given her. As a proof of this, see the veneration with which the people speak of Jesus Christ; see the crowds which flock to hear the truth in some towns and villages. God has therefore prepared France by its very irreligion to receive the religion of Jesus Christ. When the gospel was preached to her in the sixteenth century, it spread as in the times of the apostles, and nothing could put a stop to it except a war of extermination. France has now recalled it, and will finally receive it."

MISCHIEF MAKERS.

> "The mischief makers;
>   Nor do they trust their tongues alone,
>   But speak a language of their own;
>   Can read a nod, a shrug or look,
>   Far better than a printed book;
>   Convey a libel in a frown,
>   Or wink a reputation down."

The duties and obligations of social life are often misunderstood as well as sadly violated. The confidence of friends is abused, and the insidious, the hypocritical, and the malignant, take advantage of thoughtless expressions, uttered perhaps in moments of excitement, to provoke distrust, foment jealousy, and thus cause bitterness and ill-will. It has been well and forcibly said, "that to repeat what you have heard in social intercourse, is sometimes a deep treachery," and when it is not treacherous, it is often foolish. The idle tattler, who runs from door to door, listens eagerly to all that is said, then repeats, exaggerates, or by wicked insinuations, conveys a meaning that was never intended, is a source of infinite mischief, and often of bitter and hopeless feuds between neighbors and families. We can conceive of no treachery more deplorable or censurable, than that which abuses the frankness and confidence of an honest nature, and by persuasion or distrust, creates an offence, and inflicts a wound where nothing of the kind was intended. Thus a confidential conversation will be repeated, with a most solemn injunction not to betray the mischief maker, who not only tells the whole truth, but adds some unauthorized interpretation, or describes the manner as having been offensive, when the fact was exactly otherwise. Some dark suggestion, hint or innuendo, is also made, and thus a playful remark or a frank expression is tortured into slander, an insult or a slight. The breach thus created—unwillingly created, so far as the original parties are concerned—is widened from day to day by a double system of treachery and betrayal, the mischief maker professing to be confidential with the parties, and enjoining secresy upon both. Hence, hearts become estranged, friendships broken, and affection is stifled.

There are, we are aware, many mischief makers, who are so, thoughtlessly, foolishly, and without any deep, deliberate, or serious design of doing evil. They are simply babblers, or tattlers, who lack discretion, judgment, and common sense, and who have never been able to practice the philosophy of holding their tongues. But there are others who are subtle, wily, and adroit, and who, as if prompted by some incarnate fiend, seek for and study every opportunity to undermine, underrate, darken character, destroy reputation, impair confidence, and sever friendship. We can conceive of no darker illustration of human depravity. There is scarcely an individual in existence who could not be injured seriously, if not fatally, by such insidious and double-faced guile. It is impossible, at all times, to be watchful and wary, especially in social life; and when the intercourse is free, frank, and undisguised, at such times the thoughts and feelings are apt to be expressed with the utmost freedom, and even the weaknesses and prejudices of cherished friends to be alluded to, not in bitterness or weakness, but in confidence, sincerity, and sympathy. If, however, a malicious mischief maker happen to be at hand, it is the easiest thing in the world to misrepresent the real fact of the case, so as to annoy, irritate, and inflame, to create a sentiment of distrust and of coldness, and thus to lay the foundation of a misunderstanding, which, if followed up, is sure to end in enmity and ill will. Some persons are, moreover, quite sensitive on certain subjects, while others are particularly credulous. The mischief maker is sure to discover this, and play his game accordingly.

There might be many illustrations pointed out; suffice it to say, that this vice is heartless, cruel, and dangerous, and its victims, directly or indirectly, may be counted by thousands. It is such an easy thing to wound a sensitive spirit. It is so light a thing to stain or soil the reputation; confidence may be so readily disturbed; suspicion may be so promptly excited. How many merchants have had their credit ruined; how many honest men have had their prospects blighted, and their families subjected to all the horrors of poverty; how many unkindnesses have been provoked; how many hearts have been lacerated; how many families have been made miserable, by the thoughtless, or the vicious, the heedless, or the crafty and malignant propensity of the mischief maker. The poor wretch, who, in a moment of necessity, and laboring under the horrors of hunger, commits some paltry theft, with the object of satisfying the cravings of nature, is promptly arrested, convicted, and sent to a "durance vile." But how many destroyers of the peace of families, disturbers of the happiness of households, in brief, moral *assassins* of character, perform their wicked work so artfully, stealthily and hypocritically, that they see the ruin and the wreck they make, and yet contrive to escape the responsibility. Let them be assured, however, that a day of reckoning will come.

The best Recreation.—The celebrated musician, Haydn, was in company, when the subject of conversation was the best means of restoring mental energy after the exhaustion of long and difficult studies. One said he had recourse to a bottle of wine; another went into company; Haydn said that he retired to his closet and engaged in prayer, which exerted the most happy and efficacious influence on his mind.

THE VERGE OF JORDAN.

I stand upon the river's verge,
  Its waves break at my feet;
And can the roar of this dark surge
  Sound in my ear so sweet?
Higher and higher swells its wave,
  Nearer the billows come!
And can a dark and lonely grave
  Outweigh a long-loved home?

'Tis not alone the billow's roar
  That falls upon my ear;
But music from that far-off shore
  Is wafted sweet and clear;
For angel harps are tuned to cheer
  My faltering human faith,
And angel tongues are chanting there
  Triumphal hope in death.

Though dim and faltering grows my sight,
  It rests not on the grave;
It sees a land in glory bright
  Beyond the darkening wave;
The gales that toss its crest of foam
  Come from that far-off shore,
They whisper of another home
  Where parting is no more.

The everlasting hills arise,
  Bright in immortal bloom;
The radiance of those sunny skies
  Illumines e'en the tomb;
And glorious on those hills of light
  I see my own abode,
E'en now its turrets are in sight—
  The city of our God!

Loved faces look upon me now,
  And well-known voices speak!
O! when they left me long ago,
  I thought my heart would break!
They beckon me to yonder strand,
  Their hymns of triumph swell,
I see my own, my kindred band,
  Earth, home, and time, farewell!

Welcome the waves that bear me o'er,
  Though dark and cold they be!
To gain my home on yonder shore
  I'll brave them joyously;
The snowy, blood-washed robe I'll wear.
  The palm of victory!
Welcome the waves that waft me there,
  Though dark and cold they be!

[New York Observer.

THE OLD VILLAGE PRINTING OFFICE.

BY B. F. TAYLOR.

But the old village had no hotels; only two houses of entertainment. One was "up street," and that was an inn, so and so's inn; the other was "down street," and that was a stage house, where, once a day, the yellow, mud-bespattered stage rocked up and brought to, and the well conditioned boniface came shuffling out from the great corner in the bar-room like an overfed spider, opened the stage-coach door, and let out the hungry passengers. They were always hungry when they got there, for breakfast was always ready for southern emigrants, and dinner for northern; but then the landlord was *not* an old spider, but a very jovial, pleasant sort of a man, who made everybody feel as much at home as he was, and nothing more home-like could be imagined, and so very well-to-do did he get at two shillings a meal.

So much for the old village, for here we are just now passing an orchard, and there, with a broad phylactery of tan-bark, is the printing office, whence was issued weekly, in olden times, the *Black River Gazette*. The office, a low white building, once tenanted by a lawyer, who has gone up to a higher court than any they have organized yet on earth, stood next the church. So they were, for once, side by side, the pulpit and the press; and no one has learned to turn out such enginery from forge and foundry, even to this day. We enter; there is ink on the floor, the print of five small fingers. Incline your ear, gentle reader, it is the *devil's!* Not he who wears but one boot, and is disagreeably redolent with brimstone, but the begrimed urchin in shirt-sleeves just creeping through the broken pickets of the orchard fence, with apples in each hand and one in his mouth, followed in his flight by something bearing a striking resemblance to a brick-bat.

But here we are. The walls are cobwebbed and dusty; the windows are curtained with newspapers; a very dim lantern to hold a good deal of light. Click, click—the footsteps of type; and there in the corner is the editor, publisher, proprieter, and printer, "setting up" an editorial from a very queer old case. Click, click; there's a pale young man, busy with a "death"—D-i-e-d, and so he goes slowly on as though he were actually following the bier. But then a death was a very rare thing; *very* rare, in the village and round in the woods, and it was worth pondering over. True, every body knew it already, but it must go into the paper, nevertheless, for there was somebody or other that had gone out into the "Genesee country," that had loved the living, and so the paper must follow him away there, if it could, that he might mourn the dead.

Wonderful decorations there are upon the walls; what marvelous borders to the handbills; what wonderful "Selims," that the man with a short coat and long whip could hardly hold; what "great sales" of small articles; what gay coaches, riding on the top of clouds, the four-in-hand all running away, and the nine inside all merry as Punch.

But not a picture of a railroad, or a steamboat. A strange old office in those old days.

But there in the farther corner stands a square frame of heavy timber, like a huge loom, such as they wove thought on; it is the old "*Ramage Press*." Its huge lever, its lazy platen, its ponderous tympan, its great ink balls, its creaking, groaning mechanism—there it stands in all its rudeness, the great triumph of this or any other age. A pair of tin sockets swung up by a wire above the dingy engine, bearing each a "brief candle," were the Castor and Pollux of the place. In the corner, in the dark, stood a solitary keg of ink; not a very great ways off four reams of a very greyish blue paper; but then the proprietor was "passing rich" at less than forty pounds a year.

It is publication day, and editor, pale apprentice, and dingy, are in an active state of unrest. The editor writes and says "we" and "our readers"—he has two hundred and fifty—and then the printer sets type, and then the publisher looks over the form, and then the pressman places it on the press, and "then comes the tug of war." It is pull and repeat, pull again and again repeat, and the "inside" comes off, sheet after sheet, with gravity of so many elephants; the candles get briefer and dimmer, but the two hundred and fiftieth is off at last, and they all, editor, publisher, printer, and pressman, get into the same coat, and beneath the same hat, and leave the devil to fold up the papers and sweep out the office.

Where then were your compound levers, your glittering cylinders, your faithful rollers, your panting furnaces, your press instinct with life and energy, that jarred on like a chariot over whole highways of white paper in an hour? Where the busy "jours," and the editorial corps? Where the steamer, and the railway trains, and the telegraphs, panting and shrieking and flashing, to transmit that paper's contents to the world's dim, cloudy ends?

The morning comes, and the inky imp of yesterday indulges in a clean face; his unkempt locks are out of snarl; he is transformed into a Mercury. Forth he goes, packages of papers beneath each arm, in his capacity of carrier-boy. He is none of your brisk, pert fellows, of the now-a-days order, but very meek is he indeed; and when the squire speaks to him a strong and hearty "good morning, my boy," he holds down his head, and deposits the answer in his bosom, as if it were a very delicate thing, and not yet able to fly. Like death, he visits every house, and his burden grows lighter as he proceeds. He does not chuck the papers, as they do now, over the gate and under the fence, but decently and demurely places it folded and damp in the hand of somebody commissioned to receive it. But he does n't ring, for there is nothing to ring in all the town, except the church bell, that the doctor brought home in his "cutter" one day from Utica, or somewhere there away.

His rounds are soon made; meanwhile, a sorry sort of horse—an editor's horse, you know—is blowing a solitary oat about a very large manger, the very last survivor of a very large family. Pretty soon Rosinate is led forth, and a pair of saddle bags, distended to the suffocating point, is brought out, followed by the Mercury and no devil, with his pocket plethoric with dough-nuts—what has become of that old-fashioned twisted luxury?—and a tin horn tethered to a button-hole by a bit of green string. It is with a sort of sheepish importance that he mounts by the aid of the proprietor, and wends his way, as they are very fond of saying, "out in the country," as if the old village was not positively lost in the very bosom of it.

And so he went, his horn resounding through the solitudes, and he as happy as a knight fresh from tournament. And that was the "N. S. E. W., the *News* of those old days. But what there was in the *Gazette*, and who they were that read it, must be passed over in a silence like that which now, alas! hangs like a great wing over the most of them—the fairest, and loveliest, and best. [Cayuga Chief.

A CONFESSION OF FAITH.

Mrs. Swisshelm, of the Pittsburgh *Saturday Visitor*, reviews the sermon of Archbishop Hughes on the recent dedication of the Cathedral in that city, in a remarkably intrepid fashion for a lady theologian. In the course of her article she gives a confession of faith, which is explicit enough, on the topics embraced in it:—

Bishop Hughes followed what he said was the example of Christ, and troubled his brain with no reasoning. He simply told us what we were to believe; but he did not tell us that Christ had forbid the apostles to reason, or that it had not been their custom to do so. We find that Paul "reasoned of righteousness, temperance, and judgment to come," until Felix trembled. All the immediate followers of Christ reasoned, and we would have been very glad if Bishop Hughes had followed their example, and adduced some reason to support his assertions that we must believe in the forms of the Church or be without reasonable hope of salvation. Or if he had told us *what* we should believe about those forms, we could have told how much we lacked of coming up to his standard.

We do believe in all the forms of the church that we have yet seen. That is, we believe the priests wear black petticoats, and the bishops wear purple petticoats and pasteboard caps. We believe the cathedral is the handsomest church in Pittsburgh, if the altar was covered with brown muslin, rough pine boards, or almost anything else. We believe that it cost more money than any other church—so much more, that if the surplus had been devoted to supporting poor Catholics in our city last winter, it would have prevented any of them from being a public charity.

We believe the tall white saints on the walls are all made of plaster; that they were made in Pittsburgh, and that they are very good saints. In short, we believe all the *Journal* reporter said about the church and the ceremonies of dedication; and moreover, we believe that if sprinkling did the walls any good, the Archbishop should have gone clear round the house, and not have left that south transept without a drop, and that if we went to that church, we would not sit in that part of it, for fear of something happening. We believe that that blanket, or whatever it was that Bishop Hughes wore around him that day, was about the reddest thing we ever saw, and had the brightest yellow border, and that to have worn it would have made a horse sweat as much as it did the Bishop. We believe the Bishops should petition the Pope for a dispensation from the labor of carrying so much finery on a warm day, and that it would have saved a great deal of labor, and answered the purpose just as well, if all the dresses had been put upon wire frames—such as are used in dry goods stores—and carried in the procession. We believe, too, that the price of these dresses would have bought a good deal of corn for the poor Catholics of Ireland in famine time, and we do most devoutly believe that every bishop looks as if the price of his wine and oysters would feed all the widows in any congregation. We never saw a set of men look better fed, and when we look at poor women toiling over the washtub for a pittance, and giving a part of it to support these jolly looking fellows, and to buy their fine clothes, we believe they are like the shepherds God speaks of, who "eat the fat and clothe themselves with the wool, and care not for the flock."

We do not know if this is the right way to believe in the forms of the Church; but this verifies the old predictions of our friends, that we would come to confession; but it is very likely that this belief is a mortal sin, and that we shall fail to get forgiveness.

Some more things we believe, and one of them is, that Christ and his apostles never dressed up like a set of circus buffoons, and exhibited themselves to the people at so much a-head; that the professing ministers of his, who use such means to get money are a burning disgrace to his name, and that they might very consistently let themselves and their robes out to Barnum, who could no doubt realize something handsome for both himself and them by exhibiting them at his Museum. So much for our hopes of salvation through belief in the forms of the Church.

AARON BURR.

The *Presbyterian Herald* gives the following facts connected with the closing scenes of Mr. Burr's life, which the editor says were told him soon after they occurred, by one who received them from an eye-witness, and which he does not remember to have seen stated in print:—

During Mr. Burr's last illness he was very restless and impatient toward those who were about his person, often indulging in profane and abusive language. His physician observing that mortification had commenced in the extremities, thought it his duty to inform him of the fact, and to assure him that whatever preparation he might wish to make for death should be made at once. In as gentle tones as he could command, he broached the subject, assuring him that within twenty-four hours, at the farthest, he would be a dead man. Mr. Burr replied, "Doctor, it can't be so. I feel easier and better than I have felt for several days." "That," replied the doctor, "is one of the surest evidences that what I have told you is true. Your limbs are free from pain because they are dead." Turning fiery eyes upon the doctor, he said, "Doctor, I can't die, I won't die, I shan't die. My father, and mother, and grand-parents, and uncles, and aunts, were all pious and godly people. They prayed for my conversion a thousand times, and if God be a hearer of prayer, he is not going to let me die till their prayers are answered. It is impossible that the child of so many prayers will be lost." He replied, "Mr. Burr, you are already dying." He then went over pretty much the same expressions as given above, and sunk into a stupor, and soon slept the sleep that knows no waking till the morning of the resurrection. We may not have given the precise language used by him, as years have elapsed since it was reported to us. Our informant received the impression that he had run the rounds of his inquity, all the while indulging the hope that, before he died, he should be converted, in answer to the prayers of his pious parents and friends. God, in his divine sovereignty, disappointed his expectations, and made him a monument of his wrath, and a beacon to all ungodly children who are building their hopes of heaven upon their connection with a pious ancestry. When such crucify the Son of God afresh, and put him to an open shame, they must not be disappointed if he puts them to everlasting shame and contempt, before his Father, and the holy angels, and assembled universe.

GOING IN AT THE ELEVENTH HOUR.

> "And about the eleventh hour he went out, and found others standing idle, and saith unto them, Why stand ye here all the day idle?"—*Matt.* 20: 6.

An old sailor, who was very ragged, and whose white head spoke the lapse of many years, was leaning against a post in conversation with another sailor. A member of the Bethel Union spoke to them, and particularly invited the old man to attend the prayer meeting. His companion, after hearing the nature of the invitation, said,

"Thomas, go in! Come! come! man, go into the meeting; it won't hurt you."

"Puh! Puh!" cried the old seaman, "I should not know what to do with myself. I never go to church or prayer meetings; besides, I am too old. I am upward of seventy, and I am very wicked, and have always been so; it is too late for me to begin, it is of no use; all is over with me, I must go to the devil."

After a moment's pause, the member, looking with pity upon the old veteran, answered, "You are the very man the prayer meeting is held for."

"How so?" he asked, with much surprise.

"Because Jesus Christ came into the world to save the chief of sinners. When young, I suppose, you were tempted to think it would be time enough to be religious when you came to be old?"

"Ah! that I did," replied the sailor.

"Now you are old, you say it is too late. Listen no longer to these suggestions; come with me; no time is to be lost, for Jesus is waiting to save you, poor sinner, or he would have sent you to that place where hope never comes, before this; your sins deserve it."

His companion then said, "Thomas, go to the prayer meeting. You have need, at your time of life, to prepare to die."

He went, and attended regularly. Some time after he was asked, "Well, my aged friend, do you think you are too much in years to be saved? too old in sin for the blood of Christ to cleanse you?"

"No, sir," said he; "I bless God I do feel hope, a blessed hope, which I would not give up for worlds; a hope which encourages me to think that God will be merciful to me and pardon me, old sinner as I am."

* * *

There are two things which ought to teach us to think but meanly of human glory: the very best have had their calumniators, the very worst their panegyrists.

OUR CONTROVERSY WITH S. S. GRISWOLD—NO. 4.

If the human machine is so organized that it must eventually wear out, whether man sins or not; that is, if (as our reviewer insinuates) "there is no connection between moral transgression and physical suffering or death," but "death is the result of man's material organization;" in what sense can Satan be said to have "the power of death?" (Heb. 2: 14.) Our reviewer has referred to this passage, as if it made against the views we advanced with regard to the way in which death was entailed upon mankind. Perhaps he did not reflect upon the difficulty which it opposes to his own doctrine. Satan did not get the start of the Creator, and into the dust of the ground—the material of which man's body was originally made—infuse the elements of death; for previous to that, the Spirit of God had moved upon the face of the waters, (Gen. 1: 2,) and imparted to chaotic matter that principle of vitality which fitted it for all the purposes to which the Creator was pleased to devote it. Neither is Satan the appointed *executioner* of death, for this prerogative the Divine Being reserves to himself. (Deut. 32: 39, 1 Sam. 2: 6.) So that in neither of these senses does Satan hold the empire of death; and on our reviewer's hypothesis, we cannot see the consistency of ascribing to him such a power.

We pass the famous passage in Rom. 5: 12, because the collateral topics which the exegesis of it involves might give rise to a discussion which would be tedious; though to our own mind it is perfectly conclusive. And notwithstanding our idea concerning the ground on which death was entailed upon mankind seems to Bro. G. "a novel theory, without any foundation, either in Scripture, reason, or philosophy," we see no inconsistency between it and the idea that natural death is an expression of God's displeasure against sin. For we *do* hold, that death came in consequence of man's sin, and that it would not otherwise have entered the world. In consistency with our view, Satan has the power of death by reason of the apostacy into which he tempted our first parents. "He was a murderer from the beginning." (John 8: 44.)

We say, death is an expression of God's displeasure against sin. Not that it is the proper penalty of the Law; for to this view there are insurmountable objections. But that it is a standing token of God's displeasure against the first transgression—the sin of Adam. So far as the proper penalty of the Law is concerned, every individual suffers for his own personal transgressions. (Ezek. 18: 20, Deut. 24: 16, Jer. 31: 29, 30.) But it seems to have been inconsistent with the wisdom of God to grant mankind a season of probation, under the Gospel, without keeping up, all the time, a token of his abhorrence of the sin which involved the world in ruin. Hence, even the Christian, to whom the penalty of the Law is entirely remitted, must nevertheless suffer natural death. His body is dead because of our sin, though the Spirit is life because of righteousness. (Rom. 8: 10.) Hence also infants, to whom personal trangression is not reckoned, die. (Rom. 5: 14.) Except Enoch and Elijah, none of the descendants of Adam have ever been excused from bearing this testimony of the Divine indignation against the sin of their progenitor.

The strictures of Bro. G. would seem to imply that we have presented a theory inconsistent with this view. He says we "get natural death into the world only through the Gospel dispensation." He thinks "Scripture affords no evidence that natural death was an accident of the Gospel dispensation. If the Bible any where teaches that natural death was the consequent of sin, it most expressly assigns it under the Adamic law, and not under Gospel order." Then, after quoting a few texts, he adds, "It is therefore plain, that if the sacred writers intended to speak of natural death as entering this world under either Adam or Christ, they assigned it a place under Adam, and to Christ they assigned the power to deliver from such natural death." (See *Recorder* of June 28th.)

We suppose he thought this was throwing a bomb-shell into our citadel. Perhaps it was, but we shall wait for a heavier fire before abandoning our position. We get death into the world through the Gospel dispensation, in the same sense that we get *affliction* and *temptation* into the world through the Gospel dispensation. If God did not wish to try men, or put them to the proof, whether they will submit to Jesus Christ or not, he would not send afflictions upon them, nor let any temptation bear upon them. Instead, he would visit them promptly with *punishment*. But because Jesus Christ is upon the throne, and because under Him mankind have a season of probation granted them, therefore afflictions are ordered, and temptations are made strong, that under their operation the disposition of every man's heart may be manifested. So that it may be said of them, as of death, that they "were introduced under a new dispensation of grace, and to answer important ends respecting it." They are the "furnace," in which God has chosen his people. (Isa. 48: 10.) Nevertheless, they are the fruit of sin; they came into the world with the apostacy, (Gen. 3: 17—19,) and their universality, and uninterrupted continuance from age to age, are (like death) a standing token of God's displeasure against that apostacy. Is *this* theory "neither orthodox nor heterodox, but *ab extra* to both?"

We had said, that "the constitution under which man was first placed did not recognize natural death—nor did it admit it." The inference which our reviewer draws from this is, that "natural death must be a miracle." And how does he prove it? Why, thus: "For if man's natural constitution did not admit death, then such constitution must be changed in order to permit death to enter. God, therefore, had in a miraculous manner to change man's first constitution, in order to render it possible for him to die. For, according to Bro. B.'s theory, natural death was impossible according to the course of nature."

We never said "natural death was impossible according to the course of nature;" of course, we are not responsible for the tautology. Moreover, we never said that "man's *natural* constitution did not admit of death." We said, "the constitution *under which he was first placed*." We used the term "constitution," not as denoting the particular structure and connection of parts which make up the human body, but to signify a system of fundamental principles for the government of rational and social beings—a system which was given to our parents in the garden, in the form of positive law, and enforced by this sanction: "In the day thou eatest thereof, thou shalt surely die." This constitution did not recognize natural death—the foregoing text denoting death of another kind, as Bro. G. has already admitted. Whether man's *natural* constitution admitted of death, is a point that we did not discuss.

We never supposed there was such an inherent vitality in man's body, as originally constituted, that it would continue to flourish in everlasting vigor without any supporting agent. And we see nothing to forbid the idea that "the tree of life" would have served as this supporting agent. Bro G. says, "It is difficult to conceive how natural death could have been prevented, (without miracle,) even though man had not sinned." But that principle by which the body continues to grow in strength and vigor for some forty or fifty years, in ordinary cases, certainly admits of extension so as to embrace a period of four or five hundred, as we have seen in respect to the antediluvians. Why it could not be indefinitely extended, mere philosophy is unable to tell. If some adequate supporting agent could be provided, which man might eat, and incorporate with his system, according to the ordinary laws of nutrition—would his living forever by means of such support be a *miracle?* Call it a miracle, if you choose; but we stand to our position, holding that if man had fulfilled the period of probation appointed him, he would have been allowed to take of the fruit of the tree of life, and eat and live forever. (Gen. 3: 22.) T. B. B.

THE IMPROVEMENT OF TIME.

"Redeeming the time, because the days are evil." —*Eph.* 5: 16.

An Italian philosopher expressed as his motto, that time was his estate. This is an estate which, if left unimproved, will yield no profit to its possessor, but which, if well improved, will bring in a rich and everlasting income. Time is the period of man's probation—the only period he ever will have to prepare for the retributions of the final judgment. Time is the season appointed to improve and perfect our own characters, to endure trials, to declare abroad the glory of God, to labor for the benefit and salvation of the afflicted, the poverty-stricken, the ignorant, the lost—in short, it is the season in which to "do good to all men as we have opportunity," and get prepared to enjoy "that rest which remains for the people of God." How great, then, are the interests connected with this brief existence of man on the earth! How appropriate the command to "redeem the time!" Not that time past can be literally recalled; but the present and future should be as highly prized as some article of property, for which we would pay a high price, in order to get it into our possession a second time. The idea is this, that we should highly prize our time, and improve all of it to the best advantage; and especially when "the days are evil," that is, disastrous. Men do this in worldly matters. An army, threatened with destruction from an opposing army, will make extraordinary efforts to save itself. So the Christian soldier should "stand in the evil days," having "on the whole armor of God," and fight manfully against all of his spiritual foes. The days in which we live are evil ones. This is evident from the following considerations:

1st. *From the fact that at the present time there are great facilities for acquiring wealth, and professed Christians are intensely anxious to secure it.* This intense desire for wealth is dangerous to the soul. Said Jesus, "The cares of this world, and the deceitfulness of riches, choke the word" of God, and it becometh "unfruitful." Said Paul, "They that will be rich fall into temptation, and a snare, and into many foolish and hurtful lusts, which drown men in destruction and perdition; for the love of money is the root of all evil, which while some coveted after, they have erred from the faith, and pierced themselves through with many sorrows." These are "evil days."

2d. *Because men are "lovers of pleasure more than of God."* Multitudes will go to a circus or some other place of public gathering for amusement, where but few will go to hear a pure Gospel preached, and where fewer still will embrace and obey it. And professedly pious men and women prefer the gratification of their own appetites, and to dress "in purple and fine linen," and make a show in the world, and to be like the world, before the godlike work of benevolence the gospel requires.

3d. It is a disastrous time, *because modern Spiritualism prevails.* This device of Satan is deceiving multitudes, who seek to the dead for instruction, rather than to God and his word. And these are persuaded, contrary to the teachings of Scripture, that there is a state of moral improvement beyond this life, which will end in the salvation of all men! Thus are men quieted in their sins, and led on to ruin.

4th. *When children rule their parents it is an "evil day."* Yes, when parents permit their children to grow up with unsubdued wills, with passions unrestrained—when children do not love or obey their parents, there is a strong probability that they will become a curse to society, and that they will live and die in their sins.

5th. *The general declension in religion,* is another evidence. Every careful observer is aware, that true piety is on the decline in our land. Many are now received and retained as church members, who give but little if any evidence of being true Christians. Indeed, a considerable portion of the members of Christian churches seem to be mainly, if not wholly, under the influence of worldly motives, in their acts. Indeed, much of the so-called benevolence of the present day, is nothing but selfishness in some form. And the multitude, instead of comparing their lives and actions and hearts with the holy laws of God, and the example of Christ, "compare themselves" with ungodly professors of religion, and thus become satisfied with themselves, when they ought to "repent, as in dust and ashes," before God. There is great danger that many will be deceived thus, and sink down to hell while expecting to go to heaven! Truly, these are evil days in which we live, and it becomes us to be aware of the dangers that surround us! Yes, and to "give diligence to make our calling and election *sure*."

Precious time is lost in a variety of ways. It is wasted frequently by sleeping too much. Many females employ about half of their lives in that which is unprofitable, and, worse than this, in laboring to minister to the depraved appetites of themselves, their families, and their guests. Much time is lost too in preparing splendid clothing, jewelry, &c. Time is lost in frequenting scenes of worldly amusement. Time is lost in reading unprofitable books, and in vain, unchaste, and slanderous conversation, and in very many other ways. Indeed, all time not spent in glorifying God is lost; yea, worse than lost; for while men abuse this precious gift of heaven, they are "treasuring up wrath against the day of wrath, and the revelation of the righteous judgment of God." That the rational beings God has made should employ all their time faithfully in his service, is no more than justice demands. But when we call to mind the wonders of redeeming love, we ought to feel that our obligation to God is greatly enhanced, and we should apply ourselves perseveringly to "the work of the Lord." Yes, there are weighty motives to move us on. "The love of Christ should constrain us;" the "exceeding and eternal weight of glory" should entice us; the wants of a "world lying in wickedness" should urge us forward; the doom of the slothful servant, who "hid his lord's money," and was sentenced to "outer darkness, where there is weeping and gnashing of teeth," should deter us from idleness. The fact that there are "evil days," should incite us to "watch and pray" and fight, that we be not overcome by our enemies. Satan is our enemy. So cunning is he, that we "should not be ignorant of his devices." The world is an enemy. The flesh is an enemy. And now, while Satan is making extra efforts to deceive and destroy; while the world allures more than formerly; while men generally are slaves to "the lust of the flesh;" while iniquity abounds, and the love of many has waxed cold; while the distinction between the saint and the sinner is scarcely discerned; O, how important that we "awake to righteousness, and sin not."

Reader, are you in the decline of life? See to it that with zeal and faithfulness in the cause of God, you spend your few remaining days. "Set your affections on things above, and not on things on the earth." You that are in middle life, O give to God and humanity the strength of your days. And you that are in early life, remember your Creator's claims, give him your whole heart and life, "sow to the Spirit, and of the Spirit you shall reap life everlasting." C. A. O.

THE FOOTPRINTS OF THE CELT.

JOHN MITCHELL, the celebrated Irish exile, gave a lecture at the Broadway Tabernacle, New York, on the evening of the 8th inst., on "the footprints of the Celt." The views which he presented were quite different from those which are generally received. He showed, from evidence that appeared conclusive and incontrovertible, that the great mass of the inhabitants of the British Isles are of the Celtic race. The Saxon invasion was composed mostly of military adventurers, with but few women and children, and was never sufficiently numerous to change the essential characteristics of the aboriginal inhabitants, but, on the other hand, the Saxons were themselves absorbed and changed, according to a law of population by which the numerically greater absorbs and assimilates the less. If these views are correct, the bulk of the inhabitants of this country are also of the Celtic race. In this view of the case, what is to become of the complacent self-glorification and boasting of Anglo-Saxondom? It is all a mistake. Anglo-Saxon is a nonentity—a sort of nobody. What, also, is to become of the ancient broils and quarrels of the Celt and Saxon? These too are all a mistake. The case may be compared to two brothers, who, having accidentally met, mistake each other for aliens and enemies, set to, and after having exhausted their energies in inflicting black eyes and bloody noses on each other, find out, to their shame and disgrace, that their quarrel was all a mistake. The next step should be to ask forgiveness of each other, and, as far as possible, make restitution. It is perhaps the duty of the stronger party to take the first step. S.

MISSIONARY SOCIETY—BOARD MEETING.

A Quarterly Meeting of the Executive Board of the Seventh-day Baptist Missionary Society was held at Plainfield, N. J., on the fourth and fifth days of last week. It was attended by nearly all of the members residing in the vicinity, and by several from a distance, among whom were N. V. Hull, W. C. Kenyon, and E. P. Larkin, of Alfred, J. R. Irish, of DeRuyter, A. B. Burdick and E. G. Champlin, of Westerly, and P. L. Berry, of New London.

The Treasurer's Report showed that during the past quarter $139.87 was received, and $1450.02 paid out, including remittances to China and to Palestine. The balance in the treasury was $871.70, of which $570 was from the estate of B. W. Rogers.

The Corresponding Secretary read letters from S. Carpenter, N. Wardner, C. Saunders, S. Davison, T. E. Babcock, J. M. Allen, E. P. Larkin, and Grove D. Clarke. These letters related to the different missions under the charge of the Board, and have in part been placed before the readers of the *Recorder*. It will hardly be necessary to give abstracts of them, or an outline of the discussions to which they gave rise; it must suffice to state the action taken upon them, as follows:—

Eld. Henry Clarke was appointed to labor for three months as a missionary at Sullivan, Ind.

A vote was passed assuring the Executive Committee of the North-Western Association, that the Board is willing to pay half the expense of a mission at Burr Oak Prairie, Wis.

It was voted to increase the force of the China Mission by the addition of one missionary, with his wife, as early, if practicable, as the Fall of 1856.

The state of Bro. Charles Saunders' health was considered, and he was authorized to take such course with respect to it as, upon proper consideration and advisement, he may deem best, either to return home, or go elsewhere, if his health demand it.

An extra appropriation was made of $100 to Charles Saunders in view of his sickness and the increase in the price of provisions, and of $50 to Bro. Jones in view of the latter consideration.

The Corresponding Secretary was instructed to prepare a Circular, and make it public through the *Recorder*, to encourage the brethren to make themselves Life Members of the Missionary Society.

The Remittance Committees were instructed to see that the remittances to China and Palestine keep pace with the general appropriations to those missions.

LETTER FROM BRO. S. CARPENTER.

SHANGHAE, June 16, 1855.

To the Board of the S. D. B. Missionary Society:

Notwithstanding it was so recently as the 28th ult. that I slipped a note into Bro. W.'s overland letter, yet, as a ship is now up for New York, and as we have some encouraging items to communicate, I seize on the opportunity to make a brief report of my labors, &c., since our last date.

June 30th—Rest-day. Preached at 9 A. M. to about 20 persons, from the text, "Remember now thy Creator," &c. As the meeting was about to close, there came in half a dozen men who belong to Sa-Tong, the province north of this, with whom I conversed at some length, regretting, as usual, that I was unable to furnish them with books. The Sa-Tong men are frequently in our congregation, and frequently press us for books. Whether they want them for themselves, or to sell in their native province, I am unable to say.

At evening, our washerman and chair-bearer, whom we familiarly have called Afo, but whose name, properly, is Keang Kwang, who commenced laboring for us on the 3d of March, 1853, said he was decided in his purpose to be a Christian, and made a formal application for baptism. He is a married man, twenty-seven years of age, of steady habits and orderly behavior. For the last few months he has exhibited more than an ordinary interest in religious concerns, and for the last two weeks it might be said of him, "Behold! he prayeth." He says it was in prayer that he found peace to his soul, after several days of unrest. He says he should have commenced praying sooner, but he felt himself quite unworthy to address such a Being.

July 3d—Evening. Was gratified for the first time to hear Keang Kwang pour out his soul in prayer to God. He believes that God, for Christ's sake, has pardoned his sins.

5th. Preached to about 40 persons. "If ye, then, being evil, know how to give good gifts to your children," &c.

7th—Rest-day. Preached at 9 A. M. to believers. "Behold what manner of love the Father hath bestowed upon us," &c. Had conversation with the father of Keang Kwang, who arrived yesterday. He appears to be more teachable than the majority of his countrymen—says he is quite willing his son should be a Christian. He himself used to worship idols, but upon learning from his son, since he has been with us, that such things are foolish and hurtful, he has renounced the practice. Thus one after another, through the influence of better knowledge, is throwing off idolatry, even before we know of it.

10th. Preached to about 35. Subject, the pearl of great price. Pearls are more thought of in this eastern world than at the west, where they are less known. Good attention.

11th. Had a church meeting, and after hearing the experience of Keang Kwang and Chang Yuen, Bro. Wardner's cook, and after examining them, they were unanimously received for baptism and membership.

13th. Preached to about 30. "Come unto me all ye that labor," &c.

14th—Rest-day. Met as usual at 9 A. M. in the chapel. Including our own mission, there were present of the missionary body eleven persons, and the teachers and scholars of five schools, from different parts of the city, and from Bro. Wardner's place in the country, besides the passers by who came in. Our friend Mrs. Lo (alias Ne May) was also present. After an appropriate discourse from brother Wardner, the covering was removed from the baptistery, and the two candidates above mentioned, Keang Kwang and Chang Yuen, were baptized; after which the right hand of fellowship was extended to them, and prayer offered in their behalf. The assembly, though large, was orderly, and a deep solemnity appeared to pervade the minds of some. Thus, while traversing this moral wilderness, we come now and then to a verdant spot, a season of refreshing, a cordial that keeps us from fainting by the way. O that they may become more frequent and continuous. O that the windows of heaven may be opened, and a blessing poured out upon us, that there shall not be room enough to receive it. For this we will pray on and labor on, endeavoring to consecrate to our work all our time, talents, and means, as Israel were required to bring all the tithes into the storehouse; and then we can safely leave the event with Him with whom is the residue of the Spirit. We ask the prayers of our brethren now for these two lambs of our little flock.

At 5 o'clock P. M. I preached to a respectful congregation of about 30, from the words, "The Spirit and the Bride say come," &c.

ADDRESS ON EDUCATION.

On the evening following last Sabbath, Eld. N. V. Hull delivered at Plainfield, N. J., an address on the subject of *Education*, well calculated to awaken interest and lead to action. In the course of the address, (which was more than an hour long, and was listened to with fixed attention,) he treated of the value and power of knowledge—the adaptation of the mind to receive it—the influence of recorded and published knowledge upon the well-being of mankind—the necessity for each nation to have a literature of its own, embodying the spirit of its institutions—the like necessity for each religious denomination —the duty of the Seventh-day Baptist denomination, &c. &c.

Eld. Hull appears to be thoroughly aroused to the importance of our educational interests, and especially to the duty and necessity of furnishing facilities for study to those among us who propose to engage in the work of the ministry. It would be an incalculable benefit to us, if he could visit each of our churches, and impart to them some measure of the spirit by which he is animated. It is true, that a great deal has been done among us for the cause of education within the past twenty years, as is testified by the institutions at DeRuyter, Alfred, Milton, Albion, Shiloh, and other places. Still a great work remains to be done, and we look upon those who are engaged in it as our most efficient missionaries. God bless them in their labors, and give them abundant success.

A FASHIONABLE CHURCH.—One hundred dollars a Sunday, says the New York *Observer*, is about the expense of a fashionable church in Boston, as we learn from a recent paragraph in the Boston *Transcript*. In New York the expense is not far from five times that sum. We will figure up the expenditures of one church in this City, the affairs of which we happen to be somewhat acquainted with.

The church, parsonage, library, &c., cost, in round numbers, $200,000; the annual interest of which sum, at 7 per cent., is $14,000.

The pastor's salary is $4,000; that of his assistant is $500.

The presents annually given to the pastor, we believe, do not average less than $500; presents to his assistant, say $5.

The singing, with the salary of the organist, repairs of the organ, and wages of the blower, costs very nearly $1,000.

The cost of cleaning, including the salary of the sexton, will average about $900 a year.

The annual depreciation in value of building and its contents, by use and time, may be computed at $1,000.

The cost, therefore, of maintaining the church for one year, is $22,505, which is equal to $432 76 per Sunday.

Forty smart mechanics, working steadily all the year, earn about as much as it costs to support this church.

For $22,505 a year, two thousand children could be kept under instruction in good schools. It would maintain a college of five hundred students in the highest efficiency.

It would support twenty-two country churches, or eight city churches, in a liberal manner.

However, we must add, that there are not more than ten churches in the City conducted upon anything like the scale of the one to which we refer, though there are three which probably exceed it.

SCENE IN A PENITENTIARY.—Bishop Whitehouse, of Illi[illegible] in his last address, records a very interesting event—the confirmation, on the afternoon of Thursday, October 18, of seventy male convicts in the Penitentiary of the State of Illinois. It seems that the Rev. Dr. McMasters had been for seven months chaplain of the Institution, by appointment from the Governor, during which time he had ministered each Sunday in the morning, in separate services to the male and female departments. For some weeks, there had been evident a decided religious feeling, gaining more and more among the inmates. The personal indications of this contrition, exhibited during public worship, were followed up by conversations in the cells; and after as faithful examination and guidance as the cases admitted, it was deemed proper to baptize twenty-two of the number, and administer to the large body besides, who desired it, the rite of confirmation."

DEATH OF BAPTIST MINISTERS.—Two distinguished Baptist preachers have recently deceased. Rev. John O. Choules, D. D., of Newport, R. I., died in New York on Saturday evening, Jan. 12th, aged 55. He had been settled as pastor at New Bedford, Buffalo, Jamaica Plain, and Newport, and had gained an honorable position in the world of letters by his editions of Neal's History of the Puritans, Forster's English Statesmen, History of Missions, and by his racy narrative of the "Cruise of the North Star," in which cruise he officiated as chaplain of the party. Stephen H. Taylor, L.L. D., died at Hamilton, N. Y., on Monday morning, Jan. 6th, aged 65 years. He was one of the best educators of the country, and had presided with enviable success over the Universities at Lewisburg, Pa., and Hamilton, N. Y. His health had been gradually failing for more than a year.

METHODIST CHURCH IN THE CRIMEA.—A London correspondent of the *Christian Advocate*, in a recent letter, says that a Methodist Church has been formed among the British troops quartered in and about Balaklava. The number of non-commissioned officers and soldiers who have formed themselves into a society is about three hundred, and a missionary is about to be sent to them by the Wesleyan Missionary Society. This band of worshipers sent for a supply of hymn books —most of their old supply having been lost at the battle of the Alma and Inkerman. The Liverpool Wesleyans having been the first who heard of this matter, sent forthwith a supply.

THE PEABODY INSTITUTE.—The Boston *Transcript* learns that George Peabody, Esq., the distinguished London banker, has made an additional donation, $15,000, to the Peabody Institute in South Danvers. It is given for the purchase of estates adjoining and situated on each side of the Institute, and for improving and beautifying the grounds connected therewith. On the estates are two commodious dwelling-houses, the income of which is to be appropriated for the benefit of the lyceum and library. This last donation makes $45,000 which Mr. Peabody has given to his native town for the establishment and support of one of the best institutions in the State; besides, he has had purchased and forwarded for the library twenty-five hundred volumes of valuable books.

SUFFERING IN KANSAS.—Of the sufferings of the people of Kansas, and the mission of General Pomeroy, the Rev. Richard Knight, formerly of Holyoke, writes to the Springfield *Republican*:

"In this struggle there has been a degree of sacrifice unprecedented save perhaps in the days of the Revolution. Very many have given all they had to carry on the war; time, money, corn, and every conceivable thing, has been thrown into the general treasury. Numbers in consequence are ruined men, so far as pecuniary matters are concerned, and if our friends in the East do not come to the rescue, some hundreds will suffer want, if not starvation, this winter."

RAILROAD ACCIDENTS.—Two sad accidents have occurred within a week on the Hudson River Railroad. The first was on the 9th inst., near Poughkeepsie, when an express train going south was signaled to stop on account of some defect in a rail, and while this train was halting, another train, which was only a few minutes in the rear, came up, and not discovering the signal in time, ran into the express train, smashing two cars, killing three persons, and seriously wounding several others. The second accident occurred on the morning of the 14th inst., from the giving way of the bridge over Spuyten Duyval Creek. Two locomotives and two freight cars went into the river, and one engineer and one fireman were killed, but the passengers escaped unhurt, or with only slight bruises.

CONGRESS is not yet organized. The House of Representatives continues to talk and vote upon the question of Speaker without result. The Senate meets from day to day, transacts some routine business, and adjourns to wait for the organization of the House.

THE ASSEMBLY OF NEW YORK seems to find as much difficulty as the House of Representatives in electing a Speaker. Nothing was accomplished up to the close of last week. It is said that neither the Republicans nor the Democrats care to elect their candidate; but both are unwilling to vote with the Know Nothings, and thus give them the organization.

THE STORM of last week caused much suffering and loss of life on the seaboard near New York. Four pilots were frozen to death on board the pilot boat E K. Collins. The schooner Pacific went ashore and five lives were lost. A brig and a bark went ashore near Barnegat, and their crews perished. Two pilots were swept overboard and lost from the pilot-boat Swift, on the night of Jan. 5th, in the great storm.

RELIGIOUS INTELLIGENCE.

Rev. J. G. Fee, writing from Madison Co., Kentucky, informs us that there are now forty places near him where anti-slavery ministers could preach, and ought to be preaching; only four preachers and two colporters, however, are as yet employed; six young men from the free churches have gone to Oberlin or Galesburg for an education that will fit them to break the bread of life; the churches are suffering from the removal of their members to the free States; the spreading light so reveals the advantages of freedom over slavery, that men become dissatisfied with the slave States and institutions, and move off.

Rev. James W. Phillips writes to the Christian Observer from New Providence, Mo., that he had been attending there a protracted meeting with the Rev. T. H. Hatlow, the pastor. He says, "We had interesting meetings for some nine days and nights, including two Sabbaths. Twelve persons manifested an interest in the salvation of their souls, some ten of whom professed to receive the remission of their sins, through faith in Christ. Nine of them were precious youth, of both sexes, and children of the Covenant. The other three were Africans in bonds—young females."

We learn from the British Banner that a proposal has been set on foot for posting placards all over the city of London containing passages from the Bible, printed in the *largest characters*, so as to arrest attention. Each placard to contain only one verse, and sometimes only one sentence; and to be renewed as frequently as the funds obtained will permit. A society is to be organized for carrying out this idea, and, if possible, a commencment is to be made on the 1st January, 1856.

A physician, in writing to the Western Methodist Protestant, on "Clergymen's Sore Throat," attributes the disease to a non use of the vocal organs on week-days and their double use of Sundays, to mental anxiety as to support, and to the use of tobacco. He recommends to the preacher to read aloud at least half an hour each day, to quit smoking and chewing, and on the membership he enjoins a more liberal support of the ministry, as the only sensible way of curing the disease.

The Old School Board of Domestic Missions has issued a second earnest appeal for aid, in which it is stated that the receipts during the last month were less by eight hundred and twenty-four dollars than during the corresponding month of the previous year. deficiency has compelled the Board to decline several new appointments earnestly recommended by the Presbyteries, and to lessen the amount of appropriations asked for several missionaries.

The list of Life Members in the American Tract Society's last Report comprises over 12,000 names, and Life Directors over 2,500, whose prayers, we doubt not, have accompanied their contributions and labors. It would be a blessed meeting could they all assemble, with tens of thousands more, at home and abroad, who have taken part in this work, and together give thanks to the risen, reigning Redeemer.

The late Mr. P. Degrand, of Boston, has given $120,000, to Harvard College, for supplying its library with French works on scientific subjects. Another portion of his estate is given to the city of Boston, the income to be expended in purchasing books of amusement for the children of the Public Schools. Eight other portions are given to various charitable societies, while Mr. D.'s two sisters are provided with life annuities.

The intelligence recently received from the Mendi Mission is of a very afflicting nature. Death has again visited the missionary company there, and taken from them two of their number, Mrs. Brooks, formerly Miss Susan Teall, and Rev. J. Cutler Tefft. Mrs. Brooks died at the mission-house, Good Hope station, Sept. 30, and Mr. Tefft at Kaw-Mendi, Oct. 16.

The net receipts of the British and Foreign Bible Society for the last year were £136,032 sterling, which, added to the previous balance in the treasury, made its whole revenue £198,038. The expenditure in the same time was £149,040, leaving a balance appli cable to all purposes of £30,278. The issue of Bibles and Testaments for the year reached 1,450,876; the whole number distributed by the society since 1805 being 29,489,507 copies.

A work of grace is in progress at South Hampton, N. H. A number of conversions have occurred in the Sabbath school and also among heads of families, and several family altars have been erected. Three have been baptized, and others will soon submit to the ordinance.

The New Haven Register states that Committees of Conference have been appointed by the Faculty of Yale College, and the Trustees of the East Windsor Seminary, to consider the practicability of a union of the two Theological Seminaries, and to place the funds of the two corporations into one common fund.

The Pennsylvania Colonization Society have chosen the Rt. Rev. Alonzo Potter, D. D., President of the society, in place of Hon. Joseph R. Ingersoll, resigned. The Rev. Rufus Babcock, D. D., has also been appointed Corresponding Secretary, and entered upon the duties of the office.

At a meeting of the veterans of the war of 1812, held in Norfolk, Va., Thursday afternoon, upon calling the roll, it was ascertained that twenty-one of those brave men had fallen since the last meeting.

An exchange paper quotes from Paul's writings: "Owe no man any thing;" and then adds: "We fear some of our subscribers never read Paul's Epistle." And most of those who do read it object to the translation of this passage.

A correspondent of the Christian Secretary says the number of recent converts in the Cannon Street Baptist society, New York, Rev. J. Banvard, pastor, is fifty, and the good work is still advancing.

The Christian Chronicle has notices of revival influences at various places in both Pennsylvania and New Jersey. In Bordentown the revival is of a marked character.

The proprietors of the Independent announce that the circulation of that paper now amounts to over 22,000, but that it does not support itself.

Stephen W. Taylor, L.L. D., President of the Madison University, died at Hamilton, **Jan. 7, aged 65 years.**

European News.

The steamship Canada, after a protracted and tempestuous voyage, arrived, Dec. 8th, at Halifax, with the mails and three days laters from Europe.

The political intelligence by this arrival is unimportant—the main feature of it being devoted to the peace rumors and speculations.

There is nothing new from the seat of war. It is remarkable that the general public in Great Britain speak more in favor of carrying on the war now than at any other previous period. The Queen has sent a jeweled decoration to Miss Nightingale.

Heavy gales had prevailed during the week, and numerous casualties were reported on the British coast, but no American ships are known to be damaged. The Spanish brig Bravo, from Barcelona for Havana, was wrecked on the night of the 10th instant, off Gibralter. Forty-five passengers were drowned, including seven ladies.

A hurricane had occurred in the Crimea. The Tchernaya river had overflowed its banks, doing considerable damage.

The first steamer of the New York line, the Belgique, was formally baptized at Antwerp on the 15th by the Cardinal Archbishop of Malines and a crowd of clergymen.

Nine Days Later.

The steamer Atlantic, with European dates to Dec. 29th, arrived at New York on the 13th inst. The papers are filled with peace rumors, but there is nothing definite. Several new powers are said to have joined the Westesn Alliance. Meanwhile Russia continues her preparations for war on a grand scale.

Colonization in Virginia.

The Baltimore *American* says that the Report of the Colonization Board for the years 1854 and 1855 to the Legislature of Virginia, contains some interesting facts. It was shown by the report of the 5th of December, 1853, that from the 6th of April to the 5th of December of that year, there were transported to Liberia, through the agency of the Virginia Colonization Society, complying with the terms of the law of 1853, one hundred and sixteen free negroes, for whom the Board made an allowance of $50 each, amounting to the sum of $5,800.

From the 5th of December, 1853, to the present date, the Board has paid at the rate of $50 each for 188, and of $30 each for 16 emigrants—making 204 free persons, and amounting to the sum of $91,880.

It will thus be seen that the entire number whose transportation has been paid for since the organization of the Board is 316, and the sum paid $15,680.

Under the act of 1850 a capitation tax was levied upon the free negroes of the Commonwealth to raise funds for their colonization. It appears, by the report, that from this tax and from taxes on seals and attestations devoted to the like object, there has been received in the aggregate, to the present time, the sum of $50,000; yet, in consequence of the restrictions placed upon the expenditure of the legislative bounty, this entire sum has been expended and been absorbed by the General Treasury of the State.

The expenses for the collection and embarkation of the free negroes are now borne exclusively by the Colonization Society, which is dependent for its revenue wholly upon the irregular and uncertain contributions of private benevolence. The Board earnestly recommend that authority may be conferred upon them to apply a part of the fund provided by the State for the transportation of its free colored population beyond its limits to the collection and embarkation of the emigrants.

Death of a Revolutionary Soldier.—The Danville (Ky.) Tribune announces the death of Mr. John Sneed, of Boyle county, in that State, in the 101st year of his age, and adds:

He was born in Albemarle county, Virginia, on the 2d day of February, 1755, was for some years the Secretary of Thomas Jefferson, then volunteered in an expedition against the Cherokee Indians, and after that became a soldier in the Revolutionary struggle, in which service he continued until the close of the war. He was with Washington at Valley Forge during all the privations of that disastrous period; afterwards fought under the same great chieftain at Monmouth, and was one of the gallant army who received the thanks of Congress for their conduct in this engagement. He was then detailed, with a number of picked men from various regiments, to the command of Col. Morgan, and finally went to the South with Green, under whom he served until the expiration of the war. At the battle of Guilford he was taken prisoner, and when conducted into the presence of Lord Cornwallis, the following question was put to him by that nobleman:—"Where is the baggage of the American party?" "Out of your reach, Sir," was the reply. "Why so?" "Because the American party is between you and it." When peace returned, he emigrated from Virginia to Kentucky, and there lived until almost 101 years old. His one hundredth birth-day was celebrated in February last, at the residence of his son, by a centennial dinner, where he met many of his relatives and friends.

The Ice Trade.—It is estimated that there invested in the ice business, in all parts of the United States, between $6,000,000 and $7,000,000; and the number of men to which it gives employment, during the Winter months, is supposed to be from eight to ten thousand. The total annual consumption of ice in this City alone exceeds one hundred thousand tons. Boston consumes about fifty thousand tons yearly; and Philadelphia, Baltimore, and Washington, nearly an equal amount. Besides this large domestic consumption, there is every year a large amount exported to southern cities. Boston exports much more than New York. The increase of the ice trade in that city since the year 1832 has been quite remarkable. In that year the whole amount shipped was but 4,352 tons; in the year 1853, the amount exported was 100,000; and in 1854, 156,540 tons. One leading house alone exported, last year, 91,540 tons. The average price of this per ton, when sold in large quantities for shipment, is two dollars. A large proportion of it goes to Savannah, Charleston, New Orleans, and Mobile. Considerable is also sent to Havana, Rio Janeiro, Callao, St. Thomas, &c. But a small proportion of the ice harvested in the vicinity of New York is exported, being only about 15,000 tons a year.

Death by Chloroform in Boston.—The post mortem examination of the body of Miss Ida Morgan, who died at the office of Dr. Emery, Broomfield-street, resulted in finding that she died from the inhalation of chloroform, though in a good state of bodily health before taking it. The chloroform had changed her blood to water. She had inhaled it at a previous time, and had felt bad effects from it. The chloroform in the present instance was pure, and the usual quantity was given on a sponge. One application did not produce insensibility, and at the patient's request the sponge was again placed to her nose. After a third application she attempted to get up, but failed, and her head rolled to the side of the chair. She was then placed upon a lounge, breathing heavily, but soon her breathing became more easy. She never spoke after being removed from the chair. The verdict by the Jury was, that she came to her death by chloroform; that it was a pure article, properly administered, but cautioned the public against the injudicious use of it.

[Boston Post.

Accident and Wonderful Endurance.—The Grand Rapids *Enquirer* states that on Wednesday last a serious accident occurred in the town of Paris, about six miles from that city. A young man, aged 18 years, son of Mr. Nicholas Carlton, was chopping down a tree, in company with another young man. As the tree was falling, it struck another tree and swerved from the position in which it was expected to fall, striking young Carlton, knocking him down, crushing his right arm to jelly, and the butt of the tree, a foot thick, resting on his head, forcing the latter into the ground. The skull was somewhat fractured, but, strange to tell, the head was comparatively uninjured. The young man with him chopped off the log, and endeavored to roll it off Carlton's head, all the time supposing the latter to be dead, but he could not move the log, and was forced to go a mile and a half to obtain assistance. When the log was rolled away, it was ascertained that Carlton was alive. He was accordingly conveyed home. The following day his arm was amputated, and he is likely to recover.

Pacific News.—Two weeks later news from the Pacific coast was received in New York on the 12th inst.

In California, nothing peculiarly worthy of note has transpired.

From Oregon and Washington Territories we learn that the war continues to be waged by the Indians against the whites with the most determined ferocity. A dreadful battle had been fought between the Volunteers and the Indians at Walla Walla, which, after lasting two days, resulted in the latter being driven from the Fort with the loss of their chief and about fifty men. The Volunteers had also to deplore severe losses in killed and wounded.

SUMMARY.

The Land Revenues of the General Government for the fiscal year, 1855, notwithstanding the increased abundance of Land Warrants, growing out of the different Bounty Acts to the soldiers in the Mexican War, amount to the large sum of $11,497,049, against $8,474,798 the previous year, and $1 667,084 the year 1853 On the 1st July, 1855, the new Land Warrants, under the Bounty Act of the last Congress to the soldiers of 1812, were made ready for distribution, and as these have had the effect to reduce the market rate to less than a dollar an acre, while the minimum cash price of Government land is $1 25, the probability is they will tell heavily upon the land entries the current fiscal year. The cash revenues from this source last year are the largest since 1836, when the unprecedented sum of $24,887,179 was paid into the Land Office.

On the Baltimore and Ohio Railroad, on Thursday night, Jan. 3d, about 11 o'clock, the morning train from Baltimore, and the afternoon express train from Wheeling, came in collision near the Kingswood tunnel, causing considerable damage to the cars and locomotive, and killing a fireman named Redding, whose body was found about two hours after the accident, buried in the wreck. One of the engineers was considerably burnt, and several other persons connected with the trains were slightly injured, but the passengers all escaped, with the exception of some slight burns received by coming in contact with the stoves.

Inquiry having been made as to whether lands in Kansas are locatable with bounty land warrants, we learn that the public lands in that territory will be subject to location with bounty land warrants after they shall have been surveyed, offered at public sale, and become subject to private entry; that at present there are no lands subject to private entry in the territory, and consequently none now subject to location with warrants. The Indian trust lands, however, to be sold for their benefit, will not be subject to such location.

The Vermont Chronicle learns, by a communication received from Westminister College, that of nearly one hundred students who entered that College at the opening of the present session, "full one-third" of the whole number are members of the Presbyterian church, and that some fifteen have the ministry in view. A work of grace has recently commenced in the village of Fulton, where the college is located, and thirty-five have been received into the Presbyterian church, among whom were eight or ten college students.

We learn from the Troy Times, that as the 6 o'clock train Saturday evening, on the Albany Northern Railroad, had just left Johnsonville, the engine ran into a team containing two men, which was crossing the track, instantly killing the horses and one of the men, and injuring the other so that he died. Both of the gentlemen were farmers residing in Pittstown, men of character and standing, leaving families.

The Star of the West went to sea Jan. 9th, with a lot of passengers, who, without a doubt, were fillibusters, and bound to the aid of Walker, in Nicaragua. There was some little fuss made about their going, and five of them were arrested. The steamer was delayed only 15 minutes beyond her time.

The Wisconsin Legislature met at Madison on Monday, Jan. 7. Mr. Barstow has been declared elected to the Governorship, but his opponent in the contest, Mr. Bashford, had the oath of office administered to him in the Supreme Court, in order to bring the case before the said Court.

At the execution of Hubbard, a few days ago, in Wabash County, Indiana, for the murder of the French family, after he was entirely dead, the enclosure was taken down and more than five hundred persons went in and touched him, giving their reason for so doing, that it would in the future protect them from witchcraft. The rope that he was hung with, the crowd afterwards took, cut it up in small pieces, and divided it out among them, to act as a charm in protecting them in the future from ague and all other diseases.

A few days since the papers published the substance of a proclamation of Soulouque, the black Emperor of Hayti, declaring war against the Eastern or Spanish part of that Island, called St. Domingo. By the arrival of the brig Vulture, Captain Perkins, from Cape Haytien, with advices to Dec. 20, we learn that nearly the whole male population had been marched off to join Soulouque's army, which was reported to be 30,000 strong, and to be marching against St. Jago.

The Boston Times of the 29th ult., says that "on Thursday, as Elder David Miller, of Torrington, was getting out of his wagon, while at Burlington, he fell head foremost, and (as is supposed) broke his neck. He died immediately. He was a large fleshy man, and a surgeon who examined the body was not able positively to decide whether he had actually broken his neck, or died from a stroke of apoplexy, or a disease of the heart. He was the presiding elder of the Methodist church for the Hartford District.

The convention of the veteran soldiers of the war of 1812 met in Washington, January 8th. The delegates present numbered upwards of two hundred, representing eleven States. The veterans, preceded by a military escort, visited the White House, where they were received by the President, the members of the Cabinet, officers of the army and navy, and a brilliant company of ladies. The demonstration is described as being a beautiful, patriotic and exciting scene.

The British brig Zenluko, Griffin, of Halifax, N. S., was fallen in with Nov. 10, in lat. 37° 20' N., lon. 63° W., water-logged and dismasted, by brig Sarah, arrived at Guadaloupe, who took from the wreck Capt. Griffin and one man. Capt. G. had been lashed to the stump of the foremast for eight days, and was in a terrible condition of suffering. The flesh was falling from his body when he was discovered. At latest accounts he was improving.

The New York *Times* of Jan. 10th says: Nov. 28—six week ago—ordinary State flour sold at wholesale for $9 25 a $9 31¼ per barrel, To-day, the same brand sold for $7 87½ a 7 93¾—a fall of $1 37½ per barrel, or nearly 15 per cent., and this in the heart of Winter, with the great channels of cheap transportation closed. A year ago today this brand of flour sold for $8 75 a 8 87½—or nearly a dollar per barrel higher than now.

The Edinburg *Review* says it appears to be proved that more than one half of the adult population of England and Wales cannot write their own names! And this state of things is in a fair way to continue, for, according to the census of 1851, out of 1,394,188 children in England and Wales between 7 and 14 years of age, only 701,345 (about 50 per cent.) were at school.

The New York Ledger makes the following announcement: "We have the pleasure of announcing that our gifted contributor, Mrs. Sara Payson Eldredge, (so renowned and admired as Fanny Fern,) was married on Saturday, the 5th inst., to Mr. James Parton, well-known in literary circles as the author of *The Life of Horace Greeley*.

A gentleman residing in Mount Vernon, Maine, has raised in the open air, for the last three years, the coffee plant, the seed of which was brought five years ago from Cuba. It grows about two feet high, and produces its berries in pods something like peas. The plants, he says, have matured even this season, and the berries ripened without injury from frosts.

The clipper ship Bald Eagle, of Boston, Captain Treadwell, made the passage from Swatow, China, to Callao, in 83 days—distance sailed 15,662 miles; average each day 188½ miles. During the 37 days previous to her arrival she averaged 203 miles per day, and her greatest day's run, carrying royals, was 346 miles. She is not a very sharp vessel, but rather flat of the floor.

The Buffalo Commercial Advertiser of the 2d inst. says: "From the best data at hand, we estimate the quantity of Wheat in store in this city at 650,000 bushels. We have heard the estimate placed as high as 800,000 bushels, but this is too large. By far the greater portion of this amount is held on astern account."

A singular fact has just been brought to light in London, in regard to gas meters. A careful examination of the gas works in London has established this fact, that "the lower the quality of gas, the greater the velocity with which it flows through the meter; that is, the quantity registered is increased in proportion as the quality is deteriorated."

There were only 11[illegible] persons killed last year on railroads in the United States, and 539 wounded, against 186 killed and 589 wounded in 1854. Of the killed last year 61 were employed on the roads. Killed by steamboat accidents last year 176, wounded 107, against 587 killed in '54, and 225 wounded.

The N. Y. *Times* says:—Six weeks ago Mess Pork sold for $21 75 a $22 50 per barrel; to-day for $15 75. Sugars and most articles in the grocery line are also cheaper. Butter and Eggs, Apples and Potatoes, and most other kinds of eatables are, to say the least, no higher.

The annual statistics of the Rochester flouring business shows that there is now invested in mills and machinery $684,000, and that there are 122 run of stone employed. The total amount of flour exported during the last year is 601,471 barrels; of wheat imported, 1,961,272 bushels.

Some apples raised by Mr. David Blanchard, of Weymouth, Mass., have found their way to San Francisco, via Panama, as sound as when taken from the tree. It is estimated that a barrel would be worth from $30 to $45.

At a recent convention of colored men, held at Sacramento, the total colored population of California was estimated at 4815, with an aggregate in wealth of two million three hundred seventy-five thousand dollars.

Capt. Little, of the brig Loango, arrived from Aux Cayes, reports the yellow fever as raging fearfully at that place. Every vessel in port had lost more or less of their crews. Some of the foreign vessels were entirely deserted, their whole crews having died.

A late London paper informs its readers that the "Nebraska Territory of the United States is a tract of several millions of acres, lately purchased by the Americans from the Mosquito King!"

A collision occurred on the Hudson River Railroad, Jan. 9th, just below Poughkeepsie, which resulted in the death of three persons, and the wounding, more or less seriously, of some dozen others.

Lieut.-Col. Bragg, so widely known to the country for his gallant conduct at Buena Vista, has resigned his commission in the Army.

A Miss Hume, of Williamsburg, Indiana, was on trial last week at Indianapolis, on a charge of robbing the United States mail.

New York Markets—Jan. 14, 1856.

Ashes—Pots $7 00, Pearls 8 00 per 100 lbs.

Flour and Meal—Flour 7 93 for ordinary to straight State, 7 87 a 8 00 for mixed Western, 8 00 a 8 50 for Michigan, Indiana, and Ohio, 9 50 a 11 50 for extra Genesee. Rye Flour 5 50 a 7 25. Meal 4 00 for Jersey. Buckwheat Flour 2 37 a 2 62 per 100 lbs.

Grain—Wheat 1 87 for Southern, 1 90 a 1 92 for Western red. Rye 1 31. Corn 80 a 87c. for new yellow, 90 a 92c. for old mixed.

Provisions—Pork 14 00 for prime, 15 75 for mess. Beef 9 00 a 10 00 for country prime, 10 50 a 12 00 for country mess. Dressed Hogs 7¾ a 8¼c. Lard 11 a 11¼c. Butter 18 a 24c. for Ohio, 23 a 28c. for common to very good State, 28 a 30c. for prime. Cheese 9 a 10¾c.

MARRIED,

In Preston, N. Y., Jan. 1, 1856, by Eld. L. M. Cottrell, Mr. Jesse D. Rogers to Miss Mary Ann E. Clarke, both of Preston.

In Hopkinton, R. I., on the 7th inst., by Eld C. M. Lewis, Capt. Silas B. Greenman, of Westerly, master of the brig Lavacca, to Miss Ellen L. Peck, of Hopkinton.

DIED,

In Lincklaen, N. Y., Dec. 30th, Alzina Burdick, wife of Lewis Burdick, and daughter of Eld. Russell G. Burdick, aged 23 years.

LETTERS.

A W Coon J R Irish, H V Dunham, L M Cottrell, A M Whitford, John Maxson, J R Satterlee, L R Babcock, A D Bond, Andrew Babcock (p'd $2 in Sept. to end vol. 11,) C M Lewis (sent last week—can't say about *Memorial.*)

RECEIPTS.

☞ All payments for publications of the Society are acknowledged from week to week in the Recorder. Persons sending money the receipt of which is not duly acknowledged, should give us early notice of the omission.

Bills.—We are sending bills to those who owe for the Sabbath Recorder up to the end of volume twelve, now more than half completed. If any errors are discovered in them, please notify us immediately, and the proper corrections will be cheerfully made. If they are correct, please make it convenient soon to remit the amounts.

Receipts for Missionary Society.

The Treasurer of the Seventh-day Baptist Missionary Society acknowledges the receipt of the following sums since his last report through the *Recorder*:

For General Purposes:

Catharine Stelle, New Market, N J	$5 00
George Dunham "	5 00
Joel A Dunn "	10 00
I D Titsworth, New Market, to constitute Anna Larkin and Rebecca J Titsworth L M	50 00
H W Stillman, Ozaukee, Wis	5 00
Thomas Holmes, Preston	1 00
Aranetta A Holmes "	50
Harriett E Holmes "	12
Joseph N Clarke "	1 00
Sarah A Clarke "	50
Sarah E Maxson "	50
Harriett J Maxson "	10
A family in Preston	2 00
Mrs J T Rogers "	1 00
Salina E Rogers "	25
Ethan Rogers "	1 00
Joseph S Rogers "	1 00
Mrs Harriett Maxson "	2 00
Sands E Maxson "	10
Ch at Adams, to constitute Joshua Clarke, Chas. Potter, and A M Whitford L M	60 00
Sabbath-School at Milton, Wis	9 50
Wm P Longmate, Pendleton	2 00
Peter Burdick, Nile	3 00
Joshua B Maxson, Stephentown	5 00
1st Ch in Brookfield, by W B M	5 30
George W Knapp, Scio	1 00
Jeremiah Barrett, Cowlesville	1 00
Ch at DeRuyter, to con J Clark Crandall L M	25 00

For Foreign Missions:

Bibliotheca Sacra,

AND AMERICAN BIBLICAL REPOSITORY.—The Thirteenth Volume commenced Jan. 1, 1856. This volume will be enlarged to 900 pages; will be printed on a new, large, and beautiful type, and on paper superior to that of any previous volume. This Quarterly contains articles of permanent value, by some of the ablest writers in the country.

In its department it has no superior, and no Minister can afford to be without it.

It is the most learned, the largest, and the cheapest Quarterly of its kind in the country.

TERMS—$3 per annnm in advance.
$4 if not in advance.
W. F. DRAPER, Andover, Mass.

Carpet Warehouse.

YOUNG & JAYNE, No. 364 Broadway, corner of Franklin Street, (opposite Taylor's Saloon,) offer for sale a very choice and extensive assortment of

CARPETINGS, OIL-CLOTHS, CURTAIN MATERIALS, MATTRESSES, &c.,

at the lowest rates. Purchasers are respectfully solicited to examine the stock.

Misrepresentations, either expressed or implied, are strictly prohibited in this establishment.

YOUNG & JAYNE,
364 Broadway, corner of Franklin-st.

N. B.—Churches and clergymen furnished at wholesale prices. Sept 27—3 m.

Alfred Highland Water-Cure.

THIS establishment, for the cure of Chronic Diseases, is conducted by H. P. Burdick, M. D. The facilities in this "Cure" for the successful treatment of Diseases of the Liver, Spine, Nerves, Female Diseases, Bronchitis, Incipient Consumption, &c., are not excelled in any establishment. Patients will have the benefit of skillful Homeopathic prescriptions—an advantage found in but few "Water-Cures." Especial attention will be given to diseases commonly called *surgical cases*, such as Hip Diseases, White Swellings, Cancers, (in their early stages,) and Caries and Nearosis of bone.

Connected with the establishment is a Dental Shop, where all calls in that profession will be attended to.

Address, H. P. BURDICK,
Alfred, Allegany Co., N. Y.

Central Railroad of New Jersey,

IN connection with the Lehigh Valley Railroad, opened to Mauch Chunk—WINTER ARRANGEMENT, commencing Nov. 19, 1855. Leave New York for Mauch Chunk from Pier No. 2 North River, at 7 30 A. M. For Easton, at 7 30 A. M. and 3 15 P. M. For Somerville, at 7 30 and 10 45 A. M., and 3 15 and 4 30 P. M. The above trains connect at Elizabeth with trains on the New Jersey Railroad, leaving New York from foot of Courtlandt street, at 7 30 and 11 A. M., 3 and 4 P. M.

Leave Plainfield for New York at 7 05 and 9 05 A. M., and 1 40 and 6 13 P. M.

JOHN O. STERNS, Superintendent.

Hudson River Railroad.

TRAINS leave Chambers street daily, for Albany and Troy. On and after MONDAY, Nov. 19, 1855, the trains will run as follows: Express Train 7 A. M., connecting with Northern and Western Trains. Mail Train 8 30 A. M. Through Way Train, 12 M. Express Train 5 P. M. For Hudson 3 30 P. M. For Poughkeepsie—Way Freight and Passenger Train, 12 30 P. M. For Peekskill, 5 30 P. M. For Sing Sing, at 4 20 and 9 P. M. For Dobbs' Ferry, 7 15 and 11 A. M. The Dobbs' Ferry, Sing Sing, Peekskill, and Hudson Trains stop at all the Way Stations. Passengers taken at Chambers, Canal, Christopher, and 31st streets. SUNDAY MAIL TRAIN at 4 P. M., from Canal street, for Albany, stopping at all the Mail Stations. M. L. SYKES, Jr., Superintendent.

Magnificent Floral Gift.

SUBSCRIBERS to the "CHRISTIAN DIADEM" for 1855, are entitled to a splendid steel engraving, the ☞ LILLY AND THE ROSE PERSONIFIED, being given *gratis* to all old and new subscribers who send us only ONE DOLLAR, by mail or otherwise.

Six Copies for Five Dollars.

The Diadem is a strictly moral and religious work—designed for the Christian family without regard to any particular denomination.

FIFTY ENERGETIC BUSINESS MEN are wanted immediately to circulate the "Diadem" throughout the Eastern and Western States. To such as can send good references the very best inducements will be given. Address Z. P. HATCH, Publisher, 9 Spruce street, New York. May 24—3m.

Seventh-day Baptist Publishing Soc.'s Publications.

The Sabbath Recorder,

Published Weekly.

Terms—$2 00 per Annum, in Advance.

The Sabbath Recorder is devoted to the exposition and vindication of the views and movements of the Seventh-day Baptist Denomination. It aims to promote vital piety and vigorous benevolent action, at the same time that it urges obedience to the commandments of God and the faith of Jesus. Its columns are open to the advocacy of all reformatory measures which seem likely to improve the condition of society, diffuse knowledge, reclaim the inebriate, and enfranchise the enslaved. In its Literary and Intelligence Departments, care is taken to furnish matter adapted to the wants and tastes of every class of readers. As a Religious and Family Newspaper, it is intended that the *Recorder* shall rank among the best.

The Sabbath-School Visitor,

Published Monthly.

Terms per annum—Invariably in advance:

One copy	$ 25
Five copies to one address	1 00
Twelve copies to one address	2 00
Twenty copies to one address	3 00
Twenty-eight copies to one address	4 00
Forty copies to one address	5 00

The Seventh-day Baptist Memorial,

Published Quarterly.

Terms—$1 00 a Year, 25 Cents a Number.

Each number of the *Memorial* will contain a lithographic portrait of a Seventh-day Baptist preacher, together with a variety of historical, biographical, and statistical matter, designed to illustrate the rise, progress, and present condition of the Seventh-day Baptist Denomination. Wood-cuts of meeting-houses will be introduced from time to time in connection with the history of the churches.

[The first, second, and third volumes of the *Memorial*—being for the years 1852-3-4—may be had bound, for the subscription price and the cost of binding.]

The Carol:

A Collection of original and selected Music and Hymns, for the use of Sabbath-Schools, Social Religious Meetings, and Families. Compiled by Lucius Crandall. 128 pages octavo; price 35 cents per copy.

The *Carol* is designed principally for Sabbath-Schools, and contains Music and Hymns adapted to all ordinary occasions, and to such special occasions as the sickness of teachers, funerals, anniversaries, &c. A number of pieces suitable to social and public worship, together with a few Temperance Songs, are included in the book. It contains 93 tunes, and 156 hymns.

☞ Orders and remittances for the above should be addressed to the General Agent, George B. Utter, No. 9 Spruce-st., New York.

Postage.

The postage on the Sabbath Recorder is 13 cents a year in the State of New York, and 26 cents in any other part of the United States, payable quarterly or yearly in advance.

The postage on the Sabbath-School Visitor is 3 cents a year in the State of New York, and 6 cents in any other part of the United States, payable in advance.

The postage on the Seventh-day Baptist Memorial is 2 cents year in any part of the United States when paid in advance, or 4 cents a year when not paid in advance.

Miscellaneous.

The Bark Resolute—Interesting Narrative.

Two or three weeks ago we announced the arrival at New London, Conn., of the British discovery bark Resolute, in charge of the Captain of an American whale-ship. The following narrative of her rescue, though lengthy, is sufficiently interesting to justify printing:—

On the 29th of May last the whaling bark George Henry, Capt. James M. Buddington, set sail from New London, Conn., on a voyage to Northumberland Inlet and Davis Straits. The bark was manned with a crew of seventeen men, including the first and second mates. On the 14th of June, and while in latitude 54, Capt. Buddington encountered, and quite unexpectedly, too, large fields of ice, through which he dared not penetrate. However, wishing to arrive at his destination as soon as possible, he followed the edge of the "pack," as he terms it, up north as far as latitude 67.

On the 10th of September, latitude 67° N., and while in this field of ice, Captain Buddington discovered a ship in the distance, bearing northeast, about 20 miles from Cape Mercy. He ascended the rigging of his craft, and, looking at her through the glass, pronounced her, from her appearance, to be an abandoned vessel. The head of the stranger appeared to be due east, and during the whole of that day and the one following the course of the ship did not vary more than a point or so from the east. "We kept gradually nearing one another," as Capt. B. says, "although I could not exactly say what caused the thing to come about, except, perhaps, the ship may have been struck by a counter current from Davis Straits and driven towards us in that manner. For five days we were in sight of one another and continued to drift towards each other. On the sixth day after making the discovery, and when the ship was about seven miles off, Capt. B. ordered the two mates and two of the crew to proceed to the abandoned vessel across the packed ice, and after inspecting her to return to the bark as soon as practicable.

Soon after the departure of the party a southeaster sprang up, and in consequence thereof no communication was had with those on board the ship for two days. As soon as the wind subsided and it was safe for the party to retrace their steps, they left the ship, and after a tedious and hard march arrived on board of the bark in safety. They immediately represented the facts to Captain Buddington, stating that the abandoned vessel was her Britanic Majesty's ship Resolute. The Captain, knowing the history of Sir Edward Belcher's expedition to the Polar Seas, at once divined the reason of the vessel being left in that condition; and knowing that the safe conveyance of that vessel to some port would be better than catching whales, and knowing withal that it would be quite a piece of glory to hand back to the Britishers a vessel long since abandoned by them as being lost to the Queen's service forever, determined at all events to try the bold and hazardous task. Accordingly, he sent his mate back, with six men, giving them instructions to free the ship of the water with which she was burthened, and signalize their success to him. If they did not succeed in freeing the vessel, they were to hoist a signal, whereupon the Captain himself would proceed to their aid.

As it took nearly a day to accomplish the journey to the ship, nothing could be expected from the mate's party that day. But the next morning, just as Capt. B. anticipated, the signal was hoisted for his presence on board the Resolute. Taking two men with him, and leaving the bark in charge of the second mate, the Captain started, on the 10th of September, to the relief of his comrades. After a hard day's traveling over the ice and through pools of water, half frozen, the little party succeeded in reaching the Resolute in perfect safety.

He commenced immediately to search the vessel, in order to ascertain if she was seaworthy. On descending to the hold it was found to be entirely full of water up to the floor of the first deck. The well was then sounded and seven feet of water was discovered to be in the ship. The pumps were then visited; and being of a new construction, none but Captain B. was acquainted with the mode of working them. One of them, which was a force pump of great power, was rigged, and the following morning was got in working order. A gang of the men were then set to work, and for three days the pump was kept busy. Fourteen hours out of the twenty-four were consumed in thus freeing the vessel. On the third day all the water was cleared from her hold, and the attention of the Captain was turned towards extricating the prize from the dangerous position she was then placed in.

The appearance of things on board, as represented by Capt. Buddington, when he had leisure to examine the vessel, was doleful in the extreme. Everything of a movable nature seemed to be out of its place, and was in a damaged condition from the immersion in the water. The cabin was strewed with books, clothing, preserved meats, interspersed here and there with lumps of ice. There was one thing, however, which struck Capt. B. as being very remarkable, and for which probably no satisfactory explanation can be given; and this was the presence of ice for several feet in thickness on the larboard side, while there was not a particle on the starboard. The only argument that can be presented to explain this curious freak of the elements is, that the Resolute, lying with her head to the eastward for probably more than a month, received the direct rays of the sun on the starboard quarter, and nowhere else, and thus a daily warmth was imparted to this side of the ship, while the other side, being without this heat, became as solidified with ice as though the sun never shone on it. This supposition may be very plausible and satisfactory to many, for to the certain knowledge of Capt. B. the head of the Resolute never varied from the east for twenty days, notwithstanding she was constantly drifting in a southwest direction, (the course of the pack.) There was scarcely anything on board the abandoned vessel that was not more or less destroyed. There was a great lack of fuel on board—although, in the course of the search throughout the vessel, a little coal was discovered in the hold, but the quantity was very small and entirely inadequate to supply the vessel more than a week. Of provisions, there was enough, perhaps, to last a crew of seventy-five men (the number originally carried by the Resolute) for nine months. The salt meats were the only articles that were at all in a state of preservation. Everything had gone to decay. Even the ship's sails, found between decks, were so rotten that the sailors could thrust their fingers through them like so much brown paper. An attempt was subsequently made to rig a topmast studding-sail out of some of the canvas found saturated with water, but it blew out of the gearing, and was scattered to the winds like chaff. The lower hold was found to contain the library of one of the officers of the Expedition, valued at over a thousand dollars. The books were entirely valueless when discovered by Captain Buddington, and subsequently thrown overboard as worthless rubbish.

The Resolute being entirely free of water, preparations were made to bring the ship to the United States. Capt. B. decided to sail the vessel himself, and accordingly, taking eleven men with him from his own bark, he began in good earnest to release the abandoned vessel from her ice-bound situation. The rigging had to be hauled taut and the sails put in order, before he could venture to start. This job occupied him some time, but was successfully accomplished. Capt. B. was in a great dilemma for proper navigating instruments, and the wherewith to bring him to New London after being released from the ice. His compass was very uncertain, and not at all trustworthy; he was without a chronometer, and he had no other map or chart to steer by than a rough outline of the great North American coast, drawn on a sheet of foolscap. With his lever watch, a quadrant, and a miserable compass, the brave fellow bade adieu to his comrades in the bark George Henry, and, trusting to Providence and his experience in those latitudes, prepared to bear home the prize he had so cleverly won.

From the time that Captain Buddington took charge of the Resolute, on the 16th of October, she continued to drive in a southwest direction with the pack of ice, when she succeeded in getting clear. Wishing to be in company as long as possible with the bark, Captain B. waited on the outside of the floe for three or four days, with the hope of meeting her, but the vessels missed one another and did not meet again during the remainder of the eventful voyage.

While here waiting for the George Henry, the British bark Alibi hove in sight, and on being signaled came alongside the Resolute. The news of the recovery of the Resolute was communicated to Captain Stuart, of the British bark, and a pair of Captain Kellett's epaulettes, found on board the abandoned vessel, were entrusted to him by Captain Buddington, with instructions to have them forwarded to the owner as speedily as possible. A letter for the owners of the George Henry, informing them of what had occurred, was also placed in the hands of Capt. S., who promised to mail it immediately on his arrival in Great Britain. [This letter, it appears, reached the owners of the bark, at New London, Conn., long before the Resolute arrived there.]

The Resolute now lies anchored in the stream off the town of New London, and is the chief object of attraction in that neighborhood. She is about 600 tons burden, and is built in the strongest manner. Her bows are sheathed with iron, while her entire frame is coppered and copper-fastened and bolted. The topgallant masts are down, having, as it is supposed, been used for fuel by her Commander previous to the abandonment. She is very bluff in the bows, but is a pretty good sailer. Some idea may be formed of her strength, when our readers are told that she was forced through sheets of ice varying in thickness from five to eight feet, while going at the rate of six knots per hour. No danger was anticipated of her being sunk by floes of ice, on account of her great strength. But there was a period in the history of the brief voyage, when the lives of all on board hung by a thread as it were. When a little to the north of the Banks of Newfoundland, the Resolute came in contact with an iceberg about 150 feet in height, on top of which was a detached piece of ice of many tons weight, and which the Captain expected every moment would tumble down upon the vessel and sink the prize so gallantly obtained. So great was the danger, that the boats were all in readiness to push off, should the overhanging glacier be precipitated upon them. However, after a great deal of careful working and hard labor, the dangerous obstacle was cleared, and the star of success once more shone brilliantly upon the hardy and intrepid mariners.

It is the opinion of Capt. Buddington, that if the crew of the Resolute had remained on board of her, with the hope of eventually releasing her, they could not have effected the task any sooner than it was performed by the natural causes which eventually freed her, and hence, he thinks, that Sir Edward Belcher, who had command of the squadron, acted perfectly right in abandoning the vessel, under the circumstances.

Among the articles found on board of the Resolute, was rigging and anchors valued at $2,000, whaling gear, full suits of winter clothing, and other things necessary for a voyage to the Polar Seas.

The prize is valued at $50,000, although Captain B. informs us she was never fitted out for less than $100,000. The proceeds of the cruise will have to be divided among the owners and crew of the George Henry, for in whaling voyages the entire proceeds, no matter what turns up, are to be shared amongst the parties interested, namely, the captain, crew and the owners.

The George Henry, it will be remembered, arrived a few days previous to the Resolute, having on board about 150 bbls. of oil.

Potatoes for Planting.

I am rather inclined to believe that the advocates for large potatoes for seed, are rather apt to try small culture as well as small potatoes, when they make experiments that way. Permit me to give my experience in relation to small potatoes as seed potatoes.

I am a mechanic, and cultivate only a small garden. It is, therefore, for my interest to produce as much as I can on a small scale; my garden consisted of ten square rods in 1853–54, and this year there were two rods more added. Of this I have planted some two-thirds to potatoes. In 1853 I planted with a mixture of large and small potatoes, and in October dug nearly six bushels, large and small, besides what my family used through the summer; from these I took all the small ones for the next year's planting; there were none larger than a good sized plum, and many were smaller.

In 1854 I planted these potatoes, and dug in the fall eight bushels of good sized potatoes, besides the small ones and what were used in my family before digging time. This year I planted the small of last year's raising, and having finished digging, I find, besides what were used before digging, that I have one hundred and fifteen bushels in all, which makes about two hundred and fifty bushels per acre. I think, considering the effects of the drouth in this region, this gives a good result in favor of small potatoes. The manure which I used was ashes mixed with night soil, and the collection of a sink drain.

Cost of Raising Wheat, Corn, etc.

The next volume of the New York Agricultural Transactions will contain a detailed farm account of Mr. Wm. Johnson, near Geneva, from which we have the following interesting items in regard to the cost of raising different crops the last season. His statement is published in the Journal of the State Society, for the present month, and shows very creditably the order and method of Mr. J.'s agricultural operations.

The farm contains 80 acres of tillable land, divided into nine lots, numbered from one upwards, and an accurate account kept with each. The soil is dry loam, with a clay sub-soil, pretty uniform throughout the farm. Each crop is charged with the interest on the value of the land producing it, and with all the labor and material used in its production. Of wheat six acres were sown, the whole expense was $122 40; the product was 126 bushels, or 21 bushels per acre; this makes it cost per bushel a trifle over 97 cents. But deducting the value of the straw, estimated at $18, we make the cost of the wheat but 83 cents per bushel. It was sold at $181, leaving a fair margin for profit at either figures. But at the price of wheat for many years past, the profit would be little or nothing

Eight acres of barley cost $102 20, and produced 285 bushels, or 32½ bushels per acre. It cost very nearly 37 cents, and sold for $1 per bushel. This produced a greater per cent. of profit than the wheat, as we believe it generally has for a series of years.

Ten acres of corn, on clover sod, cost $153 26. The product was 410 bushels of corn, and $60 worth of corn stalks. Mr. Johnson states the cost of raising the corn at 27 1-2 cents per bushel, but if we deduct the value of the stalks from the whole expense, it makes the cost of the corn but 22 1-2 cents per bushel. We should be glad of some explanation from Mr. J. on this point, as the value of the stalks and straw may have been allowed to balance some part of the expenses not indicated.

Ten cows were kept upon the farm, yielding an average of 210 lbs. of butter each. Mr. J. estimates the product of each cow worth about $64, and the cost of keeping, $26 85. It costs 12 1-2c. per lb. to make butter on Elmwood farm, and we think it cannot be sold for less any where with much profit. His pork, killed at 9 1-2 months old, fed on milk and fattened with corn, costs 5 cts. per pound. The balance over expenses on the whole farm, for the last year, was $953 52.

Mr. Johnson practices the following system of rotation. 1st. Corn, to which is applied all the unfermented manure he can get. The next spring it is sowed with barley at the rate of 2 1-2 bushels of seed to the acre, then sown to wheat in the fall, with a top-dressing of fine manure, of about six loads to the acre. The following spring it is sown with 8 quarts of clover seed and 5 quarts of Timothy, with one bushel of plaster per acre, when it is allowed to remain three years in grass. The usual product is 55 bushels of corn, 30 of barley, and from 20 to 30 of wheat, per acre. The munure is kept under cover, and a regular system of underdraining is carried out.

Calendar for January.

Winter is the time for the farmer to make preparation for the coming Spring. If the handle of a plow happens to be broken, do not wait till the day comes for using it, before either mending it yourself or employing some other person to mend it for you. Winter is a capital time to repair broken tools, and no one can better appreciate the old adage that a "stitch in time saves nine," than the farmer.

We never shall forget the tantrum into which a farmer of our acquaintance once got, just for the want of a simple iron ring. He had a few tons of as good herds grass as any one would desire to see, just ready to go in, when the western heavens began to be obscured with the blackest kind of coming shower. All was hurry and bustle, of course, the oxen were yoked and attached to the hay-cart in double quick time, the men and boys were all on the qui vive, the rakes and forks were thrown on, and away all went upon the run, about half a mile, to the hay field. One large fork with which to pitch on the hay was taken along, and none other at all suitable for that purpose. Tom was on the cart to lay the load, the stout hired man was to pitch on, and the farmer and one or two boys were to rake after. Two or three cocks were pitched on, and the prospect was fair that at least one large load would be got home dry, when lo, crack went the end of the fork handle, just as its holder was about heaving up a large forkfull, and while the handle went up with a jerk, the shining iron was left in the hay! The handle was split up about a foot—and there stood our friend, looking the very picture of despair, while he exclaimed, "There now, didn't I tell you to go and get a ring put on to that fork handle before it was used again—didn't I, and why upon earth didn't you do it? And now, here we are, and every spear of this hay will be just as wet as muck before we can get another fork." We all did the best we could—but our main stay was gone—and the consequence was, that up came the shower before the load was half on, and hay, men, cattle, and all concerned, were drenched by one of the worst pouring showers it was ever our lot to be out in.

If that farmer, instead of trusting to Tom, Dick and Harry, to have that ring put on, had done it himself, he might have saved his hay dry, and we might all have escaped a soaking that, if it did not make any of us sick, might have done so, and entailed a physician's bill sufficient to purchase all the forks in a good-sized agricultural warehouse!

This, then, is one of the months in which to see that every pitch-fork has a ring on it to prevent it from spliting—every rake has all its teeth in—every hoe is well fastened to its handle, &c., &c.

Besides the necessary preparation for the coming spring, the farmer will find ample time to be merry, and to enjoy his winter holiday, and we wish him—we use the words as applicable to all our readers—A Happy New Year.

Perhaps there is no one thing which adds more to its comfort than a plentiful supply of good fuel, well prepared, and conveniently housed. It sorely tasks the temper of the mother and daughters to be obliged to coax and puff and blow either wet or green wood into a generous flame, when the morning is biting cold, and the children are to be made ready for school, or the men to take an early start for the woods or the market.

It is a matter of economy, too, to burn dry wood. Now is the favorable time to set this matter all right.

CARE OF STOCK.—Constant and kind care of stock is something like frequent hoeing to a corn crop. The hoeing keeps the soil light, and susceptible of receiving valuable influences from the atmosphere, and thus saves manure. So frequent carding, and careful watering and feeding, saves hay and roots and grain, and gives you a larger product of milk and flesh than could be obtained on even a larger amount of feed, without the extra care. It is well to remember, too, that shelter and warmth supply the place of food, in some degree.

SHEEP.—Feed them on clover hay, if convenient, and make it convenient for them to go under cover at will.

CALVES.—Examine your cattle—but especially your last spring calves—and see if vermin have attacked them. If so, a little warm lard or oil rubbed close to the skin about the roots of the tail, the head and neck, will soon destroy them. Cattle cannot thrive while feeding a little army of depredators.

SNOW.—Bank the house well with snow and the wood-pile will last longer.

JANUARY—the month of good wishes, new plans and new hopes—let us all start right in it, in every particular. [N. E. Farmer.

Railroad Management in Germany.

Every railroad company is bound by law to have a double track on their lines, and no person is allowed to walk on a railroad track at any time, by day or night, under a penalty of the law. A barrier, consisting of two strong planks, is placed along the side of the tracks, to keep off animals. Every fifteen or twenty miles along the route, there is a station for a guard or watchman, who lives in a little hut beside the road, and whose business it is to be at his post with a red flag in his hand, at the approach of every train; and, before a train is due, to patrol his beat to see that all is safe, and to remove obstacles which are sometimes placed on the track by miscreants. In case of danger, the guard hoists on a telegraph, so-called, which stands near each guard-house, a red painted *cascet*, which can be seen by the engineer at a great distance; but if every thing is right, the two wooden arms of the telegraph are stretched in the air. During the night there is, instead of the *cascet*, a lantern with a deep red light placed in the air as a warning of danger; and a common one if all is in a safe condition. At every crossing there is a gate, which is locked up as soon as a train is due, and any one, either on horseback or in a carriage, who desires to cross, must wait until the train has passed.

Heading Cabbages in Winter.

The following method of preparing cabbage so as to head up during the winter, is adopted by many in New England:—

"Select a suitable spot in a garden or field, six feet in width, of any desired length, free from standing water; run a furrow the proposed length of your bed, and throw a back furrow upon it. This double furrow will form a side wall of your cabbage house. In the trench stand your cabbages on their roots, leaning towards the furrow at an angle of 40 degrees. Let the next furrow be thrown upon the roots and stalks of the cabbages, and another row be placed in the trench made by the second furrow; thus proceed until your six feet of width is planted, then let the last furrow be a double one—making the other side-wall about the height of the cabbage head. Through the whole length of the middle of the patch lay rails lengthwise, supported by crutches, at a height of about two feet from the cabbages; this will form the ridge of the cabbage house. Lay light brush wood from the side walls to the ridge pole; then throw on salt hay, or bog hay, or straw, two inches in depth. As the cold weather advances, throw on dirt until you have a depth of say six or eight inches, or even more, when the winters are severe, and finally spank the dirt roof with the flat of a spade, until it will shed the rain. Fill up the two ends of your house in the same manner, leaving only small air holes of a foot or two diameter, which may be closed with hay. The length of the house should be on a north and south line. In the early spring you will find your most unpromising plants have heads of their own, and all will be thriving and fresh.

Winter Shelter for Animals.

Solomon says, "A righteous man regardeth the life of his beast." It is remarkable, that on a very large majority of our farms, far less attention is paid to the comfort of our domestic animals during the long period of their confinement during the winter months, than the well-known humanity of our farmers, in other matters, would seem to insure. Liebig, the distinguished German chemist, says that our clothing is an equivalent for food; and every discerning and reflecting person must have received a very striking and impressive corroboration of the truth of the observation in the plain fact that an animal comfortably sheltered, and provided with litter or bedding, consumes, during winter, less food by nearly one-half than an animal of the same size and kind will require if uncared for and exposed. We have frequently been surprised and shocked by what appears to be an unmerciful regardlessness of the comfort and health of their domestic animals, particularly their young stock, by many farmers.

Every correct farmer will study the comfort of every animal under his care—not only from a common principle of humanity, which is, or should be, instilled into him by the gentle and humanizing character of his pursuits, but from a healthy and laudable regard for his own interests. As a facetious writer once said, "Misery never yet fattened any one, and cold and hunger are miserable bedfellows." Good barns, comfortable sheds, close "cotes," for sheep and swine to go to when they please, are among the most elegant embellishments of which a homestead, in a rural district, can possibly boast.

[N. E. Farmer.

SOUND DUES—WHAT ARE THEY?—An answer to this inquiry will be especially interesting at this time. As these dues may possibly give rise to a serious dispute between the United States and Denmark, it will be interesting to know what they are. The "Sound" is a narrow strait lying between the Island of Zetland, belonging to the Danes, and the Swedish coast, and gives entrance to the Baltic Sea. The fortress of Cronburg Castle commands the passage, and exacts a payment from all vessels entering the Baltic; the ships of Denmark herself have to pay, as well as foreign tonnage. The origin of this exaction is, that in ancient times, Denmark undertook to build and sustain certain light houses along the coast, for which the Hanse towns agreed to pay a toll.

England, France, Holland and Sweden, pay a duty of one per cent. on every cargo entering the Baltic. Other countries, including the United States, pay one and a quarter per cent.; even Danish ships are taxed at this rate. In the year 1826 a treaty, recognizing this duty, was concluded between the United States and Denmark. This treaty, however, according to one of its stipulations, may be dissolved by either of the parties, provided they give one year's notice of their intention.

THE GRAVE OF MADISON.—A correspondent of the Fredericksburg News, in Culpepper county, Va., gives a melancholy picture of the last resting place of the illustrious Madison. He lies, with his family, in a graveyard a short distance from his house, upon his estate of Montpelier; the cemetery is surrounded by a brick wall, and the gate is entirely down. The correspondent says that not a stone marks the great man's resting place; dark, running green box wraps it with verdure, and the tracery of branches from an old leafless chestnut tree, relieving itself against the warm azure sky, nod and wave over the dark mountain. 'Tis a solemn, calm and peaceful spot. The correspondent adds that Mrs. Madison's remains are in the vault of the Congressional burial ground in Washington; her direction was to be interred by the side of her husband, but her son has never fulfilled her request.

IMPORTANCE OF A COMMA.—In the priory of Ramessa there dwelt a prior who was very liberal, and who caused these lines to be written over his door:

> "Be open evermore, O thou my door;
> To none be shut, to honest or to poor."

But after his death, there succeeded him another, whose name was Raynhard, as greedy and covetous as the other was bountiful and liberal, who kept the same verses there still, changing nothing therein but one point, which made them run after this manner:

> "Be open evermore, O thou my door,
> To none, be shut to honest or to poor."

Afterward, being driven from thence for his extreme niggardliness, it grew into a proverb, that for one point Raynhard lost his priory.

THREE ELEMENTS OF NATIONAL GREATNESS.—"Three things," says John De Witt, the eminent statesman of Holland, "are essential to national prosperity and greatness —popular liberty, perfect religious toleration, and peace." Nothing, he says, is so utterly wasteful of national strength and riches as war. Its cost all comes upon the people. It enriches nobody but contractors, demagogues and tyrants. It always ends by increasing the power of the few, and diminishing the rights and liberties of the many. Republics must mind their own affairs, and let other nations fight out their own quarrels, and settle the balance of power to suit themselves. So long as Holland kept these maxims of her great statesman, she was a first-rate Republic. She has long ago forsaken them, and is now about a fifth-rate Monarchy.

A BILLION.—How easy it is to say a billion—how easy it is to write a billion—but can you count a billion? Why not? Stop a bit.

Suppose you count 200 in one minute.
That is 12,000 in one hour,
That is 288,000 in one day,
And 105,120,000 in one year.

But this would not allow a single moment for sleep or for any other business whatever. To count a billion it would require 9,512 years, 34 days, 5 hours and 20 minutes, according to the above reckoning; but suppose we were to allow the counter twelve hours daily for rest, eating, and sleeping, it would then take 19,024 years, 68 days, 10 hours, and 40 minutes to count a billion.

NEWSPAPER FACTS.—There are sixteen million, fifty thousand, four hundred and sixty newspapers printed in the course of a year in the city of Albany, New York. This is 321 to each inhabitant, or more than one to each person every week-day in the year. The people of the Union spend in a year for newspapers $15,000,000, or would, if they all paid their debts. The newspapers that they read, if all put together in a continuous string, would reach more than ten times round the world, and weigh seventy million pounds. If they were spread out to dry, they would more than cover the whole District of Columbia like a blanket.

A correspondent of the New York *Observer*, writing from St. Anthony, Minnesota, informs us that there is at that place "a wire suspension bridge across the Mississippi, and that the tolls for the first year amounted to $12,500, and for the month of October, they were $1 940; also that the citizens have raised a bonus of $20,000, and a Mr. Winslow has obligated himself to erect within a year a hotel to cost at least $60,000." This adds another to the many testimonies of the progress and enterprise of the Great West.

"The failure of the mind in old age, in my opinion," says Sir Benjamin Brook, "is often less the result of natural decay than of disuse." Ambition has ceased to operate; contentment brings indolence; indolence decay of mental power, ennui, and sometimes death. Men have been known to die, literally speaking, of disease induced by intellectual vacancy.

A person who was recently called in Court, for the purpose of proving the correctness of a doctor's bill, was asked by the lawyer whether "the doctor did not make several visits after the patient was out of danger?" "No," replied the witness, "I considered the patient in danger as long as the doctor continued his visits!"

A man must possess fire in himself before he can kindle up the electricity that thrills the great popular heart.

New York and Erie Railroad.

ON and after Wednesday, Oct. 31, and until further notice, Passenger Trains will leave the pier foot of Duane-st., New York, as follows:

Buffalo Express at 7 A. M. for Buffalo direct, without change of baggage or cars. At Hornellsville this Train connects with a Way Train for Dunkirk and all stations on the Western Division.

Mail at 8¼ A. M. for Dunkirk and Buffalo, and all intermediate stations. Passengers by this Train will remain over night at Owego, and proceed the next morning.

Newburg Express, at 4 P. M., for Newburg direct, without change of cars.

Rockland Passenger at 4 P. M. via Sufferns for Piermont and intermediate stations.

Way Passenger at 4 P. M. for Otisville and intermediate stations.

Night Express at 5 P. M. for Dunkirk and Buffal

Emigrant at 5 P. M. for Dunkirk and Buffalo and intermediate stations.

On Sundays only one express train, at 5 P. M.

These Express Trains connect at Elmira with the Elmira and Niagara Falls Railroad, for Niagara Falls, at Buffalo and Dunkirk with the Lake Shore Railroad for Cleveland, Cincinnati, Toledo, Detroit, Chicago, &c. D. C. McCALLUM, General Sup't.

Ayer's Pills.

FOR all the purposes of a Family Physic. There has long existed a public demand for an effective Purgative Pill which could be relied on as sure and perfectly safe in its operation. This has been prepared to meet that demand, and an extensive trial of its virtues has conclusively shown with what success it accomplishes the purpose designed. It is easy to make a physical *Pill*, but not so easy to make the best of all *Pills*—one which should have none of the objections, but all the advantages of every other. This has been attempted here, and with what success we would respectfully submit to the public decision. It has been unfortunate for the patient hitherto that almost every purgative medicine is acrimonious and *irritating* to the bowels. This is not. Many of them produce *so much* griping pain and revulsion in the system as to more than counterbalance the good to be derived from them. These *Pills* produce no irritation or *pain*, unless it arises from a previously existing obstruction or derangement in the bowels. Being purely vegetable, no harm can arise from their use in any quantity; but it is better that any medicine should be taken judiciously. Minute directions for their use in the several diseases to which they are applicable are given on the boxes. Among the complaints which have been speedily cured by them we may mention Liver Complaint, in its various forms of Jaundice, Indigestion, Langor and Loss of Appetite, Listlessness, Irritability, Billious Headache, Billious Fever, Fever and Ague, Pain in the Side and Loins, for in truth, all these are but the consequence of diseased action of the liver. As an aperient, they afford prompt and sure relief in Costiveness, Piles, Colic, Dysentery, Humors, Scrofula and Scurvy, Colds, with soreness of the body, Ulcers and impurity of the blood; in short, any and every case where a purgative is required.

They have also produced some singularly successful cures in Rheumatism, Gout, Dropsy, Gravel, Erysipelas, Palpitation of the Heart, Pains in the Back, Stomach, and Side. They should be freely taken in the spring of the year, to purify the blood and prepare the system for the change of seasons. An occasional dose stimulates the stomach into healthy action, and restores the appetite and vigor. They purify the blood, and, by their stimulant action on the circulatory system, renovate the strength of the body, and restore the wasted or diseased energies of the whole organism. Hence an occasional dose is advantageous even though no serious derangement exists; but unnecessary dosing should never be carried too far, as every purgative medicine reduces the strength, when taken to excess. The thousand cases in which a physic is required cannot be enumerated here, but they suggest themselves to the reason of every body; and it is confidently believed this Pill will answer a better purpose than any thing which has hitherto been available to mankind. When their virtues are once known the public will no longer doubt what remedy to employ when in need of a cathartic medicine.

Being sugar wrapped they are pleasant to take, and being purely vegetable, no harm can arise from their use in any quantity.

For minute directions, see the wrapper on the Box.

Prepared by Dr. J. C. AYER, Practical and Analytical Chemist, Lowell, Mass.

Price 25 Cents per Box. Five Boxes for $1 00.

Ayer's Cherry Pectoral,

FOR the rapid cure of Coughs, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption. This remedy has won for itself such notoriety for its cures of every variety of Pulmonary diseases, that it is entirely unnecessary to recount the evidences of its virtues in any community *where it* has been employed. So wide is the field of its usefulness, and so numerous the cases of its cures, that almost every section of the country abounds in persons publicly known, who have been restored from alarming and even desperate diseases of the lungs by its use. When once tried its superiority over every other medicine of its kind is too apparent to escape observation, and where its virtues are known, the public no longer hesitate what antidote to employ for the distressing and dangerous affections of the pulmonary organs which are incident to our climate. And not only in formidable attacks upon the lungs, but for the milder varieties of *Colds, Coughs, Hoarseness, &c.* and for Children it is the pleasantest and safest medicine that can be obtained.

As it has long been in constant use throughout this section, we need not do more than assure the people its quality is kept up to the best that it ever has been and that the genuine article is—

The Sabbath Recorder,

PUBLISHED WEEKLY

By the Seventh-day Baptist Publishing Society,

AT

NO. 9 SPRUCE-STREET, NEW YORK.

Terms:

$2 00 per year, payable in advance. Subscriptions not paid till the close of the year, will be liable to an additional charge of 50 cents.

☞ Payments received will be acknowledged in the paper so as to indicate the time to which they reach.

☞ No paper discontinued until arrearages are paid, except at the discretion of the publisher.

☞ Communications, orders, and remittances, should be directed, post paid, to

GEO. B. UTTER, No. 9 Spruce-st., New York.

liabilities of those who take Periodicals.

The laws declare that any person to whom a Periodical is sent, is responsible for payment, if he receives the paper, or makes use of it, even if he has never subscribed for it, or has ordered it to be stopped. His duty in such a case is not to take the paper from the office or person with whom the paper is left, but to notify the publisher that he does not wish for it.

If papers are sent to a post-office, store or tavern, or other place of deposit, and are not taken by the person to whom they are sent, the postmaster, store or tavern-keeper, &c., is responsible for the payment until he returns the papers, or gives notice to the Publisher that they are lying dead in the office.

REALITIES.

Perhaps there has never been a time, since the creation of the world, when realities entered so largely into the character of men as at the present. The inner nature of every thing is now a subject of philosophy, and nothing can pass as genuine unless it possess requisite virtues. Life is assuming a more stable form, and men are honored or dishonored according as the intrinsic elements of their souls are virtuous or vicious. In other words, a man must be a *man*, or he will not be considered as such, by those who are capable of perceiving the difference between the *real and the fictitious*.

The above is relatively true, and doubtless the general tendency of the world's civilization is ultimately to reach such a standard of reality; yet at present there is too much faith in appearance—too much confidence in the glittering gauze which surrounds iniquity. Vice, that heinous monster, which lies secreted behind its dazzling covert, occasionally raises its impious head, and belches forth its poisonous breath, which convinces the world of the deception that previously screened it from public condemnation. Cold formality, metropolitan fashion, and satin-covered falsehood, all stand as so many galvanized gladiators, continually eclipsing the eye of the spectator, alluring the heart of the impulsive, and dethroning the reason of the enthusiastic. In all this men want some rule of action, some governing power, that cannot be moved by the conscience-destroying mandate of passion, or affected by the bitter moaning of adversity.

A part of the actions of men are real—another part are vain fantasies, manufactured only for the occasion. A distinction between these, then, should be the first business of every young man—an application of the *real* and the *true* should be the second.

What warms the soul more, than to be confident that you are actuated, in all your intercourse with your fellows, by truth, virtue, honor, justice, benevolence, and love to God and man? What rouses it to a sense of its own guilt, more than to know that you are captivating the hearts of your brothers by vain show, unmeaning bows, and pretended smiles? The former are emphatically the realities of man—the latter are vain embellishments, inducing him who uses them to bandon the path of right. Conscience deals with realities; its approvals are always on the side of virtue; yes, it is the voice of God, whispering in the soul, telling man to pursue the right, the substantial, and the humanity-loving; and forever to abandon the trifling allurements which beset life's journey.

A large class of men are not what they pretend to be. They feign religion, and seemingly possess all the benevolent qualities which are essential to make mankind as happy as Nature's God intended they should be; but, as we observe them day after day, we are forced to the conclusion, that their pretended goodness is only a garb to screen them from the contumely of public opinion. They act virtuously, not because there are any virtues in them, but that by doing so they can better carry out the evil designs of their own ungoverned propensities. "By their works ye shall know them." Men are so constituted, that conscience will not subscribe to wrong in others, even though the person be guilty of the same. This faculty in the soul of man, which enables him to detect wrong in his own volitions, and in the volitions of his fellows, also carries with it an impulsive feeling, which causes him to condemn that wrong wherever he finds it.

Men, however, seldom proclaim their own wrongs, while but few fail to proclaim the wrongs of their neighbors. A man may uphold vice in others, if he happens to be identified with it; but this does not argue that the tacit decision of his heart is in favor of it. This makes up public opinion; and it will at once be observed, that an opinion made up by a society of men, each of whom claims the prerogative of condemning wrong in others, will, as a general thing, be moral and virtuous, even though the men who make up that society are destitute of the first principles of *real* virtue. This may be a secret opinion, antagonistic to the expressed views of society; nevertheless, it will exist, and will be the representative of the *real* sentiment of community, whether it be proclaimed or not.

It will not, I hope, be inferred from this, that the opinion of society is never wrong; for such would be positively false. An individual may perform an action, and be impelled to the performance of that action by motives purely virtuous. Society, in taking that action into consideration, may misjudge the motive which moved him, and also the object he wished to obtain by that action, and thus, being ignorant of the real character of the person, public opinion might be against him; yet he would be justified in his own heart, the popular indignation of community to the contrary notwithstanding.

It is this reality, then, which claims the attention and admiration of the Christian world—it is this reality, then, which forms the substratum on which the characters of both individuals and societies are founded; and the person whose character is reared upon any other basis, will only have the semblance of reality; and the first blast of adversity will shake it to its center, and cause it to fall in one massive pile to the ground. Yes, let every person's actions be characterized by a sense of right; let every subject be thoroughly examined; and let honesty enter into every volition. Then the soul will grow up strong in morality, and societies will reach such a degree of perfection, that vice can have no residence; and sin will be hunted down, as an abnormal excrescence, whose only mission is to stain the fair image of God, personified in the soul of each community.

Who can help but admire the man whose every look is a reality—whose soul breathes out its conscientious convictions at every breath—and whose every act is filled with honesty and virtue? Such we are proud to own as friends—in such we are ready, upon all occasions, to repose confidence and trust. Christian integrity seems to beam forth from every look of such an one. But picture to your mind one of the opposite class—one whose looks are manufactured to suit the occasion—who bows because he can thereby effect a better trade; and ask yourself, if that smile he wore upon his countenance was a reality? Did it truly flow from an honest heart? Does he possess all the interest for your welfare that his appearance would indicate? And are you certain, that his firm grasp was really the out-gushing of a warm heart, unpoisoned by the arrows of deception? Or was it a trap set to ensnare your confidence, and cause you to be an accomplice in promoting some of his selfish ends? Oh, deception! how bitter, how unpalatable thy doctrines! It is better, far better, to shake the rough hand of honesty, than to be tantalized for months in the laps of black-hearted opossums. Honesty wears a plain dress, makes no unmeaning bows, while deception stalks with its vamped ruffles, ready at every corner to deceive and lead astray.

If a man would have a character, then, capable of standing the shocks of momentary passions and allurements, that character must be made up of realities. If he would acquire a stability, which would withstand the temptations of glittering wealth and outward appearance, every element of its structure should be freed from all alloy. If he would be a man worthy of the smile of his Maker, every principle which moves him to action must be simple in itself, but pure and genuine. If he would "love God with all his heart," every motive, every aspiration, must be a reality. The young man who starts out in life with this object in view, may not so readily obtain a reputation, but he will build a character that time cannot efface, and eternity will never cease to cherish. He who has no guile, no deception, will never accept it as a virtue from any of His creatures. All the evils of the human soul are exposed to the vision of Deity, and though they be coated over with the saliva of unadulterated stratagem, yet it will only add to their already vicious character treasonable elements, which will cause them to be buried still deeper in the contempt of Omnipotence. Wrong appears doubly wrong, if it seek to clothe itself in the garb of righteousness; so right seems doubly potent, when stripped of all but its simple wardrobe. A small cloud may obscure the face of the sun; so a deceitful tongue may stain the heart of a virtuous community.

Realities, then, are worthy of our attention; and when we see a man actuated by the pure and genuine principles of virtue; when we see him love right because it is *right;* love his fellow men because they are his *brothers;* assist the needy from an impulse of his own *soul*, which always admonishes him, and which he is always proud to obey; when, in a word, we see him loving God and all his creatures from a sense of duty and right, which rise up from the very depth of his nature, at every throbbing of his heart, we feel that he is worthy of our unbounded love and uncompromising reverence.

Such men, however, are comparatively few. Still, we may find them in all the great fields of action, whether it be in the social, political, or religious. They are the *salt* of the Christian world, without which civilization would cease to progress, and the sins of the human race would be multiplied until regeneration would become morally impossible. Selfishness, ambition, or any of the unbridled propensities of our nature, may go on and become powerful in their wild career; yet at the very moment when they suppose their strength to be most efficient, and their schemes triumphant, they have but to approach the face of honesty, and drink the pure breath of its unstained soul, and they sink in bitter remorse beneath the waves of their own loathsome corruption. They wither before the scourging lash of justice, and faint from pain as the arrow of truth enters the crusted festers of their own hearts. Yes, the man whose life is a reality, may stand up with his honest face, fearless of any assault from the selfish and ambitious, whose only notoriety has been gained by waddling in the muddy pool of self-glorification, and be confident of the smile of God, whose approval he feels flowing from the very fountain of his spiritual nature.

History teaches us that fancy, ornament, and all the ruffled decorations which have a tendency to screen the *real* character of things from the perception of men, are gradually receding from our view; and the substance and *its* qualities will, at no distant day, be considered the true field of philosophy. In other words, the index of the man will be the moral character of his soul, unaffected by ancient costumes or modern styles. The fairy notions, which once danced in the brain of those whose shouts have long since been borne away by the breezes which nestled along the banks of the Adriatic, are remembered only as the youthful dreams of a deluded people. The historical accounts of the ancient Sophists, who claimed such profound skill in philosophy and eloquence, are but so many scorpions, to sting the conscience of that would-be syllogistical reasoner, whose heart swells with pride, and whose soul is enchanted by the senseless harangue and brainless rhetoric which he conceives to fall from his own lips, as *Ego* stands up dressed in all the dignity of his own corrupt imagination. In a word, all the superstitious notions which have haunted truth and religion, during every age and every generation, are but the ornamented day-dreams of a fickle-minded fancy. Such evils do still exist; but their voices are hushed, to a great extent, by the triumphant shouts of an enlightened people. Warm-hearted Philanthropy has proclaimed its rights and administered its bounties, until the tortured soul of feigned Benevolence, which was once allowed to grow fat in wickedness, has been made to melt beneath the admonishing frown of its own indignation. Vice sinks back in remorse, whenever it finds itself in the presence of full grown Virtue; so cold-hearted formality, like the winter's drift, which melts away before the smile of the day-god, disappears in shame as it beholds the meek but honest look of true Religion.

Realities do exist. The different elements which go to make up the world's civilization, have jostled together, from the eve which preceded that long and gloomy night of paganism, all the way down through every succeeding age to the present moment. This warring of elements has thoroughly proved the character of each; and if we view the path in which they have all traveled, we shall discover thousands of varnished dogmas, which have fallen in the battle, simply because they had no *reality*. Nothing can stand through eternity, save the smile of God upon the conscience of man—*that* is a genuine reality.

I. B. C.

ALFRED CENTER.

"THE GEOLOGICAL THEORY."

To the Editors of the Sabbath Recorder:—

As it has been intimated in the columns of the *Recorder*, that the Mosaic record of creation may be so rendered as to harmonize with the "Geological Theory," and thinking that some of your readers might wish to see them harmonized, if done so as to do no violence to the record, I propose to give a geological version of one or two of those texts which seem too stubborn to yield to this "theory"—conceding, in the mean time, that those texts which do not conflict with it, *say* what they *mean*. If I fail to reconcile these texts to the theory, to the satisfaction of your readers, let me admonish them to look for the cause to some other source rather than to the theory. To doubt *that*, they must part company with those who stand high in the scientific world, and will give reason for others to suspect that they are unacquainted with the science. For the sake of convenience, I will state the theory, and then to my task:—

"1st. The first sentence of the Mosaic record is a simple, independent, all-comprehending axiom, to this effect, that matter has not existed from eternity, but had a beginning; that that beginning took place by the all-powerful will of one Being, the self-existent, independent, and infinite in perfection; *and that the date of that beginning is not made known.* 2d. That at a recent period our planet was brought into a state of disorganization, detritus, or ruin, from a former condition. 3d. That it pleased the Almighty, out of that ruin to adjust the surface of the earth to its now existing condition—the whole extending through the period of six natural days."

Now, to the record, Gen. 1: 1—"In the beginning God created the heaven and the earth." 2d, And the earth was slightly ruined. I say slightly; and let me here suggest to those who have this theory in their keeping, that they get its second leg mended, or qualified in like manner; for, as it now stands, it implies such an utter destruction of the earth, that the characters traced by the Mississippi, by which geologists determine so accurately that the river had been flowing about 124,000 years when "our planet was brought into a state of ruin," would have been entirely obliterated. Neither would the lines marked by the Niagara, from which they learn so easily that it did not break its barrier to seek the Ontario till after the Mississippi had flowed about 90,000 years, be now there. If any of your readers should be so infatuated as to take the position that those rivers which now pour their waters into Lake Erie, are coeval with the Mississippi, and argue that this vast volume of water must have had an outlet, when there is no trace of it, except where it is now, let me remind them, that the theory is their own, and geologists are not responsible for it, and are under no obligation to invent a theory to help *them* out of a difficulty. The other passage to be noticed now is at Exodus 20: 11—"In six days God adjusted the surface of the earth and the sea, and made heaven, and all that in them is." This, I admit, does not read quite as smooth as the old version, but I doubt not it will do very well when we get used to it. I will close by asking, Is there a plan upon which the Theory and the Record can be more consistently harmonized?

WHO KNOWS?

☞ Lest some should suppose that I only follow where other men lead, I propose, in another number, to show wherein I differ from them in relation to their theory of a former condition of the earth, and advance a new theory.

W. K.

"SOON BE WELL."

"Yes, "soon be well"—in a beautiful land
Of flowers and all things bright;
A song in thine heart, a harp in thine hand,
And garments purely white.

Yes, "soon be well"—for the pearly gates
Shut out the pestilent breath,
And haggard Disease no longer waits
The call of the Reaper—Death.

And when thou 'rt well, my longing eye,
Oft lifted to thy home,
Shall catch *thy* look, and, cheered anew,
I'll bide God's time to *come*.

Dec. 25th, 1855.

LOSSES.

Upon the white sea-sand
There sat a pilgrim-band,
Telling the losses that their lives had known,
While evening waned away
From breezy cliff and bay,
And the strong tides went out with weary moan.

One spake, with quivering lip,
Of a fair freighted ship,
With all his household, to the deep gone down;
But one had wilder woe
For a fair face long ago
Lost in the darker depths of a great town.

There were who mourned their youth
With a most loving truth,
For its brave hopes and memories ever green;
And one upon the West
Turned an eye that would not rest
For far-off hills whereon its joy had been.

Some talked of varnished gold,
Some of proud honors told,
Some spake of friends that were their trust no more;
And one of a green grave
Beside a foreign wave
That made him sit so lonely on the shore.

But when their tales were done,
There spake among them one,
A stranger seeming from all sorrow free:
"Sad losses have ye met;
But mine is heavier yet,
For a believing heart hath gone from me."

"Alas!" these pilgrims said,
"For the living and the dead,
For fortune's cruelty, for love's sure cross,
For the wrecks of land and sea!
But, however it came to thee,
Thine, stranger, is life's last and heaviest loss."

[London Athenæum.

A PUNNING MINISTER.

The new Encyclopædia of American Literature, by the brothers Duyckink, contains many characteristic anecdotes of Rev. Matthew Byles, from which we extract the following:

There was a slough opposite his house, in which, on a certain wet day, a chaise containing two of the town council stuck fast. Dr. Byles came to his door and saluted the officials with the remark: "Gentlemen, I have often complained to you of this nuisance without any attention being paid to it, and I am very glad to see you stirring in this matter now."

In the year 1780, a very dark day occurred, which was long remembered as "the dark day." A lady neighbor sent her son to the doctor to know if he could tell her the cause of the obscurity. "My dear," was the answer to the messenger, "give my compliments to your mother, and tell her that I am as much in the dark as she is."

One day a ship arrived at Boston with three hundred street lamps. The same day the doctor happened to receive a call from a lady whose conversational powers were not of the kind to render a long interview desirable. He availed himself of the newly-arrived cargo to dispatch his visitor. "Have you heard the news?" said he, with emphasis. "O, no! what news?" "Why, three hundred new-lights have come over in the ship this morning from London, and the selectmen have wisely ordered them to be put in irons immediately." The visitor forthwith decamped in search of the particulars of this invasion of religious liberty.

When brought before his judges at the time of his trial, they requested him to sit down and warm himself. "Gentlemen," was the reply, "when I came among you, I expected persecution; but I could not think you would have offered me the fire so suddenly."

A pun of Byles is related by the hospitable wits of Boston, to the visitor, as he passes by King's Chapel, in Tremont street. There are two courses of windows by which that building is lighted on its sides; the lower ones are nearly square. In allusion to this architectural peculiarity of the square embrasures of its solid walls, Byles said that he had often heard of ecclesiastical canons, but he never saw the port holes before.

Another, a Revolutionary witticism, does justice to Byles' toryism. When the British troops, the lobsters, passed his door, after entering the town: "Ah," said he, "now our grievances will be red-dressed."

His system of practical joking is said to have been as felicitous as his verbal, though rather more expensive to the victims. The doctor, however, occasionally met his match. A lady whom he had long courted unsuccessfully, married a gentleman by the name of Quincy. "So, madam," said the unsuccessful suitor, on meeting her afterward, "it appears you prefer a Quincy to Byles." "Yes, for if there had been any thing worse than *biles*, God would have afflicted Job with them."

FRUITS OF BIBLE READING.

The late Rev. Mr. Innes, of Gifford, in Scotland, after a life prolonged beyond the days of most men, literally fell asleep. Through life a truly peaceful man, his latter end was peculiarly so; without the suffering of disease or any acute pain, the pins of his tabernacle seem to have been gently loosed. Some days before, one of his parishioners, a farmer, called, and seeing him cheerful, said he was glad to see him so well, and that as mild weather was at hand he would soon get better, and be visiting them again. He replied, "No; I wish no such flattery. You see here a poor old man on his death-bed; but without alarm; I tell you that. Hear, and tell all your neighbors, my parishioners, that my comfort now and hope for eternity is just the Gospel of Christ I have preached to them sixty years, and there is no other." He was wonderfully composed at all times; but a week before his death, one called, and seeing a book of small type before him, asked him if he saw to read without his glasses. He said, "Oh, no; I cannot see to read even my Bible without glasses; but," strengthening his voice, "I am thankful that I have a Bible that I have read; and I can mind some texts that I can see and feel now as I never did before. O, it is a precious book!"

A MINISTER'S POWER.

In a brief notice of the late Dr. Payson, of Portland, Maine, the *Bibliotheca Sacra* says:

"He was small, near-sighted, and dark; he was frank, almost blunt in speech; he was reserved and even shy in his manners, and much preferred burying himself in books to mingling in general society; and in his general intercourse with men, though always pleasant, he usually appeared nervous, abstracted, abrupt." And yet it is admitted that few men have exerted so powerful an influence as Dr. Payson. Whence, then, his power? It is answered thus:

"The causes of Dr. Payson's success were the unaffected benevolence of his heart, the sincerity of his faith, the brilliancy and exuberant richness of his imagination, the fluency of his speech, the extent and variety of his information on all topics of interest to his people, and, above all, the intense earnestness with which he concentrated all his energies in the simple work of the ministry."

Most ministers, truly called of God, would be men of power, if they, with intense earnestness, would concentrate all their energies upon the single work of the ministry. And without doubt, the gospel ministry is a work worthy of such a consecration.

GIVE WAY A LITTLE.

In the crowded streets of a great city, where multitudes are passing in opposite directions, while some are crossing obliquely, and others at right angles, it is necessary for every one to give way a little to those he meets; by which means they will have a free passage. Were the whole multitude to pass directly onward, without any one's yielding an inch of ground to anybody else, all would be obstructed more or less, and confusion must ensue. Or, if a churlish individual should take it into his head to march forward in a straight line, and, in no case, make way for man, woman, or child, nor even for a procession, he would be sure to jostle against some one or other, at almost every step, and would receive many an insult, and perhaps hard blows, for his obstinancy and impudence.

And very much so it is in our journey through life, and with respect to our general intercourse with mankind. In the march of life no one's path is so clear, as not in some degree to cross another's; and if each is determined, with unyielding sturdiness, to keep his own line, it is impossible but he must give and receive many a rude shock. In society, in neighborhoods, and even among close friends, there will spring up rivalries, and be sometimes a close line of opinion, and if all were mutually obstinate, there could be no bounds or end to contention; whereas, by the exercise of mutual condescension, social harmony is preserved, and the pleasures of society enjoyed.

Courtesy of manners is the congruous drapery of a benevolent mind, and is both seemly and pleasing, at all times and in every relation of life. Nor does it need any laborious study to attain it. A great part of the essence of courtesy, or of genuine politeness, is expressed in these three words, "Never prefer yourself."

RUM AND TOBACCO.

A man of fine natural talents, who prepared for the ministry, but who by drinking had fallen to be a companion of the vile, would occasionally burst into a strain of eloquence, lamenting his ruin. During one of these strains I chanced to be present. He was purchasing tobacco, and turning he addressed me thus: "I use tobacco. I know it is a filthy practice, but why stop it? I am bound by another band that follows in its train—listen, when I say all drunkards use tobacco. Tobacco deadens the taste; it creates another appetite more hideous than the first; it destroys the sensibilities; it kills both body and soul. Tell your friends, impress it on your children, and *name me as an example*."

Intoxication, to a lesser or greater extent, is a certain consequence of using tobacco in any of its forms; hence, *between the habitual smoker and the habitual dram-drinker there can scarcely be said to be a shade of difference.* It is only because tobacco does not ordinarily produce that excess of intoxication known as drunkenness, that it is viewed as a thing less pernicious. The young beginner in smoking usually experiences its poisonous effects; he is overcome by nausea and a peculiar giddiness, and not unfrequently vomits. Fortunately, he is unable to continue the dose, otherwise the consequence might be stupor, convulsions, and death. Practice in this, as in every other species of intemperance, leads to a violation of appetite, and a hardened state of feeling; but the intoxication, nevertheless, does its work on the constitution. The secretion and waste of saliva is considerable; thirst is produced; and thus the *pipe and pot* are generally associated.

Dr. Rush says, "One of the usual effects of smoking and chewing is thirst. This thirst cannot be allayed by water, for no sedative, or even insipid liquor, will be relished after the mouth and throat have been exposed to stimulus of the smoke or the use of tobacco."

Dr. Brown, of West Randolph, in Vermont, says, "The use of tobacco produces a dryness or huskiness of the mouth; thus creating a thirst for strong drink."

Dr. Woodward says, "I have supposed that tobacco was the most ready and common stepping-stone to that use of spirituous liquors which leads to intemperance. Those who chew or smoke tobacco, are rarely satisfied with water or other insipid or tasteless drinks; else, why should the bar-room and the grog-shop be the resort of the smoker?"

In point of affinity and close connection, Tobacco and Rum are Siamese twins. They live in endearing friendship—they nestle in each other's bosom.

I wish to put a few questions to the devourers of tobacco:

Do you know of one drunkard that does not use tobacco? Do you know of one reformed drunkard who has apostatized, whose apostacy may not, in part, be attributed to tobacco? Do you know of one drunkard who did not use tobacco previously to becoming an inebriate on alcohol?

The use of Tobacco is among the deadly foes of Temperance. It is the nature of this weed to goad the system onward, and urge it beyond its natural strength, so that prostration or debility is among the most natural results. When the victim is in this overdone state, and depression weighs down his soul, no hand will elevate him like that of strong drink. I might speak in stronger terms. The use of Tobacco itself, in multitudes of cases, produces intoxication. The Patagonians get drunk day by day on Tobacco. People in the Sandwich Islands have been excluded from the church for getting drunk on Tobacco. Tobacco users pretty generally use just enough to carry them to the point of intoxication. They dare not use more under given circumstances; if they did, they might be on the bed or in the ditch, unfit for business—"all seas over."

We have heard much of Delirium Tremens, and supposed that its horrors could only result from the use of alcohol. This is a mistake. Cases, I think, are rather clearly made out, both in books and in actual life, in which the disease, in its fiendish and fearful horrors, resulted from the use of Tobacco.

There are fathers, also, that abhor intemperance, but are notoriously intemperate on the Tobacco score. How they can expect to raise up sons who shall escape the toper's doom, I cannot divine; say or do what they may, their example is fatal, completely so; many of their sons are already sallow, stupid, and sickly, on cigars; and when the poison shall have shattered their nerves more and more, shall have created a craving, gnawing appetite, that shall clamor aloud for strong drink, stronger and stronger, then it will be seen, that the fair boy, now puffing his cheroot in the saloon, or in his father's face, has become a bloated drunkard, pouring blasphemy upon the Maine Law, and upon all law which crosses his burning desires, for the cup of death.

[Anti-Tobacco Documents.

WHAT A DYING MAN SAID TO A FRIEND.

Lavater mentions the last visit he paid to his most intimate friend. All present having left the room, the dying man said, "Let me tell you, in a few words, that I have not led the life of a Christian. I have been a hypocrite—not what the world calls a hypocrite; but I have not been a Christian. And I trust you will thank me in the next world for this wound I must inflict on your heart. We have not been Christian friends. The love of Jesus has not dwelt in us. Our friendship was not founded on him. How many hundred hours of our short life have we killed by useless conversation, with plans of ambition! What the world calls noble ambition is abominable in the sight of God, an ever-destroying poison to the soul; a bane to all virtue; a hell to the heart which perceives it, when, at the gates of death, it begins to be sensible of the eternity of God, of Christ's unspeakable majesty, and his imcomparable humility. O my friend! that passion has caused me a thousand tears of unutterable grief. Unspeakably have I been afflicted by every impulse of that monster, now I am on the brink of eternity! O how very true are those words of my Saviour, 'Whosoever shall exalt himself shall be abased.' Jesus Christ was humility itself. It is enough that the disciple be as his Lord. O friend! heaven and earth shall pass away, but not the words of Christ. How my best actions dwindle away on the brink of the grave! How horribly are my faults and foibles, which I formerly thought little, towering up! Alas! how little do we know ourselves, though the bustle of life be ever so gentle! O how dreadful is the stillness of death! How terrible the heavy load of our own heart! Creator! Father! What name shall I give to thy mercy which will forgive forever those enormous acts of thoughtlessness; and destroy, through Jesus Christ, all the bad consequences they produced to me and others? Thou art—yes, Thou art Love."

GOOD PREACHING.

Opinions about sermons and preachers vary as widely as the diversities of human temperament and human taste, but that preaching only can claim to be called *good*, which accomplishes its object, in impressing upon the hearer a sense of his sinfulness, and his need of Christ Jesus as a Saviour. Robert Morris once remarked to Charles West Thompson, that he liked that kind of preaching which made "the congregation cower in the corner of the pews, and feel as if the devil were after them." M. Bungener, the eloquent author of the "Preacher and the King," has expressed the same idea in more elegant language: "Earth offers no grander sight than that of the sacred orator chasing before him his fellow-men, narrowing at each step the space in which he permits them to move, till he has hemmed them, breathless, between the law that condemns and the cross that saves." Such scenes have been witnessed in congregations, when a Whitefield has swayed with resistless power a crowd of sooty colliers, or an Edwards, in the wicked town of Enfield, has made his hearers tremble, as if the trump of judgment were about to sound. We fear that such close and searching preaching, pungent without the odium of personality, is too rare in Christian pulpits. Warren Hastings said, when listening to Burke's speech in conducting the prosecution against him, that though he had before thought himself innocent of any grave charges, he then "felt himself to be the most guilty person in the world." Sacred eloquence, productive of similar effects, is greatly needed in our pulpits. The hearers often retire from the sanctuary, admiring the learning, or taste, or elocution of the preacher; too rarely beating on their breasts and saying, "God be merciful to me a sinner."

OUR CONTROVERSY WITH S. S. GRISWOLD—NO. 5.

But we need not speculate upon the *mode* in which human life would, or might, have been eternally prolonged. It is sufficient that we are certified of the fact. The text quoted at the close of our last article, makes it clear that man, by transgression, forfeited his right to immortality. The term "live forever" does not denote what is commonly denoted by the term "eternal life;" for the latter signifies confirmation in holiness and happiness forever, whereas the former merely denotes continued existence; and the context shews that, under a certain supposed contingency, such a state of continued existence was attainable by man in all his sinfulness. God shut up the way to the tree of life, lest, by eating the fruit, man should live forever in the state of sin and misery to which he had brought himself.

In his article No. 4, (see *Recorder* of June 28th,) our correspondent makes himself quite merry in view of our position, that "according to the original constitution under which man was placed, natural death, or the separation of soul and body, was not threatened and could not have taken place. The punishment threatened was evil to the whole man, as made up of soul and body. The whole man was to be punished, and not one part only, while the other is taken down and annihilated." His conceptions on this topic are so gratifying to himself, apparently, that it seems a pity to disturb them. He detects men waging war without slaying their enemies; sailors overwhelmed in the sea, but not drowned; diseases preying upon its victims without killing them; men struck by lightning, but not scathed; Cain beating Abel without being able to deprive him of life; the martyrs living forever in burning fire; rivers of blood flowing, but no death in consequence; criminals swinging on the gallows year after year, but still alive; the bodies of some perforated with bullets, and others blown to atoms with bomb-shells, nevertheless their vitality preserved; and even John Rogers an eternally "living specimen of human asbestos!"

We hardly know whether Bro. G. is serious in propounding such objections, or not. It is a pity he had not made himself better acquainted with the doctrine which he oppugns. For it seems to be one of the most natural conclusions in the world, that if man had been punished according to the original threatening, he would have been punished *promptly, in the very day* of his transgression; consequently, would have had no posterity. For the first probation upon which he was put, naturally came to an end as soon as he had sinned. That the sentence against his evil work was not executed speedily, but respite granted, was owing altogether to a new probation granted to him under a new dispensation of grace. He lives and propagates his species, therefore, solely because of the grace of God through a Mediator, and that materials may be furnished for building and completing that CHURCH, which is now the medium of showing to the principalities and powers in heavenly places the mainfold wisdom of God. (Eph. 3: 10.)

But suppose even he had lived, and had posterity, without being indebted to the Gospel—does it follow that the world would have taken any such complexion as that contemplated in the argument, (if argument it may be called,) of our reviewer? Does it follow that there would have been thrones and dominions, governments and principalities, the same as now, to wage war with one another? Does it follow that the inventive faculties of man would have given birth to bomb-shells and cannon-balls, the sword and the guillotine? And if there were no Gospel, what would Cain and Abel have had to quarrel about? And what would the martyrs have had to suffer for? And for what faith would John Rogers have had to become "a living specimen of human asbestos?"

The truth is, Bro. G., neither you nor any one else can tell what would have been the complexion of society, had the mediation of a Redeemer never interposed. The present and past condition of the heathen gives but faint light on this point; for though governments exist among them, and their inventive faculties have not altogether slumbered, their movements have been developed under the fostering care of that providence of God, which has been dispensed, not as it would have been without the mediation of Christ, but in accordance with his mediation and for the sake of subserving its design. We are therefore in the dark, completely, as to what attitudes men would have assumed one towards another; only we know that they would have shown themselves corrupt, and done abominable works.

In regard to our reviewer's notion that the idea of natural death was familiar to Adam before he sinned—a notion based on the supposition that "death had existed in the animal world even prior to the birth of Adam"—we have to say, that we want something stronger than the uncertain speculations of geology to convince us of its soundness. We deny that death *in any form* had invaded the world prior to the apostasy; and even if it had, the inference that Adam was *familiar* with the fact, is unsupported. T. B. B.

NEW YORK LITERATURE FUND.

The Annual Report of the Regents of the University was presented to the Senate of New York on the 15th inst. At a meeting of the Regents on the 10th inst, forty thousand dollars of the income of the Literature Fund was distributed to the several Academies entitled to it. Alfred Academy received $443 19, Brookfield Academy $618 25, DeRuyter Institute $214 94, Friendship Academy $146 25, Richburg Academy $39 88. The largest sums appropriated were $1254 22 to the Washington County Seminary at Fort Edward, and $1389 39 to the Claverack Academy. The Regents also appropriated the moneys pledged to two Academies in each county for the support of departments to educate common school teachers. In Allegany County, the Rushford Academy received $250, and Richburg $140; in Madison County, DeRuyter Institute $250, and Hamilton Academy $170.

The report shows also that the annual number of students in general literature and science in the Colleges reporting for the collegiate year, (ending at different periods. from July to December, 1855,) was 1,111, being an increase over the number reported in 1854 of 137. The number of medical students in attendance has been 632, being a decrease of 267 since last year.

The whole number of academies at the date of this report, subject to the visitation of the Regents, is 212. The number reported by the Regents at the date of their last report was 210.

The number of teachers employed in the 165 academies which reported for the present year, is 856; number of students who intend to make teaching a profession, 637; number of students gratuitously instructed, 829.

From the reports made it appears that dividends have been declared in only three instances: Rutger's Female Institute, Poughkeepsie Female Academy, and Washington County Seminary at Fort Edward.

The total annual revenue of the academies for 1855 was $320,413; total annual expenditure, 351,853. Excess of expenditure over revenue, $31,440.

FREE DISCUSSION.

To the Editors of the Sabbath Recorder:—

I am not so happy in my remarks on "Free Discussion" as to meet the views of all your correspondents, although I am happy in the assurance that I am not alone on the main question.

The object of a family newspaper, published as the organ of a denomination, I understand, is to set forth and maintain the religious doctrines, sentiments, and views, of the people whose organ it is, and to publish such other matter as is in accordance and not in conflict therewith. The Seventh-day Baptists recognize the Bible, in its most obvious sense, to be the rule of faith and manners; and what conflicts with it, is at issue with the Christian religion, whether it be axioms in science, or metaphysical speculations; and whatever goes to obscure or evade its declarations, in a measure weakens confidence in its divine teachings. Such communications, published in a family religious paper, are capable of doing harm, and should be, in my opinion, received with caution. Not that I am disposed to discountenance discussions of Scripture questions in a religious family paper; these are very desirable, when the object and tendency is to illustrate Bible truths and declarations. This should be the first and great object of all religious discussion; and this is laudable and desirable. Doubts and difficulties should not be thrown into such a paper, when the doubts or difficulties involve vital questions. Such doubts and difficulties should be elsewhere examined and settled, and such as are persistent in wild speculations, which are chargeable with a tendency to the perversion of the faith, should, in my view, wait long for admission. For why should the young and inexperienced readers be endangered with such reading, and have their minds hampered with doubts and difficulties, and speculations to which they were strangers, and which trouble their possessors.

In morals and religion, as in nature, the tendencies are to deteriorate, and we need not to sow the tares. Noxious plants and weeds grow spontaneously and luxuriantly, requiring labor and care to clear the soil, so that valuable and needful vegetation be not obstructed. When we spread the table for our families, the food will be prepared carefully in reference to its palatableness and alimentive qualities. If new and unproved, we try with care its appropriateness before we give it to our children. Nor should we be less cautious with regard to their moral and intellectual food. If poison is once infused, it may be long before it is eradicated from their systems. Our youth will come in contact with error abroad, and often receive poison enough to paralyze the efforts of friends and teachers, without aid from their family papers.

From such considerations, I suggested the application of a discreet or judicious editorial censorship on correspondence which may be chargeable with dangerous or doubtful tendency. When scientific axioms are at issue with Bible statements, I would raise no obstacles to their investigation, nor doubt that the Bible will be vindicated. Still, I prefer that another medium than the family paper be the crucible in which it should be tried, lest the youthful aspirant to science, either in physics or metaphysics, be tempted to barter religious consistency for scientific axioms.

But I am charged with departing from the rule I recommend, by discussing the subject of "Free Discussion." To this charge I will answer, that when I advocate a position charged or chargeable with being in conflict with or calculated to mystify the Bible's declarations, or which shall not rather tend to illustrate and justify the Scriptures, and honor God as well as benefit man, then I will admit the justice of the charge. And when I am disposed to maintain scientific axioms, apparently at the expense of obvious Bible declarations, and the cost of paper on which doubtful and dangerous matter is discussed shall be considered equivalent to the consequences on the youthful mind, then I may concede to the terms of *compromise* which the article containing the charge against me proposes, and pocket the few surplus pennies, though they be the price of blood.

I am not, and do not wish to be considered, unfriendly to scientific discussion, if not involving vital issues, in a family paper. I confess to the belief that no truth in science is opposed to Divine Revelation, or Bible declarations, and that even Geology, which by the opponents of the Bible is relied on to disprove its truthfulness, I believe to be perfectly harmless in this respect, without denying any fact which is employed to settle an axiom for this science; from this simple conclusion, that whatever was necessary to fit the earth for the abode of man, and which from known laws may have taken *apparently* millions of years to produce, and the rise and ruin of innumerable races of animals, may as well have passed the same process in one week, as to have embraced a larger period, if God so ordained. ONE OF THE SUBSCRIBERS.

A NEW POINT FOR A SETTLEMENT.

The brethren of the Seventh day Baptist North-Western Association have witnessed with no little anxiety the movements of our brethren as they have made choice of their homes in the West. Having become acquainted with the high prices in the older settlements in this region, with their limited means, they have been left to choose between remaining at their then homes, or settling in some isolated home in the West. Accordingly, they have been locating in different parts of the new and inviting points at the West. The result is, that in Illinois, Iowa, Wisconsin, and Minnesota, there are families of Sabbath-keepers scattered in various parts, with not enough in a place for public worship. The consequences have been, that some, after living deprived of religious worship on the Sabbath for a while, have turned to so much of Popery as relates to the Sabbath question, and united with other churches, "that they might do more good," as they said. Others remained without the privileges of worship, until they lost their interest in the cause. Others have endured their deprivations as long as they could, and then have broken up and sought society under disadvantageous circumstances. Others have repeated their request for missionary labor. This state of things is increasing with the flight of time.

These facts came before the Missionary Board of the Association soon after their appointment last fall, and after prayerful and mature deliberation and counsel with their brethren, they concluded that duty required an effort on their part to remedy this state of things, and so cut off the increased demand for missionary labor, which already exceeded our ability. Accordingly, the Board requested me to engage in the enterprise, and at the same time to visit the scattered Sabbath-keeping families. It was quite late in the fall before I could reasonably leave home on my appointed duties. On the first Monday in December I left home, with Dr. E. R. Lewis from Rhode Island, and Bro. J. H. Titsworth from Plainfield, N. J., who were looking for a location in the West. After a trip of near four weeks, I reached home, and reported my observations to the Board, who requested me to communicate through the *Recorder* to all interested.

Leaving home, we passed into Iowa at Dubuque, intending to push north from that point, and perhaps into Minnesota, then west, then south, through the western part of Iowa, and then home. But we were told at the land office, first, that there was no office open in the State; second, there had been a large amount of lands bought on the plans that had been printed, we therefore could not tell what lands had and what had not been bought; third, if we could find a desirable location, we had not the money to buy with, and the country is flooded with land speculators, and there was little likelihood of its remaining unsold till spring—certainly not until a colony would go on and possess the land, and in that case all probabilities were against us. At one land office, for instance, they told us that board was $2 per day, and you must sleep out doors at that, the place being so thronged with land speculators and with those who wanted the land for farming purposes; that the ground was now frozen, the streams have deep banks, and are frequently unbridged, especially in those portions of the country where it had not been bought, and winter weather had come on. The howling of the wind and biting of the frost, did not make an out-door camp very inviting.

We went west from Dubuque into Jones County, some thirty miles, through a rough but somewhat fertile country. We reached the house of a Mr. Soper, a Sabbath-keeping family, on Sixth-day evening, and were made quite welcome, and we were glad to meet old acquaintances again. Sabbath and First-day were so stormy that we could hold no meeting. Second-day we went some five miles to a brother Fuller's, formerly from Petersburg, found them trying to live religion, but very lonely. Here is a large amount of land for sale at about $5 per acre, middling well watered, timber scarce. Concluded, under all circumstances, to turn our course south.

Leaving Mr. Soper's, we stopped at a village by the name of Canton, not so much renowned for its commercial interests as for its spirit manifestations, for not many nights previous to our tarry, as I was informed, they had a ball, as they called it, a *bawl* as I thought; for a leading spirit, in a lady's dress, "*a tipping* medium," with a "rolling-pin," made some rapping communication, producing a kind of *jarring* sensation in the upper extremities of some three or four of the company, leaving no doubt on their minds that it was best for them to leave for other quarters. From the remarks made about the "rolling-pin," I concluded that our home for the night was the place where this spirit scene was enacted.

We left in the morning for Maquocata, a point on our way to Clinton County. Hearing of a Sabbath-keeper some miles off from our route, we turned aside from our way to call on him, but after a few hours' drive over a very rough road we reached the place of his abode, and found him gone from home. We then turned our course for Maquocata; passed down one of the most beautiful vallies I ever saw, up which we were told a railroad is to go from Lyons, on the Mississippi, to some point on the Missouri river. Reached Maquocata after noon, found it a very pretty, growing, business place; what was still more to their credit, they had just finished a very nice academic building, with commodious places of worship. After feeding, we passed on through a good farming country for about seven miles, and stopped at a good-looking farm house, and inquired for quarters for the night. Obtaining an affirmative response, we felt ourselves to be favored After the usual inquiries about "land," we retired to bed. My companions in travel were shown to bed. I was then told that I could go to bed with "the old man," who was an indescribable old somebody, more like himself than anybody I ever saw before, who said that he had been "pulling corn through the day." I told my host, that with his leave I would sleep on the floor, with the buffalo skin. Our host, however, divided his bed with me, giving me the "*feathers*," as he called them. I think he had not enough to speak in the plural, and my relation to the floor was quite close.

We passed over some good farming lands the next morning, but the country was quite rough, and rather light soil, for some five or six miles—the road very rough. We inquired of a man if he knew any body that kept the seventh day for the Sabbath?—to which the stranger responded, "Yes, *plenty* of them;" and we found, to our surprise, that we were in the vicinity of our brethren in Clinton County. We were soon welcomed to the house Eld. L. A. Davis, where we were hospitably entertained. Here we had an opportunity to hear from all parts of the State. Our brethren took all pains to show us the lands in market here. All the land here is owned by actual settlers or speculators. After looking the matter over, from our little observation, and what we could learn from others, we should recommend this place to the favorable notice of the Board. The Board approved our opinion, and instructed me to state their reasons to the readers of the *Recorder*, which are the following:

First—If you will turn to your maps, you will see that Clinton County, in Iowa, lies directly west of Chicago, in the bend of the Mississippi river, about 75 miles west of Milton, Wis., and 150 west from Chicago. We prefer this climate to a colder one.

Second—The advantages of the market; a railroad is completed from Chicago to Fulton City, opposite to Lyons, on the Iowa side of the river, a young but very flourishing town. From this point a railroad is laid out to Dewitt, the county seat of Clinton County, within five miles of the center, perhaps, of the place where we should purchase, and so on to Iowa City, the capital of the State. The road is graded, and the track is to be laid next season. Dewitt is about 150 miles from Chicago, according to the scale on the map. It lies in a large bend of the river, giving to the settlers the benefit of several towns on the river, about equidistant from them all. These towns will soon be large business points, giving you a large market at home for much of your produce. The whole river trade will always increase Chicago is nearer than it is to one half of Illinois. The soil is good—comparing favorably with the country around Milton—produces all kinds of grain well. The land is generally prairie, sufficiently high to be healthy, and yet quite well watered, with some fine grass meadows, giving a good chance for stock and dairying. Cheese and butter are usually worth 18 pence on the river in the winter.

The land is all in the hands of speculators, and is held at from $3 to $5. I speak of the unoccupied lands. Improved farms are held at some $10 to $15. The land is as low here as it is one hundred miles back. The excitement seems to run by this point, and rages in the interior. But mark one thing—land *will* rise—it will double in one year, or I am no land prophet; and those who would benefit by the rise, should be there soon. The trouble with our eastern friends is, they do not realize how rapid changes are here. They stay to make a dollar on a sale, or earn a little more money, and land rises here five dollars while they make one.

Let all who think of coming here take their maps and look for themselves, noticing how it lies in the bend of the river. Dewitt is on your map. Five miles west of that is the point. Lyons is in the bend of the river, on the Iowa side; Fulton City on the other. An air line road runs to this place now from Chicago, and is to reach Dewitt next season, and you will see the location is a desirable one—perhaps not a better one that distance from the river in the State of Iowa, half surrounded by river markets, with a railroad running direct to Chicago, *the* great inland city of the West. There are some ten or twelve families of Sabbath-keepers there now. This land is cheaper, in my opinion, at $5, than land 100 miles back at any price. Say that it costs 12½ cents to transport one bushel of grain 100 miles, which is lower than it can be done, and that you will get 20 bushels of wheat per acre; the transportation of two years growth will amount to $5, just the cost of the land, and then you have it to pay ever afterwards, paying $2 50 every year, a very heavy tax indeed. Your pine lumber must all come from the Mississippi; you have to carry it the 100 miles back; and if you go west or north there is no certainty whether you will have a railroad within a desirable distance, unless you buy along the line of some road already secured, and then the cost of land will be as much as here.

Timber is scarce here. The farms in this neighborhood are generally fenced with posts and boards or wire. Hogs and sheep are not fenced against. The fence is generally temporary. Some farmers are fencing with hedge. This will take three years for its growth to be a good fence. Twenty dollars will buy one bushel of seed, which will make all the fence one would want on any ordinary farm, and make the best of fence. One can fence his farm cheaper with this than with rails, if he had timber plenty on the ground. Stone coal will be the fuel, and will be cheap. There is an abundance in the State, a little back, and on the other side in Illinois, and one's whole farm can be made to produce. The stone coal will be reached by railroad as soon as it will be needed. Lumber is high now, lumber dealers are making a heavy profit. This can be remedied by the farmers forming a company, and going up into the Pinery, and spending a winter there, and making their shingles, getting their lumber into the river, and in the spring getting on it and coming home. Taking this course, your lumber should not cost more than $8 or $10 per thousand.

Those wishing to secure a home in that part of the West, will come to Chicago; then take the railroad for Fulton City. Be careful and bring your goods along with you. It is quite common for people to put their goods on board public conveyance, and trust to the company and come on, and it is some times two, three, six, and nine months before their goods come along, and then if you do not have to pay for storage you will do well. If you complain of delay, two chances to one if you are not a used. Keep your goods with you, and an eye to them, and save trouble and expense. I would bring all of my household goods, rather than make much sacrifice in the sale of them The cost of bringing is comparatively small. Pack your crockery first, while you have plenty of clothing to mix in with it. Our brethren who are there, some twelve families in number, will aid you in getting houses. They live in the vicinity of Welton, on the road from Dewitt to Maquocata. V. HULL.

BIBLE BURNING.—A case of Bible burning is exciting considerable attention in England. It seems that a foreign priest by the name of Petcherine made a ceremonious and public bonfire in his chapel yard, in Dublin, of a quantity of books contributed by his penitents, and among these books were several copies of the English Bible, the burning of which having come to the notice of certain Protestants, caused a great tumult, and led to the prosecution of the priest as a violator of the laws of England. Judge Crampton, before whom the case was tried, held that the Bible was part of the laws of England, and that to treat it with contempt, by burning it, is an indictable offense. The New York *Chronicle*, in noticing the case, says:—

> "That all such acts on the part of Catholics deserve public reprobation, is most certain, and it is most certain, too, that it must operate to the injury of the Church and priesthood which practice them. But the wisdom of prosecuting at law such offenses is certainly to be doubted. The keeping of the first day of the week as a Christian Sabbath is equally a part of the law of England, and to us it seems a most important part, and essential to all the interests of morality; though prosecutions against a Jew, or a Seventh-day Baptist, for not observing it, would fail of any good effect, because he would deem it an infringement upon the rights of conscience, he esteeming another day the one which the Divine law requires him to observe. So the Catholics profess belief in the original Scriptures, or in their own versions of them, but not in the common version authorized by English law. And professing this, they will inevitably deem themselves persecuted for conscience's sake, in being made criminal and worthy of punishment for treating with contempt a version which they profess to regard as a corruption of the word of God. This view, and this treatment of our common version, we regard as no less injurious to public faith and morals than the desecration of the Lord's day by those who do not believe in that; though the pains and penalties of the law are no cure of the evil in the one case more than the other. It is one of those social evils that must be left to influence and moral suasion, and which are almost sure to be aggravated rather than redressed by civil prosecutions."

THE VIRGINIA ASSOCIATION.—In compliance with a resolution of the Virginia Association, Bro. Wm. F. Randolph forwards to us the following:—

> "On the 23d of September, 1855, the last day of the annual session of the late Seventh-day Baptist Virginia Association, held at Lost Creek, the representatives of the churches comprised in that body, 'after much deliberation upon the apparent deleterious effects of inharmonious views and movements, evinced at past meetings of this body; and seeing little or no prospect, under existing circumstances, of the cause being any better advanced in the future by continuing the present order of things; it was therefore *Resolved*, That we mutually dissolve the compact which the several churches of this body entered into when forming this Association.'"

THE CRAYON—a Magazine devoted to the advocacy of the interests of Art, the exposition of the principles of Taste, and the culture of the love of Nature—entered upon its second year with the issue for January, a capital number. It is edited by W. J. Stillman and J. Durand, and has a list of contributors and correspondents including the names of Bryant, Lowell, Mrs. L. H. Sigourney, Bayard Taylor, Alfred B. Street, Rembrandt Peale, A. B. Durand, J. G. Chapman, Daniel Huntington, Henry K. Brown, Rev. Sam'l Osgood, J. L. Tupper, Justin Winsor, James Henry, John Ruskin, R S Greenough, C. P. Cranch, W. M. Rossetti, and Wm. Page. The work will hereafter be published monthly, each number containing 32 three-column pages, with an illustrated cover. Terms, $3 per annum. Publication office, No. 763 Broadway, New York.

RELIGIOUS INTELLIGENCE.

Rev. Dr. Lansing, formerly pastor of the Clinton-avenue Society, Brooklyn, preached his semi-centennial sermon, on a recent Sunday. Dr. Lansing graduated at Yale in 1804, and commenced preaching in 1806. In 1807 he was placed over a church in Onondaga, and from that place he proceeded to Auburn, where he procured the erection of the Auburn Seminary, obtaining, by his own efforts, $100,000, lands, library, &c. He came to New York in 1832, and preached in Masonic Hall, and subsequently came to Brooklyn and was pastor of the Clinton-avenue Church until he saw a new church erected and the Society in a prosperous position, when, on account of ill health, he was compelled to resign.

A series of articles have recently appeared in the Examiner, attributed to Dr. Wayland, in which this distinguished scholar takes occasion to express, as his opinion, that the present method of educating young men for the ministry, in the Baptist Church, is a failure; that no copying of the plans of the Andover Theological Seminary will meet the wants of the Baptist Church, etc. Dr. W. deals very severely with those who preach by reading from a manuscript.

You will doubtless be pleased, says a correspondent of the Southern Baptist, to hear of the further progress of the precious work of grace in the church at Sumterville. Sunday night the ordinance of baptism was administered to twenty five converts, twenty-two whites and three colored; and a few Sabbaths previous, to seven, three whites and four colored—making thirty-two in all. New cases are occurring at every evening meeting, to encourage the hearts of God's people.

We learn from the Religious Herald, that an extensive work of grace is in progress with the Baptist church at Charlottesville, Va. One hundred and thirty persons are believed to have been converted, of whom seventy have lately been baptized by the pastor, and eighty-five white persons had thus far been received into the church. On a late occasion, eighteen females were baptized in the baptistry on one evening, and twenty-five males on the following evening.

In the formation of a State Government for California, Col. Fremont was among the most urgent to have a clause prohibiting slavery inserted in her constitution. He was opposed, he said, "to having domesticated on the new and fertile territory of the Pacific an institution which had proved such a burden and curse to many of the older States on the Atlantic." Col. Fremont's views on this subject are understood to be very nearly the same as those of Col. Benton.

By the catalogue of Andover Theological Seminary, just published, we learn that there are, in three classes, ninety-six students. Of these six are graduates of Harvard college, thirteen of Yale, twenty-four of Dartmouth, fourteen of Williams, eleven of Amherst, seven of Providence. The remainder are from various other institutions.

Shakespeare has no descendants now living. His only son died in his twelfth year; his eldest daughter, (Mrs. Hall,) left a daughter who was twice married, but died without issue. Mrs. Quincy, his other daughter, left three sons, all of whom died unmarried. With the death of these four grandchildren, the descendants of the great poet became extinct.

Some friends have presented to each student of the Union Theological Seminary and to each of its Alumni now on foreign missionary ground, a copy of Rev. Dr. Matthew's excellent book, the "Bible and Men of Learning"—a capital gift.

The British census of 1851 shows that the Unitarians have 50,061 attendants at their churches; the Swedenborgians, 10,352; the Quakers, 22,478. The whole number of persons attending Protestant churches of all sects in England is 10,462,278, or 60.7 of the population.

On Christmas day, the Sunday school connected with the Sands street M. E. Church, Brooklyn, gave as their united offering to the missionary cause, the handsome sum of one thousand dollars. The school numbers about six hundred scholars. It is a good example to follow.

One day last week, says the Puritan Recorder, a gentleman from a town a few miles from this city called at our office, and stated that he wished to send a copy of the Puritan Recorder to each of his tenants the current year. He gave us a list of thirteen names, and paid for thirteen copies.

Rev. George B. Whiting, missionary of the American Board, died of cholera at Beirut, on the 8th of November last. He entered upon the work about twenty-five years ago, and was greatly respected and beloved.

Madame Jenny Lind Goldschmidt appeared at Exeter Hall, London, recently, singing in Haydn's "Creation," after an absence from England of six years. One of the London journals says she looks thinner, but all seem to agree that her vocal powers are as superb as ever.

The office of the "Territorial Register," a free-soil paper in Kansas, was recently broken open, and the printing materials taken out and thrown into the Missouri River by a pro-slavery mob.

The Legislature of South Carolina has passed a bill requiring naturalized citizens to reside in the State two years after naturalization before being entitled to vote.

The report of the Treasurer General of Rhode Island, shows the State expenses for the last year to have been $104,246 89. The State debt amounts to $50,000.

Miss Bunkley, "the escaped nun," has been captured by Dr. Solomon Andrews, Jr., of Perth Amboy—and married.

Eld. Elon Galusha died at Lockport, N. Y., on Sunday morning, Jan. 6, 1856.

The last Census of the State of Illinois shows a total population of 1,300,551.

THE BAPTIST FREE MISSION IN HAYTI.—We referred, in a late issue, to the case of Rev. W. L Judd, of Hayti, or rather to the action of the church over which he presides, justifying him against his accusers. We see that the *American Baptist* has a statement of facts and confessions from Mr. Judd himself, which afford the most ample justification to the American Free Mission Society for its action in withdrawing their patronage from him. So says the *Watchman and Reflector*.

General Intelligence.

European News.

Four days later dates from Europe being to Jan. 5th, have been received.

There is nothing new of an official character in regard to the Peace negotiations, but there is said to be an evident growing impression that they will terminate unsatisfactorily.

From the Crimea, the only items of interest are the defeat of a strong squadron of the Anglo-Turkish cavalry near Kertsch, and the statement that large bodies of Russian troops were marching from the Crimea into Bessarabia—not, however, with the intention of evacuating the former.

There was an important rumor, which was not confirmed, that Pelissier had been appointed Commander of the Allied Armies, and Admiral Lyons Commander of the Allied Fleets in the East.

Contracts were being advertised for in Russia for immense quantities of artillery and stores. Emancipation was offered to the Serfs, and some of the restrictions imposed by the Czar Nicholas on the nobles had been removed.

From India and China we have some interesting items by this arrival:—

A battle had occurred, November 7th, in Oude, between the fanatic insurgents and the British troops under Capt. Barlow, the latter *assisting the* troops of the King of Oude. Five hundred dead were left on the field, and the insurgents dispersed, but the country is yet unsettled. Martial law has been declared in the Santal district. The Santal insurrection is not suppressed, but is no longer dangerous.

Manilla dates of the 9th of November report a dreadful occurrence. The American ship Waverly, with Chinese laborers on board, put into Manilla to bury her captain. Some trouble ensued on board, when the mate shot two or three of the Coolies and drove the rest below, then went on shore to attend the funeral of the captain. On his return the hatches were opened, when, out of 450 men, 251 were dead from suffocation. The mate and crew were imprisoned by the Spanish authorities. It is reported that the American Consul declined to take cognizance of the catastrophe.

A serious difficulty has arisen at Hong Kong between Mr. Keenan, the American Consul, and the local authorities. The trouble was caused by the arrest, by the British police, of E. W. Nichols, Master of the American ship Reindeer, on board his ship, for an assault on the carpenter, and for putting him in irons. The judgment against Nichols was a fine of $50, with $25 additional as compensation to the carpenter. Payment was refused. Consul Keenan was present during the examination, and protested against the jurisdiction of the court, as the affair took place on board an American ship. The police were then proceeding to place Capt. Nichols in prison, when Mr. Keenan took him by the arm and went quickly to the harbor, took a boat and went on board the United States steamer Powhattan. The Superintendent and police followed and demanded that the prisoner be given up. Capt. McCluney, of the Powhattan, replied that, without stating whether Capt. Nichols was on board the Powhattan or not, he considered the action of the court altogether illegal, and he would not hesitate to resist by force any attempts of British authorities to exercise jurisdiction over American citizens on board of American ships. Nichols afterward sent the amount of the fine to the Court. He was summoned by warrant to appear and answer, but did not attend, whereon he was apprehended and committed for trial before the Supreme Court, charged with the rescue of a prisoner.

Ship Foundered—35 Lives Lost.

The ship Naples, Capt. Lovell, from Leghorn, arrived at New York, Jan. 16th, having on board the first mate, Mr. Tufts, the third mate, Mr. Gardiner, and nine seamen, of the packet-ship St. Denis, from New York, bound to Havre, who were taken from a long-boat at sea on the 7th inst., in latitude 38° 30', longitude 72°, their vessel having foundered. Mr. Tufts, the chief mate, makes the following report:—

"The ship sailed from New York on the 1st inst., for Havre, and on the 5th took a gale from S. E, which hauled to N. W. and blew a perfect hurricane, during which the ship sprung a leak, and the decks were filled with water. We could not get to the pumps to work them. Cut away the main and mizzenmasts to ease the vessel, and then discovered her fast settling down forward, and at 12 m., 6th inst., left the ship, when she immediately foundered. The captain, second mate, three cabin passengers and the rest of the crew remained on board and went down with her. The lost numbered in all thirty-five souls. Mr. Tufts also reports that he was twenty-nine hours at sea in an open boat, with her starboard-side stove in, and it kept five of them continually bailing to keep her free. They had one barrel of bread (and no water) to subsist on during that time."

The following is the statement of Mr. Henry Gardiner, third mate of St. Denis:—

"At 6 p. m. of Friday, the 4th, wind blowing fresh from south-east, commenced shortening sail, and at 10 p. m. the vessel was under close-reefed fore and main topsails. At about 11 p. m. main topsail sheet was carried away, when the sail was taken in and furled; also handed down main top-mast studding sail and set main spencer. At 12 p. m., weather clear but wind blowing fresh and constantly increasing, took in and sent down all studding sails. Saturday, 5th, 1 a. m., wind chopped around to north-west and blew a hurricane; at which time the vessel began to leak very fast and the pumps would not work. At 4 a. m. the Captain told the mate that the cabin was filling with water and he would like to wear ship. Tried it but could not. Cut away main and mizzen masts, and then wore around on the starboard tack. She then, at about 5 a. m., began to settle forward, which she continued to do all day till 11 a. m., the wind blowing furiously, and the sea running wild and high. Resort was then had to the boats, when all except the long boat were found to be so badly stove as to be unfit for us. The long boat was also badly damaged, a portion of her side being stove in; but she was launched and four men sent into her to bail her and keep her alive. At this time the topgallant forecastle was under water. The mate then asked the captain if he would not get into the boat, and he shook his head in dissent, telling him at the same time it was no use. The mate then replied that it was the last shift for such as might confide in it, and accordingly entered, in company with the third mate and nine men. After this, and before letting go, the mate again asked the captain if he would not come with them, saying that he left the ship for the sake of his wife in New York. The captain answered that he had a wife and seven children in Brooklyn, but he thought they would not see him any sooner by his taking to that boat. They laid by about ten minutes, trying to get more, but none would come in. In about fifteen minutes afterward they saw the ship go down. This was at 12.30 p. m., of Sunday, the 6th; after which time till about 5 p. m. of Monday, the 7th, the wind continued to blow without abatement. In the hurry and excitement of the occasion the boat had been provided with but one barrel of bread and no water, which was all the food which they had to subsist on. They had also but three oars, which were lying in her at the time, together with some half-dozen brooms. Two of the oars were soon afterward lost, and the brooms were used as paddles. At 3 p. m. on Monday saw a schooner to leeward, but she was too far off to discern them. At 4 p. m. saw an empty water-cask also to leeward; made for it with the hope of obtaining something to drink, but were disappointed. They then descried the vessel two and a half miles to leeward, which subsequently took them on board and brought them into port."

One of the cabin passengers on the St. Denis was Frederick Weiss, a German, who has been in the employ of the Erie Railroad Company as their booking-agent in Havre. He had been here two months prior to the sailing of the vessel. He came here to marry an American lady, to whom he had been engaged previous to going to Havre as agent for the Erie Railroad Company. He was married to the lady on New Year's Day. He was about thirty-five years of age. His wife resided in Twenty-sixth street.

New York Legislature—Governor's Message.

The Legislature of New York is now in working order—Orville Robinson, of Oswego, having been chosen Speaker of the Assembly on the 16th inst.

The second Message of Governor Clarke is now before the public. Its leading statements are epitomized by the N. Y. *Tribune* as follows:—

The debt of the General Fund at the close of the fiscal year, Sept. 30, 1855, was $6,692,654 37; and the actual deficiency in the revenue of that fund was $537,863 89. The appropriation of Canal revenues to the amount of $200,000 did not help; for their continued deficiencies have prevented any aid from that quarter.

The capital of the School Fund was $2,457,520 86, being an increase of $32,308 89 during the year. Its revenue was $143,127 73. The capital of the United States Deposit Fund was $4,014,520; its revenue $245,119. Literature Fund, $268,620; revenue, $16,831. The Sinking Funds for the redemption of the debts created by the loan of the credit of the State to various Railroad Companies, were $146,077; contingent State debts on same account, $770,000. The State Canals produced $2,639,792; expenditures, $989,792; surplus, $1,650,000; enough for the Canal Debt Sinking Fund of $1,300,000, and the General Fund Debt of $350,000; but not enough to meet any part of the other requirements of the Constitution for interest on the late loans for the enlargement, and appropriations toward a Sinking Fund for the extinguishment of the principal of such loans. In anticipation of this deficiency, provision was made for such appropriations, or at least a portion of them, out of the tax to be collected during the current fiscal year.

The Constitution limits loans to eighteen years. This limitation the Governor considers too small, and creates an annual charge upon the revenues beyond the ability of the canals to meet; and accordingly he recommends a constitutional amendment. He praises the contract system for canal repairs. The work of enlarging and completing the canals happily progresses. The six per cent. loan of $2,250,000 was taken at a premium of $365,880. In June a loan of $1,500,000 was issued for the redemption of the Canal Revenue certificates, and taken at a premium of $204,511. A loan of $4,500,000 issued upon the credit of the Sinking Fund, to pay $4,000,000 of State stock falling due on January 1, 1856, and to meet deficiencies in the sinking Fund, has been made at only 5 per cent. interest, and a considerable premium realized thereon. The credit of the State is unimpaired.

The Syracuse Salt-works are prosperous; inspected bushels, 6,000,000; increase, 250,000. New salt-works are in progress. The revenue of one per cent. is sufficient.

Sixteen banking associations and six individuals have commenced during the last fiscal year under the General Banking Law; eight of these came of expiring Safety-Fund banks. Four banking Associations and five bankers give notice of stopping business. Amount of circulating notes by banks and bankers, $24,438,001; securities therefor, $25,590,848, held by the Superintendent. Unredeemed circulating notes issued by banks incorporated by special acts, and whose charters have not expired, $11,290,235. Outstanding circulation of specially incorporated banks, whose charters expired previously to the 30th September, $5,431,386. The Safety-Fund bank matters promise fairly, and the Governor praises the banks as meriting confidence. They are local institutions with hardly an exception, confining their business to their neighborhoods. The Governor deprecates any change in the basis of currency securities, by affording a more available class of securities. He suggests a law restraining banks from making loans on the hypothecation of stocks beyond a reasonable per centage on their capital—thus compelling them to resume their legitimate functions, now departed from in the city, and affording facilities to the producing classes, now driven into "the street."

The amount of school moneys apportioned is $1,110,000, $800,000 of which are taxes; $165,000, United States Deposit Fund; $145,000, Common School Fund; Expended for Teachers, $2,301,411; Libraries, $55,216; School-houses, &c., $863 990. School Districts, 11,748; Children of proper age, 1,233,987; at District Schools, 900 523; Academies, 38,734; Colored, 5,243; Unincorporated, 53,764—leaving 225,854 not in attendance at any place of instruction, not counting Colleges. If the age of six were substituted for four, the minimum period, he thinks this proportion would be greatly reduced. The number of volumes in District Libraries is 1,105,370; School-houses, 11,028, of which 9,356 are framed buildings. He calls attention to the defects of Public School policy; desires that every child should be educated, and recommends an Education Board for every town. The Annual Reports he pronounces inaccurate; and yet on these appropriations are made. He recommends the institution of School Fund Commissioners; that the State Schools be entirely free; and makes various suggestions of School reform.

Of the improvements in the militia system he speaks favorably, and recommends the sale of the City Arsenal. He favors the plan of an Agricultural College. He thinks that the Emigration Commissioners will probably require legislative relief, immigration and the Castle-Garden depot. The Harbor Commissioners are duly praised; so too the Railroad Commissioners. Various criminal reforms are justly set forth; and an important change regarding the challenging of jurors recommended.

The population of the State is set down at 3,470,063—an increase since 1850 of 372,024; no great increase, we think, for the greatest of all the States. Native voters, 516,745; Naturalized, 135,076; Aliens, 632,746; Colored persons not taxed, 35,956; Indians, 3,945.

An additional judicial district of the Supreme Court is recommended, as well as two additional Justices, to which New York city is entitled. The management of the State Prisons is commended. Number of prisoners 1,905—decrease 89; expenditures $233,343; earnings $198,230. The Governor recommends that a portion of the earnings of the prisoners be set aside for their benefit when at liberty. He offers some points for reform. He is conscious of the necessity of relieving the Executive of a portion of the burden of examining appeals for pardon and commutation of punishment; and thinks that greater discretionary power should be given to Judges. He praises the House of Refuge. He suggests an increase of Insane Asylums, and applauds the Blind and Deaf and Dumb and Idiot Asylums. The claim of the Stockbridge Indians he admits. The immunity of New York from yellow fever is mentioned, and the granting of any increased powers necessary to preserve it recommended. The Temperance law is upheld by the Governor, morally and constitutionally. An appropriation for the State expenses in the Lemmon Slave case is asked.

Burned Alive.—A letter in the New Orleans *Picayune*, dated Dec. 25, written from Lexington, Miss., says:

A daughter of a very worthy gentleman, while riding on horseback to visit a neighbor, was assaulted by a negro man, who made the most hellish attempt to violate her person. When a gentleman came in sight, the negro fled, and the gentleman carried the almost inanimate girl to her father's house. After depositing her there, he raised the alarm, and the people hurried out to hunt the negro. They were not long in finding him. He belonged to the Wade estate. They brought him into the town of Lexington, and then, in the most public street, chained him to a stake, and burned him alive!

Penalty for Cruel Treatment of a Slave.—We learn from the Concordia (La.) *Intelligencer*, of the 28th ult., that Wm. Bell, a planter of Tensas Parish, was tried at the late term of the District Court of that Parish, for cruel treatment of one of his slaves, and convicted. The *Intelligencer* says: "The prosecution was predicated on the description he gave of the slave when advertising him as a runaway. The authorities of the parish did not recognize the branding of a slave as the proper mode of identifying him as the property of the owner. After a fair and impartial trial, Mr. Bell was found guilty, and the extreme penalty of the law was inflicted on him. He was fined $200, and the Jury decreed that the slave should be sold away from him."

SUMMARY.

A dispatch dated Utica, Monday, Jan. 14, says: At 7 o'clock this evening, a fire broke out in the store No. 56 Genesee-street, which, with its contents, was wholly consumed. The flames communicated to Thurber & Seward's book-store; C. A. Yates, wholesale clothing-store; Wescott & Hammond, hat and fur store, and an adjoining building, known as the New York Store. A large amount of goods was saved, but the aggregate loss cannot be less than $75 000. The store where the fire broke out was filled with the stock of P. V. Kellogg & Co., wholesale clothing dealers, and goods of W. C. Wilcox, dry goods merchant, which firms had just taken possession of the building only a few hours before the fire broke out.

We have before us, says the Springfield, (Mass.) *Republic*, a huge loaf of bread baked by steam at the State Farm School in Monson. Messrs. Blanchard & Kimball of this city have, after a course of experiments, made an oven which is successfully heated by steam, and which now does all the baking for the Monson Institution. It is said to bake meats very finely, and the bread is certainly baked excellently well. The steam surrounds the oven, and can be maintained at a given temperature with great evenness. The success of this experiment would seem to show that large hotels and all public institutions can do nearly every variety of cooking by steam.

The residence of James C. Deyo, in Penn Yan, was entered on Monday night and money to the amount of $2,800 taken. The money was in a tin box, which Mr. D. seized as soon as he was awakened. The burglar endeavored to wrest it from him, and in this attempt fired a pistol at Mr. D. The ball passed so near him as to tear his clothing, and he relinquished his hold of the box and the robbers made off. Mr. D. offers a reward of $500 for the recovery of the money and the arrest of the burglar.

A Pittsburg firm having purchased a lot of flour at Cincinnati, found on its arrival at Pittsburg, that each barrel was "light" from three to ten pounds. On complaining to the Cincinnati firm, they referred the matter to the Chamber of Commerce, who decided that the sellers were not responsible for the light weight. The Pittsburg firm then appealed to the Pittsburg Board of Trade, who have declared that the Cincinnati firm are responsible, and pronounce the transaction a fraud.

It is not often that one State is blessed with two Governors, acting at the same time. Wisconsin is favored above its neighbors. Gov. Barstow's seat is contested by Mr. Bashford, and both parties have been sworn in—the former in the regular way, and the latter by a Supreme Court Judge. Mr. Barstow received the certificate of the Board of Canvassers. Mr. Bashford, however, proceeds at once to file charges of fraud and corruption against his opponent, and an "astounding series" of developments is promised by those who are in the secret. It is a curious condition of things.

The extent of the damage resulting from the late severe storms on our coast will hardly be known for a long time to come. Five or six vessels are known to have been wrecked on the shores of New Jersey and Long Island. Of the loss of others the only record will probably be that they were never heard of after these January storms. Impelled by a furious north-easter upon a dangerous coast, in a blinding whirl of snow, and in weather intensely cold, they have gone to pieces, and their living freight has perished in sight of land—almost within sight of their destined port.

The editors of the New York Shipping List have published their annual statement of the Sugar trade of the United States, from which we learn that the receipts into the country of Foreign unrefined Sugar, for the year ending Dec. 31, 1855, were 205,064 tons, and the consumption was 191,052 tons, against the receipts of 1854 of 165,925 tons, and consumption 150,845 tons. The total consumption of Foreign and Domestic Cane Sugar in 1855 was 379,197 tons, against a total consumption in 1854 of 385,268 tons—being a decrease of nearly 1 5–8 per cent.

The Hartford Times says the thick coating of ice upon the cherry, pear and peach trees has served to protect them from the frost, and at the same time has acted in the capacity of a burning glass by concentrating and intensifying the rays from the sun until the unseasonable warmth thus imparted has had the effect of starting the flow of sap, and developing the buds. It is feared the damage is very serious.

The great Reaper case has been decided in favor of Many's machine. Justice McLean delivered the opinion of the United States Circuit Court in this important case, which was argued last Summer at Cincinnati by the Hon. Reverdy Johnson and E. N. Dickerson for Mr. McCormick, and E. M. Stanton and George Harding for defendants. The decision on all of the points is in favor of the defendants.

Mr. John Lawrence Bagler, in the Louisville Times, offers to bet from $5,000 to $3,000, that he can do as follows: Jump five feet further on a dead level than any man in Kentucky—three feet further than any man in the United States—one foot further than any man in the world—or that he can stand flat-footed upon the earth and leap a brick wall fifteen feet high and four thick.

The Grand Jury at New Haven, Thursday, Jan. 17, indicted Samuel Sly as principal, and Rhoda Wakeman (the prophetess) and Thankful S. Hersey, as accessories to the murder of Justus Matthews. Their trial will soon take place. Abigail Sables and Josiah Jackson were discharged from prison. The prophetess wept like an infant on being told that she must remain.

The Charleston Courier of the 7th says:—"The steamer Thomas Swan, which arrived yesterday from Philadelphia, had, as a portion of her live cargo, four elephants, destined for a Southern managerie. During the severe weather of Saturday one of the elephants was lost overboard in the rolling of the vessel; the others are doing as well as could be expected, and will, perhaps, bring their trunks on shore this day."

In the preceding week, says the Council Bluffs Bugle, 500 land warrants have been located at the office in this city and 200 cash entries have been made in the same time. These entries have been made, in most cases, by and for actual settlers. In 8 hours and 15 minutes of one day the same week, 280 land warrants were located, and 95 cash entries were made.

The Springfield Republican says whooping cough has prevailed in that city this season to a considerable extent. A very great relief, we are assured upon practical knowledge, is, by wearing about the neck a fresh tarred rope, of the size of a bed-cord, covered with a thin ribbon. The aroma of the tar has a wonderful effect in quieting the cough, and preventing the spasms.

Documents in possession of the State Railway Commissioners show that the earnings of the New York railroads during the year ending Sept. 30th, amount to $20,843,000, and their expenses during the same period to $11,310,000. Total length of roads, 3,216 miles; cost of construction, $125,252,669; number of passengers carried, 33,839,164; tons of freight, 3,417,207.

According to Dinsmore's Railway Guide for January, the number of miles of railway now in operation in the United States is 23,242 which is an increase of 3,408 since January of last year. Valuing the completed railroads at $30,000 per mile, the capital now invested in this interest amounts to $697,260,000.

The Toronto papers come to us filled with glowing accounts of the great Railway Festival, on the occasion of the opening of the Hamilton and Toronto Railway. Five thousand persons are estimated to have been present, and the proceedings terminated with a déjourner and ball, at the former of which, Mayor Allan, of Toronto, presided.

The New York Central Railroad Company has put on the road two magnificent and powerful engines, one of which carries a train of 45 heavily laden cars with the greatest ease.

At Chicago, the merchants receive money inclosed in mourning letters, so as to cheat the Post Office clerks. In sixty days, remittances to the value of $20,000 were returned to that city from the Dead-letter office.

The Patent Office has been very active during the last year. One thousand nine hundred and forty-six patents were issued, the largest number any one year has ever yet shown.

Two young women were killed in Jersey City on the 15th inst, from the explosion of fire works which they were engaged in manufacturing.

According to the late census, the population of Kings County, N. Y., is 216,355—an increase of 137,664 since 1845. Of this number 32,627 are voters. Of the voters 14,350 are naturalized citizens—3,927 less than there are of native voters. Aliens 65,536. Colored persons not taxed 3,526 The total population of Brooklyn City is 205,250—an increase since 1845 of 132,481, viz: By annexing Williamsburg and Bushwick, 56,476, and the remainder by immigration.

The total receipts last year of the Reading Railroad, as per the annual report of the Treasurer of the Company, have been $4,321,793, which, after deductions of interest, expenses, &c., leaves a dividend fund of $1 940,405.

Four Portuguese sailors lost their lives last week from burning charcoal in a close room. Their vessel was lying at a Brooklyn Dock, and as it was very cold, they made a charcoal fire in the close forecastle, and went asleep, never to awake.

The Hudson River Railroad Company have dismissed the Conductor Camp, by whose carelessness the accident occurred at Poughkeepsie, and have suspended Engineers Dawson and Earl.

The Pennsylvania Legislature elected Ex-Governor Bigler United States Senator—he receiving 82 votes, the balance scattering.

The earnings of the Rome and Watertown Railroad in December, were $50,874, against $40,514 in December, 1854.

The loss of property by 603 disasters on the Western Lakes in 1855 was $2,821,529, and the loss of human lives 119.

It is said that a family of eleven persons were frozen to death near Baltimore on that dreadful cold night of Wednesday, Jan. 9th.

Counterfeit $5 bills on the Ocean Bank, New York, are in circulation in Brooklyn.

New York Markets—Jan. 21, 1856.

Ashes—Pots $7 00, Pearls 8 00 per 100 lbs.

Flour and Meal—Flour 7 87 a 8 00 for common to good State and Western mixed, 9 50 a 11 50 for common to choice extra Genesee. Rye Flour 5 50 a 7 12. Corn Meal 4 00 for Jersey.

Grain—Wheat 1 90 a 1 93 for Southern red, 2 00 a 2 12 for white. Rye 1 28 a 1 31. Barley 1 16 a 1 24. Oats 41 a 43c. for Jersey, 44 a 47c. for State, 48 a 50c. for Western. Corn 91 a 93c. for Western mixed. White Beans 2 75 per bushel. Peas 1 35 for Canadian, 2 50 for black-eyed.

Provisions—Pork 14 50 for prime, 17 00 for mess. Beef 9 00 a 10 00 for country prime, 10 62 a 12 00 for country mess. Lard 11½c. Dressed Hogs 7½c. Butter 17 a 22c. for Ohio, 23 a 25c. for State dairies, 26 a 28c. for fresh made. Cheese 9 a 10½c. Eggs 20 a 22c per dozen.

Potatoes and Turnips—Common Potatoes 1 50 a 1 75, Mercers and Carters 1 75 a 2 00. Turnips 56 a 87c. per bbl.

Seeds—Clover 12¾ a 13½c. Timothy 3 00 a 3 25 per bushel.

Tallow—12¾ a 13c.

MARRIED,

In Brookfield, Madison Co., N. Y., Jan. 15, 1856, by Eld. L. M. Cottrell, Mr. E. S. B. Maxson to Miss Mary A. Brand, both of Brookfield.

DIED,

In Milton, Rock Co., Wis., Nov. 30th, in the 19th year of her age, Marietta, daughter of Abel and Lucy Ann Babcock, much beloved and mourned by all who knew her. V. H.

In Independence, Allegany Co., N. Y., on the 9th of December, Elijah Lewis, aged sixty-three years and three months.

In Westerly, R. I., Oct. 14, 1855, at the residence of Capt. Joshua Thompson Jr., Miss Abby Stillman, aged 65 years, in the full hope of a glorious immortality. She professed religion in early life, and became a member of the Seventh-day Baptist Church in Hopkinton, where she remained an honor to the Christian name until removed to join the church triumphant. The memory of the just is blessed. D. C.

A young man, by the name of Johnson Davis, while sporting on the ice near Lost Creek, Va., New Years day, had his feet knocked from under him by accident, and fell backwards, fracturing the head in such a manner as to cause his death in a few hours. W. F. R.

☞ We learn that Deacon Martin Wilcox, of Verona, N. Y., died on Sabbath morning, Jan. 19th, in the 64th year of his age. He was a man much beloved. An obituary notice will no doubt soon appear.

LETTERS.

L R Babcock, Edwin Daniels, Wm F Randolph, D C Burdick, N V Hull, Noyes Spicer, L M Cottrell, T F West, E R Clarke, W B Maxson, P L Berry, C L Hall, E C Hydorn, J C Green, A Lanphear, E R Crandall, E P Osgood, R W Crandall, E Konigmacher, J Whitford.

RECEIPTS.

☞ All payments for publications of the Society are acknowledged from week to week in the Recorder. Persons sending money the receipt of which is not duly acknowledged, should give us early notice of the omission.

Miss E C Hydorn, Smethport, Pa	1 00

WILLIAM M ROGERS, Treasurer.

Merchant Tailoring Establishment.

THE subscriber, having sold his interest in the firm of A. D Titsworth & Co. of Plainfield, and located himself at the corner of Fulton and Pearl streets, New York, as Merchant Tailor and Manufacturer of all kinds of Clothing, would respectfully invite his friends, and as many others as feel disposed to study economy, to give him a call, feeling assured that his experience in the business will enable him to do better for his customers than they can do for themselves. He will employ the best of workmen, and give to the business his whole attention.

Cloths, Cassimers, and Vestings, of the latest patterns, constantly on hand, and made to order in the most approved manner, at short notice.

Also, any persons wishing cutting done for their friends at home, by observing the following directions, can be accommodated with any style they wish:—

Coat Measure—1st. Placing the measure at socket bone of neck, down to center of arm or shoulder; then to waist above the hip, and length of coat. 2d. From seam of back, giving width of back; then to elbow and length of sleeve, bending the arm in right angle. 3d. Breast and waist, noting the position, whether stooping forward or extra straight.

Vest—1st. From socket bone down front, giving length of vest. 2d. Breast and waist measures.

Pants—1st. From hip bone to thigh joint and knee, and length. 2d. Waist, hip, thigh, and knee measures.

Also, any persons wishing to avail themselves of my assistance in selecting a stock of clothing or other merchandise, will find me at my office every day, except Sabbath day. All orders thankfully received and attended to with dispatch.

Terms, cash on delivery.

E. B. TITSWORTH, Merchant Tailor.

☞ I can accommodate a Sabbatarian with an office in my room.

Rogers' Hotel and Dining Saloons,

KEPT ON THE EUROPEAN PLAN,

Bibliotheca Sacra,

AND AMERICAN BIBLICAL REPOSITORY.—The Thirteenth Volume commenced Jan. 1, 1856. This volume will be enlarged to 900 pages; will be printed on a new, large, and beautiful type, and on paper superior to that of any previous volume. This Quarterly contains articles of permanent value, by some of the ablest writers in the country.

In its department it has no superior, and no Minister can afford to be without it.

It is the most learned, the largest, and the cheapest Quarterly of its kind in the country.

TERMS—$3 per annum in advance.
$4 if not in advance.

W. F. DRAPER, Andover, Mass.

Carpet Warehouse.

YOUNG & JAYNE, No. 364 Broadway, corner of Franklin Street, (opposite Taylor's Saloon,) offer for sale a very choice and extensive assortment of

CARPETINGS, OIL-CLOTHS, CURTAIN MATERIALS, MATTRESSES, &c.,

at the lowest rates. Purchasers are respectfully solicited to examine the stock.

Misrepresentations, either expressed or implied, are strictly prohibited in this establishment.

YOUNG & JAYNE,
364 Broadway, corner of Franklin-st.

N. B.—Churches and clergymen furnished at wholesale prices. Sept 27—3 m.

Alfred Highland Water-Cure.

THIS establishment, for the cure of Chronic Diseases, is conducted by H. P. Burdick, M. D. The facilities in this "Cure" for the successful treatment of Diseases of the Liver, Spine, Nerves, Female Diseases, Bronchitis, Incipient Consumption, &c., are not excelled in any establishment. Patients will have the benefit of skillful Homeopathic prescriptions—an advantage found in but few "Water-Cures." Especial attention will be given to diseases commonly called *surgical cases*, such as Hip Diseases, White Swellings, Cancers, (in their early stages,) and Caries and Necrosis of bone

Connected with the establishment is a Dental Shop, where all calls in that profession will be attended to.

Address, H. P. BURDICK,
Alfred, Allegany Co., N. Y.

IN connection with the Lehigh Valley Railroad, opened to Mauch Chunk—WINTER ARRANGEMENT, commencing Nov. 19, 1855. Leave New York for Mauch Chunk from Pier No. 2 North River, at 7 30 A. M. For Easton, at 7 30 A. M. and 3 15 P. M. For Somerville, at 7 30 and 10 45 A. M., and 3 15 and 4 30 P. M. The above trains connect at Elizabeth with trains on the New Jersey Railroad, leaving New York from foot of Courtlandt street, at 7 30 and 11 A. M., 3 and 4 P. M.

Leave Plainfield for New York at 7 05 and 9 05 A. M., and 1 40 and 6 13 P. M.

JOHN O. STERNS, Superintendent.

Hudson River Railroad.

TRAINS leave Chambers street daily, for Albany and Troy. On and after MONDAY, Nov. 19, 1855, the trains will run as follows: Express Train 7 A. M., connecting with Northern and Western Trains. Mail Train 8 30 A. M. Through Way Train, 12 M. Express Train 5 P. M. For Hudson 3 30 P. M. For Poughkeepsie—Way Freight and Passenger Train, 12 30 P. M. For Peekskill, 5 30 P. M. For Sing Sing, at 4 20 and 9 P. M. For Dobbs' Ferry, 7 15 and 11 A. M. The Dobbs' Ferry, Sing Sing, Peekskill, and Hudson Trains stop at all the Way Stations. Passengers taken at Chambers, Canal, Christopher, and 31st streets. SUNDAY MAIL TRAIN at 4 P. M. from Canal street, for Albany, stopping at all the Mail Stations.

M. L. SYKES, Jr., Superintendent.

Magnificent Floral Gift.

SUBSCRIBERS to the "CHRISTIAN DIADEM" for 1855, are entitled to a splendid steel engraving, the ☞ LILLY AND THE ROSE PERSONIFIED, being given *gratis* to all old and new subscribers who send us only ONE DOLLAR, by mail or otherwise.

Six Copies for Five Dollars.

The Diadem is a strictly moral and religious work—designed for the Christian family without regard to any particular denomination.

FIFTY ENERGETIC BUSINESS MEN are wanted immediately to circulate the "Diadem" throughout the Eastern and Western States. To such as can send good references the very best inducements will be given. Address Z. P. HATCH, Publisher, 9 Spruce street, New York. May 24—3m.

Seventh-day Baptist Publishing Soc.'s Publications.

The Sabbath Recorder,

Published Weekly.

Terms—$2 00 per Annum, in Advance.

The Sabbath Recorder is devoted to the exposition and vindication of the views and movements of the Seventh-day Baptist Denomination. It aims to promote vital piety and vigorous benevolent action, at the same time that it urges obedience to the commandments of God and the faith of Jesus. Its columns are open to the advocacy of all reformatory measures which seem likely to improve the condition of society, diffuse knowledge, reclaim the inebriate, and enfranchise the enslaved. In its Literary and Intelligence Departments, care is taken to furnish matter adapted to the wants and tastes of every class of readers. As a Religious and Family Newspaper, it is intended that the *Recorder* shall rank among the best.

The Sabbath-School Visitor,

Published Monthly.

Terms per annum—Invariably in advance:

One copy	$ 25
Five copies to one address	1 00
Twelve copies to one address	2 00
Twenty copies to one address	3 00
Twenty-eight copies to one address	4 00
Forty copies to one address	5 00

The Seventh-day Baptist Memorial,

Published Quarterly.

Terms—$1 00 a Year, 25 Cents a Number.

Each number of the *Memorial* will contain a lithographic portrait of a Seventh-day Baptist preacher, together with a variety of historical, biographical, and statistical matter, designed to illustrate the rise, progress, and present condition of the Seventh-day Baptist Denomination. Wood-cuts of meeting-houses will be introduced from time to time in connection with the history of the churches.

[The first, second, and third volumes of the *Memorial*—being for the years 1852-3-4—may be had bound, for the subscription price and the cost of binding.]

The Carol:

A Collection of original and selected Music and Hymns, for the use of Sabbath-Schools, Social Religious Meetings, and Families. Compiled by Lucius Crandall. 128 pages octavo; price 35 cents per copy.

The *Carol* is designed principally for Sabbath-Schools, and contains Music and Hymns adapted to all ordinary occasions, and to such special occasions as the sickness of teachers, funerals, anniversaries, &c. A number of pieces suitable to social and public worship, together with a few Temperance Songs, are included in the book. It contains 93 tunes, and 156 hymns.

☞ Orders and remittances for the above should be addressed to the General Agent, George B. Utter, No. 9 Spruce-st., New York.

Postage.

The postage on the Sabbath Recorder is 13 cents a year in the State of New York, and 26 cents in any other part of the United States, payable quarterly or yearly in advance.

The postage on the Sabbath-School Visitor is 3 cents a year in the State of New York, and 6 cents in any other part of the United States, payable in advance.

The postage on the Seventh-day Baptist Memorial is 2 cents year in any part of the United States when paid in advance, or 4 cents a year when not paid in advance.

Miscellaneous.

Agricultural.

Winter is a time of comparative leisure for farmers—a time when they have nothing on hand to prevent their studying thoroughly the books and newspaper articles which relate to their business. For this reason we have of late given considerable space to agricultural articles, and shall continue to do so in time to come. Many of the articles copied from our exchanges will perhaps not bear criticism in all points. But if they serve to awaken interest, and lead to discussion among those who read them, our object will be attained.

Something about Plowing.

The New York Daily *Times* lately published an article designed to show that one of the most important things connected with the successful cultivation of various crops, is to secure a full and constant supply of sap, which can only be obtained through a large number of fibrous roots. Of the requisites to develop such roots, the writer speaks as follows :—

The *first* requisite in a soil, for a full development of roots, is a sufficient mass of exceedingly fine or impalpable earth, to form a matrix or bed for them.

The fibrous rootlets of a single stalk of corn or other grain in vigorous growth, number many millions. These are broken off when a plant is pulled from the earth, and were they not they could not be seen by the unaided eye on account of their exceeding smallness. A thousand of these essential, moisture-gathering fibres if twisted together would not form a cord as large as the finest hair. Now such delicate fibres can no more grow in a bed of coarse sand than a root the size of a knitting-needle could grow among pebbles as large as chesnuts.

It may be set down as a rule, that no plant can flourish in a soil which does not contain five to ten per cent. of material so fine that it can be washed out by water, and which, when separated, has no grittiness if rubbed between the fingers. It is to the absence of such fine materials that we are mainly to attribute the infertility of washed or sandy soils, and we may remark, in passing, that the best of all fertilizers for such soils is an admixture of clay or other impalpable earth. The "resolves" of all the committees in the world, and the application, in limited quantities, of the best artificial fertilizers yet discovered, cannot make permanently fertile soils of much of the sandy plains of central Long Island, until they are supplied with a considerable per centage of this requisite fine earthy material.

One object of frequent plowing, and exposure to the air of coarse soils is, to pulverize them by mechanical means, and to subject them to the combined action of frost and air, that a sufficient portion may be comminuted to such a degree that it will furnish a bed for the infinitessimal roots of the plants. When this is the main object sought after, *frequent* plowing is desirable. Autumn plowing and Winter exposure are also especially useful.

The *second* requisite of a fertile soil, or one which will produce a large growth of sap-absorbing roots is, that it should be free from substances noxious or poisonous to the growing roots.

The coloring matter of soils is chiefly derived from the iron compounds entering into their composition. The dark color of the surface soil is partially due to the vegetable matter intermingled, and occasionally a compound of manganese assists in giving color, but this latter compound is not abundant, nor widely distributed. We may say in general terms, that were the iron removed, the soil would be colorless. Now iron exists in two states—the protoxide or sub-oxide, and the sesqui-oxide or per-oxide. The sub-oxide of iron is soluble in water, and is readily absorbed into plants along with the sap. When this is done, the plant becomes poisoned, and it will either die or drag out a sickly existence. The per-oxide of iron, on the contrary, is insoluble in water, and its existence in the soil, in any quantity, is not deleterious only so far as it acts as a cement to compact the earthy particles, and as it has a tendency when mingled with decaying vegetables, to yield up a part of its oxygen and change to the sub-oxide. But the sub-oxide of iron cannot long exist in a *moist* state when in contact with air. It will withdraw oxygen from the atmosphere and be changed to the innocuous per-oxide. It is on this account that thorough and frequent stirring of the ground, by plowing or other means, is desirable. The free admission of air destroys the poisonous sub-oxide, and prepares the soil for the free and healthy development of the roots. We may here remark, that the constant saturation of a soil with water, shuts out the air, and retains the poisonous compound of iron.

The phenomena attending the growth of clover may be adduced in proof of the necessity of a free circulation of air in the soil. The great majority of farmers seldom plow deeper than four to six inches. Clover upon such a soil will grow for a year or two and then die out. So long as its roots remain in the surface, air exposed soil, it grows vigorously, but being a deep-rooted plant, the roots after the first or second year extend down below the reach of the air, where they absorb the poisonous sub-oxide of iron, and the crop necessarily is poisoned. That this is the case has been abundantly proved by numerous examples, where a clover crop has lived and flourished for a long series of years upon a naturally or artificially dry soil, deeply stirred. Other grasses send out a greater number of side roots, and on this account are more durable upon a shallow worked soil.

The same reasoning applies to other crops. A soil deeply stirred, and thus rendered free from poison, allows a deeper growth of roots and, as a matter of course, a heavier surface yield. The roots of corn and the cereals generally will, during a single season, send down roots two or three feet into a well prepared soil.

The *third* requisite for a full supply of sap to a plant is, that the sap-absorbing roots extend below the temporary effects of drouth.

Upon most soils the drying effects of the severest drouth seldom extend more than six inches below the surface. If the roots supplying the sap are chiefly in the surface soil, the water is here evaporated by the sun as fast as it is drawn up from below by capillary attraction; and if the plant is not killed outright by want of moisture, there is not enough fluid supplied to carry down the food collected by the leaves, and a feeble growth is the consequence.

Another fact worthy of notice is this, that the water arising from an unprepared subsoil to supply rapid evaporation, is charged with poisons, and these conspire with drouth to injure or kill the plant.

A soil deeply stirred with the common or sub-soil plow, and thus exposed to the action of the air, is pulverized and freed from poisons; and the roots of plants, instead of being confined to a few inches of surface, run down deeply where they are entirely beyond the reach of drouth. They receive a more full and constant supply of sap, and are ready at all times to appropriate the food gathered from the air. The water rising to the surface soil is already freed from poisons by the access of air to the lower strata. The above considerations, and others that might be adduced, show the great importance of a *deep* pulverization of every soil, the necessity of freeing it from standing water, (which is in part effected by deep plowing, though more perfectly by draining,) and the necessity of admitting air as far below the surface as possible.

We have three kinds of plowing, styled respectively, *surface plowing*, *trenching*, and *sub-soiling*. Surface plowing applies to the ordinary method of stirring or inverting a few inches of the surface, say three to six inches in depth. Trenching differs from surface plowing only in the greater depth of soil operated upon. Sub-soil plowing implies a stirring of the under or sub-soil, without bringing it to the surface. A sub-soil plow is destitute of the turning mould-board. It is drawn by a separate team, and follows in the bottom of the furrow made by a common surface plow. The object of using this implement is simply to stir and pulverize the lower stratum of soil as much as possible without bringing it to the surface, and thus admit air to it, as well as to allow superabundant water to flow away more readily.

The best sub-soil plow is one which will the most thoroughly pulverize the ground with the least expenditure of force. The implement in common use is, we think, preferable for general purposes to the one recently introduced, and somewhat extensively commended in a few agricultural papers, as the "lifting plow." This is easily drawn through the ground, but though that is an advantage, it has the disadvantage of not breaking and pulverizing the soil sufficiently. Its shape is that of a double pointed wedge, which elevates the soil in a mass, letting it fall back again into nearly the same position, while its tendency is to pack the particles more closely together, above as well as below its path. The sub-soil plow in most general use is more in the form of the common plow with a narrow, flat mould-board, the rear part being elevated so that the soil falls over it in a loose, broken, and pulverized condition. We have alluded to this, not for the purpose of finding fault with any one's favorite implement, but to explain what we consider most essential in all sub-soil plowing, viz.: that the soil be not only lifted or moved, but that it be thoroughly broken up and pulverized, and to this end we should choose, not the implement which could be worked most easily and smoothly, but the most jagged or rough one that could be got through the sub-soil with the team force at our command, as such an instrument would best accomplish the main object of all sub soil plowing.

Economic Cultivation.

We have repeatedly seated ourselves with the intent of writing upon the best mode of cultivating the various crops, and almost as often have we actually had our attention turned to and written upon some other topic. The reason is this: No one, except the favored few who have all the means at command needful in carrying out their plans of farm operations, can do half as well as they know how to do. Their land is poor, and they have not the means of enriching it. Tell a man that a purse full of gold is only an inch beyond his utmost reach, and you do him no good but to excite feelings of discontent and envy, and even lead him to forego certain improvements which are within his reach, because they pay so little compared with what he is really anxious but unable to do. Poverty is a terrible burden, and no where is it felt more than among intelligent farmers.

Notwithstanding these difficulties, we would now urge this class of farmers, first to expend their labor and their fertilizers upon a much smaller quantity of land than is usually done. Instead of planting five acres of corn, plant two, or even one; and plow and cultivate this small field to the entire neglect, if need be, of other acres. If those lie fallow, it will be useful to the soil, and at least no money will be wasted upon them.

We say to such farmers, in the second place, you can do more than you have done in the preparation of various composts. There are very few farmers who cannot double and treble the quantity and value of these necessary means of restoring vigor to worn-out and barren soils. By diminishing the extent of surface under cultivation, and by proper industry in preparing composts, there is scarcely a farm in the country that cannot be made to produce its sixty, and seventy, and eighty bushels of corn to the acre. And even though one acre only is brought up to this desirable condition, a series of years will suffice to bring the whole farm to a high state of cultivation. If only small fields are made thus productive, the hopes and courage of the farmer will be thereby excited, and he will stand up manfully among men, and tell of his success as well as they.

We would not advise farmers of limited means to buy guano or phosphates at any thing like their present prices. Pay your poorer neighbor his six or eight shillings a day (if you cannot exchange work with him) to help you collect leaves from the forest, mud from the meadow, carting the latter only after it is tolerably dry, peat or marl from the bog; and if you can buy barn-yard manures, mix them with turf, sods, roots, and weeds, dirty straw, spoilt hay, chips that are unfit to burn; and if you are conveniently situated for it, get sea-weeds from the sea-shore, oyster shells, old bones, horns, &c. Dead animals are of great value. The offal from a slaughter-house, worthless scraps of hides, bones, &c., should be used only with large quantities of common soil, or of some other solvent. Not one in a hundred turns to the best account the contents of privies, hog-pens, soap-suds, and other kinds of waste.

Pardon us for asking, why will you tax yourselves so severely by neglecting any of these modes of improving your lands? It may be only such neglect that keeps you in poverty; and though you enter upon the work with many painful doubts in relation to the results, we will assure you against loss from any such operations, if conducted with tolerable discretion.

Now is the time to commence this system of operation for the next year. On every leisure day, let the time be occupied in these preparatory labors. Every hour thus spent is worth something, and will tend to fill your purse at the time of harvest.

Almost all farmers sadly neglect their barnyard manures. Were these properly cared for, their value, as a whole, would be more than double. [Plough, Loom, and Anvil.

Garden Soils.

A good garden may be made by skillful management, upon almost any soil. But the results will differ somewhat according to the nature of the soil; where the soil is a moist, heavy loam, resting upon a clayey sub-soil, crops cannot be obtained as early as upon a different soil. But by tillage adapted to the nature of the soil, large heavy crops may be obtained for fall and winter use. Upon such soils only one crop can generally be obtained, in a season. Such soils should be well drained, and cultivated in beds or ridges, so that the surface water may be conducted off, and not be permitted to injure land already sufficiently moist. Horse manure is the best dressing for such soils, when cultivated as a garden, and should be liberally supplied, and well plowed in. Such land is apt to bake and become hard; consequently it requires to be frequently stirred during the growth of the plants. Such a soil is well adapted to the growth of pears and quinces.

When it is an object to obtain early crops, as in the cultivation of market gardens, a light, sandy loam is preferable. When such a soil is made rich by high cultivation, the crops are earlier, more sure, and the soil is more easily worked. Many of the most productive gardens in the neighborhood of Boston are made upon light sandy plains that were previously exhausted by cultivation without manure, and that have been redeemed by judicious management. The plow is put in as deep as it can be made to run, and the whole of this depth is made fat by liberal supplies of warm, stimulating manures. It is an important object with market gardeners to get early crops, and they are able to get them in such a soil, two, three and four weeks earlier than in a heavy loam. This gives them a longer season, and by a skillful management of successive crops, they get two or three crops in one season. Apple trees succeed well on such soils. When the ground is enriched by high manuring and the cultivation of hoed crops, the trees grow rapidly, and come into bearing some years sooner than in a colder and heavier soil. They start earlier in the spring, and, of course, have a longer season to grow, and the wood which they make becomes better matured and prepared to endure the cold of the ensuing winter.

In such soils, fall sowing is often practised to advantage. Onions, beets and lettuce are sowed in September and covered with salt hay, rock weed or meadow hay; the mulching is removed early in March, and the ground between the rows stirred, and onions and beets are thus obtained for the market in June or early in July. Vegetables at this season command nearly double the price that they do later in the season. Three crops are often obtained from the same ground. A portion of ground is plowed as soon as the frost is out, and a heavy dressing of horse manure is plowed in. Early peas are planted in rows perhaps five feet apart; then radishes are sowed broadcast, and raked in. The radishes are pulled before the peas are all picked. Between the rows of peas are planted at proper times, squashes, melons or cucumbers; by the time the vines begin to run, the radishes and peas are removed from the ground, and the whole surface is left in possession of the vines. Early potatoes are taken off in July and the early part of August, and a full crop of turnips is made to follow. Or after peas and potatoes, onions and beets are sowed for the spring market. After lettuce and radishes, cabbages are set for fall use. Many such gardeners start vegetables in hot-beds under glass; thus they obtain potatoes, tomatoes, cabbages and cucumbers some two or three weeks earlier than by open culture, and the increased price amply repays them for the outlay of capital and labor.

Strawberries succeed admirably on such soils, especially if, in addition to high culture, irrigation is employed. Some of the strawberry gardens in the vicinity of Baltimore, consisting of from ten to one hundred acres, are made of worn-out sandy land, which has been redeemed by cultivation. One gardener in the neighborhood of Boston, receives more than three thousand dollars annually for the vegetables and fruit grown upon twenty-six acres of such land. His proximity to a ready market, and to an abundant supply of manure, are circumstances which contribute greatly to his success. But high culture, and a skillful arrangement of successive crops are the essential conditions of his prosperity. I do not believe he would make as much money in proportion to his outlay, in the cultivation of a heavy loam, although the soil is in itself much more fertile. Early crops could not be obtained on such a soil, and these are a chief source of profit. Apples would not succeed as well as on a lighter and more sandy soil. From four Porter apple trees on such a soil, apples have been sold to the amount of more than a hundred dollars in a year. This to be sure is an extraordinary product, and was owing to the superior quality of the fruit; but under such culture on a sandy soil, Baldwins, Greenings and Russets will yield from four to five barrels to a tree, worth from two to four dollars a barrel. On such a soil peaches and plums thrive better than on any other, and bear full crops in four or five years from the stone.

Let no man say he cannot have a good garden, because he has only a piece of poor sandy land. On such land, he can have earlier crops than his neighbor who has a deep, rich, moist loam; and if he does not have so heavy a crop, he can have two to his neighbor's one. Plow early and deep, and put on manure with a liberal hand, and you shall have a luxuriant garden, where you have now an unproductive and barren patch. [New England Farmer.

Singular Apple.

An apple was brought into Boston market for the present season, from New Hampshire, where it has received the name of "No-Blow." It is a most remarkable apple, in its appearance as well as in its character. It is about as near square as round, for it is neither. Its shape is oblong, and it looks like a club foot. The tree on which it grows stands in a pasture, where it is said to have come up from the dropped seed, and never blossoms—the fruit rarely having any seed! Some of the specimens have little green-coated protuberances around the calyx, but they contain no seed. The apple is not entirely coreless, having the usual appearances of an apple core in the flesh, but wholly without seeds. The following is a description of the fruit as accurately as we can give it:

Size above medium, but not large, measuring ten and a half inches in circumference over the stem and calyx ends, and eight and a half around the middle of the apple; color greenish, speckled with a large deep red blush, spotted like a Baldwin on one side. Stem an inch long, serrated, and set in a deep cavity. One side resembles a Baldwin, and most of the other side a greenish russet. The flesh is yellowish, and flavored like the Rhode Island greening, becoming tender and pleasant to the taste. The calyx is almost without a basin, being the mere gathering in of the skin, having little green protuberances around it, looking like seed vessels. The shape of the fruit is very irregular, though constantly adhering to its form. It bulges out around the top, and is smaller below the middle.

[Bunker Hill Aurora.

Cabbages.

There are more ways to cook a fine cabbage than to boil it with a bacon side, and yet few seem to comprehend that there can be any loss in cooking it, even in this simple way. Two-thirds of the cooks place cabbage in cold water and start it to boiling; this extracts all the best juices, and makes the pot-liquor a soup. The cabbage-head, after having been washed and quartered, should be dropped into boiling water, with no more meat than just to season it. Cabbage may be cooked to equal broccoli or cauliflower. Take a firm, sweet head, cut it into shreds; lay it in salt and water for six hours. Now place it in boiling water until it becomes tender—turn the water off, and add sweet milk; when thoroughly done, take it up in a cullender and drain. Now season with a little nutmeg grated over, and you will have a dish little resembling what are generally called greens.

Bold and Successful Robbery.

The following curious case of robbery is detailed by the St. Louis *Democrat*, and displays a coolness and original sagacity on the part of the rogue which has seldom been paralleled anywhere :—

Monsieur Maurice Dejamee, lately arrived in our city, on New Year's Day was passing along Fourth street, when he met a friend and invited him to come to his hotel, and take dinner at his room. During the conversation, the house and number of the room were all given, and all heard by a third party, who happened to be standing by. This third party, on the look-out for a chance, caught an idea at once, and hastening to the hotel in advance of the Frenchman and his guest, represented to the landlord that he was the newly-employed servant of Monsieur, and that his governor would soon be along to order dinner in his room.

The Frenchman and friend came and ordered dinner. The servant that waited on them was the same individual that heard their conversation on the pavement. The landlord thought of course Monsieur would prefer his own domestic; and the Monsieur was highly pleased indeed, that the landlord should provide him with such an attentive servant. The dinner was eaten with relish and the wine and jovial conversation flowed freely between host and guest. Suddenly, as the servant was removing the dishes he "accidentally" stumbled and the contents of one of the half consumed dishes was spilled upon Monsieur's coat. The confusion was great, as may be supposed, and the owner of the coat let off a volley of mingled French and English execrations at the stupidity and awkwardness of the servant, who was very humble in his apologies, and assured Monsieur that if he would just take off the coat and let him take it down stairs, he would bring it back presently as good as before without stain or blemish. The owner parted with his coat and at the same time (which he did not find out until afterwards) parted forever with a roll of money in one of the coat pockets and one or two other articles of value. The servant had decamped. The Frenchman had been robbed. The landlord was dismayed. Everybody swore sacré.

Loss of Life by Wars.

We have seen it sometimes remarked, in reference to the loss of life in the Crimea, that certain battles were among the bloodiest every fought, the sacrifice of life the greatest, &c. But such writers either forget, or certainly know very little about the terrible battles fought in former times, and even of a comparatively recent date, and within the memory of persons living. Let us notice some of these.

At the battle of Arcola the Austrians lost, in killed and wounded, 18,000 men; the French, 15,000.

At Hohenlinden the Austrian loss was 14,000; the French, 9,000.

At Austerlitz, the Allies, out of 80,000 men, lost 30,000 in killed and wounded or prisoners; the French loss only (!) 12,000.

At Jena and Austerstadt the Prussians lost 30,000 men, killed and wounded, and nearly as many prisoners, making nearly 60,000 in all; and the French 14,000 in killed and wounded.

At the terrific battle of Eylau, the Russians lost 25,000 in killed and wounded; and the French, 30,000.

At Friedland the Russian loss was 17,000, in killed and wounded—the French loss 8,000.

At Wagram the Austrians and French lost each 25,000 men, or 50,000 in all, in killed and wounded.

At Smolenski the French loss was 17,000 men—that of the Russians, 10,000.

At Borodino, which is said to have been "the most murderous and obstinately fought battle on record," the French lost in killed, wounded and prisoners, 50,000 men—the Russians about the same number, making in all 100,000 men in one battle!

At Lutzen the French loss was 18,000 men—the Allies, 15,000.

At Bautzen the French lost 25,000 men—the Allies, 15,000.

At Dresden, where the battle lasted two days, the Allies lost in killed, wounded and prisoners, 25,000 men; and the French between 10,000 and 12,000.

At Leipsic, which lasted three days, Napoleon lost two Marshals, twenty Generals and about 60,000 men, in killed, wounded and prisoners—the Allies, 1,790 officers, and about 40,000 men—upwards of 100,000 men in all!

At Ligny, the Prussians lost 15,000 men, in killed, wounded and prisoners; the French 6,800.

The battle of Trebbia lasted three days; and the French and Allies lost each about 12,000 men, or 24,000 in all.

Debt and Interest.

Henry Ward Beecher gives some very pertinent advice to young men just commencing life, which is quite as valuable to their elders in all classes of society :—

"I forgot to ask, in the earnestness of my congratulations, whether the farm is yours? Whether it is paid for? I hope the deeds are recorded, without mortgage or lien of any kind. I hope no notes are drawing interest. No blister draws sharper than interest. Of all industrious workers none is comparable to that of interest. It works day and night, in fair and foul weather. It has no sound in its foot-steps, but travels fast. It gnaws at a man's substance with invisible teeth. It binds industry with its firm grasp, as a fly is bound upon a spider's web. Debt rolls a man over and over, binding a man hand and foot, and letting him hang upon the fatal mesh until the long-legged interest devours him. There is but one thing raised on a farm like it, and that it is the Canada thistle, which swarms new plants every time you break its root, whose blossoms are prolific, and every flower father of a million seeds. Every leaf is an awl, every branch a spear, and every single plant is like a platoon of bayonets, and a field full of them is like an armed host. The whole plant is a torment and a vegetable curse. And yet a farmer had better make his bed of Canada thistles than attempt to lie at ease upon interest."

Runaway Locomotive.

The Lancaster Island Daily, Jan. 9, says that about 12 o'clock, the day previous, the crowd of persons at the Railroad station in that city, awaiting the arrival of the train from Philadelphia, were not a little surprised to see a locomotive and tank coming up the road at high speed, which shot through the station like a meteor in chase of a rainbow, and hummed its course west, with unchecked speed, without engineer or attendant. The inference was that some accident had happened, and the excitement was great, but information was received in a short time, that a short distance below the Locomotive Works the morning train from Philadelphia had run into a train of empty trucks that was running on the track before it, demolishing a number of the trucks, and disengaging the locomotive and tank from them. The engineer and fireman on the truck train being frightened at the collision, jumped off, thus leaving the locomotive free to run down what it pleased. It was this that came careering through the city "at the top of its speed," without deigning to stop and take a drink as usual, and which seemed bound on a Western expedition of such great moment, that it required all to "stand from under," without even given warning of its approach. We did not hear that it caused any serious accident on the road, nor where it finally "brought up."

Going to Law.

Upwards of eighty years ago there was in the town of Hatherleight, in the county of Devon, an inn, known by the name of Client's Arms. There was a swinging signboard, on one side of which was painted a man stripped of his coat and waistcoat, exclaiming, "I've been to law and have won." And on the other side of the signboard was painted a man stark-naked, crying out, "Oh, what shall I do? I have been to law and have lost."

The origin was this. Two men had a dispute about a little spot of land, respecting which they could not agree; recourse was had to legal proceedings, which ended in the verdict of a jury. The man against whom the verdict was given could not pay the costs, and the winner had to pay all his own. In fact, the loser was stripped of all his property; the victor was obliged to sell his little estate; then took an inn and set up the above mentioned sign as a warning to others. Some of the descendants are now living.

Curiosities of Water.—Nor is the hailstone less soluble in earth than in air. Placed under a bell glass with twice its weight of lime, it gradually melts and disappears; and there remain four parts, instead of three, of perfectly dry earth under the glass. Of a plaster of Paris statue, weighing five pounds, more than one good pound is solidified water. Even the precious opal is but a mass of flint and water, combined in the proportion of nine grains of the earthy ingredient to one of the fluid. Of an acre of clay land a foot deep, weighing about one thousand two hundred tons, at least four hundred tons are water; and, even of the great mountain chains with which the globe is ribbed, many millions of tons are water solidified into earth.

Water, indeed, exists around us to an extent and under conditions which escape the notice of cursory observers. When the dyer buys of the dry salter one hundred pounds each of alum, carbonate of soda, and soap, he obtains in exchange for his money, no less than forty-five pounds of water in the first lot, sixty-four pounds in the second, and a variable quantity, sometimes amounting to seventy-three and a half pounds, in the third. Even the transparent air we breathe contains, in ordinary weather, about five grains of water diffused through each cubic foot of its bulk, and thus rarified water no more wets the air, than the solidified water wets the lime or opal in which it is absorbed.

The Works of Noah Webster.—It is supposed that with the exception of the Bible, the lexicographic works of Noah Webster, have the largest circulation of any books in the English language. Nearly twelve hundred thousand copies of Webster's Spelling Book were sold by one firm in this city last year, and it is estimated that more than ten times as many are sold of Webster's Dictionaries as of any other series in this country. Four-fifths of all the school books published in the United States are said to own Webster as their standard. The State of New York has placed 10,000 copies of Webster's Unabridged in as many of her public schools. Massachusetts has, in like manner, supplied 3,248 of her schools; nearly all. Wisconsin and New Jersey have provided for all their schools.

An award of $6,500, for personal injuries on the New Haven Railroad in 1854, was rendered in the Supreme Court New York the other day against the Company.

New York and Erie Railroad.

ON and after Wednesday, Oct. 31, and until further notice, Passenger Trains will leave the pier foot of Duane-st., New York, as follows:

Buffalo Express at 7 A. M. for Buffalo direct, without change of baggage or cars. At Hornellsville this Train connects with a Way Train for Dunkirk and all stations on the Western Division.

Mail at 8¼ A. M. for Dunkirk and Buffalo, and all intermediate stations. Passengers by this Train will remain over night at Owego, and proceed the next morning.

Newburg Express, at 4 P. M., for Newburg direct, without change of cars.

Rockland Passenger at 4 P. M. via Sufferns for Piermont and intermediate stations.

Way Passenger at 4 P. M. for Otisville and intermediate stations.

Night Express at 5 P. M. for Dunkirk and Buffal .

Emigrant at 5 P. M. for Dunkirk and Buffalo and intermediate stations.

On Sundays only one express train, at 5 P. M.

These Express Trains connect at Elmira with the Elmira and Niagara Falls Railroad, for Niagara Falls, at Buffalo and Dunkirk with the Lake Shore Railroad for Cleveland, Cincinnati, Toledo, Detroit, Chicago, &c. D. C. McCALLUM, General Sup't.

Ayer's Pills.

FOR all the purposes of a Family Physic. There has long existed a public demand for an effective Purgative Pill which could be relied on as sure and perfectly safe in its operation. This has been prepared to meet that demand, and an extensive trial of its virtues has conclusively shown with what success it accomplishes the purpose designed. It is easy to make a physical *Pill*, but not so easy to make the best of all *Pills*—one which should have none of the objections, but all the advantages of every other. This has been attempted here, and with what success we would respectfully submit to the public decision. It has been unfortunate for the patient hitherto that almost every purgative medicine is acrimonious and irritating to the bowels. This is not. Many of them produce so much griping pain and revulsion in the system as to more than counterbalance the good to be derived from them. These *Pills* produce no irritation or pain, unless it arises from a previously existing obstruction or derangement in the bowels. Being purely vegetable, no harm can arise from their use in any quantity; but it is better that any medicine should be taken judiciously. Minute directions for their use in the several diseases to which they are applicable are given on the boxes. Among the complaints which have been speedily cured by them we may mention Liver Complaint, in its various forms of Jaundice, Indigestion, Langor and Loss of Appetite, Listlessness, Irritability, Billious Headache, Billious Fever, Fever and Ague, Pain in the Side and Loins, for in truth, all these are but the consequence of diseased action of the liver. As an aperient, they afford prompt and sure relief in Costiveness, Piles, Colic, Dysentery, Humors, Scrofula and Scurvy, Colds, with soreness of the body, Ulcers and impurity of the blood; in short, any and every case where a purgative is required.

They have also produced some singularly successful cures in Rheumatism, Gout, Dropsy, Gravel, Erysipelas, Palpitation of the Heart, Pains in the Back, Stomach, and Side. They should be freely taken in the spring of the year, to purify the blood and prepare the system for the change of seasons. An occasional dose stimulates the stomach into healthy action, and restores the appetite and vigor. They purify the blood, and, by their stimulant action on the circulatory system, renovate the strength of the body, and restore the wasted or diseased energies of the whole organism. Hence an occasional dose is advantageous even though no serious derangement exists; but unnecessary dosing should never be carried too far, as every purgative medicine reduces the strength, when taken to excess. The thousand cases in which a physic is required cannot be enumerated here, but they suggest themselves to the reason of every body; and it is confidently believed this Pill will answer a better purpose than any thing which has hitherto been available to mankind. When their virtues are once known the public will no longer doubt what remedy to employ when in need of a cathartic medicine.

Being sugar wrapped they are pleasant to take, and being purely vegetable, no harm can arise from their use in any quantity.

For minute directions, see the wrapper on the Box.

Prepared by Dr. J. C. AYER, Practical and Analytical Chemist, Lowell, Mass.

Price 25 Cents per Box. Five Boxes for $1 00.

Ayer's Cherry Pectoral,

FOR the rapid cure of Coughs, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption. This remedy has won for itself such notoriety for its cures of every variety of Pulmonary diseases, that it is entirely unnecessary to recount the evidences of its virtues in any community where it has been employed. So wide is the field of its usefulness, and so numerous the cases of its cures, that almost every section of the country abounds in persons publicly known, who have been restored from alarming and even desperate diseases of the lungs by its use. When once tried its superiority over every other medicine of its kind is too apparent to escape observation, and where its virtues are known, the public no longer hesitate what antidote to employ for the distressing and dangerous affections of the pulmonary organs which are incident to our climate. And not only in formidable attacks upon the lungs, but for the milder varieties of *Colds, Coughs, Hoarseness, &c.* and for Children it is the pleasantest and safest medicine that can be obtained.

As it has long been in constant use throughout this section, we need not do more than assure the people its quality is kept up to the best that it ever has been and that the genuine article is—

The Sabbath Recorder,

PUBLISHED WEEKLY

By the Seventh-day Baptist Publishing Society,

AT

NO. 9 SPRUCE-STREET, NEW YORK.

Terms:

$2 00 per year, payable in advance. Subscriptions not paid till the close of the year, will be liable to an additional charge of 50 cents.

☞ Payments received will be acknowledged in the paper so as to indicate the time to which they reach.

☞ No paper discontinued until arrearages are paid, except at the discretion of the publisher.

☞ Communications, orders, and remittances, should be directed, post paid, to

GEO. B. UTTER, No. 9 Spruce-st., New York.

Liabilities of those who take Periodicals.

The laws declare that any person to whom a Periodical is sent, is responsible for payment, if he receives the paper, or makes use of it, even if he has never subscribed for it, or has ordered it to be stopped. His duty in such a case is not to take the paper from the office or person with whom the paper is left, but to notify the publisher that he does not wish for it.

If papers are sent to a post-office, store or tavern, or other place of deposit, and are not taken by the person to whom they are sent, the postmaster, store or tavern-keeper, &c., is responsible for the payment until he returns the paper, or gives notice to the Publisher that they are lying dead in the office.

THE NEW THEORY ESTABLISHED.

To the Editors of the Sabbath Recorder:—

From certain conceded facts, upon which some geologists have built a theory that the earth was at some remote period in a fluid condition, and which they advance in support of their other theory—the great age of earth —I am led to adopt a theory entirely different. One of these facts, and the one upon which I base my theory, is this: In descending into the earth, the temperature increases as you descend; and assuming that it continues to increase onward in the same ratio, they draw the conclusion, that the earth, with the exception of a comparatively thin crust, is in a melted state. To this I assent; but here we part. Their theory is, that the earth is cooling down from a melted state; while mine is, that it is heating up to a melted state. In support of my theory, I adduce the fact that from the lowest point in the crust of the earth where an observation has been taken, the temperature decreases towards the surface, until you emerge from the highest mountain peaks into everlasting snows. And this alone may be deemed sufficient to destroy their theory; for, from the amount of heat the earth must have given off in cooling to its present condition, and the laws of heat, the upper regions of the atmosphere should be the warmest.

Another fact which I bring to sustain the view that the inner crust of the earth is gradually melting away, is the constantly-recurring eruptions of lava from volcanoes, forced out by the expansive force of the solid substances of the earth in heating to a melting state. Close those safety-valves of the earth, and how soon would it be rent asunder.

I also have some authors, from whose writings I wish to quote in support of my theory. I will quote from but two; and though they may not stand very high in the estimation of the scientific, I think their writings will have some weight with the general reader. The first is one Malachi, who wrote a few years prior to the Christian era; and he speaks by authority. He says, "For behold the day cometh that shall burn as an oven; and all the proud, yea, all that do wickedly, shall be stubble; and the day that cometh shall burn them up." The other is Simon Peter, who wrote a few years later. He says, "But the day of the Lord will come as a thief in the night; in the which the heavens shall pass away with a great noise, and the elements shall melt with fervent heat; the earth also, and the works that are therein, shall be burned up." The fact that these writings were penned before the modern theories of the earth were introduced, and therefore written without any direct view of destroying or supporting any of them; and the remarkable coincidence of a future condition of the earth, as described by them, and that which it will eventually reach according to my theory, gives to the evidence already offered such weight that I think it cannot be successfully controverted.

I will dispose of one or two facts, to which the advocates of the other refer as sustaining their views, and submit the question. And, first, the equatorial diameter of the earth being greater than the polar. This they assume was caused by the rotation of the earth while in a fluid state. But the assumption that the earth was ever in a fluid state is the very thing to be first proved. I account for this difference of diameter upon well-known philosophical laws—the expanding force of heat at the equator, and the contracting power of intense cold at the poles; and if any doubt the correctness of my estimate of the power of cold at the poles, let them go and measure it. The second is the fact that remains of plants and animals, now found only in tropical regions, have been found in high northern latitudes. From this they argue that this region, in consequence of the internal heat of the earth, at some former period possessed the temperature and characteristics of the torrid zone. But I take the position, that the poles of the earth have been changed from the equator to where they now are; consequently, what was the torrid zone before that change, now belts the earth from pole to pole. These remains, with the bones of the Mammoth and Mastodon found in the temperate regions on the other side of the globe, where this belt would come, may be deemed conclusive on this point. But let me ask: Is it not much more probable that the elephant found at the mouth of the Lena would be overtaken and encased in ice, by the sudden change of temperature, caused by such a change of the poles, than it would by the slow and gradual change consequent upon their theory of the cooling of the earth? And here, in the sudden change of the rotary motion of the earth, consequent upon the changing of its poles, I have, probably, by chance, stumbled upon the proximate cause that "brought our planet into a state of" slight "ruin." If so, it must settle the important question how long the elephant found at the mouth of the Lena had remained imbedded in ice. And now I submit, whether their theory or mine has the better claim to be regarded as the true one? WHO KNOWS?

For the Sabbath Recorder.

KNOWLEDGE OF THE SCRIPTURES.

The Bible is the most wonderful book in the world. The first step to a proper appreciation of it is a conviction of its authenticity and divine inspiration. This has been tested and proved by men of learning and piety in past ages, and evidences are yet adduced which all the scepticism of the world cannot overthrow. Besides, it holds its credentials in the peculiarity and purity of its doctrines, and in its singular phraseology. Nor is there any lack in the internal evidence, as every person knows who has carefully read it; for it gives such a vivid and faithful view of the internal and secret exercises of the mind as no other book does or ever did. The fact of its giving a faithful and true picture of man's inmost soul, as well as his outward life, is demonstrative of its divinity. But it is to be lamented how much it is neglected, even by professors of religion. It is one of the crying sins of the present day, that the Bible is but little read and studied and prayed over by persons who profess godliness. Works of fiction and romance are eagerly read, and periodicals of the present day pander to the corrupt taste of society, and become popular principally for the novels they contain. Many persons who hold their membership in Christian churches, if they are guilty of reading at all, will apply themselves diligently to the perusal of novel tales in newspapers and magazines, and let their Bibles get dusty on their tables or shelves. It is very clear that the Bible is but little read, from the ignorance manifested by professors. Are there not many who are not able to tell you what the leading doctrines of the Bible are? Multitudes are ignorant of God's plan of saving sinners, and the doctrine of justification by faith is nearly unintelligible. Ask many, who have joined our churches under excitement and a manufactured revival, what they understand by reconciliation through the blood of the cross, and they cannot tell—in fact, they scarcely know what you mean. As to the ordinances and institutions of the church, they know no more than what others have told them, and they become Baptists, or Presbyterians, or Methodists, just as circumstances happen to lead. Such individuals lie open to all the sophisms and rotten theology of the times, and are likely to wander about, as they often do, as if guided by an ignis fatuus.

Study the Bible; it is full of God—full of divine light—full of salvation in Christ Jesus —full of consolation for the lost, the weary, and the heavy laden. Study it prayerfully; it will be a light in a dark place—the beacon light on a rock, to direct the way while sailing over the troubled and dangerous ocean of life—the day-star breaking in upon the darkness, and giving hope and encouragement, when the spirit is troubled by the strange vicissitudes of time. Study the Bible; it will present you with examples of piety and devotion—of self-denial and zeal in the cause of Christ. It will give you enlarged ideas of divine mercy—it will inspire your compassion for a perishing world—it will elevate your thoughts and purify your affections—it will fit you for life and death and eternity.

We should study the Bible in order to know what God's will is, and to acquire that knowledge which will lead us back to God, and final happiness and perfection. The Scriptures are perverted by some, who wrest their meaning to their own selfish ends, and to support fabrications of their own. Some unite with the devil in forming a creed or a sect, and then go to the Bible to endorse it, and thus error becomes rampant, and its believers fanatics. In this way past errors originated and have been propagated, and in the same way more modern and recent errors have arisen and are defended. Mormonism, that grand piece of devilishness, sensuality, infidelity, and misery, is supposed to be an additional revelation to the Bible, and would have been frowned out of existence long ago, had the Bible been known and believed. Materialism, and the doctrine of annihilation, had never been entertained, had men gone to the Bible with a prayerful mind, in order to know the truth and the will of God. But creeds and dogmas were formed in the corrupt heart, and the Bible was twisted and distorted to support them. When men are disposed to error and the corruption of the truth, it is not very difficult to find some abstract passage or passages of Scripture for defense. But let a person go to the word of God as such, and study it to know what he says to us, and there will be no danger of mistake, at least fatal mistake.

When we urge the importance of studying the Bible, we would not wish to be understood that all other reading is to be neglected; for we consider it to be wise, and, in fact, the duty of every one to obtain as much useful knowledge as he can, and to study all useful and improving subjects. Yet we would insist, that the lack of scriptural knowledge is the bane of our churches, and the greatest impediment to usefulness in the Christian world. We do hope that the blessed day will dawn upon the world when the church of Christ, in all its membership, will be so completely furnished with Bible truth that it will go forth, "fair as the moon, clear as the sun, and terrible as an army with banners."

GEO. R. WHEELER.

SALEM, N. J.

DEATH OF AN INFANT.

BY JOHN Q. ADAMS.

Sure, to the mansions of the blest,
 When infant innocence ascends,
Some angel brighter than the rest
 The spotless spirit's flight attends.

On wings of ecstacy they rise,
 Beyond where worlds material roll,
Till some fair sister of the skies
 Receives the unpolluted soul.

There at the Almighty Father's hand,
 Nearest the throne of living light,
The choirs of infant seraphs stand,
 And dazzling shine, where all are bright.

That inextinguishable beam,
 With dust united at our birth,
Sheds a more dim, discolored gleam,
 The more it lingers upon earth.

Closed in this dark abode of clay,
 The stream of glory faintly burns,
Nor unobscured the lucid ray
 To its own native fount returns.

But when the Lord of mortal breath
 Decrees his bounty to resume,
And points the silent shaft of death
 Which speeds an infant to the tomb,

No passion fierce, no low desire,
 Has quenched the radiance of the flame;
Back to its God the living fire
 Returns, unsullied as it came.

For the Sabbath Recorder.

PRAYER AND CONFERENCE MEETINGS.

No occasion, perhaps, is better fitted to warm the heart of the Christian, and to render his soul alive to the duties God has assigned him, than the Prayer and Conference Meeting. It is here that the earnest seeker after Christ will come to find refreshment for the thirsting soul, and here that he delights to meet with those who have met to worship our Heavenly Father. The poor and despised, the weary and heavy laden, and the soul sick of sin, here may find abundant supplies of grace, that shall be of great worth and comfort to them while traveling up and down the earth, and that will afford greater joy when the cold hand of death is laid upon them. And yet very many of Christ's professed followers are apt to forget the benefits here received, and pay little or no regard to the hallowed influences surrounding God's children at such meetings.

When first we put on the armor of Christ, and begin to battle for the triumph of his glorious cause, then it is our chief delight to meet in the house of prayer, and to converse with our fellows upon the great principles of religion. But, alas, how very soon many begin to feel and to exhibit that coldness so natural to man! It is then we begin to let our duties pass undone; we neither pray nor speak in the prayer circle; and finally, we neglect to meet at all with our brethren on these social occasions. We are not now as we once were; our hearts have become colder, our consciences are getting seared, and our love for godliness and the society of religious men is growing less. Our position now is a critical one, for we are trifling with the Holy Spirit—a sin against God, and attended with great danger; while the narrow way in which we once loved to walk, has become a broad road, leading us on with the vast multitude of Satan's followers towards that awful abyss where the helpless victims of misery are weeping and gnashing their teeth with pain. Surely, the way to ruin is broad, and the danger of losing the soul is great, for the road to heaven is a narrow way, and is attended with great effort, while our natures are telling us to go on in the broader way. How fearful the danger that we shall continue our steps in that way till it terminate in our final ruin!

Whenever his circumstances will allow it, the true Christian will not only be found in the Prayer and Conference Meeting, but his voice will there be heard in praising God and speaking words of encouragement to his brethren to cheer them on in their noble warfare, and warning sinners to flee from the wrath to come, and find refuge in God, whose mercies are everlasting.

As Christians, how closely are we watched by the world, and how often the anxious sinner becomes discouraged in his seekings for the "waters of life," by the coldness and backwardness of those who profess to love the cause of Christ. O that men were wise, to know, and to *feel* as they should, the greatness of their responsibilities, and the real character of the influences they are continually exerting upon those around them, whether for good or evil, that their light might be made to shine with more glorious beams, alike on the path of the righteous and the ungodly.

As professed lovers of the Redeemer, we need to watch closely our steps, and be fervent in prayer, that we may not create for ourselves false excuses, that shall keep us from the house of God, or from doing at any time any duty that our Father may impose on us. How many parents will form such excuses, and by their example cast such influences upon their children as shall tell a sad tale upon their characters during the whole of their lives. Reader, are you a parent? Then may I ask you to think of these things, earnestly and prayerfully, and strive to let your light so shine before those committed to your care, that they may find blessed enjoyment in following your holy example. Teach them to reverence God, and to love the assemblage of His people, and thus you may save the precious souls of those children from eternal ruin. Jesus Christ demands the services of all, and to labor in his vineyard is a heavenly work. To be thus engaged is not only a privilege, but the duty of the true Christian. That we may all be faithful workers in this vineyard, is the earnest prayer of

A YOUNG BROTHER.

WESTERLY, Jan. 16, 1856

JAPAN AND THE JAPANESE.

A lecture on this subject was recently delivered at Clinton Hall, New York, by William Heine, the artist of the late Japan Expedition. From a report in one of the daily papers, we condense the substance of the lecture:—

The number of the inhabitants of Japan, which consists of three large islands and several groups of smaller ones, was estimated at from fifty to two hundred millions, but the lecturer was inclined to accept the former number.

The country was mountainous, containing many volcanoes, which could be seen far out at sea. Earthquakes were frequent; one of which has recently, as was well known, destroyed Simoda, one of the three harbors opened by the late treaty to the Americans. Mineral springs abounded, and the rivers, though not large, were swift and rapid. The climate was mostly severe, except on the southeast coast of Nipon; there the climate was mild and pleasant, the crops were abundant, and there were hosts of hale and hearty old people. Cultivation was carried to a high point, the steepest hills being tilled to their topmost pinnacle. The Japanese, however, were not particular about food, but ate almost anything, even poisonous fishes and reptiles, while the greatest delicacy known to them was a certain kind of snakes. Plants and flowers were developed to their highest degree, and in the cities, every house, however small, had its garden. Domestic animals abounded, and dogs and cats (and those of the ugliest kinds) were met with in large quantities. Various wild beasts roamed the woods, and foxes were especially abundant. The reason of this was, that the Japanese think the fox the favorite son of the devil, and therefore are very careful not to offend his Satanic Majesty by hurting his favorite.

The personal appearance of the middle and upper classes of the Japanese was pleasant and agreeable. The laborers, however, and the common classes generally, were rather ill-favored.

Mr. Heine also gave a sketch of Japanese history up to the Sixteenth Centery, when the Portuguese first made their appearance. A ship with two hundred of them arrived, according to Japanese accounts, in 1543, and being well received, they were soon followed by the Dutch, and even by an English ship. The Jesuits also arrived not long after, and made converts in an astounding degree. At this time, however, civil war broke out, which lasted many years. In 1614, the side which the Christians espoused being defeated, persecution commenced, and it did not last many years before they were all destroyed. In 1638, 6,400 Christians were slaughtered, after being besieged for three months, the Dutch gaining an unenviable notoriety by lending the assistance of their artillery, &c., to the Pagans. Since 1640 no strangers were allowed in Japan, the laws dooming all such to death. Sixty persons, constituting a Portuguese embassy from Macao, were all beheaded.

After alluding to the manner of government and the extent to which the system of espionage was carried, Mr. Heine spoke of the different classes of Japanese society. The highest comprised the princes, the next the nobles, the third the priests, and the fourth the military profession, the members of which, on account of the long duration of peace, were chiefly occupied as guards. These four classes enjoyed certain privileges, among which was that of wearing two swords, a long and a short one. On gala days also, and on festive occasions, they were allowed to wear wide pantaloons, of which they often possessed large numbers. When they were too poor to own a pair, they hired one from a tailor for a day. The next class comprised the merchants, the next the mechanics and *artists*, and the lowest the agricultural laborers, who were little better than slaves.

The Japanese women occupied a higher position than those of any other Oriental nation. They were permitted great freedom, which they seldom abused. The men of the higher classes could each have one "chief wife," and as many others as they wished When they were divorced for infidelity, they need not support them—otherwise they must. At the birth and naming of children, many ceremonies were observed. In the schools the children were taught reading and writing, and the outlines of Japanese history. Among the upper classes education was carried to a high point.

THE BRIGHT SIDE.

I have always admired that sect of old Greeks called the Laughing Philosophers Perhaps my opinion would be modified, if I knew what kind of laughter it was in which they indulged. But I take it for granted that it was a good-humored cachinnation—a real hearty side shake, with nothing satirical or malicious in it. Whether the genial beams of prosperity, or the pelting hail of adversity, fell on their heads, their countenances were radiant with mirth, and their spirits as elastic as the air they breathed. Would it not be better for us all if we could look upon life with the same philosophical serenity? Perhaps we cannot avoid occasional depression; but we might cultivate, much more than we do, that moral optimism that sees good in everything. How many spend their lives in making themselves miserable? By some obliquity in their nature, they are ever scanning the faults around them. The weather, the scenery, the society, are all subjects for grumbling and dissatisfaction. They look on the dark side of human nature, and are jealous and suspicious.

Now it has been said that there is no one so depraved and vicious, but has in him some germ of a noble nature. Dickens, in describing one of his inimitable characters, says: "Away up many a dark and winding pair of stairs was a door known to but few, but it opened into the heart." To find these secret doors, through which the souls of our fellow men admit their visitors, should ever be our aim. Fewer then would, Timon-like, turn their back upon a hated humanity.

I have now in my mind's eye one who has spent his life in cultivating this kindly spirit. Owing to a very happy mental constitution, his equanimity is seldom disturbed by the annoyances that so frequently embitter the lives of other men. Some excellencies he always sifts even from the refuse of society. As long as he can find any good, he refuses to speak ill of any man. Though his intellect is of a high order, and his walks are amid the abstruse fields of science and literature, yet his tastes are simple as those of a child; and he can enter with children into their sports, with all the apparent zest of his boyhood's days.

Nor does his invincible good nature impair his efficiency in battling for the cause of truth. When he is called to oppose error, or redress wrong, his stern logic is like the battle-axe of Richard, and his ridicule like the sword of Saladin. Frosts have already stolen over his brow, but the tracery of time has been light on his countenance. Wrinkles hardly know where to take up their abode on those placid features, that never yet writhed in anger or scorn. When care and sorrow begin to draw deep lines on that noble countenance, up rushes from a fountain in the breast, a generous current, that bears away in one sweep every trace of time,

"Though life's old age,
 Hath every nerve unstrung,
The heart, the heart is a heritage,
 That keeps the old man young."

Such a character is delightful to contemplate. Like some tall mountain peak in a sunny clime, its summit towering far above the region of storms and vapors, but its sides burdened with verdure, and with fruits for the use of men—the storms that beat upon its breast, send gushing forth from those rugged steeps a thousand joyous rills to make glad the face of nature and of man. But they can never stain that snow-capped brow.

RELIGIOUS AWAKENING IN SWEDEN.

A revival of peculiar interest has been progressing for months in different parts of Sweden. It has excited bitter opposition from the hierarchy of the Established Church, but "the Word of God is not bound." Recent accounts indicate that the good work is going forward more rapidly than ever, and that vital piety is being infused into cold and formal churches. The *British Messenger* gives the following account of it:—

"The present revivals cannot be traced to a common source. They occurred simultaneously and independently in various parts of the country, under the quickening grace of the Holy Spirit.

The awakening in Delecarlia occurred through the instrumentality of the press. A publisher, who had a large supply of Luther's sermons, suggested to some ministers to purchase the books and sell them to their parishioners. They readily made the purchase—pushed the sale in their respective parishes, and urged their people to read the work. The people bought it—read, thought, felt—became awakened, and soon the ministers found themselves surrounded by a people earnestly desirous to obtain more spiritual food A blessed time of refreshing was enjoyed; but they have had to endure much persecution for the trial of their faith.

Nor has the reviving influence been experienced by the 'common people' only. It has entered the universities and schools, the army, the legal profession, and the clergy Young ministers have been instrumental in the conversion of clergymen they were assisting. Young ladies not a few, of good birth and accomplishments, have fled to Jesus, and renounced the world, in consequence of coming into contact with the gospel in a truly Christian school, or hearing it from the lips of a poor peasant in a prayer-meeting.

The revival still goes on, and scarce a week passes without bringing spiritual additions to the true church of Christ. And the Lord appears to be making bare his holy arm to achieve salvation in every district of the land.

In some places whole congregations appear to be pervaded by the Spirit of awakening, and to be in an inquiring condition.

A student writing from Upsala, says: 'It is remarkable how Christianity has advanced among the students within a few years. Not long ago there were scarcely two or three students to be found, for a series of years, who discovered any evidence of Chsistian life; now there are between twenty and thirty. And in the same way has it been in these last years, throughout our whole land. Awakenings occur even in districts where formerly there was not the smallest spark of spiritual life. Even from Lapland we hear of lively awakenings—how whole villages have split up their brandy vats, which formerly were greatly valued by them—how the judges in some districts have nothing to do, because the people are reconciled in love and peace with one another. It is gladdening that so many awakenings have commenced in almost all directions. Some years since our fatherland was a desert, in whose sandy waste only a few green oases were found here and there; now new oases shoot up, like the stars of a winter evening; and if we contemplate these oases with spiritual eyes, how lovely is not the life there, where the soul, fainting with heat in the desert, is refreshed with the crystal clear fountains, where living waters allay became anxious about their salvation,' and that the children awakened by him 'are accustomed to meet for reading God's word, prayer, and praise;' that 'the colporteurs work most blessedly,' and that, through one of them, as many as 'twelve students have been recently awakened.'

the thirst eternally—where tears flow in streams, but they are heavenly tears—where songs of praise are raised, more beautiful than those which at any time have been heard from the lips of the world's children—and where all the inhabitants are clothed in snow-white garments—the 'fine linen' of the righteousness of Christ—where love beams in every glance, and peace is enthroned on every forehead, and all are illumined by heavenly light from above.'

From a recent letter of a lady in the center of the country, we learn that, through the preaching and frequent household visitations of one pastor, 'almost a whole congregation

A minister in the south of the country, also thus writes: 'What now more than all things else occupy my time, are the great awakenings in Scania, which increase both in depth and extent. We already reckon more than twenty congregations around this, where a greater or less number of men have been either awakened to understand their ruin, condemnation, and danger, or have been brought, through the gospel, to new and right peace in Christ. Whole congregations, for instance Fjelkestad, where formerly no token of spiritual life had been discerned within the memory of man, and where ministers, equally with hearers, were asleep, have been awakened to the intensest anxiety, so that a hundred, yea, even a thousand, are at one and the same time inquiring, 'What shall we do to be saved?'"

THERE IS A TIME TO DIE.

BY REV. DR. HUMPHREY.

Death is the most certain of all events that can happen to us in this world. It is the only future event which we can speak of with absolute confidence. What changes, what sicknesses, what trials, may await us; where we may be a year hence; where we shall die and be buried—who can tell? Not so with death. It is as certain to every one of us, old and young, rich and poor, as that the sun will rise and set to-morrow. So, also, the time of every person's death is fixed and certain. It must be so, if God has unchangeable purposes, embracing all beings and all events. "Is there not an appointed time to man upon earth? Are not his days like the days of an hireling?" Again, it is said still more explicitly, "His days are *determined*; the number of his months are with thee; thou hast appointed his bounds that he *cannot pass.*" Here is an absolute certainty as to the time, the day, and the hour of every one's death. It is as fixed as the throne of God itself. Men have died, and will continue to die, some older and some younger, but none will pass his bounds—no one will live an hour, or a moment, after reaching it. "He cannot pass."

But to us the time of our death is entirely *uncertain*. No event is more so. The passing moment of life is all that we are sure of. We know no more what shall happen to us on the morrow than at any future period. Everything touching the time and manner of our death is kept from our knowledge. "Times and seasons are the secret things which belong to the Lord our God." What manner of death will it be? By what disease, or by what accident? Where? At home or abroad? At what time? At what period of life? Nothing to us is or can be more uncertain.

"And why—if there is no discharge, no escape from the stroke, and if the time is fixed—why is it withheld from us? Why are we not told just how long we have to live, that we may keep the day of our departure continually in view, and prepare for it?"

O, man, "thou dost not inquire wisely concerning this." It is in great mercy that God has concealed the time from us. The knowledge of it would embitter every day of our lives. We should be looking forward to the last day, as a criminal under the sentence of death does to the day of his execution, with this difference in his favor, that he may possibly be reprieved and live longer, while we could indulge no such hope. And we should be less likely to prepare for death than we now are. So prone are we in our fallen state to postpone, that if one who is unprepared to die were to be assured of living ten, twenty, or forty years, apprehending no danger within that time, he would be certain to put off repentance to very near the fixed limit—so near, that he would be too much agitated to make the great and essential preparation. It is the uncertainty as to the time of our death, which constitutes the strongest motive to prepare for it without any delay. It may come at any hour, by night or by day. To great multitudes it does come "as a thief in the night." The highest health is no protection. The most blooming youth is no defense. The only safety for a day is to have made "our calling and election sure." Where one is suddenly cut off before our eyes, let that warning, by Him who hath the keys of death and hell, sink down in our hearts. "Be ye also ready, for ye know not the day nor the hour wherein the Son of Man cometh."

I only add, that the certainty, as to the time of any one's death, does not militate at all against the use of means for lengthening out life. It is a fixed limit, of which we have and can have no certain knowledge. We know that there are remedies for the most threatening diseases, and that God often blesses the use of them to the recovery of the sick. This is our warrant—this is our encouragement, and we are to use the means of preserving our own lives, and the lives of others, just as if no bounds were set. We see them not, we cannot prove how near or how far off they are. Our times are in God's hands, not in our own. It is enough for us to know that we must die, and that death may overtake us anywhere and at any moment. All the days of our appointed time, let us wait in full preparation till our change come.

Man ought always to have something which he prefers to life; otherwise life itself will appear to him tiresome and void.

THE SCHOLAR AND SOCIETY.

"Who would be *free* must first be *wise* and *good*."

Knowledge, *Liberty*, and *Religion*, are the triple foundation on which society can rest with safety. They are the triple shield for the preservation of the *State* and the *Individual*. They are the triple power for the promotion of Civilization. No State is secure without knowledge and religion to uphold and preserve its liberties. The Church is not safe without the largest liberty of conscience, and the clear light of knowledge to guide its activities. All that is of moral and of spiritual worth in civilization, has grown out of the free and harmonious blending of these three prime elements. The proper and industrious blending of these elements has produced the pure white light of progress. No individual ignoring either of these great principles, will fulfill his entire mission of life. No nation that ignores them can ever develop a full and glorious civilization.

The *Scholar's* relations to these great powers are most intimate and important. To the ignorant the treasures of knowledge are closed. He has not the high vantage ground of the scholar from which to labor. He may be inspired by high and holy motives—he may be desirous of doing good; but he has not the ample field of the scholar for labor. He cannot give a definite mold and lasting power to thought.

To the scholar the prospect is far different. The fields of knowledge are his. The hopes and inspirations of religion are as freely offered to him as to the rest of humanity. Liberty invitingly waves her banners for him. All of the great avocations and duties and influences extend to him special invitations.

Let us look more minutely at some of his relations, powers, and duties.

That the relation between the scholar and knowledge is most intimate and important, is a proposition so obvious as to need no demonstration. It is, indeed, a truism. Scholars are the body-guards to learning. Education depends upon them for life and growth. Thinking, manufacturing thought, is the leading, the more definite business of a scholar's life. There is but little thought—deep, comprehensive, enduring thought—in the world, save what is wrought out in the student's laboratory. The whole world brings material to him to be wrought into thought. He takes this and applies the tests for truth, and if it stands the trial, then the evolved thought is again passed over to the world, to be inwrought into all of the relations of society. This, at least, is the natural unperverted order.

The books of the past are the important implements, the essential materials, out of which he manufactures books for the present and future. No man ever wrote an entirely original book, but rather a revised edition of the past—revised, and maybe improved, and maybe not improved. There are but few books that will answer for all time. It is the duty of the scholar to revise the thoughts of the past, adapting them to the present, and adding such new ones as Providence and man have evolved. The true scholar makes all past knowledge the basis, and not the limit, of research and progress. No individual is fully prepared to give definite mold and shape to thought for the future, save, perhaps, in the regions of fancy and fiction, until he has faithfully studied the greatest, the leading thoughts of the past on the same subject. This is one of the great missions of the student—that of preparing thought for the present and future.

Again, other things being equal, the more a man knows of every thing, the better he can teach any thing. The more thorough and complete the discipline of his own mind, the better he can impart even a little discipline to the mind of another. A well educated man or woman will give the best education to a child. A person can teach in any one department better for being a scholar in other departments of learning. A genuine scholar, philosopher, and sage, who has not lost his common sense and his sympathies with the young—a man old in wisdom and in years, but young in feeling and affection, would be the best teacher even of the simplest and humblest branch of learning.

In the language of Prof. Tyler: "So far-reaching and universal are the relations of things, that no one thing can be fully known without a knowledge of a multitude of other things. Hence, in order to teach any thing to the best advantage, the teacher needs to know not merely that particular thing, but every thing else to which it stands related. The best method of teaching a child his alphabet is a question involving profound principles of philology, as well as mental philosophy. None but a profound scholar and philosopher is qualified to make a spelling book. Webster studied and improved his spelling book after he had finished the best dictionary of the English language, and had placed himself in the very foremost ranks of English philologists. A good reading book can be prepared only by a man of correct taste, wide acquaintance with literature, and finished classical education. No man can make a good English grammar, who knows only the English language. The best English grammars, not to say all the improvements in the methods of teaching grammar, have been made by profound classical scholars, availing themselves, too, of still more learned men, still more profoundly versed in comparative philology. The best text-books in the natural sciences, for the use of schools and academies, have been prepared by the professors and teachers of natural science in college; and well they may have been, for they require an extensive acquaintance with natural and mental philosophy."

The same may be said of the scholar and the writer. "The question," says the same author, "who shall furnish the country with reading, with books and pamphlets and magazines, with quarterlies and monthlies and weeklies and dailies, is a question of incalculable moment. It is almost equivalent to the question, What shall be the prevailing thoughts and sentiments, character and spirit, of the people? In an age and country like ours, where everybody reads, able and eloquent writers form almost the atmosphere in which the whole community live and move and have their being. The orator was once the oracle and prophet and director of the people. The writer now divides the sovereignty with the orator."

Hoe's Rotary Press will now throw off as many words in an hour as can be written by fifty men in a year. This modern scribe is a young giant, not exactly a hundred-handed Briarius, but doubtless will be when a few years older. Even now the one stationed in the office of the N. Y. *Tribune* writes off, at each beat of your pulse, nearly one hundred and fifty-six thousand words, sufficient to make five hundred and fifty pages of a duodecimo book.

"While the mechanical efficiency of the press has thus been magnified a hundred-fold, its moral power has been increasing in the same astonishing ratio. Now the question who shall wield this mighty moral engine—a question which is to decide in a great measure the character and destiny of the present and coming generations, for time and eternity—is itself to be decided, to a great extent, by the scholar. Admit all that can be said of the increasing influence of a new and growing class of writers, who have never seen the inside of a college, and who have got their education in the streets and market places—concede all on this point that the truth will justify—still the educated men of the country, if sufficiently numerous, and able, and well educated, can and will control the literature of the country. At all events, if they cannot control it and give it a right direction, no human power can control it. This is the only resource—this is the only hope." *

LETTER FROM BRO. N. WARDNER.

SHANGHAE, China, Aug. 29, 1855.

Bro. Carpenter informed you in his last, that two persons have recently been added to our number by baptism—one of his servants and our cook. The scene was solemn, and drew tears from the eyes of some of the native spectators, chiefly the older members of Mrs. W.'s school. We have since been under the painful necessity of excluding Tong Uén-Châ. In the early part of last spring Bro. C., for non-compliance, ceased to employ him as teacher; since which he has absented himself from all of our religious meetings, except one communion season; and after being faithfully admonished and labored with, showed no disposition to reform. There are also strong evidences that he has become a confirmed opium smoker. Is it not a fortunate circumstance, that this man was not sent as a missionary to the Honan Jews? Bro. C. will probably give you more particulars. Opium smoking is becoming alarmingly prevalent, and is rapidly increasing. Last year 75,000 chests were introduced from India, which cost China the snug little sum of $25,945,000, and will probably slay many thousands of her sons and daughters. There are estimated to be about 10,000,000 of opium sots in China, involving about 8,000,000 families. Nine hundred and ninety-nine thousandths of this number may safely be reckoned as hopelessly ruined, as but *very few* who taste the opium pipe ever reform.

Our cook, "Vóng Nyih," gives us much comfort, and manifests a tenderness of conscience that is not often met with in a Chinaman. The next day after he was baptized he came and told me that the pail he had been in the habit of buying oil in only held nine pounds, instead of ten as it had always been reckoned—that he had always justified himself in keeping the price of the other pound, because I told him, when he first came to work for us, that it held ten pounds, and would be so reckoned, and therefore he considered it as his acknowledged right. But hearing the baptismal vow explained the day before, as a solemn pledge, to God and man, that he would henceforth renounce all dishonesty, covetousness, and love of the world, it set him to thinking; and having occasion to buy oil again that day, this thing was brought up to his mind in a light which he could not reconcile with that strict honesty which the religion of Jesus requires, he supposing I had been deceived in regard to the size of the pail; and he could not feel at ease till he had confessed the truth. Having got thus far, he looked up into my face, with his large honest eyes swimming in tears, and so full that he could hardly speak, and said, "Now will you forgive me?" and on receiving an affirmative answer, he fell upon his knees, confessed the deed as a breach of his Heavenly Father's law, and begged for Jesus' sake that it might be forgiven him. He can now read the Scriptures with considerable facility.

A tailor who has been in our employ considerable since we moved into the city, professes also to love Jesus, and attends our evening devotions regularly, when he is in the city and the weather will permit. He refuses to work on the Sabbath for other people, and attends our prayer and preaching meetings. Two or three times he has ventured to pray with me in private, and once with Vóng-Nyih. He has expressed a wish to become one with us, notwithstanding he expects strong opposition from his family and relatives. If he continues to give as good evidence as he has thus far, his request will probably be granted before many weeks.

Chung-Kwé, the faithful old man who has been with us so long, has given us considerable reason to hope for him of late.

There are two others who profess to be interested, and attend evening devotions with us, and occasionally bring their friends, so that, with our household, I have a company of from four to eight attentive listeners nearly every evening.

Since my last I have preached from three to five times a week, till the past three weeks, my building operations have consumed all my time on week days.

Our two schools are prospering, and the scholars make good proficiency in Scripture knowledge.

MRS. MINOR'S DEATH.

The Philadelphia *Presbyterian* of January 12th has the following notice of the death of Mrs. Minor of the Agricultural Mission in Palestine:—

It is with deep regret that we have heard of the decease of Mrs. Minor of the Palestine Agricultural Mission. This lady, formerly of Philadelphia, first visited Palestine under an enthusiastic impression that the time had arrived for the fulfillment of the prophecies in reference to Israel's restoration, and that she might be instrumental in furthering the work. Prudence might have dictated a different course, and certainly a more calculating policy would have prevented her from encountering the hardships of such an enterprise. Once there, and the field before her, her views were materially corrected, and her devotion, although not diminished, became more chastened and practical. She labored assiduously for the benefit of the suffering and degraded Jews, and we have the best reason for knowing that, through her agency, much good was accomplished. When the agricultural scheme was projected she entered into in heartily, and as we have before stated, not only did she remove the prejudice of Jewish Rabbis against their people entering upon the cultivation of the soil, but her example was influential in calling forth similar enterprises. While we were fully aware that Mrs. Minor and her assistants held views, particularly in observing the seventh instead of the first day of the week as the Christian Sabbath, which we did not entertain, yet we could not, in the absence of all other efforts in behalf of the Jews of Palestine, but feel a deep interest in her efforts, especially as the project was rather a preliminary and agricultural one for the temporal benefit of the Jews, than a strictly religious mission. We have, in despite of much prejudice against Mrs. Minor and her plans, adhered to our first convictions, and have seen no sufficient reason for repenting of our course. From a long correspondence with Mrs. Minor, we have been led to form a high estimate of her piety; and in the course of her work we have had abundant evidence of her courage, practical determination, and executive talent. Her labors have, humanly speaking, hastened her departure from life, and what may be the effect of such a loss to the scheme itself we cannot foresee. We must await the indications of Providence.

A SECOND NERO.

A persecuting edict against Christians was promulgated at the end of 1854, by Tu-Duc, the king of Cochin-China. This edict is very long, contains horrible blasphemies, and breathes a furious hatred to the Christian name. Not only does Tu-Duc aspire to walk in the steps of predecessors Ming-Mang and Thien-Tri, of detestable memory—he aims even to surpass them. The following are the principal provisions of the edict in question:

"The Christian mandarins of both the capital and provinces are required to recant, the former within a month, the latter within three months; in default of their compliance, they will be deprived of their rank; and if still obstinate, will be punished like the common people. The soldiers and the people must apostatize, and trample the cross under their feet within six months, on pain of severe punishment. The European missionaries will be beheaded, and their heads exposed for three days; their bodies will then be thrown into the sea. Any person betraying them will receive three hundred taels. The native clergy and the pupils of the Europeans will also be beheaded, and one hundred taels reward is offered for their apprehension. The pupils of the native preachers will be banished to the distant islands. The churches and places of meeting will be burnt, and the rice belonging to the Christian communities distributed to the people. All the Mandarins of the provinces, from the least to the greatest, will be severely punished if they fail to execute these decrees. The chief of the canton, and the mayor of any village in which any European or his pupils may be apprehended, will be punished with death."

DENOMINATIONAL LITERATURE.

To the Editors of the Sabbath Recorder:—

In the report of Bro. Hull's Lecture on Education, delivered in Plainfield, N. J., as published in the *Recorder* of Jan. 17th, reference is made to the importance of each religious denomination, and of the Seventh-day Baptist denomination in particular, having a literature of its own. I think it is not fully understood what is meant by these suggestions. Will Bro. Hull, or some one else, just inform us what kind of literature Seventh-day Baptist literature is, or would be, and in what respects a Sabbatarian literature would differ from a literature demanded by mankind in general, or of the present age in particular.

Having no sympathy with any thing like Know Nothingism, either in church or state, I am, fraternally, S. S. G.

SABBATH EVENING LECTURES IN LONDON.—We have received from Bro. William Henry Black, elder of the Sabbath-keeping Congregation in Mill Yard, London, a programme of his Sabbath Evening Lectures for the present Winter, as follows:—

Jan. 4. Introductory Lecture, on the nature and proper uses of the Holy Scriptures.

Jan. 11. Their supreme authority in all matters of faith, worship, and practice.

Jan. 18. The public and private reading of the Scriptures.

Jan. 25. The original languages of the Scriptures.

Feb. 1. The errors and defects of the Authorized Version of the Bible. (With special reference to Mr. Heywood's intended motion in Parliament.)

Feb. 8. The just interpretation of the Scriptures.

Feb. 15. The figurative language of the Scriptures.

Feb. 22. The poetry contained in the Bible.

Feb. 29. The nature, intent, and use, of Prophecy.

March 7. The actual fulfillment of Prophecy.

March 14. The Prophecies not yet fulfilled.

March 21. The general agreement and consistency of the Scriptures, considered as an evidence of their divine origin.

March 28. Recapitulation, or Repetition Lecture.

March 29. The 163d Anniversary.

LARGE PAPERS.—The enlargement of the New York *Observer* causes the *Independent* to haul down the announcement which has so long headed its columns, "The largest religious newspaper in the world." The *Evangelist*, in noticing this matter of enlargement, says:—

"The true criterion of a paper is not quantity, but quality—not the space it covers, but the amount of talent, and time, and hard work, expended upon it. The *Courier and Enquirer* is the largest political paper in this country, but nobody suspects it of concentrating upon its columns the greatest amount of ability. The *Observer* is larger than the London *Times*, but is it, therefore, a greater power in the world?

"We do not underrate the value of ample space; for we often feel the want of room to meet the demands upon our columns. We are very certain, that with a larger sheet we could save ourselves from much labor and perplexity in condensing and improving our materials. But our conviction has ever been, that the *first* want was a higher literary standard—a vastly increased strength, variety, and power in our articles. The money which we expended for literary aid during the last year, in addition to the personal labors of the editors, would easily have enabled us to publish a paper as large as the *Observer*. But we do not think we were mistaken in believing that we consulted the tastes of our readers, and infinitely better served the purposes of a religious paper, by reserving our resources to improve the quality of this journal, rather than to enlarge its dimensions."

MINISTER OF THE OLD SCHOOL.—A correspondent of the *Puritan Recorder* gives an interesting sketch of his old pastor, Dr. Perkins, from which we make the following extract:—

"When I lived in Dr. Perkins' parish, he was about 80 years old, and had been pastor there about 55 years, yet he preached twice on the Sabbath, performed pastoral duties without aid, and held evening meetings in the school-houses in remote parts of his parish, in which he delivered extempore discourses, that were as logical, concise, finished, and accurate, and as readily and fluently delivered, as were his written discourses on the Sabbath. So, too, in guiding and instructing inquirers and young converts in a revival, he had all the thoroughness and system of his best days. The same was true of his examination of candidates for the ministry, and for ordination, years after this, as I know from having repeatedly heard him on such occasions, and from having been examined by him, as Moderator of the Council, when I was ordained, at which time he was 86 years old, and had been 62 years the pastor of the same people. Thus did he indeed bring forth fruit in old age, and when he died, a great and good man fell in Israel. When he left us, a truly refined and polished gentleman; a ripe student; a thorough scholar; a chaste and classical writer; an earnest, instructive, and faithful preacher; a wise, active, kind, prudent, and sagacious pastor; and a humble and devout Christian, passed from earth to heaven."

COLORED PEOPLE.—A petition is now in extensive circulation in Virginia, praying the legislature of that State to so modify the laws concerning slaves and free persons of color, as—

1. To protect the parental relation, forbidding the separation of parents and young children, at the will of any man or set of men, under criminal penalties.
2. To recognize and secure the marital relation to colored persons; forbidding the disregard of the sacred relation of husband and wife by any man amongst his own slaves, and protecting the same between slaves of different families.
3. To allow persons so disposed to teach persons of color to read, so as better to assist their moral and mental elevation

The memorial instances (says the *Colonization Herald*) as indications of the great responsibility which the South feels for the temporal and spiritual well being of the colored people in their midst, that in Louisiana the laws prohibit the separation of parents and young children, and the same policy has been engaging legislative attention in Georgia and Alabama. In South Carolina, important ameliorating modifications of the code on Slavery have been advocated by many able writers and jurists—among whom may be mentioned Dr. Fuller and Judge O'Neil. In Maryland, free colored persons are permitted to have their own schools, and with the most encouraging results. In Louisiana, their schools are not only permitted, but assisted by money from public funds.

REVIVAL AT SALEM, N. J.—Eld. W. B. Gillette informs us that for some two weeks past he has been engaged in a series of meetings at Salem, N. J., assisting Rev. Dr. Perkins. About twenty persons profess to have been converted, and the work is still progressing.

DAKOTA, WIS.—At the meeting of the North-Western Association, last Fall, much interest was expressed in the young Sabbath-keeping Church and Society at Dakota, Wisconsin—Geo. C. Babcock was ordained as preacher of the church, and a sum of money was raised to purchase a library for the church, (which library, we may as well say here, was purchased in New York and forwarded by express to Milton some time ago.) We have now before us a letter from Dea. Rowland I. Crandall, our agent at Dakota, giving the names of nine new subscribers for the *Recorder*, and saying that a "goodly number" have been added to the Society since the meeting of the Association. We have also a letter from Eld. Geo. C. Babcock, in which he says that "though the state of religion among us is not what we could desire, yet the faithful attendance on the worship of God encourages us to labor with our might." There are many who feel a deep interest in the Society at Dakota, and will pray earnestly for its prosperity.

NEW YORK STATE NORMAL SCHOOL.—The next term of the New York State Normal School at Albany, commences Feb. 25th, 1856. The vacancies are to be filled by appointment by the Board of Town Superintendents in the several counties on the 4th of February, 1856. Each county is entitled to send to the School a number of pupils (either male or female) equal to twice the number of members of Assembly in such county. Each student receives a small amount of money per term as mileage. For Allegany County there are four vacancies, and the mileage is $7 68. Chenango, 4 vacancies, $3 30 mileage; Cortland, 2 vacancies, $4 20 mileage; Erie, 1 vacancy, $9 75 mileage; Genesee, 3 vacancies, $6 49 mileage; Jefferson, 5 vacancies, $4 80 mileage; Lewis, 2 vacancies, $4 26 mileage; Madison, 1 vacancy, $3 03 mileage; Rensselaer, 5 vacancies, 18 cents mileage; Steuben, 5 vacancies, $6 48 mileage.

FOREIGN MISSIONS IN GERMANY.—In several States of Germany the highest ecclesiastical councils have decreed that yearly on the Sunday after Epiphany a sermon shall be preached in all Protestant churches on Foreign Missions, and a collection be taken up, the proceeds of which will be sent to the Missionary Society of Basel. It may be taken for certain that this will be, in short, introduced into all Protestant State churches of Germany. How fast the interest in the missionary cause has grown within the last year, and how universally it is now shown throughout Germany, is also proved from the circumstance that from twenty to thirty periodicals are exclusively devoted to this cause.

RELIGION IN TURKEY.—Letters from Dr. Anderson, at Aintab, Syria, speak of the flourishing condition of Protestantism in that place, and of the great multiplication of Sabbath-schools and Bible-classes. These letters also mention the death of Mr. Whiting, of Beirut, on the 8th November. A letter from Mr. Ball, who has recently visited Pergamos and Thyatira, states that there is a favorable opening for missionaries in each of those places. Persecutions are disappearing and churches increasing. The tidings from Thessalonica are of an encouraging nature.

ENGLISH JEWS.—An important movement, according to the *Morning Herald*, is in progress among the most influential of the English Jews, for the establishment of a college for the education of members of the ancient faith in London. With a view of obtaining degrees in the London University, attendance on the classical classes of University College is to be part of the scheme. Hebrew and Theology are to be placed under the direction of the Chief Rabbi. A school is to be established in connection with the College. Premises have been taken in Finsbury square.

CHURCHES IN PARIS.—According to official reports, published in the beginning of 1855, the capital of France, with a population of 1,000,000 souls, has only 46 churches, or one church to 23,900 inhabitants; besides, they are most unequally divided. The tenth district has ten houses of worship for 114,000 inhabitants, or one to 14,250; while the fourth district has only one to 45,900 souls. The city of Brooklyn, N. Y., has nearly one church to every thousand or two thousand inhabitants, and that, too, without any aid from Government. Nevertheless, the attendance upon public worship in Paris is said to be very great compared with what it was fifty or even twenty years ago.

JEWS IN THE GREAT CITIES.—The number of Jews in the great cities is thus stated: New York, 12,000; Philadelphia, 2,500; Baltimore, 1,800; Charleston, 1,500; London, 20,000; Amsterdam, 25,000; Hamburg, 9,000; Berlin, 5,000; Cracow, 20,000; Warsaw, 30,000; Rome, 6,000; Leghorn, 10,000; Constantinople, 80,000; Jerusalem, 6,000; Smyrna, 9,000; Hebron, 8,000. In Berlin, there are 2,000 Christian Jews, also some thousands in England; 59 clergymen of the Church of England are converted Jews.

DANIEL WEBSTER'S BOOKS.—A recent visitor to the library of Daniel Webster, which remains at his old home in Marshfield just as he left it, after giving a full description of it, says:—

"Not an infidel work could be found among all his books. He never read such books. To the very close of his life he retained that reverence for the Bible and the religion it inculcates, which his excellent parents taught him in infancy. The mute counsellors with whom he communed in retirement, still show how he thought, how he studied, and what opinions he cherished. A better selection of books to make one wise and good could scarcely be made."

RELIGIOUS INTELLIGENCE.

The Board of Directors of the Auburn Theological Seminary, N. S., have passed a resolution instructing their Professor of Homiletics to give special attention to training the students in *off-hand* preaching. The method adopted by the Professor is to give out in advance a text on which all are expected to prepare themselves to speak. The Professor calls on such as he pleases, and those called up proceed to discourse on the text at various lengths, from two to twenty minutes. The exercise, it is said, is found highly interesting, and affords evidence how much latent capacity there is for this kind of preaching, only needing to be properly encouraged and called out.

Rev. Mr. Arthu, was to sail for England the 19th inst., in the steamer Atlantic. As the fruit of his appeal in behalf of the missions in Ireland, about $6,000 was raised in Boston and vicinity. In Philadelphia, after hearing his lecture on "Christian Benevolence," a committee of ten was named, and a pledge given that $10,000 should be raised in addition to about $2 000 already subscribed. In Baltimore, about $4,000 have been raised, and $10,000 are confidently expected. In addition to the sums above named, about $17,000 have been raised in New York, and the total thus far will be about $45,000.

Rev. Thomas Hill, of Waltham, writing on Church Music in the Christian Examiner, says: "Sometimes an attempt is made to alter a secular air, by changing the cadence to a religious form. We have *recently* heard tunes of this character, from some new collection of sacred music, popular Irish and negro melodies being cut off in the last measure, and a chord of the sub-dominant introduced, as if it were to sanctify them. The result is, that the tunes are spoiled for whistling on a week day, without being rendered fit to sing on Sunday."

The American Colonization Society has finally cleared itself of debt. It began the last year with an incubus of $32,000, but has shaken it off. The rigid economy, however, which was necessary in order to effect this result, has curtailed operations in Liberia, and only three expeditions were sent out during the year. The last one, sent under the auspices of the New York State Society, sailed from New York in December, taking fifty-eight emigrants.

The *Macedonian*, the Missionary paper of the Baptist Union, acknowledges the receipt of $100 from a Congregationalist, as a contribution to their noble effort to remove the debt resting on them. It should not be forgotten that one of the earliest friends of the American Board, and one of its most liberal benefactors, considering his means, was Solomon Goodel, a Baptist. Besides donations to its funds of nearly $4,000, he gave a legacy of $1,400.

Missionary advices state that the fall of Sebastopol has quieted the adherents of the old Armenian Church, who before had hoped that the triumph of Russia would annihilate Protestantism in Turkey. Another most extraordinary sign of the times, which is referred to in every recent letter, is the readiness of Mohammedans to read the Bible. It is impossible to tell whereunto this may grow.

The *Episcopal Recorder* earnestly recommends the institution of class or band meetings, which, under the direction of judicious teachers, to be appointed by the minister, to meet at specific periods for conference and prayer; and urges the plan by the fact, that such meetings have been greatly blessed in times past, not only among the Methodists, but Episcopalians.

Mrs. Wright, the widow of the Rev. Mr. Wright, so long known as one of the ablest and best of the Missionaries of the American Board among the Choctaw Indians, has resigned and retired from the Mission. In common with others, she has been sorely tried and grieved with the course of things taken towards that Mission, and in her delicate state of health she deemed it her duty to leave the field.

Rev. Asa Cummings, D. D., for nearly thirty years the able and judicious editor of the *Christian Mirror*, of Portland, Maine, retired from that labor at the close of last year. He has earned an enviable reputation as a faithful, vigilant and most useful conductor of one of the best religious newspapers in this country.

Dr. Cornwell, lately of Greene County, Ill., recently died and left a will devising some $10,000 worth of real estate, so that the income of it shall purchase books on Physiology, particularly Graham's and Dr. Alcott's works, for distribution in the common schools in Green County, Ill. He also willed smaller sums to medical colleges at the West.

Besides the College in Liberia, efforts are making for the endowment of two Colleges for colored men in this country. The first of these will be under the superintendence of the Presbyterian Church, and will be located in Pennsylvania, the second under the patronage of the Methodist Episcopal Church, and will be in Ohio.

The Vienna correspondent of the *Times* states that in Bohemia and Hungary there will, in future, be no high Protestant schools, so that the children of Protestants who wish to complete their studies and serve the State will be necessitated to attend the Catholic "gymnasia."

Rev. Dr. Stiles, General Agent of the Southern Aid Society, who has just returned from a visit to Detroit and Chicago, received in those cities donations and subscriptions to the amount of $1,500 or $1,600—with the prospect of a further increase.

The N. Y. *Observer* says that a single congregation in the city of New York provides for the religious teaching of a thousand poor children. Nor is this a solitary instance. Many churches of various denominations are doing the same.

Mr. Kincaid, Baptist missionary in Burmah, visited the capitol a few months ago, was sent for by the king, who offered to help with money in the removal of his family to that city.

There has been a falling off of more than $31,000 in the receipts of the Methodist Episcopal Church Missionary Society in 1855, as compared with 1854; a mournful fact.

The *Watchman and Reflector* states that the Baptists have increased in Rhode Island in forty-two years seventy per cent., and in Massachusetts about eighty per cent.

Isaac S. Tuttle, a prominent citizen of Augusta, Ga., who died there recently, left the sum of $50,000 to be used for the benefit of the Augusta Orphan Asylum.

General Intelligence.

European News.

European dates to Jan. 12th have been received.

The intelligence consists merely of an extension of the previously prevailing peace rumors. Nothing definite is yet known from St. Petersburg. Speculations continue to be contradictory. Interviews had taken place between Counts Nesselrode and Esterhazy, but the main questions at issue had not been discussed. The expectation from Russia is neither a refusal nor acceptance, but such a modified counter-proposition as may give rise to negotiation and delay. On the other hand, the Palmerston Cabinet must meet Parliament, early in next month, with a decided announcement either of peace or war. As regards France, rumor reports the tone of the French Government as again more warlike. Russian preparations to continue the conflict are on a larger scale than ever. Briefly, the hopes of peace have received little or no confirmation.

From the Crimea, there is nothing of importance. On Dec. 22, the French blew up one of the five docks of Sevastopol, and reduced that fine work to a heap of ruins.

The railway from Moscow to Petersburg is to be protected by redoubts placed at intervals along the line. Each redoubt is to be occupied by a battalion of militia, who are responsible for the line within the limits, to *the* extent of guarding it against any surprise by the enemy.

The price of saltpetre has risen exceedingly in Russia. All restriction has been removed from its production, and although the import duties are not formally repealed, it is tacitly understood that it will be allowed to be imported free of all charges.

There is no news of political interest from from England. The freedom of the City of Glasgow has been presented to the Earl of Elgin, in testimony of his merits as Governor-General of Canada.

Madame Goldschmidt-Lind appeared at Liverpool in the "Messiah," and had a crowded audience at tickets from 10s. 6d. to 21s.

Fourteen steam gun-boats, of wood, are at present being built on the Mersey at Birkenhead, and large Government orders for cannon and projectiles keep the foundries in and around Liverpool in full activity. Thirty-five gunboats are in process of construction at Woolwich, besides numerous others at other ports.

A most extraordinary case of poisoning occupies considerable space in public attention in England. The circumstances are briefly these. Dr. William Palmer, a surgeon, but who made betting his profession, in other words, "a sporting man," was in company with a gentleman named Cooke, at Bugeley, Staffordshire, settling up some gambling accounts, when Cooke, who had just drank a glass of liquor, suddenly became sick, and exclaimed that Palmer had poisoned him. Cooke died next day, and Palmer was arrested. A discovery that Palmer was indebted a large sum to Cooke, confirmed the suspicion against him, and it was then remembered that his (Palmer's) wife had died suddenly of symptoms similar to those that had carried off Cooke. This led to further inquiry, when the astounding fact came gradually out, that sixteen persons, all immediately connected with Palmer, had died suddenly, within a short time, and that on the lives of some of these persons he had effected insurance, while with others he had had betting transactions. The most astounding incident of these developments is, that Lord George Bentinck (who, it will be remembered, died suddenly) had transactions with Palmer, and it is now believed that he was poisoned. The corpses of some of the supposed victims have been exhumed, and submitted to chemical research for traces of poison. Strychnine, or some other vegetable preparation, is supposed to have been the means employed. It is somewhat curious that the accused had a fast horse that figured conspicuously in his turf speculations and bore the name of Strychnine.

The War in Hayti.

Letters from Port-au-Prince, Hayti, of Dec. 30th, give full particulars of the defeat and flight of Faustin I., Emperor of Hayti. It seems that the army with which he proposed to chastise the Dominicans consisted of about 30,000 men, which divided into three detachments—the army from the North under the command of Paul Decayette, of 7,000 men—another of 4,000 men, who took a southern route, and the main body of the army under the Emperor. Of the company which took the southern route nothing is known, except that after crossing the line they were met by a body of Dominicans, and the Jacmel regiment, which was in advance, broke their lines at the first fire, precipitated themselves upon the rear, and produced a general route of the whole regiment.

The force under the immediate command of the Emperor amounted to about eighteen thousand men. When near Las Cahobas, in an open plain, bordered by a piece of woods, they came upon a body of Dominicans, about four hundred in number, with a cannon. The advance guard continued to move forward until within gunshot of the Dominicans. The leader of the Dominicans then advanced in front of his troops, and Valentine, who leads the Haytian advance guard, advanced to meet him. After a brief parley they separated; each returning to his own troops; but on his way, the Dominican discharged a pistol, whereupon one of the regiments from the South of Hayti, without orders, opened a fire upon the Dominicans which they promptly returned. An officer of this southern regiment then mounted his horse, called upon his troops to follow him, and throw themselves back upon the main body of the Haytian Army, which was simultaneously charged by the Dominicans. The example of the Southern troops proved contagious, and very soon the greater part of the army had deserted, leaving the Emperor and his Staff almost alone. They took to a by-path through the woods and escaped, but by the narrowest chance. The enemy were at one time within a few feet of him, and he was only saved by the loyal exertions of his staff officers, several of whom lost their lives in defending his.

The Emperor is said to have reached a place about sixty miles from Cape Haytien, with only a thousand men. The Southern troops who deserted him so faithlessly, to the number of one thousand five hundred, succeeded in reaching Las Cahobas. The Emperor sent orders for them to join him, but they refused to do so.

Where the rest of the grand army had gone was not known at Port-au-Prince; it will probably get home, however, sooner than its leader.

The Emperor's pecuniary loss must have been very great. He had with him over $200,000 in money, which was taken, and with it most of the arms, ammunitions, and provisions of his troops; for most of them threw away their arms when they took to their heels. [N. Y. Times.

Swindling in New York.

One of the most successful and adroit "confidence" men that has ever practiced upon the credulity of the citizens of New York was arrested the other day in Broadway, after having successfully carried on his operations for nearly four months, in spite of the efforts of the Police to capture him. He first made his appearance in the city early in last October, he having previously operated in Southern and Western cities. On the 15th of the month last named he called at the store of Tiffany & Co., and purchased a bill of jewelry to the value of $76, representing at the time that he was one of the firm of Peterson & Humphrey, carpet-dealers at the corner of Broadway and White-street, where he requested that the jewelry should be sent at a certain hour. At the appointed time the "confidence" man saw the messenger approach the store, and immediately entered it himself with as much confidence as though he owned the whole establishment, walked behind the desk, and receiving the goods made out a check on the Broadway Bank for the amount, and signed it "Thos. Brancroft." This was handed to the messenger, who left with it; but when it was presented on the following day to the bank it did not bring the dollars. About ten days previous to this transaction, the confidence man entered the jewelry store of Robert Rait, Broadway, corner of Warren-street, and bought watches and jewelry to the value of $370, and ordered the package sent to No. 6 Barclay-street, at a late hour of the day. When the time arrived, he was at the store in question, making himself very officious about the desk, he having previously represented to Mr. Rait that he was connected with the house; and on the package being delivered to him, he drew up a check for the amount of the bill on the Broadway Bank, and signed it Benj. Greer. This he handed to the messenger, and it proved to be worthless. Complaints now began to pour in upon the Chief of Police, and officer Keefe was set to work to search for and arrest the swindler; but while he was being looked after, and on the 13th of October, word came that Greer had obtained $400 worth of watches and jewelry from Messrs. Jackson & Many, on the corner of Bowery and Broome-street, on a worthless check on the Broadway Bank, signed "Thos. Bancroft." He was next heard of on 22d of December, when he obtained $200 worth of jewelry from Sam'l. Baldwin, Esq., Importer of Jewelry, at No. 170 Bowery. He received these goods at No. 12 Dey-street, and there gave in payment a worthless check on the Broadway Bank, signed "Thos. K. Wilson." On the 31st ult., he came the confidence game over Mr. F. W. Leak, from whom he obtained in a similar manner a set of furs valued at $65. To the check which he gave for this bill he signed the name of "James R. Treadwell." The 7th of January he was again heard of, having on that day swindled Mr. A. Morel, of Nassau-street, out of $400 worth of watches, who received as pay a worthless check on the Mercantile Bank, signed "James R. Treadwell." A day or two since he purchased goods to the amount of $1,030 from Mr. Fry, jeweler in the Bowery, and ordered them sent to No. 10 Park Place. He was on hand when the goods arrived, but for some reason became frightened and ran out of the store—a fortunate circumstance for Mr. Fry. Mr. Keefe, the officer, had all this time been on the lookout for the swindler, but not being successful, he resolved to try another plan to catch him. He accordingly visited several loan offices and other places where he supposed the offender would be likely to call for the purpose of getting cash advances. On his own responsibility he offered a reward for the arrest of the man. Fortunately, a Mr. Carroll, doing business at No. 346 Broadway, was one whom the officer called upon, and he knowing the operator, volunteered to assist in finding him. Finally, Mr. C. espied him at the corner of Broadway and Broome-street, and handed him to the custody of an officer. He was then taken to the office of the Chief of Police, where, after having had time for reflection, he made a full confession to Officer Keefe and Sergeant Bowyer, telling them to whom he had disposed of the goods, &c. It is presumed, therefore, that most of the property will be recovered.

SUMMARY.

There are at present, within a short distance of Cincinnati, 1,200 acres of grapes under cultivation, and of them, about 800 to 1,000 acres are in a bearing condition. The average yield per acre is variously estimated. Particular spots, under favorable circumstances, have produced as high as 1,000 to 1,200 gallons of wine to the acre. A fair average will be about 400 gallons, which, allowing there to be 1,000 acres in bearing, will produce 400,000 gallons of wine. This, at an average price of $1 25 per gallon, amounts to half a million of dollars in value.

Mr. Cutler exhibited the other day, at the Novelty Iron Works, an engine, carrying out a novel invention of Mr. Phineas Bennett, the motive power of which is gas generated from coal or wood, and for which he claims great superiority of strength and speed, and much benefit to be derived from the use of a small proportion of fuel. The gas is generated in tubes, and passes directly into the cylinder. The principle of the machine is nearly that of the caloric engine of Ericsson.

Port-au-Prince dates to Jan. 1, have been received. The reported defeat of the Haytiens by the Dominicans is confirmed. The Emperor Faustin had escaped from the field, and a reward of ten thousand doubloons was offered for his head. An intense feeling prevailed against him, and if caught the probability was that he would be shot by his own people.

We learn from the Alton (Ill.) Courier, that at a meeting of the Alton Horticultural Society, it was stated by Dr. Hall, others confirming the statement, that on examination of the fruit buds of peach trees, in that vicinity, it had been found that the recent severe cold weather has destroyed the promise of a yield of luscious fruit the coming season.

On Wednesday afternoon, Jan. 23d, a fatal accident occurred on the Central Railroad near Bloomsbury, Hunterdon County, N. J., about sixty miles from New York. It appears that Thomas Kitchen, his granddaughter Eliza Alpaugh, and her child, were crossing the track in a sleigh as the freight train was approaching at the rate of thirty miles an hour. The train passed on, running over the sleigh, instantly killing Mr. Kitchen, (who is an old man about seventy years old,) breaking his back, and nearly severing his head from his body. Mrs. Alpaugh was also seriously injured, though it is hoped not fatally. Her child also received some injuries. On the evidence of the Jury it was proved by a man named Williamson, who was cutting wood within a short distance of the accident, that the signal was given above a mile before the crossing was reached. The verdict of the Jury was, that Mr. Kitchen met his death whilst driving carelessly over the track as the cars were approaching.

A bill is pending before the Legislature of New York, which provides that any married woman whose husband, from drunkenness or profligacy, or other cause, shall neglect or refuse to provide for her support or the support of her children, or any married woman who may be deserted by her husband without fault on her part, shall have the right to transact business in her own name, collect her own earnings and those of her minor children, and educate her children, free from the interference of her husband, or any other person. She may also bind out or hire out her minor children. Also, hereafter it shall be necessary to the validity of every indenture of apprenticeship, that the mother, if living with her husband, sign the same.

Missourians, with a taste different, but not creditably different, from that of New Yorkers, celebrate New Year by selling men and women upon the block. At Boonville, Cooper Co., the "trustees of the Jenning's Estate" received on that holiday for Jimpse, aged about 22, $1,495; for Jake, 27, $1,500; Lee, 37, $1,300; Daniel, 26, "afflicted," $800; Mary Jane, 20, $1,120; Isaac, 50, $1,000; Bet, under 13, $920; Jim, 11, "rheumatic," $700; Lucy, 9, $720; Dan, 7, $630; George, 5, $495; Charlotte and child, $900; Phebe, "diseased," and child, $600. Total, $12,180. Average price, $812.

A party of twenty-two ladies and gentlemen, from Rockville, Conn., visited this city on Friday, (says the Springfield Republican of the 5th inst.,) in the capacity of a sleighing party, dining and taking supper at the Massasoit House, and visiting the Armory and other of the prominent features of Springfield. The ladies acted as escorts for the gentlemen, ordering the meals, paying the bills, and furnishing the comforts of the trip generally. We shall hope to record many fruits of this leap-year gallantry among our matrimonial announcements before the year is over.

An interesting forgery case, that had occupied the Court for eleven days, was decided at Pittsburg on Tuesday. The name of the accused is Leverton Thomas. He is seventy-five years of age, is wealthy, and possessed much influence in Washington County, where he resided. His avaricious propensities led him to misrepresent, and forge, and he swept away the property of one McCorkle, through misrepresentations and forgery. The latter was one of the principal witnesses in the case. The Jury, after an absence of two hours, returned a verdict of guilty.

The Detroit Free Press says that a man, woman and child were recently drowned while attempting to cross the river from that city to Canada. They were in a sleigh drawn by a single horse, and had nearly reached the Canadian shore, when the horse broke through the ice, or, as is supposed by some, fell through an air-hole, drawing the sleigh and its unfortunate occupants after him. The horse rose to the surface for a moment and then all were swept away by the swift current beneath the ice.

While Prof. Hale was engaged in showing a gentleman and two young ladies the process of making hydrogen, at the Irving House in Cambridge, Mass., on Monday evening, the generator exploded, carrying the bell through the ceiling above and scattering fragments. The whole party were drenched in a solution of sulphuric acid, damaging their clothes to the extent of $150, and the whole loss is $300.

A lady named Miller, upwards of 70 years of age, residing in Robinson Township, about eight miles from Pittsburg, Pa., has been lying seriously ill for some time. During the past forty days she has not eaten a morsel of food of any kind, and her only drink is water. She is a widow, and the mother of a family. Her physicians have not given the disease any definite name. She was still alive, though very weak.

In the Pennsylvania Legislature, on the 24th inst., a resolution was offered, directing the Judiciary Committee to inquire if further legislation was not necessary to protect the personal liberties of citizens from the arbitrary proceedings of Judges of the United States exercising jurisdiction in the State. Rejected by 64 to 31. A bill was then introduced to change the venue in the Kane and Williamson case from Delaware County to Philadelphia.

The Lowell News says that the Leap-Year Ball of the carpet factory girls came off according to announcement, on Thursday evening, and was a very pleasant affair. "The ladies," it says, "to the number of about seventy-five, healthy, robust, cheery and lovely, took their carriages, called for their beaux, were driven to the hall, where ladies managed, selected their own partners, ordered the supper, and gloriously paid all the bills!"

In the Senate of the United States, on the 24th inst., a message was received from the President stating that circumstances have occurred to disturb the course of Government in Kansas, producing a condition of things which renders it incumbent on him to call the attention of Congress to it, and he urgently recommends the adoption of such measures as the exigency seems to require.

The tobacco crop of Connecticut has become so important that the tobacco-growers lately held a convention at Hartford to promote its interests. A tobacco warehouse has been established in that city, where the crops of all the principal growers are sent for sale.

An original portrait of Ridley, the Martyr, was lately cut up and destroyed by two of his descendants, very old ladies, because they thought it might come to shame by falling into the hands of a pawnbroker.

Some twenty ladies of West Stockbridge, (says the Springfield Republican of the 9th inst.,) inspired by the existence of good sleighing and leap year, got up an excursion to Great Barrington on Saturday, and took their husbands thither, providing them with one of the best dinners the Berkshire House could afford.

A letter from Altona, a small town in Illinois, dated the 18th instant, states that the inhabitants are suffering terribly under the ravages of the small-pox. At the writing of the letter, thirty cases were reported. The usual business of the place was entirely suspended, as farmers did not dare to come into it.

Dr. Rebman, a missionary in Africa, has, it is said, proven the existence in that country of an immense sea, twice as large as the Black Sea, which has no discoverable outlet. It lies between the equator and ten degrees south latitude, and between the 23d and 30th Meridian. He calls it Ukerewe or Inner Sea.

The largest reading room in the world is now nearly completed in the British Museum, London. It is circular, 140 feet in diameter, and 140 feet in height. The tables will accommodate nearly 400 readers. The wrought iron bookcases will contain 102,000 volumes. The cost of the room will be about $300,000.

The Massachusetts School for Idiots has fifty-four children, of whom thirty-four are placed there by the State. The Boston Post says "the success which has attended the institution has been very great, and the inmates, from being disgusting creatures, have become comparatively bright children."

A late number of the Collegiate Mirror, published at Holly Springs, Miss., announces that the honorable degree of "Mistress of Arts" has been conferred upon Mrs. Hale and Mrs. Sigourney, and publishes the letters of acknowledgment written by those ladies.

The Boone County (Ind.) Ledger states that three interesting young ladies, on going to bed at a Mr. Hunt's, near North Salem, Hendricks County, a few evenings since, took a vessel of live charcoal into their bedroom, and on the next morning were all found dead.

It is stated that the Emperor of the French intends to offer a prize of 20,000 francs (800*l*) for the best poem on the taking of Sebastopol; also three or four other prizes of equal amount on different subjects connected with the Universal Exhibition.

California News to Jan. 5th has been received. A severe shock of earthquake was experienced at San Francisco on the 2d of January. The mining news is rather favorable, new diggings having been discovered on the American River.

A charter has been obtained by O. S. Presbyterians for a University in St. Louis, and it is expected that it will be erected during the coming summer. Between $60,000 and $70,000 have been subscribed toward the enterprise.

The council of the Cherokee Nation, at its late meeting, passed a bill authorizing their principal chief to open correspondence with several of the Missionary Boards having missions among them, complaining of the inculcation of anti-slavery doctrines.

A correspondent of the Lutheran *Observer* states that there are but nine students at the present time in the Theological Seminary at Gettysburg, Pa., and one more is expected. Last winter there were 25.

There is being formed at Paris a society of economists, naturalists, and hardy gourmands, having for aim the introduction of horse flesh into the category of butchers' meat.

On Thursday, Jan. 24, the 4 o'clock train from New York encountered, near Metuchin, N. J., a vehicle crossing the track. Both of the horses attached to the vehicle were killed, and the driver was slightly injured.

Mr. Samuel W. Lowe, of Philadelphia, has discovered a method of preparing tin, by which engravings can be obtained, from a direct pressure press, equal to copper engravings.

Six fugitive slaves from Virginia were arrested at the Maryland line, near Hood's Mills, on Christmas day, but after a severe fight four of them escaped and have not since been heard of.

The French Government has sent to the Sultan the grand cross of the legion of honor in diamonds. This is the first time that his highness has received a decoration from a Christian power.

Nicholas Longworth, a resident of Cincinnati, has lately paid twenty-six thousand dollars into the treasury of Hamilton County, that being the amount of his taxes for the present year.

A venerable and worthy Roman Catholic priest of Dublin, Very Rev. Dr. Yore, has given his theological library of over two thousand volumes, to be raffled for the support of a charitable institution for the deaf and dumb.

The steamer Isaac Newton has gone upon the dry dock, to be lengthened five feet longer than the New World, and is to be completed on the most magnificent scale by the opening of navigation in the Spring.

George M. Townsend has been convicted in the District Court at Newcastle, Del., of robbing the Wilmington Post Office. His sentence has been deferred till the 1st of February.

The Cleveland Plaindealer mentions the sudden death of Wm. Blake, from injuries received while experimenting with his newly invented fire-proof paint.

The Pennsylvania House of Representatives, by a vote of 70 to 32, ordered to a second reading a bill repealing the Liquor Law of that State.

The Madison Argus states that $3,000,000 worth of lumber, it is estimated, will be got out of the St. Croix and other branches of the Mississippi the coming season.

A San Francisco paper states that in California within the last nine months, 489 persons have been murdered, 6 hung by the Sheriff, and 45 by the mob.

It is said that all classes at Jerusalem are suffering from scarcity of food. Some of the Jews are in danger of perishing from sheer starvation.

The average salaries of New England Methodist preachers are found, on calculation, to be about $600 a year.

A comparison of the performances of the Collins and Cunard lines of European steamers for the past year, shows that the former have beaten the latter on the Eastern passages one day and four hours, and on the Western passages one day and seven hours and twenty minutes. This is better sailing, on the part of the Cunard steamers, than was shown in the previous year.

In the French army the soldiers, during the winter, wear wooden-bottom shoes. The result is, that the French army is less afflicted with toothache and rheumatism than any army in the world. A wooden-bottom shoe is always dry—a fact which should always give them the preference.

The Lyons (France) journals speak of a spectacle at once touching and singular. Eight one-handed Zouaves from the Crimea have been seen walking in the streets by twos, keeping together by the only arm which is left them.

There is a project on foot to construct a railroad from Vera Cruz to the city of Mexico, a distance of some 300 miles. British and French capitalists are said to be interested in the enterprise. Its estimated cost is $12,000,000.

The Detroit Advertiser mentions the sale of 12,000 acres of pine lands, in Lapeer Co., to Wm. S. Driggs, for $150,000. The purchaser intends to enter at once into the lumbering business.

The Traveler states that, contrary to the usual experience of large cities, in Boston last year the number of births was in excess of the deaths to the extent of about one thousand.

Upwards of five thousand dollars was collected in the various Methodist Episcopal Churches in Boston and vicinity, on a recent Sunday, for the cause of Protestanism in Ireland.

Bayard Taylor will make, it is said, $5000 this season by lecturing. John G. Saxe will net $4000, if sickness does not break up too many of his engagements.

The number of Revolutionary Pensioners grows less and less. It is now reduced to 726. The number of revolutionary widows receiving pensions is 5552.

The Cincinnati Sun says that such is the stagnation of business in that city, that there are over ten thousand applications for relief from the public charities.

Boston has six thousand more females than males, while Chicago has about fifteen thousand more males than females.

The Dutch Government have decreed the total abolition of Slavery, in Netherlands, India.

CONGRESS is not yet organized. The House of Representatives continue to vote on the old candidates for Speaker, and the final vote last week gave Banks the election less four ballots. It is expected that a Speaker will be elected in the course of the present week.

New York Markets—Jan. 28, 1856.

Ashes—Pots $6 75 a 7 00; Pearls 7 75 a 8 00.

Flour and Meal—Flour 8 00 a 8 31 for State, 8 12 a 8 25 for mixed Western, 8 25 a 8 50 for common to good Ohio, 9 00 a 11 25 for extra Genesee. Rye Flour 5 50 a 7 00. Corn Meal 4 00 for Jersey. Buckwheat Flour 2 50 a 2 75 per 100 lbs.

Grain—Wheat 1 75 a 1 80 for Western red, 2 10 for Southern white, 2 12 a 2 15 for Western white. Rye 1 29 a 1 31. Barley 1 16 a 1 23. Barley Malt 1 40 a 1 45. Oats 43 a 45c. for Jersey, 49 a 51c. for Western. White Beans 2 00 a 2 50 per bushel.

Provisions—Pork 14 25 for prime, 16 50 for mess. Beef 9 00 a 10 00 for country prime, 10 50 a 12 00 for country mess. Dressed Hogs 7½ a 8c. Lard 11c. Butter 18 a 23c. for Ohio, 23 a 27c for common to good State, 28 a 30c. for prime. Cheese 9 a 10½c.

Seeds—Clover 12½c. Timothy 2 25 a 2 37 per bushel. Rough Flaxseed 2 15 a 2 25.

Tallow—13c. for Butchers' Association.

Wool—Fleece 33 a 46c. for common to fine. Pulled 34 a 35c. for super.

MARRIED,

In Alfred, N. Y., Jan. 21, 1856, by Eld. Jared Kenyon, Mr. CHARLES W. LANGWORTHY to Miss LYDIA M. SHAW, both of Alfred.

On the 18th inst., by Rev. I. Moore, Mr. JOHN J. LAWS, of Accomack, Va., to Miss MARY S. MOORE, of Plainfield, N. J., daughter of the officiating clergyman.

DIED,

In DeRuyter, N. Y., at the residence of her son-in-law, Dr. Ira Spencer, Mrs. HANNAH WALKER, aged 69 years. A. R. C.

At Dakota, Wis., Dec. 29, 1855, of dropsy, Mrs. SUSAN CRANDALL, wife of Dea. Rowland I. Crandall, in the 49th year of her age. She was a member of the Seventh-day Baptist Church at Dakota, where she had resided about two years. Though from the state of her health she was not permitted often to meet with the church for worship, yet in her patient and uncomplaining resignation to her state, and her expressed willingness to go or remain according to the will of God, she left a most salutary example. In her death she left to her friends the most consoling assurance of her happy exit to that state where disease and pain come not, and the weary are at rest. G. C. B.

In Brookfield, Madison Co., N. Y., on the 18th inst., Mr. JOSHUA RANDALL, aged 24 years.

LETTERS.

W B Gillett, L A Davis, John Babcock, Geo C Babcock, Rowland I Crandall, A R Cornwall, M H Gavitt, H P Burdick, G T Spicer, A W Coon, S S Griswold, S Olin (p'd to vol. 12, No. 29,) Abel Stillman, Eli Forsythe, H W Coon, T F West, J C West, N L Brooks, D E Lewis, W B Maxson, Chas Potter.

RECEIPTS.

☞ All payments for publications of the Society are acknowledged from week to week in the Recorder. Persons sending money the receipt of which is not duly acknowledged, should give us early notice of the omission.

FOR THE SABBATH RECORDER:

H Chipman, Mystic Bridge, Ct	$2 00	to vol. 12	No. 52
Wm B Haynes "	2 00	12	52
Wm M Barber "	2 00	12	52
A S Randolph, Plainfield, N J	2 00	12	52
Geo Bonham, Shiloh, N J	2 00	12	52

FOR THE SABBATH-SCHOOL VISITOR:

Church at Scott, by A W Coon	$5 00
Joel C West, Oxford	1 87
Eli Forsythe, Montra, O	1 00

FOR SEVENTH-DAY BAPTIST MEMORIAL:

Elias Heath, Adams Center	$ 25

FOR THE CAROL:

Joel C West, Oxford	$2 13

WILLIAM M. ROGERS, Treasurer.

Rogers' Hotel and Dining Saloons,
KEPT ON THE EUROPEAN PLAN,
No. 4 Fulton-st., New York,
Near Fulton Ferry.
☞ Rooms to let by the day or week.
CLARKE ROGERS } Late of Fulton Hotel.
HENRY ZOLLVER }

Savery's Temperance Hotel
AND
TELEGRAPH DINING SALOON,
No. 14 Beekman Street, N. Y.
KEPT ON THE EUROPEAN PLAN.
MEALS AT ALL HOURS OF THE DAY.
LODGING ROOMS,
From $2 to $3 per Week, or 50 Cts. per Night.
BELA SAWYER, Sup't. JOHN S. SAVERY, Proprietor.

Bibliotheca Sacra,
AND AMERICAN BIBLICAL REPOSITORY.—The Thirteenth Volume commenced Jan. 1, 1856. This volume will be enlarged to 900 pages; will be printed on a new, large, and beautiful type, and on paper superior to that of any previous volume. This Quarterly contains articles of permanent value, by some of the ablest writers in the country.
In its department it has no superior, and no Minister can afford to be without it.
It is the most learned, the largest, and the cheapest Quarterly of its kind in the country.
TERMS—$3 per annum in advance.
$4 if not in advance.
W. F. DRAPER, Andover, Mass.

Alfred Highland Water-Cure.
THIS establishment, for the cure of Chronic Diseases, is conducted by H. P. BURDICK, M. D. The facilities in this "Cure" for the successful treatment of Diseases of the Liver, Spine, Nerves, Female Diseases, Bronchitis, Incipient Consumption, &c., are not excelled in any establishment. Patients will have the benefit of skillful Homeopathic prescriptions—an advantage found in but few "Water-Cures." Especial attention will be given to diseases commonly called *surgical cases*, such as Hip Diseases, White Swellings, Cancers, (in their early stages,) and Caries and Necrosis of bone.
Connected with the establishment is a Dental Shop, where all calls in that profession will be attended to.
Address, H. P. BURDICK,
Alfred, Allegany Co., N. Y.

Central Railroad of New Jersey,
IN connection with the Lehigh Valley Railroad, opened to Mauch Chunk—WINTER ARRANGEMENT, commencing Nov. 19, 1855. Leave New York for Mauch Chunk from Pier No. 2 North River, at 7 30 A. M. For Easton, at 7 30 A. M. and 3 15 P. M. For Somerville, at 7 30 and 10 45 A. M., and 3 15 and 4 30 P. M. The above trains connect at Elizabeth with trains on the New Jersey Railroad, leaving New York from foot of Courtlandt street, at 7 30 and 11 A. M., 3 and 4 P. M.
Leave Plainfield for New York at 7 05 and 9 05 A. M., and 1 40 and 6 13 P. M.
JOHN O. STERNS, Superintendent.

Hudson River Railroad.
TRAINS leave Chambers street daily, for Albany and Troy. On and after MONDAY, Nov. 19, 1855, the trains will run as follows: Express Train 7 A. M., connecting with Northern and Western Trains. Mail Train 8 30 A. M. Through Way Train, 12 M. Express Train 5 P. M. For Hudson 3 30 P. M. For Poughkeepsie—Way Freight and Passenger Train, 12 30 P. M. For Peekskill, 5 30 P. M. For Sing Sing, at 4 20 and 9 P. M. For Dobbs' Ferry, 7 15 and 11 A. M. The Dobbs' Ferry, Sing Sing, Peekskill, and Hudson Trains stop at all the Way Stations. Passengers taken at Chambers, Canal, Christopher, and 31st streets. SUNDAY MAIL TRAIN at 4 P. M. from Canal street, for Albany, stopping at all the Mail Stations.
M. L. SYKES, Jr., Superintendent.

Merchant Tailoring Establishment.
THE subscriber, having sold his interest in the firm of A. D. Titsworth & Co., of Plainfield, and located himself at the corner of Fulton and Pearl streets, New York, as Merchant Tailor and Manufacturer of all kinds of Clothing, would respectfully invite his friends, and as many others as feel disposed to study economy, to give him a call, feeling assured that his experience in the business will enable him to do better for his customers than they can do for themselves. He will employ the best of workmen, and give to the business his whole attention.
Cloths, Cassimers, and Vestings, of the latest patterns, constantly on hand, and made to order in the most approved manner, at short notice.
Also, any persons wishing cutting done for their friends at home, by observing the following directions, can be accommodated with any style they wish:—
Coat Measure—1st. Placing the measure at socket bone of neck, down to center of arm or shoulder; then to waist above the hip, and length of coat. 2d. From seam of back, giving width of back; then to elbow and length of sleeve, bending the arm in right angle. 3d. Breast and waist, noting the position, whether stooping forward or extra straight.
Vest—1st. From socket bone down front, giving length of vest. 2d. Breast and waist measures.
Pants—1st. From hip bone to thigh joint and knee, and length. 2d. Waist, hip, thigh, and knee measures.
Also, any persons wishing to avail themselves of my assistance in selecting a stock of clothing or other merchandise, will find me at my office every day, except Sabbath day. All orders thankfully received and attended to with dispatch.
Terms, cash on delivery.
E. B. TITSWORTH, Merchant Tailor.
☞ I can accommodate a Sabbatarian with an office in my room.

Seventh-day Baptist Publishing Soc.'s Publications.

The Sabbath Recorder,
Published Weekly.
Terms—$2 00 *per Annum, in Advance.*

The Sabbath Recorder is devoted to the exposition and vindication of the views and movements of the Seventh-day Baptist Denomination. It aims to promote vital piety and vigorous benevolent action, at the same time that it urges obedience to the commandments of God and the faith of Jesus. Its columns are open to the advocacy of all reformatory measures which seem likely to improve the condition of society, diffuse knowledge, reclaim the inebriate, and enfranchise the enslaved. In its Literary and Intelligence Departments, care is taken to furnish matter adapted to the wants and tastes of every class of readers. As a Religious and Family Newspaper, it is intended that the *Recorder* shall rank among the best.

The Sabbath-School Visitor,
Published Monthly.
Terms per annum—Invariably in advance:

One copy	$ 25
Five copies to one address	1 00
Twelve copies to one address	2 00
Twenty copies to one address	3 00
Twenty-eight copies to one address	4 00
Forty copies to one address	5 00

The Seventh-day Baptist Memorial,
Published Quarterly.
Terms—$1 00 *a Year*, 25 *Cents a Number.*

Each number of the *Memorial* will contain a lithographic portrait of a Seventh-day Baptist preacher, together with a variety of historical, biographical, and statistical matter, designed to illustrate the rise, progress, and present condition of the Seventh-day Baptist Denomination. Wood-cuts of meeting-houses will be introduced from time to time in connection with the history of the churches.

[The first, second, and third volumes of the *Memorial*—being for the years 1852-3-4—may be had bound, for the subscription price and the cost of binding.]

The Carol:

A Collection of original and selected Music and Hymns, for the use of Sabbath-Schools, Social Religious Meetings, and Families. Compiled by Lucius Crandall. 128 pages octavo; price 35 cents per copy.

The *Carol* is designed principally for Sabbath-Schools, and contains Music and Hymns adapted to all ordinary occasions, and to such special occasions as the sickness of teachers, funerals, anniversaries, &c. A number of pieces suitable to social and public worship, together with a few Temperance Songs, are included in the book. It contains 93 tunes, and 156 hymns.

☞ Orders and remittances for the above should be addressed to the General Agent, GEORGE B. UTTER, No. 9 Spruce-st., New York.

Postage.
The postage on the Sabbath Recorder is 13 cents a year in the State of New York, and 26 cents in any other part of the United States, payable quarterly or yearly in advance.
The postage on the Sabbath-School Visitor is 3 cents a year in the State of New York, and 6 cents in any other part of the United States, payable in advance.
The postage on the Seventh-day Baptist Memorial is 2 cents a year in any part of the United States when paid in advance, or 4 cents a year when not paid in advance.

Miscellaneous.

From "The Crayon."

Wanderings in the Southwest—No. 8.

An easterly wind in Western Texas portends rain, and such a wind was bearing along watery masses of cumuli in the direction which my road lay far beyond the limits of the last herdsman's cottage. At the inn kept by M. Tardé, at Castroville, I could look with resignation upon the storm that overtook me at that place. Here one sees for the last time the comforts of a home; he bids adieu to comfortable beds and the luxuries of the table until he finds himself, after many weary weeks, among the old settlements of New Mexico. A night of thunder and lightning and rain, was succeeded by a day of dull grey clouds, distilling a fine mist upon the ground already saturated. When I visited Castroville, four months before, the district court was in session, and the *attachés* gave it a busy air; now the population were as quiet as a village in their native France. The martins, which had possession of the piazza, where they had reared their young and kept up an incessant chattering all day, had gone too, but the drouth that prevailed then had been succeeded by copious rains. Bean vines, under the training of the accomplished madam, had twined with extraordinary grace up the strings that covered the gable end and loaded down the barrel-stave white-washed fence,

——"and the sweet tuberose,
The sweetest flower for scent that blows,"

hung in heavy masses around the ruined nests of the martins. Walks could be extended only into the garden, where a double row of the multicaulis mulberry made a very pretty avenue, which our enthusiastic host had already appropriated to a future banquet hall. We had another rainy night, and another grey morning gave us no hope of a speedy improvement in the weather, and it was deemed advisable to proceed. Fortunately for me, I met here Capt. Ricketts, of the 1st Artillery, on his way to Fort Duncan. As our road was the same for ninety miles, I accepted a seat in his ambulance, and surrendered my horse to a dragoon of his escort. We found our trains ready to start, and standing in the mud, while the teamsters, with their military great-coats dripping with water, appeared reluctant to start. The rains had been so violent that the contents of the wagons were all wet, the covers having proved insufficient to protect them, and the men, who for two nights had slept in or under the wagons, seemed thoroughly water-soaked, and the wagon-master of my train was so completely soaked with something stronger, that he was lying on the ground in a state of insensibility. The captain ordered him to be taken out of the mud and placed on one of his wagons.

Rainy days are rarely enjoyed by any travelers, but least of all by those who are journeying over an unimproved country, where the obstacles which nature every where opposes have never been overcome by art; where it is impossible to stop, and to proceed is but little less difficult. Our ambulance proceeded very well for a few miles over the hilly post-oak country, but when it reached the rich flats on the Hondo, the black loam and tangled grass loaded down the wheels, and a distance of eight miles required as many hours to traverse it. The heavier teams were left behind altogether. On the Hondo, a man named Franks has settled with a large number of negroes, and he had just opened, at his own expense, the road over which we traveled, connecting his crossing with Castroville. Mrs. F. was suffering intensely from a felon, and making use of a lancet which she furnished, I had the satisfaction of affording her relief. The place, a low, thatched cottage, with a stone house in process of building, was infested with dogs and negroes, and it was difficult to imagine where they all slept. A half dozen of the latter stood around while the captain and myself made the supplies of corn cakes and venison to disappear in such quick succession as to compel them to display their ivory. The cakes were made from corn just ripened, and grated on the cob, and I remember the relish with which I ate them, now that I have been for two months in the wilderness, with heartfelt emotion. Milk and butter, too—alas! We succeeded in reaching the Seco about eleven o'clock at night. The train was all left behind and fast in the mud, and we were without our camp equipage, but we found a lodgment in the house of a German named Rider. The rain had ceased, and the following day we made a short journey to the Sabinal, in order to give time for the train to overtake us. It was a picturesque spot which was selected, and the wagons as they came up formed in a semicircle around the brow of a smooth hill, at the foot of which was the rocky bed of the stream, enlarged here into a deep and wide pond, where two or three large cypresses stood with their feet in the water, the last that we see going west; to the right of us was a grove of oaks, where the tents of some settlers were pitched. My train had not arrived, and I was dependent upon the hospitality of my generous friend. The country, as far as Fort Inge, presents but little of special interest; sometimes post-oak and at others mesquet trees predominated, but every where rich grass. The rivers are all mere brooks, without auxiliaries, making a deal of noise over the stones in channels much too large for them, or only furnishing water holes. The higher lands intervening begin to show chapparel and gravel, and the trees gradually appear smaller. The whirr of the quail is frequent, but the grouse is not seen west of San Antonio.

At the head of the Leona Captain Ricketts left me, as from this point our routes diverge. Here I waited two days for my train. The head of the Leona, at the distance of thirty miles below which I had met with so disastrous a deluge, is in a wide flat of rich land, overgrown with thickets of small live oak, hackberry, and pecan trees. There can be no doubt that it will prove sickly when it becomes settled. I am much induced to believe the tradition that it is a new river. Its jungles are the haunts of innumerable deer and wild turkeys, and the puma, jaguar, and tiger cat roam unmolested. Mr. Black has built a substantial stone building at the head of the river, and has laid out a town, which he calls Encina. A forest of small elms (Ulmus alata) and live oaks throws a shadow over the site of the town, grateful in a country where, except on the rivers, one will hardly find trees with foliage heavy enough to afford a shade. Situated as it is on the great thoroughfare to Mexico, and the last suitable situation on good water, it will become an important place. I was agreeably surprised to see Capt. Walker and his Lieut., Devant, of the Mounted Rifles, ride up the same afternoon that my train arrived. They were returning to Fort Duncan, after a scout with twenty men, and their command was encamped at the deserted Fort two miles below. We made them a visit at their camp. Close to the Fort is a remarkable hill of volcanic rock, rising from the plain to the height of two hundred feet, in a conical form, and broken into irregular masses of rock. From the summit, several other similar hills are visible. These are the more remarkable because they are the only traces of irregular volcanic action that I have seen in Texas. The hospitality of a soldier's board is always free, and now, when I remember the right good will with which the table was loaded down, my gratitude is mingled with a deeper and sadder emotion in knowing that that accomplished gentleman and officer, Devant, found soon after a watery grave while crossing the Rio Grande.

I returned to Black's about ten o'clock at night, and found my wagon master lying in the road drunk, and covered with blood, from the effects of a fight in which he had indulged with one of his men, and as on the following morning he was unable to proceed, I left him. Just before starting, a party of fillibusters came in from Eagle Pass with a negro that they had captured in Mexico. This man was a fine-looking mulatto, who had been twice captured before; on one occasion, his captor arrested him on the Texas side, while the negro was waiting for the means to cross the river, and on his way to San Antonio he sold his claim on him for $50, but the negro, watching his opportunity, escaped with his captor's horse and six-shooter. He was followed across the Rio Grande and again seized, and badly burned in the struggle that ensued, but his cries called in the natives, and his persecutor was compelled to effect his own escape. Once afterward he was captured, and his captor had him at work at Encina, waiting an opportunity to send him to his master, when he escaped, and a suit was then pending, his master vs. his captor, for his services, as a punishment for permitting him to escape, when his third capture by the fillibusters put an end to it. He was safe now, with a pistol always ready to shoot him down at the slightest pretext. Poor fellow; he deserved a better fate. These fillibusters, in their efforts to extend the area of freedom, were refused admission by the insurgent Mexicans, who declared them a nuisance, but they succeeded so far as to re-capture this heroic slave.

(To be continued.)

Agricultural.

Fixed Facts in Agriculture.

Somebody (says the *Prairie Farmer*) has got up the following list of "fixed facts" in agriculture, and for once, in condensation of the sort, has hit the right nail on the head, in most of them. They are for an eastern latitude, and no western farmer need trouble himself about what is said of manufactured manure, at least till he has learned to use his stock furnished from the barnyard.

1. All lands on which clover or the grasses are grown, must either have lime in them naturally, or that mineral must be artificially supplied. It matters but little whether it be supplied in the form of stone-lime, oyster-lime, or marl.

2. All permanent improvement of lands must look to lime as its basis.

3. Lands which have been long in culture, will be benefited by the application of phosphate of lime, and it is unimportant whether the deficiency be supplied in the form of bone-dust, guano, native phosphate of lime, composts of flesh, ashes, or that of oyster-shell lime—or marl—if the land needs, lime also.

4. No lands can be preserved in a high state of fertility, unless clover and the grasses are cultivated in the course of rotation.

5. Mould is indispensable in every soil, and a healthy supply can alone be preserved through the cultivation of clover, and the grasses, the turning in of green crops, or by the application of composts rich in the elements of mould.

6. All highly concentrated animal manures are increased in value, and their benefits prolonged, by admixture with plaster, salt, or with pulverized charcoal.

7. Deep plowing greatly improves the productive powers of every variety of soil that is not wet.

8. Sub-soiling sound land, that is, land that is not wet, is also eminently conducive to increased production.

9. All wet land should be drained.

10. All grain crops should be harvested before the grain is thoroughly ripe.

11. Clover, as well as the grasses, intended for hay, should be mowed when in bloom.

12. Sandy lands can be most effectually improved by clay. When such lands require liming or marling, the lime or marl is most beneficially applied when made into compost with clay. In slacking lime, salt brine is better than water.

13. The chopping or grinding of grain to be fed to stock, operates as a saving of at least twenty-five per cent.

14. Draining of wet lands and marshes, adds to their value, by making them to produce more, and by improving the health of neighborhoods.

15. To manure or lime wet lands, is to throw manure, lime, and labor away.

16. Shallow plowing operates to impoverish the soil, while it decreases production.

17. By stabling and shedding stock through the winter, a saving of one-forth the food may be effected; that is, one-fourth less food will answer, than when the stock may be exposed to the inclemencies of the weather.

18. A bushel of plaster per acre, sown broadcast, over clover, will add one hundred per cent. to its product.

19. Periodical applications of ashes tend to keep up the integrity of soils, by supplying most, if not all, of the organic substances.

20. Thorough preparation of land is absolutely necessary to the successful and luxuriant growth of crops.

21. Abundant crops cannot be grown for a succession of years, unless care be taken to provide an equivalent for the substances carried off the land in the products grown thereon.

22. To preserve meadows in their productiveness, it is necessary to harrow them every second autumn, apply top-dressing, and roll them up.

23. All stiff clays are benefited by fall and winter plowings; but should never be plowed when wet. If at such plowings the furrow be materially deepened, lime, marl, or ashes, should be supplied.

24. Young stock should be moderately fed with grain in winter, and receive generous supplies of long provenders, it being essential to keep them in a fair condition, in order that the formation of muscle, bones, &c., may be encouraged and continuously carried on.

Variety of Food Necessary.

It is in vegetable as in animal life; a mother crams her child exclusively with arrow-root—it becomes fat, it is true; but alas! it is rickety, and gets its teeth very slowly, and with difficulty. Mamma is ignorant, or never thinks, that her offspring cannot make bone—or what is the same thing, phosphate of lime, the principal bulk of bone—out of starch. It does its best, and were it not for a little milk and bread, perhaps now and then a little meal and soup, it would have no bones and teeth at all.

Farmers keep poultry; and what is true of fowls, is true of cabbage, a turnip, or an ear of wheat. If we mix with the food of fowls a sufficient quantity of egg shells or chalk, which they eat greedily, they will lay many more eggs than before. A well bred fowl is disposed to lay a vast number of eggs, but cannot do without the materials for the shells, however nourishing in other respects her food may be. A fowl, with the best will in the world, not finding any lime in the soil, nor mortar from the walls, nor calcarious matter in her food, is incapacitated from laying any eggs at all. Let farmers lay such facts as these—which are matters of common observation—to heart, and transfer the analogy, as they may do, to the habits of plants, which are as truly alive, and answer as closely to every injudicious treatment, as their own horse.

Migration of Plants.

Botanists have long been convinced that the facts connected with the diffusion of plants may often be explained by an inquiry into the structure of their seeds, the lightness of these, and their capability of transportation by winds; by their texture preserving them from destruction in the waters of the ocean; by the prevalence of particular currents in the air or sea; or by the presence or absence of mountainous barriers, or other obstacles to their dispersion. It has been observed that (the God of) nature has provided a variety of methods for the diffusion of seeds. Many such have been noticed by naturalists, and their operations have been illustrated by facts well ascertained. The most important are doubtless winds, or rivers, or marine currents. The former convey the lighter kinds of seeds to an incalculable distance, and the latter are well known to transport others occasionally from the most remote countries. Besides these more general causes, it is well known that seeds are often conveyed from foreign countries, which were transported in commerce. Various plants are well known to have been introduced into Europe by the accidental mixture of their seeds with rice brought from the East or West Indies, and those tropical countries have interchanged some of their productions in a similar way. Some seeds are capable of preserving their vitality in the stomachs of birds, and are thus propagated. Such are the mistletoe and juniper. A number of facts are upon record, which prove that the migration of plants by means of currents in the ocean to distant shores, where, if the climate is congenial to them, they form new colonies, is not a matter of conjecture, but a thing which actually takes place. Several remarkable instances of this description are recorded in the *Amanœitates Academicae.* It is stated that the seeds of several plants of equinoctial countries are occasionally collected in the Hebrides.

[Pritchard's Physical History of Mankind.

Price of Flour.

The Secretary of the Treasury has appended to his late Report a table of the annual average export price of Flour, from the port of New York, for the last fifty-six years, and also the selling prices, average for each year, at the principal shipping ports. We have arranged from the official returns the following figures of the export value:

EXPORT PRICE OF FLOUR AT NEW YORK.

1800	$10 00	1819	$8 00	1838	$9 50
1801	12 00	1820	5 37	1839	6 75
1802	9 00	1821	4 25	1840	5 37
1803	7 00	1822	7 00	1841	5 20
1804	7 75	1823	7 75	1842	6 00
1805	13 00	1824	6 62	1843	4 59
1806	7 50	1825	5 37	1844	4 75
1807	8 25	1826	5 25	1845	4 51
1808	6 00	1827	8 00	1846	5 18
1809	7 50	1828	5 50	1847	5 95
1810	8 25	1829	5 00	1848	6 22
1811	10 50	1830	7 25	1849	5 35
1812	10 75	1831	5 62	1850	5 00
1813	13 00	1832	5 87	1851	4 77

1816	7 37	1835	6 00	1854	7 88
1817	14 75	1836	7 50	1855	10 10
1818	10 25	1837	10 25		

Gov. Clarke on Prohibition.

In his Message to the Legislature of New York, Gov. Clarke has the following sensible suggestions in relation to the Prohibitory Liquor Law:—

The Act for the Suppression of Intemperance, Pauperism, and Crime, passed by the last Legislature, in accordance with the clearly expressed demand of the people, went into operation on the 4th of July last. Notwithstanding it has been subjected to an opposition more persistent, unscrupulous, and defiant, than is often incurred by an act of legislation; and though legal and magisterial influence, often acting unofficially and extra-judicially, have combined to render it inoperative, to forestall the decision of the Courts, wrest the statute from its obvious meaning, and create a general distrust in, if not a hostility to, all legislative restrictions of the traffic in intoxicating liquors—it has still, outside of our large cities, been generally obeyed. The influence is visible in a marked diminution of the evils which it sought to remedy. In the City of New York, and others of our large towns, it has, through the connivance of magistrates, and executive officers, sworn to sustain the laws, been flagrantly disregarded, on the pretence principally of its unconstitutionality. The course pursued has indicated but little confidence on the part of those opposed to the law in the ultimate decision of the Court; and still less, of a willingness to let the statute be tested by actual experiment. That some of the details of the Prohibitory Act are imperfect, and that some of its provisions are susceptible of a lax interpretation, is not to be denied. These defects do not, however, vitiate the main principle of the law, which seems to me to be entirely accordant with our Constitution, and in harmony with the obligation which Government owes to the people. My confidence in the power and duty of the Legislature to prohibit the traffic in intoxicating liquors, and in the good results which may be anticipated from such prohibition, is in no degree shaken.

But no further action on the subject is recommended, until the constitutional questions involved in the existing law shall have been adjudicated by the Court of Appeals.

What amendments, if any, may be needed to render the statute more effective for the suppression of "Intemperance, Pauperism, and Crime," and to guard against the neglect or malfeasance of those to whom its execution is entrusted, may be matters for your subsequent consideration.

Crystal Palaces.

A fatality seems to attend Crystal Palaces. No matter how much they may flourish at first, they are sure to meet with some reverse before their career is run. Nothing could have been more prosperous than the affairs of the London Crystal Palace up to the time when a speculative stock company purchased it, removed it to Sydenham, and surrounded it with decorations that almost brought it to the level of some of the enchanted Palaces described by Madame D'Aulnoy in her Fairy Tales. It lies amid exquisite lawns of every variety of surface. A silver embroidery of numberless fountains spangles the sward. Huge forest trees have been dug up, with such masses of earth attached that their most delicate roots are uninjured, and transported to adorn this wonderful garden. There are lakes, and rivers, and cascades, and grottoes. One island, in the center of one of the lakes, is filled with perfectly correct models of the extinct races of animals, of the natural size—each, in its action, illustrating its habit of life. The building itself is a marvel of beauty and instruction. In its courts, illustrative of Architecture, Natural History, Botany, Geology, the Fine Arts, a man may, by observation alone, instruct himself to a very considerable extent. He may, in fact, "look through" the vast Books of Nature and Art in the course of a day. And he must be stupid, indeed, if he does not learn something.

One would naturally imagine that so attractive a place as the Sydenham Palace would prove an immense success in a pecuniary point of view. On the contrary, it seems that the Company is in considerable difficulty. The report of the Company has just been issued. Up to the 30th of June last, the expenditure had amounted to the enormous sum of $6,135,000; while there was still $350,000 wanting to complete the building and improvements. The Company owes for land a balance of $280,000, besides a sum which was appropriated from the revenue amounting to nearly $320,000. They cannot, by the terms of their charter, borrow more than half of the amount of their capital, which amount they have already nearly eaten up. The moneys appropriated, therefore, out of the revenue have to be looked on as money sunk; and in spite of the attractions of the Palace, we suspect that it will be a long time before it pays a dividend.

After all, it is not surprising that this scheme should not have turned a profitable one. Its success depended entirely on the patronage of the masses, as the successes of all monster undertakings do. Now, the masses in England have only one day in the week on which they can amuse themselves—Sunday. On Sunday the Palace at Sydenham is shut, in deference to the religious opinions of several pious Members of Parliament, who would not hear of Sunday admissions in the Company's charter. The poor London mechanic, therefore, for whose use this great building was originally undertaken, is entire-debarred from enjoying it. He may read about it in the papers, and see pictures of it in the Illustrated London News, but the law takes care that he commits no such awful crime as wandering through its avenues of wonders on Sunday. [N. Y. Times.

A Sad Scene.

Portions of the French troops which took part in the siege of Sevastopol have been welcomed back to Paris with great pomp and ceremony. The letters from that city, published in the daily papers, are filled with the details. We copy a few paragraphs, relating to the grand procession, from a letter to the N. Y. *Daily Times*:—

Each regiment was preceded by its music, its flag and its wounded. The excitement commenced with the appearance of Gen. Canrobert, and the bronzed, warlike-looking fellows of the 20th Regiment of the Line. The regiment, which went from Africa to the Danube, served in the Dubroudscha and at the Alma, at Inkermann and the Malakoff, aroused a perfect storm of enthusiasm in the spectators. Their platoons were left, just as death had thinned them out, and presented but a meagre representation of a complete regiment. Its wounded were numerous, and the decorations were liberally distributed throughout the remains of this gallant band. Many of them were wanting in arms and legs; and I saw one poor fellow whose face was horribly mutilated by sabre cuts. With their brown visages, long beards and much-worn clothes, they seemed to have just come from the battle field. They all carried wreaths of laurel, thrown them by women in the crowd. Some had placed them on their bayonets, some on their sword-hilts, while some carried them in their hands. The flag of this regiment, which was well riddled with balls, was dressed in mourning for its ancient bearer, who was killed with it in his hands at the Malakoff. Over the crape hung a wreath of laurel.

Next came the 50th of the Line, preceded by Gen. Blanchard, who carried his arm in a sling and looked pale and emaciated from long confinement with his wound. He excited the liveliest interest in the crowd, one-half of whom were in tears at the touching spectacle which was passing before them. This was the regiment so fearfully decimated at the final attack on the Malakoff, and like the 20th, which preceded it, its platoons were much thinned out. In front marched perhaps a hundred wounded men, who presented as great a variety of horrid mutilations as a surgeon could wish to see. These brave fellows, although they had the same bronzed, unshaved and dirty look of the men of the 20th, were more warlike and less fatigued. They marched with a firm, bold step, and looked ready for another last charge. Their flag was faded and almost in shreds. In their rear marched three men, who attracted much attention. One of these was a thin, frail man, beardless and of light complexion, who carried on his breast five decorations, and who had to be supported by two of the hospital attendants. This is the man whose exploits have so frequently found their way into the journals, and whose last was to kill two Russians, take another prisoner, and put two others to flight—the five Russians having fallen upon him in an unguarded moment. He was loudly cheered. The other two were an officer and man, the last remains of a company of forty, whose history is sad enough. The company, which was originally composed of eighty men, had gone through the entire war, and been reduced to forty. This forty had, after the fall of Sevastopol, got their discharge, to take effect in a short time, but, during this short time, the Colonel of their regiment found it necessary to detail them upon an enterprise where they fell into an ambush and were all killed but the two whom we saw marching through the streets to-day; and these two only extricated themselves by superhuman efforts, after having killed several of the enemy. These men were loudly cheered by such as knew their history, but it was enough to see them placed in an isolated position, and decorated. The crowd understood that they were brave men who had especially distinguished themselves. The officer, who was lame, rode, while the man walked at his side, and the tableaux told its own tale.

A Picture of War.

The Russians are greatly rejoiced at the capitulation of Kars, after it had endured a long siege. The following extract from the correspondence of the London *Times* will give some idea of the condition of things which led to the surrender of the place:—

"Numbers have been frozen to death, and the villages along the road from Kars are filled with their miserable comrades, who have sunk exhausted upon the way. We see them staggering in all day along the principal thoroughfare into the city, haggard and footsore, their countenances half idiotic from cold, hunger and fatigue.

Their condition, even before leaving Kars, was as wretched as could be; so much so (I quote word for word from an eyewitness) that it was positively painful to stir out of doors. They were lying about in all directions, groaning piteously—watching the Russian provision-wagons, which, as if to add to their misery, passed almost all day within their ken. Townspeople and soldiers alike suffered all the horrors of famine. The former crowded round the General as he rode out of his quarters, and prayed him, with all the eloquence of despair, to seek some means of putting an end to their misery. Women forced their way into his very rooms, and, throwing their starving children at his feet, implored him rather to kill them at once than let them perish thus piecemeal for want of sustenance.

The hospitals were crowded with sick; on the Thursday before the surrender 80 men died in one day. Many went mad or became idiots from sheer hunger and hard work. Those who preserved a remnant of health, half-starved as they were, and scarcely clothed, were obliged to mount sentry almost every night up to the ancles in snow. Since the battle of the 29th there had been no animal food to issue to the troops. Horses had indeed been killed in the General's stables secretly by night, but the meat was sent to the hospitals for the sick. A pittance of bread or flour made into weak broth, was all that the working soldiers had to subsist upon. Discipline was almost at an end."

Casualties for a Year.

From the New York Observer, Jan. 17.

It is not surprising that in these days of travel, and of peril by land and by sea, the chapter of accidents and casualties for the past year should be long and sad. We have gathered from reliable sources the facts and figures which are appended, although it is highly probable that the number of deaths by fatality of travel is somewhat greater than is here represented.

During the year 1855, the number of railroad accidents in various parts of the country, resulting in losses of life or of limb, was 142, by which 116 persons were killed, and 539 badly wounded. More than 60 employees of the railroad companies are included in this number of the killed, of which 20 were engineers, and 6 conductors.

The steamboat accidents have not been so numerous, amounting to 27, but resulting in 176 deaths, an increase of 60 over those caused by rail.

The loss of property occasioned by destructive fires has been enormous, amounting to more than $13,000,000. This is the estimated loss of about 200 extensive conflagrations; the figures do not embrace the vast amount of property destroyed by almost innumerable smaller fires.

Disastrous as these results seem to be, they are happily far less in magnitude than those of the former year, 1854. During that year the railroad accidents numbered 51 more, while the number of the killed was 70, and of the wounded 50, greater than in the last year.

The steamboat accidents of 1854 were 48, diminished in 1855 to 27; the killed were 587, diminished to 176; the wounded 225, diminished to 107.

The number of fires in 1854 was 223, which decreased by 30 in 1855; and the loss of property amounted to $20,000,000, which was reduced to $13,000,000 during the last year.

The New Chaplain.—Rev. Henry Clay Dean, the present Chaplain to the United States Senate, was some years ago a resident of North-western Virginia. While preaching one day at a church situated a few miles from Fairmount, he was annoyed by the inattention of his congregation, as manifested in turning their heads to see every body who came in. "Brethren," said he, "it is very difficult to preach when thus interrupted. Now do you listen to me, and I will tell you the name of every man as he enters the church." Of course, this remark attracted universal attention. Presently some one entered: "Brother Scatterfield," called out the preacher, while the "brother" was astonished beyond measure, and endeavored in vain to guess what was the matter. Another came in—"Brother Joseph Miller," bawled the preacher, with a like result; and so perhaps in other cases. After a while the congregation were amazed at hearing their preacher call out in a loud voice—"A little old man, with a blue coat and a white hat on! Don't know who he is! You may look for yourselves."

New York and Erie Railroad.

On and after Wednesday, Oct. 31, and until further notice, Passenger Trains will leave the pier foot of Duane-st., New York, as follows:

Buffalo Express at 7 A. M. for Buffalo direct, without change of baggage or cars. At Hornellsville this Train connects with a Way Train for Dunkirk and all stations on the Western Division.

Mail at 8¼ A. M. for Dunkirk and Buffalo, and all intermediate stations. Passengers by this Train will remain over night at Owego, and proceed the next morning.

Newburg Express, at 4 P. M., for Newburg direct, without change of cars.

Rockland Passenger at 4 P. M. via Sufferns for Piermont and intermediate stations.

Way Passenger at 4 P. M. for Otisville and intermediate stations.

Night Express at 5 P. M. for Dunkirk and Buffalo.

Emigrant at 5 P. M. for Dunkirk and Buffalo and intermediate stations.

On Sundays only one express train, at 5 P. M.

These Express Trains connect at Elmira with the Elmira and Niagara Falls Railroad, for Niagara Falls, at Buffalo and Dunkirk with the Lake Shore Railroad for Cleveland, Cincinnati, Toledo, Detroit, Chicago, &c.

D. C. McCALLUM, General Sup't.

Ayer's Pills.

For all the purposes of a Family Physic. There has long existed a public demand for an effective Purgative Pill which could be relied on as sure and perfectly safe in its operation. This has been prepared to meet that demand, and an extensive trial of its virtues has conclusively shown with what success it accomplishes the purpose designed. It is easy to make a physical *Pill*, but not so easy to make the best of all *Pills*—one which should have none of the objections, but all the advantages of every other. This has been attempted here, and with what success we would respectfully submit to the public decision. It has been unfortunate for the patient hitherto that almost every purgative medicine is *acrimonious and irritating* to the bowels. This is not. Many of them produce so much griping pain and revulsion in the system as to more than counterbalance the good to be derived from them. These *Pills* produce no irritation or pain, unless it arises from a previously existing obstruction or derangement in the bowels. Being purely vegetable, no harm can arise from their use in any quantity; but it is better that any medicine should be taken judiciously. Minute directions for their use in the several diseases to which they are applicable are given on the boxes. Among the complaints which have been speedily cured by them we may mention Liver Complaint, in its various forms of Jaundice, Indigestion, Langor and Loss of Appetite, Listlessness, Irritability, Billious Headache, Billious Fever, Fever and Ague, Pain in the Side and Loins, for in truth, all these are but the consequence of diseased action of the liver. As an aperient, they afford prompt and sure relief in Costiveness, Piles, Colic, Dysentery, Humors, Scrofula and Scurvy, Colds, with soreness of the body, Ulcers and impurity of the blood; in short, any and every case where a purgative is required.

They have also produced some singularly successful cures in Rheumatism, Gout, Dropsy, Gravel, Erysipelas, Palpitation of the Heart, Pains in the Back, Stomach, and Side. They should be freely taken in the spring of the year, to purify the blood and prepare the system for the change of seasons. An occasional dose stimulates the stomach into healthy action, and restores the appetite and vigor. They purify the blood, and, by their stimulant action on the circulatory system, renovate the strength of the body, and restore the wasted or diseased energies of the whole organism. Hence an occasional dose is advantageous even though no serious derangement exists; but unnecessary dosing should never be carried too far, as every purgative medicine reduces the strength, when taken to excess. The thousand cases in which a physic is required cannot be enumerated here, but they suggest themselves to the reason of every body; and it is confidently believed this Pill will answer a better purpose than any thing which has hitherto been available to mankind. When their virtues are once known the public will no longer doubt what remedy to employ when in need of a cathartic medicine.

Being sugar wrapped they are pleasant to take, and being purely vegetable, no harm can arise from their use in any quantity.

For minute directions, see the wrapper on the Box.

Prepared by Dr. J. C. AYER, Practical and Analytical Chemist, Lowell, Mass.

Price 25 Cents per Box. Five Boxes for $1.00.

Ayer's Cherry Pectoral,

For the rapid cure of Coughs, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption. This remedy has won for itself such notoriety for its cures of every variety of Pulmonary diseases, that it is entirely unnecessary to recount the evidences of its virtues in any community where it has been employed. So wide is the field of its usefulness, and so numerous the cases of its cures, that almost every section of the country abounds in persons publicly known, who have been restored from alarming and even desperate diseases of the lungs by its use. When once tried its superiority over every other medicine of its kind is too apparent to escape observation, and where its virtues are known, the public no longer hesitate what antidote to employ for the distressing and dangerous affections of the pulmonary organs which are incident to our climate. And not only in formidable attacks upon the lungs, but for the milder varieties of *Colds, Coughs, Hoarseness, &c.* and for Children it is the pleasantest and safest medicine that can be obtained.

As it has long been in constant use throughout this section, we need not do more than assure the people its quality is kept up to the best that it ever has been and that the genuine article is—

Sold at wholesale in New York by A. B. & D. Sands; retail by Rushton, Clark & Co., and by all Druggists, everywhere.

The Sabbath Recorder,

PUBLISHED WEEKLY
By the Seventh-day Baptist Publishing Society,
AT
NO. 9 SPRUCE-STREET, NEW YORK.

Terms:

$2 00 per year, payable in advance. Subscriptions not paid till the close of the year, will be liable to an additional charge of 50 cents.

☞ Payments received will be acknowledged in the paper so as to indicate the time to which they reach.

☞ No paper discontinued until arrearages are paid, except at the discretion of the publisher.

☞ Communications, orders, and remittances, should be directed, post paid, to

Geo. B. Utter, No. 9 Spruce-st., New York.

Liabilities of those who take Periodicals.

The laws declare that any person to whom a Periodical is sent, is responsible for payment, if he receives the paper, or makes use of it, even if he has never subscribed for it, or has ordered it to be stopped. His duty in such a case is not to take the paper from the office or person with whom the paper is left, but to notify the publisher that he does not wish for it.

If papers are sent to a post-office, store or tavern, or other place of deposit, and are not taken by the person to whom they are sent, the postmaster, store or tavern-keeper, &c., is responsible for the payment until he returns the papers, or gives notice to the Publisher that they are lying dead in the office.

GEOLOGY AND THE BIBLE.

To the Editors of the Sabbath Recorder:—

I have been much gratified with the perusal of several communications which have appeared in your paper of late on the subject of "Geology and the Bible." Although very interesting to me, I find that they are not so to every one, as I perceive that Eli S. Bailey, and "A Subscriber in Rhode Island," have entered their objections to a further continuance of the controversy in the *Recorder*, and have proposed to start "a *literary* omnibus," which should be open to all the *ologies* and *isms* of the day. Now I have no objection to those brethren (and all who may agree with them) riding in such a conveyance, if they can establish one to suit them, to their hearts' content; but as it is very doubtful whether such an establishment will ever be brought into operation, and as I do not exactly agree with any of the writers, I have thought best to offer you one more communication on that subject, with full liberty, if you think it opposed to the cause for which the *Recorder* was established, to throw it under the table, or into the fire, as you may think best.

I do not propose to attempt a regular review or criticism of their productions, but only to give a few of the reasons, in as brief and comprehensive a manner as possible, why I cannot agree with them in their views of the work of creation.

It is now more than half a century since I first heard disputation about the creation of the world, whether it was all accomplished in six days. I was too young to say much, but thought the more; but as far as my thoughts would go, they were in favor of the negative of the question, though I felt but little interest in the matter at that time, nor until I arrived at the age of maturity, when I became more inquisitive, and was often quizzing my friends, especially those I thought knew the most. At length I applied to a clerical friend, in whom I had unlimited confidence, for his opinion. He admitted that the time seemed short for such a vast work, but that we ought not to doubt the power of Almighty God to accomplish it in that time, if he saw fit, or thought it best. I replied, "That is not the object of my inquiry. I do not claim or desire to know any thing of the extent of his power, any more than I do of the material of which the sun is composed, which unconsumed forever burns. I know not but he has power to speak a horse into existence, with saddle and bridle in order, and a rider in his seat, ready for a race, as soon as I could go to my barn and harness my horse and be ready for the start. The question is not whether he has the power to perform such an operation, but whether *he has done it*, and whether it is consistent with his plan of operations, and the laws which he has established at the beginning for the good order and well-being of creation." He finally concluded the question was beyond his reach or comprehension, and said no more; and I remained in darkness or ignorance another term of years.

At length the controversy was revived with the Geologists, and feeling myself identified with them, I again entered the field of inquiry, and was soon led to make a closer examination of the Mosaic record than I had heretofore done, and discovered a distinction there is made between the animal and vegetable departments, which had hitherto escaped my notice. It appears that on the second day, or as soon as the earth and the waters were separated, and the earth was in a condition for vegetation to commence, God said, "Let the earth bring forth grass, the herb yielding seed, and the fruit tree yielding fruit after its kind, *whose seed is in itself upon the earth;* and it was so." Gen. 1: 11. Now nothing is said in this decree of any thing but grass and fruit; but in verse 20th it is further said, "Let the water bring forth abundantly the moving creature that hath life, * * and God created the great whales, and every thing that hath life," &c. Again, verse 24th, "And God said, Let the earth bring forth the living creature after his kind, cattle and creeping thing; and God made the beasts of the earth, and the cattle after their kind, and every thing that creepeth upon the earth; and God saw that it was good." Here, then, we have three distinct and separate requirements of the earth and water *to bring forth;* two for living animals, and one for vegetables; yet of living animals, fowls, and creeping things, it is said, God made them; and as he endowed them with life and volition, it may with propriety be said that he made them, in contradistinction from the vegetables, which he did not make; he only made the seeds, and committed them to the earth, or qualified the earth to bring them forth without seed, a kind of spontaneous production, which I have no doubt has been continued to the present day; for whenever the earth is laid bare, or exposed to the direct rays of the sun, grass and a certain kind of herbs will appear, while the fruit tree, *whose seed is in itself,* can only be obtained from the seed. I have seen grass growing, sufficient for the subsistence of cattle, so far north that the season was not long enough for the seed to ripen. Whence, then, came the grass? I am aware that I may be told that it was carried by the birds; but birds who live on vegetable seeds do not frequent that country, and if they did, I should not suppose that seed dropped by birds would vegetate any sooner than it would after passing through a flouring mill.

I admit, that the first chapter of Genesis, and the three first verses of the second, is a reasonable and consistent account of creation, except so far as concerns the length of the day, which, for the sake of making consistency in the operation of God's laws, I must consider a period much longer than twenty-four hours. I think it is well known to every person at all conversant with Scripture, that the term *day* is often used to represent periods of very different length of time, as "the day of the Lord," which is repeated more than a dozen times; "the day of Jesus Christ," "the day of judgment," "the day of vengeance," "the day of grace," &c. Webster defines a day to be "any period of time distinguished from other time." There is no number of days, months, or years, given in these periods, but no doubt some of them are periods of great length. Some hold to the period of twenty-four hours, because it has the evening and morning attached to it; but every period of time has its beginning and end, consequently its evening and morning, as well as the day of twenty-four hours, although they have no bearing on the question concerning the length of the *day* of creation, and no heavenly orb to mark their beginning or end.

I will now introduce some testimony from Holy Writ, to prove that a *day* of creation embraces a period of time vastly longer than twenty-four hours, namely, King David and the Apostle Peter, two as good witnesses, I think, as can be produced from the whole catalogue of those who have testified to the truth of Christianity, and who would be as likely to speak by inspiration as the scribe who penned the Mosaic record.

Peter says, "Beloved, be not ignorant of this one thing, that *one day with the Lord is as a thousand years, and a thousand years as one day.*" 2 Peter 3: 8. This, with the context, (the three preceding verses,) proves conclusively, to my mind, that Peter, in this remarkable exhortation, referred exclusively to the creation of the world; else, why, and for what purpose, could it have been given, being entirely disconnected with any other subject. Had it not been something of some importance, I think the "beloved" would not have been charged *to keep it in memory and not be ignorant.* Peter's counsels or exhortations have always been for peace among brethren, and I know not why they should not have had contentions among them about the creation, the same as we have now, as I suppose they had the same documents. There has been nothing lost or added, I believe, since that time, and I have no doubt they differed—perhaps quarreled a little—as we do at the present day, and called each other hard names, and charged them with infidelity, as Dr. Lord has done, or blasphemy, as S. Davison does those who oppose his views of creation. Hence Peter's counsel for peace.

David says, "Before the mountains were brought forth, or ever thou hadst formed the earth and the world, even from everlasting to everlasting, thou art God. Thou turnest man to destruction, and sayest, Return ye children of men. For a thousand years in thy sight are but as yesterday when it is past, and as a watch in the night." David's object is not altogether as visible as Peter's, yet I consider the testimony equally as strong, that at the creation a thousand years were considered a day, or a day a thousand years. Admitting this to be a truth, of which I have no doubt, the idea of an instaneous creation, by speaking things into existence, which some have so strongly urged to support their theory, will vanish, as I have ever considered it very weak testimony, and not applicable to the case at all. I suppose it must have had its origin in David's words in the thirty-third psalm, "For he spake and it was done; he commanded and it stood fast." This I have ever considered as relating to nothing more than the perfection of his system of operation, the same as I have heard said of some naval commanders; their system of discipline was a word and a blow, and the blow always came first; but yet I have never understood the operation of speaking into existence, though Dr. Fahnestock says, in one of his communications, that it was just as easy for the Almighty to speak every thing into existence in the twinkling of an eye, as any other way; to which I reply, if that be the case, I can see no reason why six days should have been occupied for that purpose, if nothing was to be gained by it. I think that course would have been carrying the matter to one extreme, as far as a thousand years to a day would carry it to the other, and with far less reason. It is certain that the earth was qualified to bring forth grass for cattle, and fruit for man, and that out of the ground the Lord God made every tree to grow, and that when he gave the dominion to Adam, he said unto him, "Behold, I have given you every herb bearing seed, and to every beast of the earth, and every fowl of the air, and every creeping thing, wherein there is life, *I have given* [illegible] *green herb for meat;* and God saw that it was good." Now I think it equally certain, that if those vegetables grew out of the earth from seed committed to it by the Creator, (and we hear of no other method of production,) it must require more than two or three days of twenty-four hours to accomplish it; and I think I should not be doing my friend or brother justice to call him an infidel or blasphemer for disbelieving it. I think it would be far more consistent to admit that a day consisted of a longer period, even to a thousand years.

To me it is very evident, that Adam and Eve were brought into existence by a different process from any thing that had preceded them, as neither the earth nor sea were required to bring them forth; all we know is this: "And God said, Let us make man in our image, after our likeness. So God created man in his own image, male and female created he them;" but by what process different from that of the animals that preceded them, we are left entirely in the dark, and I do not recollect that I have ever seen but one opinion offered by any writer who has given his views to the public, and he did not think that man was a new or original creation, but only an improvement of the monkey by several generations—the first from the common monkey to the ape—the second from the ape to the baboon—and thence to the ourang-outang, and thence to the black man, and from the black man to the white man or Adam; and he then gave his opinion that the ourang-outang does not differ as much from the black man as the black man does from the white man. I do not propose to endorse this opinion, but think it vastly more plausible than the idea of instantaneous production, or speaking things into existence contrary to the natural course and order of creation. The idea that but one day of twenty-four hours transpired from the time that God said, "Let us make man," to the time he was charged with the dominion of all things, on the earth and in the sea, and then remained in a state of total inactivity, for all we know, eight hundred years, or to the time he begat sons and daughters, is a tax on my credulity a little beyond my ability to bear, and so must remain, till some one appears for my relief more given to solving mysteries than myself.

In vindication of what I have said of the regularity of God's laws and works, I offer a few extracts from writers who have preceded me, whose views, I think, are entitled to a brief consideration.

John Ray, who wrote nearly a hundred years ago, before geologists had fairly commenced their researches in the bowels of the earth for testimony in favor of the great age of the earth, says: "Man is always mending and altering his works; but nature observes the even tenor of her ways, because her works are so perfect that there is no place for amendment—nothing that can be reprehended—no blot or error in this great volume of the world, as if any thing had been an imperfect essay at first—nothing that can be altered for the better. This proves it not to have been the work of chance, but of counsel and providence."

The other extracts are from the New York Quarterly for October, 1834: "Our advancement in knowledge is nothing but the continued discovery of the general laws under which effects are produced, through natural causes, which the more ignorant ascribe to the simple creative energy of God. We are astonished to find so many things traceable to natural causes, and to see that they are produced under general laws. Nor can we set any bounds to future progress of discovery in this direction. Animals neither reason nor learn, but are guided and governed by an instinct whose laws are as inevitable as those of inert matter itself. The stone does not fall more naturally than the young duckling swims." "It is for man that the world is constituted under fixed laws, which he alone is able to learn and take advantage of, and thus bring all things under his feet. Our knowledge is of these general laws. We call them laws of nature, as if nature itself was a force, while in fact the only real force is the real power of the Creator, and these laws are but the rule of action which he prescribes to himself in order that man may be able to acquire useful knowledge. Were there no fixed laws of cause and effect, we could know nothing of nature, and could have no exercise of reason in guiding our conduct. The conviction we have of the absolute certainty and immutability of those laws, is God's revelation to man of his determination to work all changes according to those rules, and is God's pledge that he never will, in any case, depart from those rules, or reverse those laws of nature, only for a palpably wise and sufficient reason, connected with the highest good of man. God has made the world such that the intellect may study its laws with the innate conviction that they are laws, and not accidents, while the heart may seek and acknowledge the favor of Heaven, as though there were no laws of divine administration, but that of direct interposition at the promptings of personal love. The agonizing entreaties of parental love in behalf of a sick child, the spontaneous cry of the shipwrecked mariner, the prayer of pious souls for deliverence from public calamities, can reach the ear of the Almighty, and receive their appropriate return, without a suspension of the laws of nature, just as the influence of divine grace can transform the soul, and fill it with pure thoughts and heavenly joys and right purposes, without violating the laws of mind. There is nothing in the works of God which may not be studied philosophically as a product of divine wisdom—nothing in the events of life which may not be acknowledged devoutly as a proof of divine love. The world is for man as to his whole being, and most of all for him as to his highest nature as an accountable subject under training for the kingdom of heaven and eternal happiness.

CLING TO THE MIGHTY ONE.

Cling to the Mighty One, Ps. lxxxix. 19.
  Cling in thy grief, Heb. xii. 11.
Cling to the Holy One, Heb. i. 12.
  He gives relief: Ps. cxivi. 9.
Cling to the Gracious One, Ps. cxvi. 5.
  Cling in thy pain; Ps. lv. 4.
Cling to the Faithful One, 1 Thess. v. 24.
  He will sustain Ps xxviii. 3.
Cling to the Living One, Heb. vii. 25.
  Cling in thy wo; Ps. lxxxvi. 7.
Cling to the Loving One, 1 John iv. 16.
  Through all below; Rom. viii. 33, 39.
Cling to the Pardoning One, Is. iv. 7.
  He speaketh peace: John xiv. 27.
Cling to the Healing One, Exod. xv. 36.
  Anguish shall cease. Ps. cxlvii. 3.
Cling to the Bleeding One, 1 John i. 7.
  Cling to his side; John xx. 27.
Cling to the Risen One, Rom. vi. 9.
  In him abide; John xv. 4.
Cling to the Coming One, Rev. xxii. 20.
  Hope shall arise; Titus ii. 13.
Cling to the Reigning One, Ps. xxvii. 1.
  Joy lights thine eyes. Ps. xxi. 11.

ANECDOTES OF THE PULPIT.

Dr. Sprague, in his work, "European Celebrities," tells an anecdote related to the author by Rev. George Burder, which belongs to that dark period in the history of the Established Church, when few evangelical sermons were heard from its pulpit:—

Mr. Jones had a college classmate, who entered the ministry at the same time with himself, but was a mere man of the world, and knew little, and cared nothing, about the true Gospel." This man, conversing one day with Mr. Jones, said to him, half jocosely, half-seriously, "Why is it that you are so popular as a preacher, and so few come to hear me, when everybody knows that at the University I was considered greatly your superior?" "Why," said Mr. Jones, "the reason is that I preach the Gospel." "The Gospel," said the other, "so do I; almost every text I preach upon is from Matthew, Mark, Luke, or John." Said Mr. Jones, "You may do that, and yet never preach Jesus Christ." "Well," said the other, "lend me one of your sermons, and see what effect it will have." He actually did lend him one, and he preached it as he had engaged to do; and as he was coming out of the church at the close of the service, he was accosted by a man who, in listening to the borrowed discourse, had been thrown into a state of deep anxiety in respect to his salvation. Says the minister, somewhat confused by the strange result of his preaching, "Wait, wait; say nothing about it till the people have all gone out." After the congregation had retired, the anxious inquirer began further to explain himself, when the clergyman interrupted him by saying—"But what is the matter with you? I see no occasion for your making yourself unhappy." "Matter," replied he; "why your preaching has made me feel like a condemned criminal, and I fear there is no mercy for me." "Well, really," said the minister, "I am very sorry that I have wounded your feelings—I had no intention of doing it; but since you have got into this uncomfortable state, I advise you to go and see Mr. Jones."

Rev. Charles Simeon indulged in both sharp and complimentary criticisms on American preachers, as may be inferred from the following specimens:—

I had sent him, not long before, several of our American books, in most of which he professed to be deeply interested; but there was one (the Murray-Street Lectures) which he did not like, and he wished to tell me honestly the reason. Said he, "A number of your ministers have undertaken in that work to show what they can do; and, though they have certainly displayed ability, I do not think that such preaching, continued through four thousand years, would ever convert a soul." I remarked to him, that I supposed each individual felt himself called upon to make a great effort. "Yes," said he, very pleasantly, "it would seem to me like a great effort to keep out the Gospel." He spoke with much enthusiasm of Jonathan Edwards; but he seemed to admire him rather for the pungency of his preaching than the depth of his metaphysics. Said he, "His preaching reminds me of a man's holding another's nose to the grindstone, and turning with all his might, in spite of all objections and expostulations."

Dr. Sprague had the good fortune to listen to Robert Hall in one of his wonderful flights of eloquence, and records his impressions in a genial manner:—

I went the next morning to Broadmead Chapel, to hear him preach. It was, by no means, a large building; nor was the congregation, in point of numbers, anything like what I had expected; though I understood it was select, and had in it an unusual proportion of intelligent men. One of the tutors in the Baptist Theological Academy at Bristol performed the introductory services, and it was not till they were singing the second time, that Mr. Hall walked into the pulpit. His gait was slow and majestic; and if I had known nothing of him before, I should have needed nobody to assure me that he was some extraordinary personage. He rose and announced his text in the most unpretending manner that can be imagined, and in so low a tone that I found it difficult to understand him. For several minutes there was no material improvement in his style of elocution—he kept pulling the leaves of his Bible, as if he were a book-binder, engaged in taking a book to pieces; and his eyes were steadfastly fixed in one direction, as if his whole audience were gathered into one corner of the room. I said to myself—"If this is Robert Hall in England, I greatly prefer to meet him as I can in America; for I had rather read his writings, than merely hear his unintelligible whispers." Presently, however, the scene began to change, and his voice, though still low, became distinctly audible. For the first fifteen or twenty minutes he said nothing which would have led me to inquire who he was, if I had not known; for the last twenty-five or thirty, it seemed to me that he said scarcely anything that could have been said by another man. It was like an impetuous mountain torrent in a still night. There was not the semblance of parade—nothing that betrayed the least thought of being eloquent, but there was a power of thought, a grace and beauty, and yet force of expression, a facility of commanding the best language, without apparently thinking of the language at all, combined with a countenance all glowing from the fire within, which constituted a fascination that was to me perfectly irresistible. As he advanced to the close of his discourse, the effect upon my nervous system was like the discharge of artillery; and though I was completely rapt with wonder and admiration, I was not sorry when he said—"Let us pray." I shall, perhaps, be less suspected of extravagance in this statement, when I say that Robert Hall's own people regarded this as an extraordinary performance; and one of his intelligent hearers told me that I might have heard him for years, and not have chanced to hear so fine a sermon.

[Watchman and Reflector.

THE TOMB OF THOMAS PAINE.

A correspondent of the *Journal of Commerce* gives a description of Thomas Paine's tomb and its surroundings:

Some years since, I collected from a correct source a few scraps of information respecting the latter scenes of Paine's life. About two miles north of New Rochelle, is situated the "Paine Farm," an elevated tract of land, containing, at the time of his death, several hundred acres of genuine Westchester county fertility. Opposite, and across the street from the entrance to his farm, stands an ancient and somewhat dilapidated house, in which Tom Paine passed the last period of his life, and in the large eastern room of which he breathed his last. This house is now nearly or quite two hundred years old, and at the time of Paine's death was a country tavern; and the ancient sign, "Entertainment for Man and Beast," can, I think, be found in its garret. The landlady was Mrs. Badeau, a descendant of the first French settlers of New Rochelle. Her daughter, Mrs. Badeau, still lives on the place, and was, at the time referred to, twelve or thirteen years of age. His remains were interred on his own farm, directly opposite the house in which he died; and the spot was enclosed by a rough stone wall, traces of which still remain. The ground for some distance around his rude tomb, has remained uncultivated since his death, while brambles have occupied the spot which, had he died twenty years before, would have given place to the evergreen and rose, planted by the hand of friendship. About two rods from his grave stands the monument erected to his memory by the admirers of his talent and principles. It is of marble, in the Grecian style, about nine feet high, encircled with a wreath of oak leaves and acorns. On its front is displayed a profile in bas-relief, said to be a perfect likeness of the man. Below this is the simple inscription—"Thomas Paine, author of Common Sense." The profile bears a striking resemblance to the medallion of John Hancock.

Many years ago, when a small timid boy, I passed a night in the old house, and in the "Paine Room." It was a dark and stormy night in mid-winter; the fierce wind swept past the corner of the room, and dashing the rain in torrents against the unprotected window at my head, died sighing away amid the branches of the old pear-tree, which, swayed by the blast, creaked against the house with an unearthly sound Paine's grave was but a few yards from me—and my fancy pictured him with a legion of demons awaiting his command to bear me away and wreak vengeance on me for occupying the place to which he had laid claim. To add to my fears, huge rats ran about the room, squeaking, fighting, and jumping upon the bed occasionally. I covered my head, and lay in fear and trembling till daylight. The effect upon my timid mind remained for years; and even now, on a stormy night, I think of Tom Paine, and the room in which he closed his miserable career.

MEANS OF SECURING A BLESSING.

Dr. Chickering, in his recent volume, furnishes the following illustration of the effect of prayer in a protracted meeting:—

Two days of the meeting had passed away. Though the attendance was good, there was little apparent feeling, yet some hearts were agonizing in prayer; and others were beginning to tremble with conviction. The evening services at the distant neighborhoods were unusually solemn. A new spirit of grace and supplication was poured out upon God's people.

One brother in the church, unable to sleep, arose and went to the houses of two others, called them up, and spent with them the remainder of the night in fervent prayer. In the morning they called upon the pastor, that they might still further relieve their burdened hearts, and learn new tidings of the grace of God; tidings which soon poured in, both upon him and them, perhaps beyond their faith, certainly beyond his.

The godly mother of some awakened persons, an aged Baptist professor, arose in the night, and made her way to the dwelling of a near neighbor, an intimate friend and sister in Christ, to engage her supplications for those much-loved souls. They soon rejoiced in gracious answers to those prayers.

When the ministers came together the next morning, the fruits of all those prayers were manifest. Not only had they received a new baptism of the Holy Ghost, a new unction from on high, greatly adding to their fervency and effectiveness in the labors of the day, but many of them had some new thing to tell, of the grace of God, in the families where they had been entertained, or in the respective neighborhoods.

From that memorable night, which might be called emphatically the night of prayer, was dated a new era in the progress of the work.

O! that there were more such nights! nights when Christians cannot sleep; not only during protracted meetings, but at other times. Such feelings on the part of the people, would be both a result and the procuring cause of larger measures of the Spirit. Such morning visits from sleepless brethren would cheer the hearts of the weary watchmen upon Zion's walls. The church would be seen giving heed to the inspired exhortation—"Keep not silence, and give no rest, till he establish, and till he make Jerusalem a praise in the earth." When such nights come, the morning of Zion's joy and prosperity will not be long delayed.

AN AFFECTING INCIDENT.

An affecting occurrence took place some time ago in a seaboard town in England. Six little children got into a boat on the beach, and a mischievous boy shoved it off. The boat drifted away to sea before the children were missed. Terrible was the agony of the mothers when they knew it. A number of men went off in all directions; every boat was on the lookout till far in the night. Daylight returned, and still there were no tidings from the helpless children; the day wore away, and still nothing was heard from them—they were either lost in the wide expanse of the whole ocean, or hurled within its unfathomable depths. A Plymouth fisherman, fishing early next morning, discovered something floating in the distance; he bore down to it, and discovered it to be a boat, and in the bottom six children, all huddled together like a nest of birds, fast asleep—God having mercifully given them that blessed solace after a day of terror and despair. He took them aboard, and feasted them with bread and cheese, and gladdened their despairing little hearts with the promise of taking them home. Between three and four in the afternoon, the fisherman was seen in the offing, the boat astern. All eyes were turned towards him; the best spy glass in town was rubbed again and again, and at last they fairly could see that it was the identical boat. The news flew through the town—the mothers came frantic to the beach, for there were no children discerned in the boat; none to be seen in the sloop. Intense was the agony of suspense, and all alike shared it with the parents. At last the boat came in, and the word went round, "They are all safe;" and many stout-hearted men burst into tears, women shrieked with joy, and became almost frantic with their insupportable happiness. It was, indeed, a memorable day; and a prayer, eloquent for its rough sincerity, was offered up to Almighty God, who, in his infinite mercy, had spared these innocent children from the perils and terrors of the sea during that fearful night. Five of these children were under five years of age, and the sixth was but nine years old.

I AM NOT ALONE.

An aged chief of Rarotonga was visited by Mr. Buzacott, of the London Missionary Society, who had noticed his absence from the Lord's Supper, and knew that there must be a good reason for it. The old man was reclining on his couch. "What!" said the missionary; "all alone!" "No," was the answer, "I am not alone; God is here with me." Where is the man, however wise, however great, who could have said more?

But this island chief has an open Bible before him. He lives far away from the centers of Christian benevolence; but that best of books has found him out. "What have you been reading?" asked the missionary. Having adjusted his spectacles, he turned to those words of Paul, so appropriate to his case: "For we know that if our earthly house of this tabernacle were dissolved, we have a building of God, a house not made with hands, eternal in the heavens." And does he, in very deed, enter into the meaning of this scripture? Yes; for he adds immediately, "That is what I am expecting." It will not be long before this earthly house will tumble down; then I shall have the house not made with hands, eternal in the heavens."

He has since slept in Jesus. His body rests on a hillock, which he himself had chosen. His people have placed a monument over his grave; and a coral slab stands against the wall of the chapel, in which he once delighted to worship, bearing the words, "Blessed are the dead which die in the Lord!"

[Journal of Missions.

DIP, POUR, SPRINKLE, AND WASH.

While I filled the Professorship of Ancient Languages in the University of Georgia, I had occasion to compile a table of passages where the words dip, pour, sprinkle, and wash, in their various modifications, occur in the English Bible, with the corresponding term used in the Greek of the New Testament and the Septuagint.

Dip I found in twenty-one passages. In all of these except one, bapto or baptizo is found in the Greek. The one exception is in Gen. 37: 31, where Joseph's brethren took his coat and dipped (*emolunan*, smeared or daubed) it in the blood of a kid. Mark the great accuracy of the Greek here—the idea is that of smearing or of daubing, and the Septuagint so expressed it.

Sprinkle, in some of the forms, I found in twenty-seven passages. In not a single instance is bapto or baptizo used in the Greek.

Pour, I found in no less than one hundred and nineteen instances, but in not even one of them did I meet with bapto or baptizo used in the Greek.

I found Wash in thirty-two cases, where reference was made, not to the whole person, but to a part, as the eyes, the face, the hands, the feet. In none of these was bapto or baptizo found, but nipto invariably.

[President Shannon, of the College of Louisiana.

The Gospel.—It is the design of the Gospel to take man wholly off himself, and cast him wholly upon God and Christ. All idols must be cast down, God alone must be exalted. Self-emptiness and God's fullness, self-insufficiency and Christ's sufficiency, self-righteousness and Christ's righteousness, are the great convictions of the Gospel; and to make self nothing, and God all in point of wisdom, strength, righteousness, and glory, is the great command and duty of it.

OUR CONTROVERSY WITH S. S. GRISWOLD—NO. 6.

The Resurrection.

Bro. G. has delivered himself quite fully upon the doctrine of the Resurrection. With all frankness, he discloses his adoption of the Swedenborg theory, that "the resurrected body is not the old body revivified and reconstructed, but it is one evolved out of it." He is "of opinion that the Bible does not teach the *resurrection of the body;* yet as firmly as any other man does he believe it teaches the *resurrection of the dead.*" And fancying that he has emerged into the light of a doctrine which makes all his former notions on this point, together with those of his brethren, look ridiculous, he asks whether we "believe in the resurrection of the identical material body which was buried at natural death, or some one of the many different atomic bodies which the soul inherits during its natural life?"—a question which he evidently supposes to be unanswerable upon our theory.

Now, Bro. G., our belief is distinctly this:—that man goes to the grave *in the body,* and rises from it *in the body.* Your question, embarrassing as you suppose it to be, is founded upon the established philosophical fact, that the component atoms of the human body are in a state of ceaseless fluctuation; therefore the body cannot, in strictness of speech, be said to be the same in any two successive moments of its duration. In the course of seven years—we think that is the period—all the particles of which the human body is composed have passed away, and their places supplied with new ones, so that none of us have identically the same body now that we had seven years ago.

Well, we do not know that we have said any thing to countenance the idea that there is a strict philosophical identity between the body that is laid to sleep in the grave and that which awakes in the morning of the resurrection. We do not know, either, that we have attempted to fix an identity between the resurrection body and that which a man has at any particular period of his earthly existence, whether at youth, manhood, or any other period. We have simply said, in substance, that man dies in the body, and rises in the body.

Now we presume that Bro. G. would have no hesitation in admitting that he went to bed, last night, *in the body,* and got up, this morning, *in the body.* Nor would he suppose that, in making this admission, he was misleading any one, or saying what was not true. Or, to present a case still more striking; our missionaries in China went out to that country some nine years ago. They went out *in the body;* and they are still (as we suppose) *in the body;* and should they come back again, they would come *in the body.* Is not this so, Bro. G.? Yet not one particle of their former bodies is now inherited by them. So a Nantucket whaler starts on a voyage to the Pacific, and is gone seven years. Not a particle of his body remains the same as it was when he started. Yet he goes out *in the body,* and comes home *in the body.* Again, the first time we ever saw Bro. G. was in the summer of 1840. The last time we saw him was in the fall of 1854—fourteen years afterward. We could not detect much difference in his appearance, but on consulting our philosophy, we find that he had not only lost all the particles of the body in which we first saw him, but of another one beside. Yet we thought he was in the body still; and when we now say, that our first interview with him was *in the body,* and that we saw him again, *in the body,* a year ago last fall, we presume that neither he, nor any one else, will dispute it.

Now, what is the meaning of such expressions? We are almost inclined to let Bro. G. answer this question himself; for we feel confident that he cannot give any answer, which will not furnish a key to the solution of the question he has proposed to us. The meaning is, that the soul, which is the real *man,* in each and all of these successive periods, sustains the same relation to that corporeal structure usually designated as the body. Not the same relation to its particles, numerically considered, but the same sort of relation to it, considered as the appointed tabernacle for his abode through all these successive periods.

We think we know enough of philosophy, as well as of Scripture, to understand that the body which is laid in the grave, is not, in strictnesss of speech, "that body which shall be" in the resurrection. We know that the existence of the body which we now inhabit, ceases at death; and we know that the same thing cannot have two absolutely different and distinct existences, notwithstanding it may have two different *modes* of existence. We do not say that the particles, or atoms, of which the natural body is composed, go into annihilation at death; they merely enter into new combinations. Whether there is any chymical process which, under the direction of Infinite Power, collects and gathers them again, in order to that which the Apostle calls "a spiritual body," is a question which we are not concerned to settle. It is clear that the material organization which we call the body, ceases to exist *as such,* at death. And we will admit, for the argument's sake, that the decomposed bodies which were buried years ago, have appeared above ground again, in the form of rank, luxurious vegetation; that cattle have fed upon the grass thus grown, and that Bro. G. and ourselves have, finally, eaten of the beef, and found it good and wholesome.

But what is there in all this, that furnishes a reason for denying the resurrection of *the body?* What to constitute any reasonable objection to saying, that man goes to the grave *in the body,* and rises from it *in the body?* Putting on your philosophical cloak, you ask *what* body? *Which* "of the many different atomic bodies that the soul inherits during its natural life," comes up in the resurrection? We do not feel bound to answer such questions. If you should say of the Nantucket whaler, who was gone seven years, that he went away *in the body,* and came back *in the body;* and we, in turn, should ask *what* body; you might think us hyper-critical. We suppose that between the body which is laid in the grave, and the body of the resurrection, there is some sort of relation, though we do not pretend to define what the relation is. It is intimate enough, however, to justify the declaration that the body is raised again. Strict, philosophical identity, is not pretended; at least, it is not our view, whatever others may alledge. There is a relation between the grain sown and that which is produced. You suppose that the relation between the natural and spiritual bodies is the same. We understand the Apostle to teach (1 Cor. 15: 36–38,) that there is an *analogy* in the cases, but we are not clear that he intends to teach that they are *exactly alike.* All that can be *certainly* established by what he says, is that, as it is within the power of God to effect the reproduction of grain from seed sown, giving it such "a body as it hath pleased him," so it is equally within his power to effect the resurrection of the body, and to furnish such a body as it may please him. As to the notion that "there is within the material body of all intelligent beings a spiritual germ, from which arises (at least) the basis of the resurrection body," as the kernel of corn contains an embryotic germ from which arises the future stock; it is unsupported by the Apostle's teachings. For as there is no inextinguishable principle in plants, the analogy does not hold. Besides, is the embryotic germ, or seminal principle, any thing different from the power of God? What occasion then have we to carry our thoughts in this matter beyond God's power? It may be inferred, therefore, that this wonderful, though common instance, is mentioned to show that the resurrection of the body is not beyond the power of God to accomplish; and that it may certainly be expected, according to Christ's promise.

But Bro. G. pushes the analogy to an extreme, and so obtains support for the Swedenborgian theory that the embryo of the spiritual, or resurrection body, is conceived and concealed within its proper receptacle, the natural body, and only awaits the return of the natural body to the dust in order to be fully developed. This is the theory which Professor Bush elaborated with so much ingenuity, in whose book (no doubt) the whole strength of the argument appears. But beautiful and plausible as the theory seems, it rests upon mere assumption. There is no direct statement of such an idea any where in Scripture, nor is it contained in any passage by necessary implication; while there is one very important objection to it, namely, that it is antagonistic to the Bible doctrine of a general and simultaneous resurrection of the saints. The next step to which it leads, is the doing away of a general Judgment Day. We presume Bro. G. shoulders these consequences.

T. B. B.

TO PROMOTE REVIVALS.

In this day of religious declension, the inquiry is often made, "What can be done to bring about a better state of things?" The present state of things is often charged to the want of discipline in the church. That there has been a great remissness in this, is evident. No doubt there are too many baptized infidels in the church. But we are not of the opinion that the church is prepared to administer discipline properly. We are not spiritually minded. "Ye that are spiritual, restore such an one, in the spirit of meekness, considering thyself, lest thou also be tempted." Discipline cannot be properly administered by those who are not spiritually minded. The work of discipline should be begun and carried forward perseveringly; but it should be the work of self-discipline. Let each correct his own faults, lest we hear the taunting reply, "Physician, heal thyself." This may be done by self-examination and prayer. Let every Christian get himself in a spiritual state, and be careful to possess daily a spiritual state of mind, and then his actions will show forth the praises of God, and his conversation be of, or about, heaven or heavenly things, for "out of the abundance of the heart the mouth speaketh." "Where our treasure is, there will our heart be also." If Christians would live as they ought, make the church of God their home, and let their interest and happiness be identified with its prosperity, be punctual to all the needful meetings, especially those for prayer and praise, there would be but little difficulty in this work. Nominal professors would find no home there; they would leave the church just as naturally as oil separates from water. But as long as Christians are agreeable company for hypocrites and unbelievers, and can engage heart and soul in all their plans, just so long there will be an affinity between the church and the world that ought not to exist, and one that will have a tendency to ruin souls. Revivals of religion are to be, and must be, promoted not by declamatory noise, nor by human machinery, but simply by God's people becoming spiritually minded; and this is a work they ought to attend to immediately; the church suffers for the want of it; pastors become discouraged, and say, "Who is sufficient for these things?" the wicked are growing bold in sin, and the Gospel of Christ is thereby hindered. To promote revivals and a better state of things in the churches, let neighbors get together in neighborhoods; let that good Deacon go to his neighbors, and invite them to his house or elsewhere, and there let them talk and pray, until they realize the benefit of asking for the Holy Spirit, being assured, "that it will be given to them in abundance." Such movements will result in revivals of religion. A CHURCH MEMBER.

Green Cottage, N. J., Jan. 24, 1856.

DEATH OF MARTIN WILCOX.

I see in the *Sabbath Recorder* of Jan. 24th, a simple notice of the death of Deacon MARTIN WILCOX, of Verona, Oneida Co., N. Y. This announcement has filled with sadness the hearts of many of the friends of our beloved Zion, who, in submission to the bereaving dispensation of the all-wise providence of God, exclaim, in the language of inspiration, "How are the mighty fallen, and the weapons of war perished!" They recognized in our deceased brother the genuine Soldier of the Cross, who was more potent in his meek and Christ-like deportment, his solemn and fervent supplications, his affectionate exhortations to his brethren, and his tears in behalf of those who had no hope and were without God in the world, than they have ever seen in the characters of Saul and Jonathan, on account of whose fall, the pious David wrote that beautiful elegy, 2 Samuel 1: 19—27.

Brother Wilcox was a native of Connecticut; and when a child, he set his affections on things above, and gave his heart to God. He became a member of the Seventh-day Baptist Church in Burlington, in that State, (now extinct, principally by removals to the State of New York.) When a young man, he removed into the society of the first church of Brookfield. Here he buried his wife and infant son. From this society he removed, in 1819, to the city of Schenectady, and was one of the small number who commenced Sabbath worship in that city. After remaining there about two years, he removed to the town of Homer, in Cortland County, N. Y., adjoining the town of Scott, where his pious zeal was exerted in encouraging the few Sabbath-keeping Christians who held their Sabbath worship in that town. When the Seventh day Baptist Church of Scott was organized, he was one of the little band composing it. He resided in the bounds of this church a number of years, and here he was united in marriage to the amiable lady who was his subsequent companion while he lived, and is now widowed by his death. Where, and at what time, he received the call and ordination of Deacon, the writer is not positively advised, but thinks it was in the Church of Scott, during his residence in Homer. After residing here a number of years, he removed again to the village of Unadilla Forks, within the limits of the First Church of Brookfield. He resided here a number of years, when his business led him to settle in the limits of the First Church in Verona, Oneida Co., where he closed his useful life.

To whatever church Bro. Wilcox removed, he carried his church membership with him, and that of his family, being persuaded that his usefulness as a Christian, and the confidence of his brethren, would be thereby increased. He of course became a member of the several churches within whose pales he resided. In all of these churches he was the same devoted Christian, which rendered him a valuable acquisition in every department of piety. His religious sentiments, in which he was remarkably stable, were what are considered by evangelical Christians orthodox. He was too well versed in the Sacred Scriptures to be easily affected with the religious novelties which at times agitated the various communities in which he lived. To the church he was a rich treasure—constant in his attendance upon public worship, though at times with no small difficulty—always ready to engage in any religious duty or devotional exercise. His prayers and exhortations were always seasoned with grace, and appeared to have the effect of increasing the spirituality of his brethren. As a counselor in the church, he was wise and prudent; and he gave his advice with such an earnest desire to promote the best interests of the church, that it was not easy for a real Christian to reject it.

To all of the reformatory measures of the age, Bro. Wilcox was a prominent and substantial friend. In the cause of temperance and human freedom, he waited not to see the results of the efforts of others in these important reforms, but being convinced of their propriety, he unhesitatingly became their patron, without regard to their popularity, or the reproaches cast upon them. In every department of benevolence, his example is worthy of imitation by every Christian in the land. He was ever ready and prompt in contributing to the expenses of the church in which he lived, and has acted a praiseworthy part in the support of our Domestic and Foreign Missions. In his contributions in these various departments, he always appeared to contribute to the extent of, and even beyond, his means. And it is not known that an appeal was ever made to him by the indigent in vain. Such a man is a treasure to the church, and his death is a public calamity. He has left a widow and a number of children, who are bereaved of an affectionate husband and kind parent. But, thanks be to God, they were all prepared by divine grace to bow with pious submission to this painful dispensation of Providence.

Brother Wilcox had for some time been attended with some of the prominent symptoms of diabetes, which, however, had not prostrated him to such an extent as to disable him from attending to his business abroad, While absent from home, he was severely attacked with an acute result of his chronic disease; and being blockaded with snow, he was unable to return for several days. He however succeeded, with great difficulty, in returning to his home, much exhausted by exposure, disease, and excessive exertion, three or four days previous to his death. His extreme illness was very brief, and during much of this short period his mind was wandering. It is probable that he was not conscious of his being so near his end. But his uniform piety is the best evidence of his preparedness for his change.

Brother Wilcox died Sabbath morning, January 19th, in the 64th year of his age. His funeral services were attended at the Seventh-day Baptist Church in Verona on the 23d. The sermon was preached by Eld. W. B. Maxson, from Rev. 14: 13; after which his remains were conveyed to Unadilla Forks, and on the following day, the 24th, laid in his final resting-place in the cemetery in that village, in the place selected by his surviving family.

"*The memory of the just is blessed.*"

GERMANS IN THE UNITED STATES.

The influence of American institutions and habits on the piety of German emigrants (says the *Watchman and Reflector*) is most hopeful, and when truly converted they become oftentimes the most stable and devoted members of evangelical churches. A colporteur of the American Tract Society speaks in the following terms of a German community with which he had become intimately acquainted at the West:—

"I know of no Christians who are more correct, none more consistent, or who exhibit so much devotion to the cause of Christ. The sincerity and genuineness of their piety is seen in their families. Family religion is with them more than mere form—it is a living reality. They read the Word of God, sing and pray, as if they meant something, and are never prevented from attending to their family devotions by the fear of man. A German Christian would attend to his family worship if the President of the United States were present. If the husband is away, the wife will attend to it; and if both are gone, and there is only a girl fourteen years old professing religion, she will attend to it. I have seen these things, and know what I say. I believe this is the result, to a great extent, under God, of the Tract Society's work. Their religious reading aside from the Bible is made up of the Society's publications, its periodicals and books. The influence of soul-saving truth upon the heart is thus seen."

THE AMERICAN TRACT SOCIETY AND THE INDEPENDENT.

To the Editors of the Sabbath Recorder:—

For a long time there has been going on, through the columns of the *Independent,* an elaborate discussion concerning the attitude of the American Tract Society towards American Slavery; in which the Tract Society has received some pretty severe castigations for refusing to utter a manly protest against a crime having no parallel in Christendom, (always excepting Sebastopol.) The position of that Society toward this inhuman crime, seems monstrous; for it is little else than an attempt to cover the "sum of all villanies" with the shield and approbation of Jehovah. The Society has pursued a system of most deliberate Jesuitry, in thus attempting to palliate a crime that embodies robbery, concubinage, and murder; for while it has published tracts against novel reading, dancing, and tobacco chewing, it has utterly refused to speak out against buying and selling God's image, the traffic in the bodies and souls of men, the sale of young women for prostitution, and the deliberate annulling of the holy relation of marriage. But farther, the Society has mutilated the faithful records of works they have republished, such as "Mary Lundie Duncan," Gurney's "Love to God," and Mather on the "Usage of Slaves"—works in which their authors bear a solemn protest against slavery. Thus the Tract Society has proved itself recreant to history, and false to humanity and God. Such is the position of the American Tract Society, one of the great benevolent monopolies of the day.

Now, although against this truckling to the crime of slavery, the *Independent* has entered its protest, yet it seems to me it has so blunted the edge of its own sword as to effectually prevent its doing much good; for, while it assumes slavery to be a crime against God and man, the sin of sins, yet it expressly does not wish the Tract Society to publish a work favoring the immediate abolition of slavery, nor that slaveholding is a sin *per se.* See *Independent* of January 11, 1855. How the *Independent* can reconcile its own position with its assumed sinfulness of slavery, is more than I can tell; for, to admit that a course of conduct as the "sum of all villanies," and yet not wish such an institution as the American Tract Society even to publish a tract declaring such conduct a sin *per se,* or one in favor of immediate abolition, is double Jesuitry. Would the *Independent* "roar as gentle as a sucking dove," if its daughters and wives were exposed to the bidding of some southern libertine? Would it then deem slavery as hardly equal in enormity to dancing, novel reading, tobacco-chewing, or snuff-taking? While the *Independent* demands the immediate abolition of these, it complacently grants indulgence to a sin that never had its parallel among civilized nations. Even the Dey of Algiers, and the Sultan of Egypt, Mohammedan though they be, dare not longer continue this crime of all crimes, the most inhuman and unchristian. Let the *Independent* but put forth as manly a protest against American Slavery as some whom it calls "infidels of the most degraded class," and then it can hold up the Tract Society to a just rebuke, and not cause its own face to blush with inconsistency. It is painful to notice such gnat straining and camel swallowing. Yet justice demands that not only the Tract Society, but even the *Independent,* should be seen each in their true position. Being a reader of the *Independent,* I am happy to bear testimony to its high character as a religious journal in the general, standing up like a beacon in the midst of servile and cringing popularity. Still, in the matter above, I cannot approve.

S. S. G.

THE PUBLISHING BUSINESS.—The following extract from an exchange has in it much truth as well as some exaggeration:—

"The result of my observation enables me to state as a fact, that publishers of newspapers are more poorly rewarded than any class of men in the United States, who invest an equal amount of labor, capital, and thought. They are expected to do more service for less pay, to stand more sponging and 'dead heading,' to puff and defend more people without fee or hope of reward, than any other class. They credit wider and longer; get oftener cheated; suffer more pecuniary loss; and are oftener the victims of misplaced confidence, than any other calling in the community. People pay a printer's bill more reluctantly than any other. It goes harder with them to expend a dollar on a valuable newspaper, than ten on a needless gewgaw; yet everybody avails himself of the use of the editor's pen, and the printer's ink. How many professional and political reputations and fortunes have been made and sustained by the friendly though unrequited pen of the editor? How many embryo towns and cities have been brought into notice, and puffed into prosperity, by the press? How many railroads, now in successful operation, would have foundered but for the assistance of the 'lever that moves the world?' In short, what branch of American industry or activity, has not been promoted, stimulated, and defended, by the press? And who has tendered it more than a miserable pittance for its mighty services? The bazaars of fashion, and the haunts of appetite and dissipation, are thronged with an eager crowd, bearing gold in their palms, and the commodities there vended are sold at enormous profits, though intrinsically worthless, and paid for with scrupulous punctuality; while the counting-room of the newspaper is the seat of Jewing, cheapening, trade orders, and pennies. It is made a point of honor to liquidate a grog bill, but not of dishonor to repudiate a printer's bill."

PRINCETON THEOLOGICAL SEMINARY.—The report of the Trustees of the Theological Seminary of the Presbyterian Church, at Princeton, was presented to the New Jersey Legislature on the 22d ult. The Trustees are required by statute to exhibit to the Legislature every five years an exact state of the accounts and funds of the corporation. Their last report was made in February, 1851. They now report that the real estate belonging to the corporation consists of about twelve acres of land; value of real estate $85,000. The Permanent Fund, under the care of the Board, amounts to $96,879. The interest of this fund is applied to the payment of professors' salaries, to the assistance of needy students in the prosecution of their studies, &c. The largest part of it is vested in New York. In addition, there is a Permanent Fund for the support of the Seminary, held by the Trustees of the General Assembly of the Presbyterian Church in the United States. The expenditures of the Board for the payment of professors' salaries and for incidental expenses of every kind, have been as follows: In the year ending May, 1851, $14,826; do. 1852, $16,013; do. 1853, $13,907; do. 1854, $12,613; do. 1855, $16,352. The whole number of volumes of books now in the library is 13,680.

THE ENGLISH CHURCH.—The following modest advertisement recently appeared in a public newspaper in England:—

"Wanted, a curate, immediately, for two years certain, for a sole charge in the north of England. Population, 400. Excellent furnished house, with extensive gardens and pleasure-grounds. The head gardener is paid by the rector, the under gardener by his *locum tenens.* Stipend, £50 a year. Surplice fees, about £10, and all the rates and taxes paid. A large family would be an objection, as the house and furniture are in excellent order."

"A Poor Priest and an English Gentleman," in replying to the advertisement, asks if the Rev. J. A. R. would have an insuperable objection to his (the applicant's) combining the labors of "head gardener" to the care and culture of the 400 thinking vegetables whom he proposes to consign to the charge of the "*locum tenens?*" Could this arrangement be effected, he would be exonerated from the heavy burden of paying the "under gardener."

STATE UNIVERSITY OF WISCONSIN.—Professors E. S. Carr and Daniel Read, of the State University of Wisconsin, have been duly inaugurated. From the report of the Board of Regents, read on the occasion, we learn that the number of students during the past year is ninety-three. Of these, forty-three reside in Madison, and fifty in other parts of the State, or in other States. Many of those from Madison belong to families who have been attracted thither by the educational facilities afforded by the University. The report recommends a separate Preparatory Department, and the establishment of Medical and Law Departments. The whole value of the property and lands belonging to the institution, six years ago, was $130,000. This has increased, under the judicious management of the fund, until, in addition to the University buildings and grounds, valued at $250,000, it is now estimated at $300,000.

A NOVEL PLAN OF MISSIONS.—Messrs. Rayland, Fenn, and Meadows, three laborers of the Church Missionary Society, in Southern India, have adopted the plan of having no abiding place, but dwelling in tents, and going from village to village, to preach the unsearchable riches of Christ to as many heathen as will hear them; they seldom remain longer than a week in one place, and aim to pervade every part of it with the truth of God; they have visited hundreds of villages, and left behind them evangelical tracts and books, to remind the people of the truths they have heard. Always, and everywhere, they set forth the guilt and vileness of sin, the death of the Lord Jesus Christ, and the sanctifying work of the Holy Spirit, as the only hope of the sinner.

THE LATE ANSELM ROTHSCHILD.—The Swabian *Mercury* contains the following from Frankfort:—

"The fortune of Baron de Rothschild, who recently died, has been valued at from 40,000,000 to 50,000,000 florins. A sum of 1,200,000 florins is destined to continue the alms which the deceased was in the habit of distributing every week, as well as for the distribution of wood to the poor in winter. The fund for giving a dower to Jewish maidens receives 50,000 florins; the fund for the sick as well as the Jewish hospital, 10,000 florins each. The Jewish school, 50,000 florins. Sums of 3000 florins are bestowed on several Christian establishments. The clerks who have been more than twenty years in the firm receive 2000 florins, the others 1000; the juniors from 300 to 500 florins. Many legacies are left to servants."

THE WILL OF AN OLD BACHELOR.—The New Orleans *Delta,* announcing the death of Mr. John D. Fink, a wealthy old bachelor of that city, says:—

"The value of his succession, we are informed, may be safely estimated at $500,000; of this immense amount he has left about $60,000 to his friends and relatives. He concludes by devoting the remainder of his large fortune to the purpose of erecting an asylum for destitute Protestant widows, to be called the 'Fink Asylum,' and authorizes Mr. Buellerdeick to appoint three trustees to carry the latter portion of the will into effect. Finally, he wills that his body shall be interred in the Protestant Cemetery on Girod-street, and a marble monument erected over it, fenced in with an iron railing—the whole cost of which is not to exceed $2,000."

MISSIONARY LABORS IN THE PACIFIC.—On the islands of the Pacific, comprising the Sandwich, the Feejee, and Friendly Islands, New Zealand, and the various groups occupied by the London Missionary Society, there are connected with the London, the Church, the Wesleyan, and the American Missionary Societies, 119 missionaries, 45,929 communicants, 239,900 professed Protestants, and 54,708 scholars. Connected with the Protestant missions in India there are 443 missionaries, 18,410 communicants, and 112,191 professed Protestants; showing that to each missionary in India there is an average of 253 professed Protestants and 41 communicants, while in the Pacific each missionary has an average of more than 2,000 professed Protestants and 385 communicants.

ANTI-ABOLITIONISM IN THE INDIAN TERRITORY.—The Cherokee Nation are large slaveholders. In order to protect themselves against the Abolitionists, their Legislative Council, by a large majority of both branches, passed a law last year enacting that it should be unlawful for any missionary to counsel or advise any slave to the detriment of his master, and that the penalty for so doing should be removal from the territory of the Nation. A fine of not less than $25 nor more than $100 was at the same time imposed upon any citizen who should be guilty of the like offense, and the Superintendent of the Public Schools was forbidden to employ any Abolitionist as a teacher. This law, it appears that John Ross, who is Chief, and by virtue of his office sole executive of the Nation, thought proper to *veto;* and it having failed to command the required majority of two-thirds in the upper branch, although it received a larger vote than two-thirds in the lower, it of course fell through.

SLAVERY IN THE LEGISLATURE OF PENNSYLVANIA.—The transit of Slave property through the Commonwealth of Pennsylvania, has been made the subject of majority and minority reports in the Legislature. The majority of the Judiciary Committee held to the view that the right of transit is secured to the Slaveholder, by the Law of Nations and the Federal Constitution. The minority, consisting of three members, among whom is Hon. E. Joy Morris, do not yield assent to this reasoning of the majority, but *hold* that Slavery is exclusively a local institution, not recognized by the law of nature, the common law, or the civil law. They cite abundant authorities, to show that Slavery is not only against the law of Nations, but also against the laws of Pennsylvania. The minority report is strong and able. The Legislature has as yet taken no action in the matter.

FATE OF COMMUNISTS.—A Pittsburg correspondent of the Cincinnati *Gazette* writes: "The association of Germans, founded at Economy by George Rait, twenty miles below us, on the Ohio River, had a semi-centennial celebration a few days since, in commemoration of the fiftieth anniversary of their settlement. The association is much weaker in numbers now than it was at its establishment, as the members have never married, except a few of the leaders, and they are steadily dwindling to a handful; but those who remained enjoy remarkable vigor in their advanced age. They retain the whole of the extensive and now rich domain of the original foundation, and have accumulated a large amount of ready money, upon which they live costly, without the necessity of that labor and industry which once characterized them."

"THE BIBLE AND GEOLOGY" have another hearing in our columns to day. Two or three *short* articles on the subject are waiting their turn, after which we presume the discussion will rest for a while.

CONGRESS.—The struggle in the House of Representatives is ended, and Nathaniel P. Banks, Jr., of Massachusetts, the Republican candidate, is chosen Speaker. This result was reached last Sabbath, on the one hundred and thirty-third ballot, and at the close of the ninth week of the Session, by a plurality vote of 103, being five votes short of a majority, and three over the next highest candidate, Mr. Aiken, of South Carolina. The contest was strictly between the North and the South, and for once the North has triumphed. Mr. Banks did not receive a single vote from a slaveholding State. Throughout the country, the Republicans are in high glee. It is reasonable to expect that Congress will now go to work with a will, and that hereafter we may have something from that quarter worth reporting.

MR. SEWARD ON THE CENTRAL AMERICAN QUESTION.—Hon. Wm. H. Seward recently delivered an address in the Senate of the United States on the present position of affairs between the United States and Great Britain, growing out of the Central American question. The following paragraph contains the conclusion to which the whole speech of Mr. S. tended :—

"*I do* not think that Great Britian will choose a resort to war. Her Government, hardly less than our own, is a popular one. This controversy grows out of a caprice of her own Administration. A war would embarrass her prosperous industrial system, and could bring to her in return no adequate advantage, even if she were successful. My counsel, therefore, is a notice to Great Britain, that we shall interfere to prevent her exercise of dominion in South America, if it shall not be discontinued within one year, and also that authority be now given to the President to execute that delayed purpose."

POSTAL REFORM.—In New York, one day last week, a meeting was held preliminary to extensive agitation for a postage reform. The following resolutions, adopted by the meeting, indicate the principal points of reform proposed :—

Resolved, That the condition of our Post-Office system is entirely inadequate to meet the wants of the country, and is discreditable to the intelligence and energy of our people.

Resolved, That in order to make the system what it ought to be, it is necessary, in the opinion of this meeting, substantially to introduce the following reforms :

1. Uniform postage of two cents on letters, and a cheap uniform rate for printed matter.
2. Receiving-houses and letter carriers for the collection and delivery of letters in cities and principal towns without extra charge.
3. Money orders, for sums not exceeding $25, to be drawn by the principal Post Offices on each other.
4. Compulsory pre-payment to be abolished, and double postage to be charged on all mail matter not pre paid.
5. All dead letters to be returned to the writers—and whenever possible without opening.
6. The postage on all franked matter to be paid by the Government.

REFUSING AID TO THE TRACT SOCIETY.—The Church of the Pilgrims, in Brooklyn, over which Rev. Dr. Storrs is the settled pastor, is one of the oldest, largest, and most influential churches of the Congregational denomination in this vicinity. It has also, as a whole, hitherto been considered as occupying middle ground on the subject of Slavery. On a recent evening, at the annual meeting for the election of officers, and other business, the question came up of arranging for the monthly collections of the Church for various benevolent objects, among which was the American Tract Society. After a somewhat protracted discussion, in which the pastor and some of the principal laymen of the Church participated, it was decided by vote to take up no collection for the American Tract Society the present year. Dr. Storrs embraced the opportunity to say that he would not by word or deed indorse the management of that Institution until it changed its policy on the Slavery question. He showed its inconsistency in publishing tracts on dancing, horse-racing, gambling, drinking, tobacco chewing, and smoking, while it not only refused to speak out plainly on the subject of the great sin of Slavery, but actually mutilated some of the best publications in the English language in order to please the South. The discussion was interesting and instructive, and the result of the vote gave satisfaction to a majority of the members present. [Tribune.

KIDNAPPING AND MURDER.—In our intelligence columns will be found an account of a horrible transaction in Ohio—a mother escaping from slavery with her three children, and being overtaken by the base hirelings of federal usurpation, acting under the Fugitive Slave Act of 1850, she frantically cut their throats rather than have them carried back to slavery. We agree with the Tribune in saying :—

"When the slave mothers of the South begin to be affected with this fanaticism for freedom, it is not to be believed that either they or their children can long be retained in bondage. Still less is it to be believed, that the humane and Christian people of the North will tolerate the execution among them of a kidnapping statute by which mothers are driven to such extremities."

SUGAR-MAKING MACHINERY.—Mr. T. B. Stillman, the senior partner of the firm of Stillman, Allen & Co., of the Novelty Iron Works, New York, is, we understand, on a visit to this State, (says the New Orleans *Picayune*) for the purpose of witnessing the operation of the various improvements in sugar making machinery, introduced by that distinguised establishment; and has authorized the proprietors of two well-known establishments of our city to construct and furnish planters with the celebrated Begass Furnace, invented by his late brother, Mr. Alfred Stillman, who was so long and favorably known to this community, and who lost his life by the explosion of the Anglo-Norman. His widow and children will doubtless receive the benefit secured to them by the Patent-Office at Washington.

European News.

We have one week later news from Europe.

The grand news of the week is that Russia agrees to negotiate on the terms proposed by the Allies. The first announcement was made from Vienna by telegraph to the London *Times*, in the following words: "Russia accepts the Allied propositions unconditionally; this is authentic." This dispatch caused an immense sensation. The funds rose three per cent. and Cotton one farthing. In the other markets a panic reigned. Next day the Government published a dispatch from Minister Seymour at Vienna as follows: "Russia agrees to accept the allied proposals as the basis of negotiations." This qualified announcement curbed the excitement, and alarmists begin to fear that Russia merely seeks to gain time by deceptive negotiations.

From the Crimea there is nothing important. Numerous ambuscades of Cossacks were distributed around the Allied Camp, but vigilance prevented many stragglers being captured. Several additional explosions had been made in the Sebastopol Docks, and they were nearly destroyed. France and England each reserve a gate by which they were inclosed, as a trophy.

The *Invalide Russe* publishes a dispatch from Prince Gortschakoff, saying that a party of French, wearing white cloaks to prevent their being seen in the snow, advanced by night and surprised Baidar, bayoneted the outposts, and retreated when the Russian reserves came up.

There was a grand review at Paris, on the 15th, of the troops from the Crimea, when the Duke of Cambridge, in the name of Queen Victoria, presented the British Crimean Medal to 14,000 French troops.

A treaty has been made with Japan, opening to British commerce the ports of Nagasaki and Kakokaki, the same as to the Americans.

The fourth consignment of machinery for the Government small-arm factory, was landed at Woolwich on the 15th Jan., from Robbins, Lawrence, & Co., of Windsor, Vt.

The Emperor of Austria has signed a decree relating to Protestants. It is liberal except so far as it prohibits the marriage of Catholic priests converted to Protestantism.

MUTUAL DEPENDENCE.—Henry Ward Beecher utters true and valuable thoughts in the following paragraph :—

"We often see an old weather-beaten man, who never had a success in his life, who always knew more and accomplished less than his associates, who took the quartz and dirt of enterprise, while they took the gold; and yet, in old age, he is the happier man, and all his life long he was the happier man. He had a sum of hope and they of desire and greed—and amid all his misfortune and his mysterious providences, he had that within him which rose up and carried his heart above all troubles, and upon their world-wide waters bore him up like the old Ark upon the deluge. It was the deluge that gave out—not the ark. God has distributed his gifts. It takes a score of them to make one man. One supplies the swift sagacity; another the cautious logic; another the impelling force; another the hope; another the practical tact—one supplies general principles, another the working plans. Men seldom unite by the strong points. It is men's weaknesses that bind them together. By distributing gifts, God makes one man dependent upon another, and welds society together by making every man necessitous, in some place, as regards other men."

RUFFIANISM IN WASHINGTON.—Horace Greeley, of the N. Y. *Tribune*, who is spending the winter in Washington, was the victim of a brutal assault on Third-day, Jan. 29th. It seems that on the previous Fifth-day, Mr Rust, of Arkansas, moved a resolution in the House of Representatives, proposing to rule off the course all the candidates for Speaker who had been run previous to that time. In his letter of that day to the Tribune, Mr. Greeley commented upon the resolution as the meanest proposition yet presented to Congress. This is supposed to be the provocation for the assault. On the afternoon of Third-day, after the House adjourned, Mr. Greeley started for his hotel, in company with Mr. Purviance, of Pennsylvania. While passing through the Capitol grounds, Mr. Rust addressed him, and the parties halted, while Mr. Purviance passed on, not suspecting any difficulty. Mr. Greeley was thus left entirely alone, without a friend anywhere near him. Rust asked him if his name was Greeley. Receiving an answer in the affirmative, he inquired whether he was a non-combatant? Greeley's answer was, "That depends upon circumstances;" upon which Rust said, "Take that, then!"—striking him a severe blow on the head with his clenched fist, which he repeated frequently. During all this time Mr. Greeley had not the remotest idea who his assailant was. He defended himself as well as he could, until the parties were separated—and then asked of the bystanders, "Who is this man?" Rust started up the avenue, and Mr. Greeley also pursued his way in the same direction, some little distance behind his assailant, and still unaccompanied by any friends. When near the National Hotel, Rust left the half dozen friends with whom he had been walking, turned back upon Greeley, and asked, "Do you know now who I am?" The answer was, "Yes, you are Mr. Rust of Arkansas," and then the latter began to beat him furiously over the head with a metal top of a heavy cane, nobody interfering until his brutal vengeance seemed to be sated. Rust is physically a very powerful man, while Mr. Greeley is of quite another make. The assault is generally regarded as a very cowardly affair. It is said that Mr. Greeley does not propose to prosecute.

A Missionary of the American Sunday School Union in Iowa writes that during the recent intensely cold season many persons have lost their lives in attempts to cross the prairies. The drifting snow obscures the road, and the adventurous traveler becomes bewildered; and sinks down benumbed and stupefied. Recently a family in Mitchell County, consisting of father, mother, four sons and a daughter, met this tragic fate. They lost their way; the cold was extreme, and, after wandering about awhile, they sank down in the sleep of death. Even one of the oxen was frozen. Their bodies were discovered by following the back track of the surviving ox.

RELIGIOUS INTELLIGENCE.

Attention has been called to the case of Edward Williams and his family, now at Malta. They are, in some sense, a first fruit of missionary labor among the Turks. He has been compelled to leave his native country from a well-grounded fear of capital punishment for apostacy from Islamism. He is a man of tried piety, and should the way be opened for his return home, his knowledge of Turkish and Armenian, would make him, and probably his sons, most useful in spreading the Gospel. Two of the last named are in the Malta Protestant College. Williams' only means of support is £1 a month as door-keeper of the Presbyterian Church.

Archbishop Hughes, in his recent lecture in Baltimore, expressed the opinion that the Roman Catholic Church in this country can anticipate little increase to its numbers or strength from immigration, and that the future hopes of the Church must be based upon its retaining its present numbers, and the increase from conversions. He thinks the present condition of the Church and the enormous accessions which he says have been made to it from converts of American birth, justify the most sanguine expectation in this regard.

Rev. Antoinette L. Brown was married to Samuel C. Blackwell, of Cincinnati, on the 24th ult. The marriage took place at Henrietta, N. Y., and was celebrated by the father of the bride, who is not a minister, nor, we believe, a magistrate. Mr. Blackwell is probably a brother of Lucy Stone's husband, as the name is the same.

The Rev. Dr. Hannah, with the Rev. F. Jobson for a companion, was appointed by the last General Conference of the Wesleyan Church in England, a deputation to the General Conference of the Methodist Episcopal Church in the United States, to be held at Indianapolis on the 1st of May next.

The Catalogue of the Union Theological Seminary, in the city of New York, shows the number of students in attendance to be 96; of whom the Senior Class has 19; the Middle Class, 31; the Junior Class, 40; and 6 are Resident Licentiates.

The Rev. Dr. Cumming, of London, has heralded the end of the world in 1865; yet his publisher's arrangements for the copyright of his books extend far beyond that period, and he has just entered upon a nineteen years' lease of his summer house!

Rev. M. Colbertson, Missionary of the Presbyterian Board, Shanghae, China, has arrived in this country. He returns on account of the failure of his health, and is accompanied by his wife and three children.

The Church Journal, in speaking of "St. Luke's Home" in New York, says:—"A thousand dollar bill has already been sent in for St. Luke's Home for Aged and Indigent Christian Females—donor unknown."

Punch says the reason why editors are so apt to have their manners spoiled is, because they receive such vast numbers of evil communications.

Within the last two months, about eighty conversions have occurred in the Baptist congregation at Bordentown, N. J.

The Baptist College at Georgetown, Ky., though it has lived twenty years, is almost entirely without endowment.

SUMMARY.

A young man, named Harry Grey, who is now engaged as watchman at the Kentucky Locomotive Works, has recently had left him, conditionally, by a deceased uncle in England, $200,000. Mr. Grey is only 25 years of age—already having inherited $45,000 from his father, which he spent for the benefit of himself and "mankind in general" His prudent old uncle, knowing his financial habits, has inserted as a condition of the inheritance, that if the said Harry was in debt at the age of 30, five hundred dollars, he should forfeit the inheritance.

Gov. Gormon, in his late message to the Minnesota Legislature, estimates the population of the Territory at 75,000. He announces that the President has given him notice that the three tribes of Indians now residing in the Territory cannot be disturbed and sent further West. All the tribes are peaceable and friendly. Nearly every village in the Territory has a school for the education of small children, and the colleges and seminaries of learning in St. Paul are in a flourishing condition.

It may surprise persons to be told, what is the undoubted fact, that there are now in the Crimea 50,000 British fighting men; that there are at home or in the depot in Malta recruits enough to raise that force to 70,000—an army of British-born subjects larger than the Duke of Wellington ever had under his command. Besides these, there is the Turkish Contingent of 20,000, the Foreign Legion quite as strong, and the Sardinian troops of 15,000, making a total of at least 125,000 men, marching under the British flag.

Gen. Davis, who presides over the War Department at Washington, has sent instructions to Col. Monroe to adopt coercive measures for the removal of the remnant of savages occupying the extreme southern portion of Florida. Removal is now the declared purpose, and to accomplish it, the Executive of Florida has been authorized by the War Department to receive and tender to Col. Monroe for immediate service five companies of volunteers; and, should the five be insufficient, as many more as Col. Monroe may desire.

A stampede of slaves from the border counties of Kentucky took place Sunday night, Jan. 27th. The whereabouts of several of the fugitives having been discovered in Cincinnati, officers proceeded to make arrests. Upon approaching the house where the slaves were secreted, the latter fired, wounding two or three spectators, but not seriously. One slave woman, finding escape impossible, cut the throats of her children, killing one instantly, and severely wounding two others. Six of the fugitives were apprehended, but eight are said to have escaped.

Six slaves belonging to Mr. Levi Dougherty, who lives on Fourth-street, between Madison and Russell, Covington, Ky., together with two belonging to Mr. Gage, residing in the same neighborhood, made their escape from bondage on Sunday night. They crossed the river about 11 o'clock, and ere this are far on their way towards Canada. Their aggregate value to their owners was about $8,000.

A woman with a child about one year old was found in a starving condition in a house on Hudson near DeKalb-avenue, Brooklyn, Jan. 29th, by Officer Waddy, of the Fourth District Police. The husband of this woman was serving out a sentence on Blackwell's Island, and she, it seems, was unable to procure provisions, and in a state bordering upon insanity locked herself in a room, where she with the child had been two days when found, without food. They were taken in charge by the Superintendents of the Poor and sent to the Alms House.

In the Supreme Court, Philadelphia, Monday, Jan. 28, Judge Black delivered the unanimous opinion of the Court in the matter of the Cleveland, Painesville and Ashtabula Railroad vs. The City of Erie, to the effect that the Railroad Company have the right to extend their road through Erie to the eastern boundary, to connect with the Northeast Road, and that resistance and destruction of property by the Mayor and Councils of Erie is unlawful, and must be restrained. The injunction sought for was granted.

The San Antonio *Zeitung*, of Jan. 12th, contains lengthy details of a movement already on foot amongst the German settlers in Texas, which has for its object an emigration *en masse* across the Rio Grande, and the foundation of a German settlement in Mexico, where the greatest advantages are offered them by the Mexican authorities. Mr. Riotte, an eminent German Jurist, who quitted his native land in consequence of the Revolution of 1848, and has since resided in Texas, is at the head of this movement.

A dispatch dated Boston, Monday, Jan. 28, says: The case of Wm. B. Ela, who claims of Mayor Smith, Gen. Edwards and U. S. Marshall Freeman, $20,000 damages for injuries received at the hands of the military on the day of the rendition of Burns to slavery, (which was taken from a Jury last year on the law question as to whether the circumstances existing justified the assault complained of,) came before the full bench of the Supreme Court this forenoon for argument.

In the Upper House of the Ohio Legislature, Jan. 30th, Mr. Brown introduced a preamble and resolution reciting the circumstances of the recent slave case in Cincinnati, denouncing the participators in the arrest, and requesting the Judiciary Committee to inquire into it, and report a law to prevent the recurrence of such scenes in Ohio. After debate, the resolution was adopted, but afterwards reconsidered and referred to a committee.

The Register of the Land Office in Minnesota reports that the whole number of pre-emptions allowed at that office from the date of its establishment, commencing Oct. 9, 1854, to the present time, is 1,066, and all but four of these on twelve fractional townships, containing in round numbers 160,000 acres—that being all the land of which plats had been returned to the office previous to the last month.

There are indications on all sides that the civil contest in Kansas is about to be reöpened. Local correspondence sets forth the preliminary skirmishes; while every Southern journal abounds with exhortations to arms, and intimations that the Spring campaign is to open with a vast invasion of the fated territory, and close with the expulsion of all the Free-State men.

The Albany *Atlas* says that Mr. John Upton, Express Messenger, who was severely injured at the late accident on the Hudson River Railroad, has been presented with nearly $1,000 by the banks of that city, for his fidelity to their interests, in watching their treasure during that fearful time, while he himself was badly hurt.

The Sussex (Eng.) Express states that Mr. Mitchell has engaged Madame Goldschmidt and her husband for twenty weeks, and for that period they are to receive £20,000, on the condition that they perform at three concerts in each week. An eminent musical firm offered to give Mr. Mitchell £5,000 for his engagement.

The officers of the New York State Poultry Society, are making somewhat extensive preparations for the Annual Poultry Show, which is to open at Van Vechten Hall, Albany, on the 12th of February, and continue through the following two days. Several prominent gentlemen are to serve as Judges in the different classes of fowls, &c.

Advices from Mexico state that a conspiracy to overthrow the Government and establish an Empire, at the head of which was Haro y Talirez, had been discovered. The projector had been arrested, but subsequently escaped, and was joined by a powerful army, with which he was besieging Puebla, with good prospect of success.

The Cleveland Common Council has passed a resolution raising the license on the Cleveland Theatre to ten dollars a night. The object of the resolution is to tax it out of existence. The resolution met with a sharp resistance, and passed by a small majority, in the midst of great excitement.

In the Assembly of New York, Jan. 29th, the Speaker announced the Committee of five on Mr. Glover's bill for the repeal of the Prohibitory Liquor Law, and from the complexion of the Committee a report favorable to the bill is anticipated—three being in favor of the repeal and two opposed.

The number of vessels wrecked on the Florida Reef last year was eighty, valued at $1,123,500; with cargoes worth $1,720,577. The salvage at Key West and on the coast, amounted to $100,495.

In the New York State Senate, the other day, twenty-nine petitions for a bridge over the Hudson River at Albany were presented. People there are evidently getting tired of the uncertainties of ferry transportation.

Captain Matthews, of the schooner Maria L. Davis, from Cape Haytien 10th ult., reports that the Emperor Faustin the First has turned up, and was busy recruiting an army for another attack on the Dominicans.

The Plymouth Rock, ashore at Hart Island, is all ready to be set afloat again, but owing to the accumulation of ice around her, she cannot at present be got off.

Hon. Geo. M. Dallas has accepted the mission to England, tendered him by the President, *vice* Mr. Buchanan.

More than fifty children from the Home for the Friendless left New York Jan. 29th for new homes in Illinois.

During the present session of the Alabama Legislature, there have been about one hundred cases of divorce granted.

The schooner T. W. Levering was capsized a few days since off Watt's Island, in Chesapeake Bay, and the crew, consisting of two white and two black men, with the passengers, a Mr. Owens, his wife and eight children, all perished. The vessel belonged to Byrd & Matthews, and was engaged to remove Mr. Owens and family from York River to Newtown, Maryland.

A few days ago an old man was robbed on the steamer Empress, plying on the Mississippi River. The guilty parties were soon after arrested, and tried under the Judge Lynch code, with a display of much forensic eloquence, and the sentence of the jury was faithfully executed—one person receiving 150 lashes, another 50. They were then set ashore.

The congregation of the Roman Catholic Church in Sixteenth street, between Sixth and Seventh avenues, New York, have been for some time much annoyed by the depredations of a gang of pickpockets, who congregate there on Sundays, in pursuit of their professional calling and the worshipers' pocket-books.

We have received advices from Ontonagon, Northern Michigan, to the 29th of December. The weather was intensely cold in that region, the thermometer ranging from 19° to 28° below zero most of the time, and at 12° below at mid-day in the sunshine. There was a great scarcity of provisions at Ashland, La Pointe, Wis., and Superior—beef selling at $50 per barrel, and other supplies in proportion.

It is again proposed to extend the city limits of Albany, by taking in about one mile of the territory north of Watervliet, so as to embrace the Lumber District, Patroon's Mansion, the factories at Tivoli Hollow, and the numerous dwellings, slaughter-houses and farms, now a part of the suburbs of the city, but belonging to the township of Watervliet.

There are in the Wisconsin Asylum for the Blind, 14 pupils—which number is all that the buildings will accommodate. According to the recent census, the number of blind persons in the State is 186; in 1850 it was 50 The Institution has been indebted to the Legislature alone for its support—nothing having been contributed by parents or friends of inmates.

The Temperance men of Indiana have called a Convention at Indianapolis, to meet on Washington's Birth-day. The recent decisions of the Supreme Court of that State have virtually annulled the Prohibitory Law. The prohibitionists mean to push the question to a final issue.

The Wool Growers' Association of Western New York are to hold its second annual exhibition at Penn-Yan, commencing on the 27th of May next. A premium list of $1,000 has been made up, which will be increased if a State appropriation is obtained.

New York Markets—Feb. 4, 1856.

Ashes—Pots $6 75: Pearls 7 75 per 100 lbs.

Seeds—Clover 12½c. Timothy 3 25 a 3 37. Rough Flaxseed 2 10 a 2 20.

Tallow—12½c.

Wool—39 a 46c. for Fleece, 34½ a 40c. for various grades of Pulled.

MARRIED,

In Philadelphia, on the evening of the 23d Jan, by Rev. Dr. Belcher, WALTER B. DAVIS, of Shiloh, N. J., to HARRIET N. ELWELL, of Upper Pittsgrove, N. J.

At Marlboro, N. J., on the 3d ult., by Eld. D. Clawson, Mr. CHARLES B. ROORK to Miss MARGARET B. DILKES.

Also, on the 30th, by the same, at Stoe Creek, Cumberland Co., N. J., Mr. DAVID ELWELL to Miss CHARLOTTE AYARS.

DIED,

In Angelica, Allegany Co., N. Y., Aug. 27th, 1855, HELLEN DUNCAN, aged 25 years; also at the same place, Jan. 7th, 1856, HENRY DUNCAN, aged 21 years; both of consumption. A. B. C.

In Walworth, Wis, Oct. 29, 1855, of consumption, terminating in dropsy, JULIA ANN RANDOLPH, wife of H. W. Randolph, in the 35th year of her age. Sister Randolph experienced religion in early life, and united with the Seventh-day Baptist Church in Shiloh, N. J. On removing to Wisconsin, she attached herself to the body of Christ at Walworth, where she remained one of its brightest ornaments until, after a distressing illness, she fell asleep in Jesus. As the day of her dissolution drew near, she seemed to enjoy enlarged views of the goodness, greatness, and power of God, in the atonement through a mediator, and her peace was that which passeth understanding. O. P. H.

At Dorrville, R. I, on the 3d of January, 1856, of consumption, Mrs. ABBY A. ARNOLD, wife of William Arnold, aged 23 years.

LETTERS.

Ira Stillman, Abram Burger, Elias Frink, S W Green, W B Maxson, David Clawson, Geo. S Crandall, W A Langworthy, Nathan Spencer, H Cummings, Asa Barrett (our loss.) F W Hamilton, Francis Greenman John Whitford, P B Maxson, Samuel R Wheeler, Luke Sherman C M Lewis, D P Curtis, A B Crandall, N V Hull, Mrs A L Saunders.

RECEIPTS.

☞ All payments for publications of the Society are acknowledged from week to week in the Recorder. Persons sending money the receipt of which is not duly acknowledged, should give us early notice of the omission.

Bibliotheca Sacra,
AND AMERICAN BIBLICAL REPOSITORY.—The Thirteenth Volume commenced Jan. 1, 1856. This volume will be enlarged to 900 pages; will be printed on a new, large, and beautiful type, and on paper superior to that of any previous volume. This Quarterly contains articles of permanent value, by some of the ablest writers in the country.
In its department it has no superior, and no Minister can afford to be without it.
It is the most learned, the largest, and the cheapest Quarterly of its kind in the country.
TERMS—$3 per annum in advance.
$4 if not in advance.
W. F. DRAPER, Andover, Mass.

Alfred Highland Water-Cure.
THIS establishment, for the cure of Chronic Diseases, is conducted by H. P. BURDICK, M. D. The facilities in this "Cure" for the successful treatment of Diseases of the Liver, Spine, Nerves, Female Diseases, Bronchitis, Incipient Consumption, &c., are not excelled in any establishment. Patients will have the benefit of skillful Homeopathic prescriptions—an advantage found in but few "Water-Cures." Especial attention will be given to diseases commonly called *surgical cases*, such as Hip Diseases, White Swellings, Cancers, (in their early stages,) and Caries and Necrosis of bone.
Connected with the establishment is a Dental Shop, where all calls in that profession will be attended to.
Address, H. P. BURDICK,
Alfred, Allegany Co., N. Y.

Central Railroad of New Jersey,
IN connection with the Lehigh Valley Railroad, opened to Mauch Chunk—WINTER ARRANGEMENT, commencing Nov. 19, 1855. Leave New York for Mauch Chunk from Pier No. 2 North River, at 7 30 A. M. For Easton, at 7 30 A. M. and 3 15 P. M. For Somerville, at 7 30 and 10 45 A. M., and 3 15 and 4 30 P. M. The above trains connect at Elizabeth with trains on the New Jersey Railroad, leaving New York from foot of Courtlandt street, at 7 30 and 11 A. M., 3 and 4 P. M.
Leave Plainfield for New York at 7 05 and 9 05 A. M., and 1 40 and 6 13 P. M.
JOHN O. STERNS, Superintendent.

Hudson River Railroad.
TRAINS leave Chambers street daily, for Albany and Troy. On and after MONDAY, Nov. 19, 1855, the trains will run as follows: Express Train 7 A. M., connecting with Northern and Western Trains. Mail Train 8 30 A. M. Through Way Train, 12 M. Express Train 5 P. M. For Hudson 3 30 P. M. For Poughkeepsie—Way Freight and Passenger Train, 12 30 P. M. For Peekskill, 5 30 P. M. Passengers taken at Chambers Canal, Christopher, and 31st streets. SUNDAY MAIL TRAIN at 4 P. M, from Canal street, for Albany, stopping at all the Mail Stations. M. L. SYKES, Jr., Superintendent.

Merchant Tailoring Establishment.
THE subscriber, having sold his interest in the firm of A. D Titsworth & Co. of Plainfield, and located himself at the corner of Fulton and Pearl streets, New York, as Merchant Tailor and Manufacturer of all kinds of Clothing, would respectfully invite his friends, and as many others as feel disposed to study economy, to give him a call, feeling assured that his experience in the business will enable him to do better for his customers than they can do for themselves. He will employ the best of workmen, and give to the business his whole attention.
Cloths, Cassimers, and Vestings, of the latest patterns, constantly on hand, and made to order in the most approved manner, at short notice.
Also, any persons wishing cutting done for their friends at home, by observing the following directions, can be accommodated with any style they wish:—
Coat Measure—1st. Placing the measure at socket bone of neck, down to center of arm or shoulder; then to waist above the hip, and length of coat. 2d. From seam of back, giving width of back; then to elbow and length of sleeve, bending the arm in right angle. 3d. Breast and waist, noting the position, whether stooping forward or extra straight.
Vest—1st. From socket bone down front, giving length of vest. 2d. Breast and waist measures.
Pants—1st. From hip bone to thigh joint and knee, and length. 2d Waist, hip, thigh, and knee measures.
Also, any persons wishing to avail themselves of my assistance in selecting a stock of clothing or other merchandise, will find me at my office every day, except Sabbath day. All orders thankfully received and attended to with dispatch.
Terms, cash on delivery.
E. B. TITSWORTH, Merchant Tailor.
☞ I can accommodate a Sabbatarian with an office in my room.

Seventh-day Baptist Publishing Soc.'s Publications.

The Sabbath Recorder,
Published Weekly.
Terms—$2 00 *per Annum, in Advance.*
The Sabbath Recorder is devoted to the exposition and vindication of the views and movements of the Seventh-day Baptist Denomination. It aims to promote vital piety and vigorous benevolent action, at the same time that it urges obedience to the commandments of God and the faith of Jesus. Its columns are open to the advocacy of all reformatory measures which seem likely to improve the condition of society, diffuse knowledge, reclaim the inebriate, and enfranchise the enslaved. In its Literary and Intelligence Departments, care is taken to furnish matter adapted to the wants and tastes of every class of readers. As a Religious and Family Newspaper, it is intended that the *Recorder* shall rank among the best.

The Sabbath-School Visitor,
Published Monthly.
Terms per annum—Invariably in advance:

One copy	$ 25
Five copies to one address	1 00
Twelve copies to one address	2 00
Twenty copies to one address	3 00
Twenty-eight copies to one address	4 00
Forty copies to one address	5 00

The Seventh-day Baptist Memorial,
Published Quarterly.
Terms—$1 00 *a Year*, 25 *Cents a Number.*
Each number of the *Memorial* will contain a lithographic portrait of a Seventh-day Baptist preacher, together with a variety of historical, biographical, and statistical matter, designed to illustrate the rise, progress, and present condition of the Seventh-day Baptist Denomination. Wood-cuts of meeting-houses will be introduced from time to time in connection with the history of the churches.
[The first, second, and third volumes of the *Memorial*—being for the years 1852-3-4—may be had bound, for the subscription price and the cost of binding.]

The Carol:
A Collection of original and selected Music and Hymns, for the use of Sabbath-Schools, Social Religious Meetings, and Families. Compiled by Lucius Crandall. 128 pages octavo; price 35 cents per copy.
The *Carol* is designed principally for Sabbath-Schools, and contains Music and Hymns adapted to all ordinary occasions, and to such special occasions as the sickness of teachers, funerals, anniversaries, &c. A number of pieces suitable to social and public worship, together with a few Temperance Songs, are included in the book. It contains 93 tunes, and 156 hymns.
☞ Orders and remittances for the above should be addressed to the General Agent, GEORGE B. UTTER, No. 9 Spruce-st., New York.

Postage.
The postage on the Sabbath Recorder is 13 cents a year in the State of New York, and 26 cents in any other part of the United States, payable quarterly or yearly in advance.
The postage on the Sabbath-School Visitor is 3 cents a year in the State of New York, and 6 cents in any other part of the United States, payable in advance.
The postage on the Seventh-day Baptist Memorial is 2 cents a year in any part of the United States when paid in advance, or 4 cents a year when not paid in advance.

Miscellaneous.

From "The Crayon."

Wanderings in the Southwest.

NO. 8—Continued.

Nine miles brought us to the Nueces, at that time a clear, rapid stream, and difficult to ford. Here was encamped the advance party of Major Emory's boundary commission, camped at the head springs of Turkey Creek. There is good land and picturesque scenery along this creek, but away from it the land is rolling, stony, and covered with shrubs. Another day's ride over a country sterile and every hour more desolate, brought me to Fort Clark, at the head of a beautiful stream called Las Morus. The river rises a few rods above the Fort, and bursts out, Minerva-like, at once in its full proportions, and is overshadowed by very large pecans and oaks, which define the outline of its course through a region which is elsewhere almost destitute of trees. Dr. Norris, the accomplished surgeon at this post, told me that he had known the stream to rise a foot in a single day, with no apparent cause; a proof of the great distance at which it has its subterranean source. It affords another example of this interesting feature of many of the streams of Western Texas. From this point of the road one bids a long adieu to forest shades and quiet waters. We leave the beautiful behind us. On my arrival an express was sent to a detachment of dragoons, which came down as an escort to Major Emory's party, on their return to El Paso, to wait for further orders. I made my adieus to the officers over a watermelon, and in an ambulance, with four grey mules, provided by the efficient quartermaster, I drove out to the Pedras Pintos, a small brook eight miles distant, where the escort were camped.

Ten dragoons, armed with rifles, and variously dressed, with red shirts and blue; one wears a black wool hat without a crown, another a light one with half a rim, a third with a hat entire, tied with a deer skin band, turned up before and behind, and drawn over the ears. The sergeant has a straw hat, with a band of broadcloth fancifully cut full of holes, and notched on the margins. He wears fustian breeches, and has killed a deer and sat in the blood. They all have good horses, and the brass mountings of their saddles, the glitter of their rifles, carried uniformly, no less than their orderly march, betray the disciplined soldier, despite their ununiform dress. They are followed by two wagons, carrying their forage, each drawn by six mules. A third wagon, like the two preceding, is loaded with forage for my mules and its own. It rumbles along just in front of me, with a long, narrow bucket swinging to the hind axle; a chain to lock the wheels in steep descents, dangles along the road; then the ambulance, with a driver with long hair, broad-brimmed hat, and broader shoulders, and a detachment of one man of the 1st Infantry, as my body guard, sits with him. Two more dragoons, as rear-guard, complete the train. It was the last day of summer that we set out. The cool nights had deposited myriads of crystal globules on the points of the long, coarse grass that covered the low ground where the creek found its course, now overgrown by it, and now widening into a little pond, where a few cat-tail flags outranked the grass on its margin. Blackbirds chattered among them, red-winged and yellow-headed—this last variety are very common in Texas. Slowly we wend our way over smooth rocky roads, the mules wag their long ears as they walk, the tar-bucket swings, and the chain dangles on over the weary road. Though the ascent has been gradual, the elevation must be considerable, judging from the aspect of the country. The rolling surface is scantily covered with soil, hardly sufficient to cover the solid limestone below it, but isolated bushes are spread over it, some in lively green, others with whitish foliage, and crowded with tubular flowers of a bright rose color. The yucca grows small, but is too characteristic a plant to escape notice, interspersed as it is everywhere among the mottled shrubbery. In the lower country, it has a trunk resembling the palm tree, but wherever found on the table lands, its leaves start from the root, are from a yard to a yard and a half long, concave above, convex below, with sharp, smooth edges, terminating in a hardened point; they are so rigid as to resist a blow from a club, and standing out in every direction, like radii from a centre, they would form a *cheveaux de-frise* so complete as to impale any animal that would attempt to force it. As a fence, they would be impassable; and so formidable do they look, that two of them planted at a gate would be equivalent, in my estimation, to a watch-dog. We camped the second night on the San Filippe, a clear but cheerless stream. My tent is pitched facing the fire, by a detachment of the dragoons assisted by the infantry. A cot, a trunk, and a camp table, are placed in it. I had obtained from the commissary such stores as were necessary for the road, coffee, sugar, bacon, and hard bread, which last furnished me an excellent field for entomological researches. If I have any thing better I must depend upon somebody's gun. There are Texan quail (*Ortyx texana*) in plenty, and fish seemed to be abundant in a deep place in the creek, where it expanded into a pond, at the base of a limestone cliff. A musket served me for a shot gun, and I had hooks and lines. I baited the hook with a small mullet, and left it for the larger ones to take at their leisure, to try the more exciting sport of the field. The sudden flush of a flock of quails startles me, and before I can recover my presence of mind they are beyond range, but I see where they settle, and creep carefully up to the spot; they are crowding to the border of a pile of prickly pears, and ready to fly. The trigger yielded to the pressure of the finger, and I thought the gun would refuse to perform its office, but at length it did "go," and so did an indefinite number of the birds. I ran to the spot, expecting to find half their number dead upon the field; the cactus was bleeding at every pore, but my hopes of a dinner had flown, leaving me no feather as a souvenir. I found them again, but the cap would not explode, and as night came on I returned to the stream where I had left my line, but the bait was gone and left nothing better in its place. Returned to camp and dined on bacon and pilot bread, as usual.

The next morning I returned to the attack on the quails, and succeeded in wounding one, but when I went to pick it up, it rose and flew so high that it seemed as though it was resolved never to have any more to do with this treacherous world. Returned to camp and breakfasted on biscuit and bacon.

This day unfolded still more clearly the interesting geological features of the country. The undulations of the surface deepened into ravines, showing the stratifications of limestone; the hills are almost denuded of soil, the bushes still more stunted. Away to the left is the fantastic outline of mountains in Mexico, rising in acute angles and perpendicular walls to the clouds, but all distant and dimly blue.

Suddenly a cañon yawns below us, and the train with locked wheels descends between two walls of rock, some of the strata of which are of great thickness, and undermined by the disintegration of the softer strata, and often worn by water from above into buttresses, and resembling some grim fortress towering hundreds of feet high. No trees, and only here and there a shrub in the lowest parts of the ravines, but everywhere bare blue rocks vast, dreary, and desolate. Our wagons pitched and bounded over the loose rocks in the bottom of the cañon, until it spread into a larger one with a smooth stone floor, over which flowed, in a thin, broad sheet, the waters of "Devil's river." I had approached a stream with such an ominous name with feelings of curiosity, but now I felt more of awe. Whether that name had been given it from the character of the savages who found in its inaccessible cliffs and caves a safe refuge from pursuit, and safe positions from which to shoot their feathered, noiseless messengers of death upon a weaker party, or whether it was really a damned river, and consigned to the Prince of darkness, I had formed no opinion. But I kept a sharp look-out for all sorts of evil ones. The rock over which the water flowed was white with sulphur, apparently, and once my heart came into my throat at the sight of a hideous spotted saurian, with horns over its eyes, and a sharp tail, but it proved to be only the horned frog, and the normal condition of things was resumed under my jacket, without serious consequences. Leaving the bed of the river, we crossed a ridge of hills to the ravine of another stream emptying into Devil's river, and camped on the open ground beyond. This camp ground is well known as that of the "Painted Caves." Caves are everywhere common in the limestone cliffs, and most common in the highest and most inaccessible places. The mode of their formation appears to me very easy of solution. They occur in that quality of limestone which I have compared before to the Caen stone. The effect of rain upon it is to harden it, but where it is exposed to the action of the atmosphere, and guarded from rain, it suffers disintegration. When a rock becomes detached and rolls down from its place, it may happen that a portion of the surface exposed is protected from the rain, and in process of time an excavation of considerable extent is found. There are great numbers of these caves in the cliffs, near where I am now writing, (on the Pecos,) of all sizes, from that of a baker's oven to that of a chamber where a hundred persons could find shelter. A shell of rock hangs down in front of them like a curtain, and the floor, which is always ascending, is covered with the debris as it falls in laminæ and dust. Outside the rock is blue, from exposure to weather, but within it is a delicate yellow tint, the natural color of the stone. The painted caves are of this nature, but being easy of access and near an important crossing, they had evidently been, from remote times, a resort of the savages who still hold dominion in these regions. My driver said "that when he first visited the place, five years since, the walls were covered with drawings in red and black, of men and animals," but every person visiting the spot seems to have conceived it his duty to leave some testimonial of his taste and intelligence in charcoal on the walls, until there are none of the natives' symbolical records remaining, except one or two too low to be conveniently reached. These caves were a mile from our camp, and not desiring to go further alone, I returned for a companion, and took a young Irishman, named Andy, a driver, to accompany me further down the river, where the scenery seemed still more sublimely desolate. There was no running water, but it stood in holes in the bed of the stream. We had gone about half a mile below the caves when I discovered recent signs of Indians, perhaps two or three days old, which I mentioned to Andy. I proposed to him that if he should see a large mass of coarse black hair anywhere behind the rocks, he should fire upon it with his rifle, and I would reserve my buck-shot to repulse a charge until he could re-load, but Andy remembered that his mules required his attention, and wished to leave me with both guns! But I insisted upon seeing him safely back to camp. Andy, however, thought he saw his animals straying, I fancy, and I soon lost sight of him behind a point of rocks. Desolate as this region is, it is not wanting in the picturesque. To an artist it could furnish studies of rock that it would be difficult to excel. Andy left me just at a very interesting spot—a pond of deep, limpid water, into which projects a cliff of solid stone, forty feet high, flat on the top, and undermined by the force of the current when the water was high, in finely curved lines, from top to bottom. Its connection with the precipices behind it was concealed by a few persimmon trees—the only trees in sight. It seemed that I could catch some fish from the top of this rock, but in the effort to gain it, I missed my footing, and fell into a prickly pear, which gave me useful employment till dark, in clearing my skin from the prickles. Dined again on hard bread and bacon. Near the camp, at the edge of the water, was a shrub common in all the streams of this region, which resembles willow, and is generally called such, but it has composite flowers in a panicle. Upon one of them a very large *Cicada* was making more noise than seemed necessary, and I captured him. There is a smaller species of it common in the North, and is often improperly called a locust, by those who confound the true locust with a grasshopper. I found, also, a fine specimen of the green Mantis, a very interesting insect, with a body about three inches long. Shot a pigeon for my breakfast. In the effort to shoot a long-eared rabbit, I was wounded by the point of the Yucca, and crippled for two days. On the road the sergeant killed a fine buck.

Remainder of No. 8 next week.

REASONS FOR WEARING A MOUSTACHE.—Punch has questioned one thousand persons, with the following result: To avoid shaving, 69; to avoid catching cold, 32; to hide their teeth, 5; to take away from a prominent nose, 3; to avoid being taken as Englishmen abroad, 7; because they are in the army, 6; because they have been in the army, 221; because Prince Albert does it, 2; because it is artistic, 29; because you are a singer, 3; because you travel a good deal, 17; because you have lived long on the Continent, 3; because the wife likes it, 8; because you have weak lungs, 5; because it acts as a respirator, 29; because it is healthy, 77; because the young ladies admire it, 471; because it is considered "the thing," 10; because he chooses, 1. The last is the best reason of all.

Personal Description of Faustin the First.

An American clergyman, who spent a winter in Hayti in the year 1853, gives the following description of the black Emperor, Faustin the First:—

"The present Emperor of Hayti, Faustin Soulouque, or, as he is officially known, 'His Majesty, Faustin the First,' had, previously to his election as President, been unknown to fame save as a military chieftain. His first connection with the army was in the capacity of a servant to a distinguished General. He has ever been regarded, by those who have known him, as a man of moderate abilities and acquirements, but of undoubted bravery. My first view of him was as he was riding through the city of Port-au-Prince, as his custom is on every Sunday morning. His color is the dingiest coal black; he has not the thick lips and other characteristic features that usually accompany this color. He rode a fine grey horse, imported from the United States, and was accompanied by a hundred or more of his lifeguards, on horseback, preceded by cavalry music, and passed through the principal streets of the city, uncovering his head and dispensing his bows and his smiles to the crowds as he rode rapidly past them. He was dressed, as he has always been when I have seen him, far more richly than I have ever seen any of our military officers dressed. He wore the common crescent-shaped military cap, with rich plumes and heavy golden trimmings. His coat was blue broadcloth, with standing collar; and the entire front, the collar, the seams of the sleeves and the back, the edges of the skirt, &c., were overlaid with heavy golden trimmings. Besides this, various figures were wrought in gold upon the back and other parts of the coat, so that a large part of the cloth was covered. But a part of his vest could be seen, as his coat was buttoned with one button near his neck; but all that did appear showed nothing but gold. His trowsers were white, trimmed on each side of the seams with gold lace. He was not, however, in full dress, as he had on common boots, instead of a pair most richly trimmed with velvet and gold that he sometimes wears. His age is little above fifty, his form erect, near six feet in height, and well proportioned. His horsemanship is of the most accomplished character. This attracts the attention of all foreigners, and their universal remark is, that in this respect he is rarely equaled. He usually rides to the Bureau of the Port, the Custom-house, and through several of the principal streets of the city, attended by a few of his guards, twice during the week. As I had seen him thus riding rapidly through the city, I was perplexed to reconcile his face, which seemed amiable and benignant, with what I knew of his character; but subsequently, as I stood near him when he dismounted at church, and then sat within a few feet of him during a long service, I have been relieved of this difficulty, for I could see in his face when in repose an index of his stern and merciless heart. Those familiar with the circumstances of his election as President of the Republic (the present Emperor of France, be it remembered, has most closely followed the black Emperor in the method he has taken to reach his present position) will remember that the honor came upon him most unexpectedly. Parties were so nearly balanced that neither of them was able to succeed, and after several unavailing ballots he was taken up as an available military candidate, and moreover as one that the leaders thought could easily be managed. But they soon found out their mistake. The very men who had procured his election were the first to suffer. In a very short time he dismissed them from the ministry and chose a cabinet to his own liking, and from that day onward he has sacrificed whoever has dared to oppose him, or been suspected of plotting his overthrow, with apparently as little feeling as he would have taken the life of a centipede. It is a very difficult matter to judge of the future in regard to the Haytian Government and people, but to all appearances he bids fair to be their ruler for many years to come. At least, if he be not, it will not be because he would hesitate to sacrifice hetacombs of opposing subjects to secure this end."

The Underground Railroad.

We take the following extract of a letter, written by William Still, and dated Philadelphia, Jan. 4, 1856, from the *Provincial Freeman*—a Canada West paper. Speaking of the fugitive slaves, the writer says:—

Dozens have passed on the Underground Road during the brief interval since your exit; and, with but rare exceptions, they have been of the most valuable, able-bodied, intelligent and brave of their class. Indeed, if the narrative of some two or three, to whom I allude, could be made public, I am persuaded that their adventures would appear far more extraordinary and thrilling than any which have ever come under my notice, not excepting the noted Henry Box Brown, or the celebrated William and Ellen Crafft and others.

One poor man, who left yesterday morning, in company with three others, and will barely reach Canada ere this reach you, in order to effect his escape, was obliged to swim the Potomac River on horseback on Christmas night, while the cold wind, storm and darkness were indescribably dismal. This daring bondman, rather than submit to his oppressor any longer, periled his life as above stated. Where he crossed, the river was about half a mile wide! Where could be found in history a more noble and daring struggle for freedom than is here evinced?

The wife of his bosom, and his four children, only five days before he fled, had been sold to a trader in Richmond, Va., for no other offence than simply because she had resisted the lustful designs of her master, being true to her own companion. After this poor slave-mother and her children were cast into prison for sale, the husband and some of his friends tried hard to find a purchaser in the neighborhood; but the malicious and brutal master refused to sell her—wishing to gratify his malice to the utmost of his power, he sent them to the place above named.

In this trying hour the severed and bleeding heart of the husband resolved to escape at all hazards, taking with him a daguerreotype likeness of his wife, which he happened to have on hand, and a lock of hair from her head, and from each of the children's, as mementoes of his unbounded (though sundered) affection for them.

After crossing the river, his wet clothing freezing to him, he rode all night a distance of about forty miles, in the morning leaving his faithful horse tied to a fence, quite broken down. Now he commences his dreary journey on foot—cold and hungry—in a strange place, where it is quite unsafe to make known his condition and wants. Thus for a day or two, without food or shelter, he traveled, until his feet were literally worn out.

Passing many interesting incidents on the road, I will say he arrived safely in this city on New Year's night, about two hours before day-break, having been a week on the way. The night he arrived was very cold; besides, the Underground train, that morning, was about three hours behind time, which, in waiting for it, entirely out in the cold, a member of the Vigilance Committee thought he had well nigh got frosted. But when he came to listen to the story of the fugitive's sufferings, his mind changed.

Scarcely had he entered the house (you can guess) where he was kindly received, before he took from his pocket his wife's likeness, and while gazing upon it made touching remarks, and showed it, &c. Subsequently, in speaking of his family, he showed the locks of hair referred to, which he had carefully rolled up in paper, separately. Unrolling them, he said: "This is my wife's;" "this is from my oldest daughter, eleven years old;" "and this is from my next oldest;" "and this from the next," "and this from my infant, only eight weeks old." These emblems he proposed to preserve with the utmost care, as the last remains of his affectionate family. When he exhibited the locks of hair, I could then fully appreciate his heroism in plunging into the Potomac, on the back of a dumb beast, in order to flee from a place and people who had made such barbarous havoc in his household.

His wife, as represented by the likeness, was of fair complexion, prepossessing and good-looking—perhaps not over 33 years of age. The husband is a dark mulatto, about 38 years of age, in stature well made, genteel, reads well, and is quite intelligent.

The Grape.

No fruit in the world is at once so delicious and so health-giving as the grape. The New England *Farmer* thus discourseth:—

The grape is a fruit held in high estimation by those who have been once accustomed to use it freely. It is not, however, generally known, perhaps, that in addition to its other excellent qualities, it possesses medicinal virtues which, of themselves alone, would seem to present a sufficient inducement for its cultivation.

In France and Spain, and other vine-growing countries, these medicinal properties of the fruit are well understood and appreciated, experience having demonstrated that a free use of the grape has a most salutary and invigorating effect upon the animal system; that it dilutes the blood, removes obstructions, particularly from the kidneys, liver, spleen, and other important organs, imparting a healthy tone and a vigorous circulation, and increasing the entire physical economy.

In cases of dyspepsia—a disease which is the foundation of many others—and all diseases of the liver, by which health is not only destroyed, but the mental powers sadly affected, a "grape diet" is almost the only remedy resorted to, and generally with success. It is asserted, on reliable authority, that those who labor in the vineyards, and are accustomed to partake constantly and liberally of the fruit, are never troubled with that disease. Those who are subject to it in cities, and other places where the grape is not cultivated, on the development of the symptoms of the complaint, resort to the "grape diet," or "grape cure," and where the disease has not become confirmed, and the system reduced beyond the power of remedies, a radical cure is often the result.

The nutrimental properties of the ripe grape are considerable, and it is said men may live and labor on it as an exclusive article of food, and without becoming exhausted, for a much longer period than upon any other species of fruit. It is both stimulating and invigorating, and by retaining the stomach in a healthy tone, promotes the general health and energy of all the parts.

The culture of this truly valuable fruit should be encouraged. Every man who has a house—even if he has no garden—should have a vine. It can take up no room—the air of heaven only—if he has no breadth of ground to spare for it, as it may be planted by the underpinning of his dwelling and be made to climb the house to the roof.

[Rural Intelligencer.

A Meeting which was not a Meeting.

The storm of week before last, by interrupting travel, caused a very singular meeting of Telegraph Directors. Thursday was the day of quarterly meeting of the directors of the Magnetic Telegraph from New York to Washington city. Several attempts were made by the Philadelphia and New York directors, and the officers of the Company, to get to the place of meeting, Baltimore, but they were frozen up on the road and had to return. The Baltimore *Sun* gives the sequel:

"But the fast men of the telegraph were not to be thus thwarted by those lesser agents, the railroads; those, indeed, who had subdued one great elemental principle to their purposes, were not to have its power and influence wrested away on that occasion at least by another; so the President of the Company made a telegraphic call for a meeting at twelve o'clock noon, on the next Saturday, the directors to be at their respective offices in the different cities to transact the business by the same lightning agency. At the appointed hour, the President took the chair in Philadelphia, and the directors in Washington, Baltimore, Wilmington, and New York, promptly answered to the call of the roll, when the business commenced. Resolutions were proposed and motions made in one city, and seconded and debated in the others, with as much promptness as though all had been present in one room. In the course of about two hours, the business was all transacted, a dividend declared, and the meeting adjourned. The old proverb, "business before pleasure," having been complied with, one of the Baltimore directors, under the enthusiasm of feeling excited by the novel feat he had just assisted in performing, and apparently wholly oblivious in consequence of the severe snow storm then raging, conceived the hospitable idea of inviting his fellow directors to dine with him on that day. This was a poser, for while they could converse one and two hundred miles apart as well as though they were in the same room, there was *some* perplexity as to the manner of getting at that dinner. One gentleman, however, accepted the invitation, and requested the party who proposed the dinner not to dine until he should arrive."

Regularity of Feeding Cattle.

Stephens, in his 'Book of the Farm,' gives the following illustration of the necessity of regularity and method in agricultural duties:

'In thus minutely detailing the duties of the cattle man, my object has been to show you rather how the turnips and fodder should be distributed relatively than absolutely; but whatever hour and minute the cattle-man finds, from experience, he can devote to each portion of his work, you should see that he performs *the same operation at the same time every day*. By paying strict attention to time, the cattle will be ready for and expect their wonted meals at the appointed times, and will not complain until they arrive. Complaints from his stock should be distressing to every farmer's ears, for he may be assured they will not complain until they feel hunger, and if allowed to hunger, they will not only lose condition, but render themselves, by discontent, less capable of acquiring it when the food happens to be fully given. Wherever you hear lowings from cattle, you may safely conclude that matters are conducted there in an irregular manner. The cattle-man's rule is a simple one, and easily remembered—*Give food and fodder to cattle at fixed times, and dispense them in a fixed routine.* I had a striking instance of the bad effects of irregular attention to cattle. An old staid laborer was appointed to take charge of cattle, and was quite able and willing to undertake the task. He got his own way at first, as I had observed many laboring men display great ingenuity in arranging their work. Lowings were soon heard from the stock in all quarters, both in and out of doors, which intimated the want of regularity in the cattle-man; whilst the poor creature himself was constantly in a state of bustle and uneasiness. To put an end to this disorderly state of things, I apportioned his entire day's work by his own watch; and on implicity following the plan he not only soon satisfied the wants of every animal committed to his charge, but had abundant leisure to lend a hand to anything that required his temporary assistance. His old heart overflowed with gratitude when he found the way of making all his creatures happy, and his kindness to them was so undeviating, they would have done whatever he liked.

A GREAT STEAMSHIP.—The new iron steamship Persia, of the Cunard line, has arrived at Liverpool from the Clyde, under the command of Capt. Judkins, of the Arabia. The Persia's speed from Greenock to Liverpool averaged sixteen knots an hour. The Persia exceeds by 1,200 tons the internal capacity of the largest of the present Cunarders. Her chief proportions are:—Length from figurehead to taffrail, 390 feet; Length in the water, 360 feet; Breadth of hull, 45 feet; Breath over all, 71 feet; Depth, 32 feet; Burden, 3,600 tons.

According to the Government rule of admeasurement, her power is equal to that of 900 horses; according to the plan laid down in Earl Hardwicke's bill, 1,200 horses; and according to James Watt's old established rule, of 3,300 lbs. per horse, she would work up to 4,000 or 5,000 horses. She has seven water-tight compartments, separate sleeping accommodation for 300 passengers, and a clear promenade from stem to stern, along the roof of the deckhouse. The weight of iron in the Persia when launched was 2,200 tons, and, with the engines, 1,400 tons of coal and full cargo, will be 5,400 tons, with which she will draw 23 feet of water. Her accommodation is for 1,200 tons measurement of goods. Steam being the sole motive agent she is but lightly rigged, with three masts. Bets are offered that she will accomplish the trip between Europe and America in seven days. She will sail from Liverpool about a month hence.

TONGUE FROZEN FAST.—In Cincinnati, on the 10th January, one boy induced another to put his tongue against a fluted iron lamp post—the thermometer at the time indicating a temperature far below zero. The tongue stuck fast, of course, and the poor boy suffered great agony. Several passers endeavored to release him, but in vain. Matters were in this situation for over five minutes, when a gentleman named Taylor went into the Telegraph House and brought some hot water and whiskey, with which he bathed the tongue of the suffering boy, and finally liberated about one-half, leaving the other sticking to the post where it remained for the balance of the day, a warning to youngsters how they recklessly lick cold iron in freezing weather. The luckless boy was taken to his home in extreme agony.

IMPROVEMENT IN THE MELODEON.—As commonly constructed, the melodeon has two sets of reeds, the one tuned either a second above or in unison with the other, and both sounded by the opening of the valve. To this a Waterville mechanic has now added two other sets, by introducing another reed-board of precisely similar construction, having its rank of keys situated above and in the rear of the first sets. These are tuned to some other interval, or in unison, as desired, and all may be sounded by the lower key-board by merely attaching the upper one to it. This is one of the most useful and valuable improvements that could be made on this popular instrument.

ALLOYS OF METALS.—Prof. Calvert, of England, has succeeded in producing two new alloys, composed of iron combined with that valuable metal lately obtained by M Deville—aluminum. These two alloys are composed as follows: First, 1 equivalent of aluminum, 5 equivalents of iron; second, 2 equivalents of aluminum, 3 equivalents of iron; and the last alloy possesses the useful property of not oxidizing when exposed to a damp atmosphere, although it contains 75 per cent. of iron. Thus is solved one of the great chemical and commercial questions of the day, namely, that of rendering iron less oxid zable when exposed to damp atmosphere.

Capt. F. H. Hibbard, who recently died, and was buried in Greenwood Cemetery, left $20,000 for the Brooklyn City Hospital.

New York and Erie Railroad.

ON and after Wednesday, Oct. 31, and until further notice, Passenger Trains will leave the pier foot of Duane-st., New York, as follows:

Buffalo Express at 7 A. M. for Buffalo direct, without change of baggage or cars. At Hornellsville this Train connects with a Way Train for Dunkirk and all stations on the Western Division.

Mail at 8½ A. M. for Dunkirk and Buffalo, and all intermediate stations. Passengers by this Train will remain over night at Owego, and proceed the next morning.

Newburg Express, at 4 P. M, for Newburg direct, without change of cars.

Rockland Passenger at 4 P. M. via Sufferns for Piermont and intermediate stations.

Way Passenger at 4 P. M. for Otisville and intermediate stations.

Night Express at 5 P. M. for Dunkirk and Buffalo.

Emigrant at 5 P. M. for Dunkirk and Buffalo and intermediate stations.

On Sundays only one express train, at 5 P. M.

These Express Trains connect at Elmira with the Elmira and Niagara Falls Railroad, for Niagara Falls, at Buffalo and Dunkirk with the Lake Shore Railroad for Cleveland, Cincinnati, Toledo, Detroit, Chicago, &c. D. C. McCALLUM, General Sup't.

Ayer's Pills.

FOR all the purposes of a Family Physic. There has long existed a public demand for an effective Purgative Pill which could be relied on as sure and perfectly safe in its operation. This has been prepared to meet that demand, and an extensive trial of its virtues has conclusively shown with what success it accomplishes the purpose designed. It is easy to make a physical *Pill*, but not so easy to make the best of all *Pills*—one which should have none of the objections, but all the advantages of every other. This has been attempted here, and with what success we would respectfully submit to the public *decision. It has been* unfortunate for the patient hitherto that almost every purgative medicine is acrimonious and irritating to the bowels. This is not. Many of them produce so much griping pain and revulsion in the system as to more than counterbalance the good to be derived from them. These *Pills* produce no irritation or pain, unless it arises from a previously existing obstruction or derangement in the bowels. Being purely vegetable, no harm can arise from their use in any quantity; but it is better that any medicine should be taken judiciously. Minute directions for their use in the several diseases to which they are applicable are given on the boxes. Among the complaints which have been speedily cured by them we may mention Liver Complaint, in its various forms of Jaundice, Indigestion, Langor and Loss of Appetite, Listlessness, Irritability, Billious Headache, Billious Fever, Fever and Ague, Pain in the Side and Loins, for in truth, all these are but the consequence of diseased action of the liver. As an aperient, they afford prompt and sure relief in Costiveness, Piles, Colic, Dysentery, Humors, Scrofula and Scurvy, Colds, with soreness of the body, Ulcers and impurity of the blood; in short, any and every case where a purgative is required.

They have also produced some singularly successful cures in Rheumatism, Gout, Dropsy, Gravel, Erysipelas, Palpitation of the Heart, Pains in the Back, Stomach, and Side. They should be freely taken in the spring of the year, to purify the blood and prepare the system for the change of seasons. An occasional dose stimulates the stomach into healthy action, and restores the appetite and vigor. They purify the blood, and, by their stimulant action on the circulatory system, renovate the strength of the body, and restore the wasted or diseased energies of the whole organism. Hence an occasional dose is advantageous even though no serious derangement exists; but unnecessary dosing should never be carried too far, as every purgative medicine reduces the strength, when taken to excess. The thousand cases in which a physic is required cannot be enumerated here, but they suggest themselves to the reason of every body; and it is confidently believed this Pill will answer a better purpose than any thing which has hitherto been available to mankind. When their virtues are once known the public will no longer doubt what remedy to employ when in need of a cathartic medicine.

Being sugar wrapped they are pleasant to take, and being purely vegetable, no harm can arise from their use in any quantity.

For minute directions, see the wrapper on the Box.

Prepared by Dr. J. C. AYER, Practical and Analytical Chemist, Lowell, Mass.

Price 25 Cents per Box. Five Boxes for $1 00.

Ayer's Cherry Pectoral,

FOR the rapid cure of Coughs, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption. This remedy has won for itself such notoriety for its cures of every variety of Pulmonary diseases, that it is entirely unnecessary to recount the evidences of its virtues in any community where it has been employed. So wide is the field of its usefulness, and so numerous the cases of its cures, that almost every section of the country abounds in persons publicly known, who have been restored from alarming and even desperate diseases of the lungs by its use. When once tried its superiority over every other medicine of its kind is too apparent to escape observation, and where its virtues are known, the public no longer hesitate what antidote to employ for the distressing and dangerous affections of the pulmonary organs which are incident to our climate. And not only in formidable attacks upon the lungs, but for the milder varieties of *Colds, Coughs, Hoarseness, &c.* and for Children it is the pleasantest and safest medicine that can be obtained.

As it has long been in constant use throughout this section, we need not do more than assure the people its quality is kept up to the best that it ever has been and that the genuine article is—

The Sabbath Recorder,

PUBLISHED WEEKLY
By the Seventh-day Baptist Publishing Society,
AT
NO. 9 SPRUCE-STREET, NEW YORK.

Terms:

$2 00 per year, payable in advance. Subscriptions not paid till the close of the year, will be liable to an additional charge of 50 cents.

☞ Payments received will be acknowledged in the paper so as to indicate the time to which they reach.

☞ No paper discontinued until arrearages are paid, except at the discretion of the publisher.

☞ Communications, orders, and remittances, should be directed, post-paid, to
GEO. B. UTTER, No. 9 Spruce-st., New York.

Liabilities of those who take Periodicals.

The laws declare, that any person to whom a Periodical is sent, is responsible for payment, if he receives the paper, or makes use of it, even if he has never subscribed for it, or has ordered it to be stopped. His duty in such a case is not to take the paper from the office or person with whom the paper is left, but to notify the publisher that he does not wish for it.

If papers are sent to a post-office, store or tavern, or other place of deposit, and are not taken by the person to whom they are sent, the postmaster, store or tavern-keeper, &c., is responsible for the payment until he returns the papers, or gives notice to the Publisher that they are lying dead in the office.

Rates of Advertising.

For a square of 16 lines or less—one insertion		$ 75
" "	each subsequent insertion	50
" "	six months	6 00
" "	one year	10 00

For each additional square, two-thirds the above rates.

THE BIBLE AND GEOLOGY.

BROTHER D. E. M.:—

Having seen the discussion between yourself and others on Geology and the Bible, I wish to make a few inquiries, and state some difficulties that are in my way, and forbid my adoption of the geological theory. Will you stoop and patiently hear the thoughts of an obscure and unpretending brother, and pardon the awkward manner in which these thoughts are presented?

In your reply to Doctor Bailey, No. 3, you have given us the geological theory in the language of Dr. John Pye Smith, and which *you say* "*is adopted* by all of the most eminent geologists of the age:"—

"1st. The first sentence of the Mosaic record is a simple, independent, all-comprehending axiom, to this effect, that matter has not existed from eternity, but had a beginning; that that beginning took place by the all-powerful will of one Being, the self-existent, independent, and infinite in all perfection; and that the date of that beginning is not made known. 2d. That at a recent period our planet was brought into a state of disorganization, detritus, or ruin, from a former condition. 3d. That it pleased the Almighty out of that ruin to adapt the surface of the earth to its now existing condition—the whole extending through the period of six natural days."

I inquire, first, are we to believe that all the material composing the universe came into being at the going forth of the creative fiat?—and did those laws which control and modify matter, in all its varied conditions, exist coeval with matter? Having taken the liberty to inquire into matters so long anterior to Adam's race, I pause, and in my thoughts find myself expatiating on a pre-Adamite earth. But what can I learn? I turn to the blessed Book of God, but it fails me now. Overwhelmed with anxiety, I turn from the Bible to the schoolmen of the present day, namely, John Pye Smith, Hugh Miller, Sumners, Chalmers, Duncan, Flemings, and D. E. Maxson, &c. These all feign to speak encouragingly; they say, in effect, Lo, we have a record in relation to these matters; go thou and rest therein, and be wise. It is called the science of Geology, a record "no longer to be regarded as the dreams of fancy, but the legitimate deductions from long and careful observation of facts." Then, in the light of this truth-telling record, I ask, did the pre-Adamite earth enjoy the blessings of solar light and heat? And did it have an atmosphere, with all its phenomena of clouds, rains, dews, &c., and all the conditions necessary to the existence and full development of animal and vegetable life? Did the inhabitants of that world look out upon a green earth, and behold Flora in all her smiles, and see the ripening fruits clustering in the vales and on the mountain sides? Did the earth, the air, and seas, teem with animal life? And did the laws of motion—of gravity and chemical affinities, &c.—exist then as now? *Answer*—Go to the stratified crust of the earth, and learn in those deposits that such things did exist. Again, was the geographical situation of the earth then as it is now? Yes, in many respects the very same. There was the great Mississippi Valley, extending from the Alleghany to the Rocky Mountains, with all its diversity of inclined plains; and there was the Mississippi River, with its numerous tributaries, rolling its immense waters into the Gulf of Mexico for a period of at least 24,000 years; and there too was the great chain of northern lakes, and Niagara also, with her voice of thunder, leaping the rock and tumbling down the abyss at Queenstown nearly 36,000 years in the history of the pre-Adamite earth. While I contemplate this bright picture, I fancy this country of ours in a far better condition than now, both in science and morals; certainly, the inhabitants of that world were not affected with Adam's transgression. But does any one say, that this fancy is foolish and wild, and geology teaches the sober truth that there were no human beings in that period, as proved from the fact that no fossil remains of such beings are found in all the stratified crust? Be patient a little longer, while I make a suggestion. Perhaps those beings were not sinners, and never died, and at the time of the great ruin their Father in Heaven took them all, body and soul, to glory, as he will his saints at the great and last day, and this accounts for the absence of such remains. *Query*—After the resurrection, will there be the least fossil remain of Adam's race to be found on earth?

But the revery is suddenly broken off by the second proposition in the geological theory, "that at a recent period our planet was brought into a state of disorganization, detritus, or ruin, from a former condition." Here I am brought to a perfect stand-still, and in amazement I ask, What am I to understand this condition to consist in? When philosophers, chemists, or statesmen, speak of disorganization of animal, vegetable, chemical, or political bodies, I know what they mean—an abrogation or suspension of the laws of their organization or combination; consequently they fall back to their native elements. But when applied to our planet, are we to understand the same thing? If so, then the Almighty abrogated or suspended all those great laws that controlled the motions and conditions of our earth, and she fell into chaos. What is the matter with Niagara, that she has ceased to sing? And what is the matter with the Father of Rivers, that he has ceased to flow? Oh! the law of gravity is no more. And where are the coral reefs, and the ten miles of stratified crust? Gone—all gone to atoms—because the laws of attraction or cohesion are suspended or abrogated. But do any of the schoolmen say those laws were not abrogated, and that this state of things did not occur as you have supposed? But, kind instructor, there is another word in your published theory—*detritus*—and from its connection, I would read; our planet was brought into a state of detritus. I suppose geologists understand their own nomenclature. Mr. Webster tells me that in geology it means a mass of substance worn off or detached from solid bodies by attrition. Then I conclude, by your own theory, that by some mysterious rubbing process the solid material composing the crust of the earth was, to use your own language, "brought into a state of ruin." And now I ask, in all candor, where are those marks of the earth's extreme old age? All lost in this disorganized and ruined state of our planet. And now, as I in my fancy stand gazing upon and contemplating this confused mass of material, this conglomerated ruin, I fall into a sad difficulty; for while the Spirit of God is brooding over this great deep, I see that he must by a miracle reproduce all that ten miles of stratified crust, all those coral reefs, all that gorge of Niagara, and all the delta at the mouth of the Mississippi.

We notice the last proposition in the theory: "3d. That it pleased the Almighty out of that ruin to adjust the surface of the earth to its now existing condition, the whole extending through a period of six natural days." What am I to understand this adjustment of the earth's surface to be, but its arrangement into sea and land, rivers and lakes, hills and valleys, woodlands and plains. It was then the Almighty who gave to the great oceans their bounds, "and brake up for them his decreed place, and set bars and doors, and said, Hitherto shalt thou come, but no farther, and here shall thy proud waves be stayed." It was He then who arranged the Mediterranean and opened the straits at Gibraltar, and brought into being all the natural fixtures of the eastern continents. It was He then who called forth the western hemisphere, erected her tall mountains, set into motion her Mississippi, Niagara, and other rivers, and spread out all her forests and prairies, &c. And "all this," as the theory says, "in six natural days." Was it then that the morning stars sang together, and all the sons of God shouted for joy? This to me appears beautiful and true, but conflicts with the notion of looking to deltas, gorges, and stratification, for the hoary age of our earth. To avoid this, or like difficulties, the infidel has rejected the Bible. But I prefer to reject, not the facts of geology, but the theory and deductions of some geologists.

L. A. DAVIS.

WELTON, Iowa, Jan. 21, 1856.

To the Editors of the Sabbath Recorder:—

The discussion of scientific subjects belongs to men of science; but may not one of the uninitiated, for the benefit of whom such subjects are professedly discussed, venture to ask an explanation of some things which to him appear dark, not to say contradictory? And, lest my intention should be misapprehended, allow me here to say, that my object is *light*, not criticism. I have been much interested in the geological question that has been discussed through your columns by brethren Maxson, Bailey, and others, and would gladly attain to the truth in the matter; but before I can adopt the "geological theory," or "fact," as Bro. M. claims it to be, of the world's age, as advocated by him, I wish him to remove one objection which arises in my mind to some of his strong arguments, or evidences in its favor. This theory, he states "in the concise language of Dr. John Pye Smith," as follows: "1st. The first sentence of the Mosaic record is a simple, independent, all-comprehending axiom to this effect, that matter has not existed from eternity, but had a beginning; that that beginning took place by the all-powerful will of one Being, the self-existent, independent, and infinite in all perfection; *and that the date of that beginning is not made known.* 2d. That at a recent period our planet was brought into a state of disorganization, detritus, or ruin, from a former condition. 3d. That it pleased the Almighty, out of that ruin, *to adjust the surface of the earth to its now existing condition*—the whole extending through a period of six natural days." This theory claims "*that the date of that beginning* (Gen. 1: 1) *is not made known*," and Bro. M. offers in proof of this, the Niagara Falls, which he claims, according to Lyell, has been receding 35,000 years, at the rate of one foot per year, by the action of the water upon the rock, &c. As another evidence of this "fact," he tells us that "the alluvial deposit near the mouth of the Mississippi river, according to Lyell, must have been about 130,000 years in the course of formation at the present rate of deposit." Now, if these are "facts to be believed," they not only establish the point "that the date of that beginning is not made known," but, to my mind, they establish another point equally clear, and that is, *that the surface of the earth was adjusted to its present existing condition*, not merely 6,000 years ago, but at least 130,000 years ago; for I cannot conceive that either the Niagara or the Mississippi rivers *could flow* as they *now flow*, (and they must have flowed during all that time *as now*, to have accomplished the work attributed to them,) until the earth assumed its present form, or while it "was without form, and void, and darkness was on the face of the deep." To my mind, then, these evidences prove too much; and I cannot reconcile them with the declaration of Bro. M, that the six days work of Gen. 1st and Ex. 20th, "consisted of *fitting* up or *remodeling* the earth from the material which had existed since the creating fiat, in the first verse, (of Genesis,) called them into existence," or of Dr. Smith, "that out of that ruin it pleased the Almighty to adjust the surface of the earth to its *now existing condition—the whole extending through a period of six natural days*." And this, with me, amounts to an objection to the Geological Theory of the world's age, and this is the objection which I would be happy to have Bro. M. remove, that I may believe the doctrine, if it is true.

A TRUTH SEEKER.

For the Sabbath Recorder.

MINISTERIAL RESPONSIBILITY.

In view of the greatness of the work of the ministry, the Apostle Paul says, "Who is sufficient for these things?" This man was possessed of great intellectual powers, of extensive learning, of deep piety and warm devotion, and moreover had a most especial call to the work, and yet he trembled when he weighed the solemn responsibility resting upon him. He faltered not at the toils and sacrifices and sufferings which he had to endure in this vast enterprise, nor was he ever unfaithful to the trust committed to him; but the thought of having souls to instruct and train for eternity, and to whom he would be the savor of life unto life or of death unto death, weighed heavily on his soul. The work of the ministry is the same now in importance, and connected with as much responsibility as ever, and as much grace is needful to perform it.

What is the work the minister has to perform? Let the sacred oracles direct us in giving a reply. "Go into all the world, and preach the gospel to every creature," is the commission of our risen Lord. Paul, who, we believe, knew his business well, says, "Now then we are ambassadors for Christ, as though God did beseech you by us, we pray you in Christ's stead be ye reconciled to God." This was the exclusive work in which the ministers of Christ were engaged in primitive times. They meddled not with tyranny and oppression They had nothing to do with politics or government measures. They did not harangue their audiences on civil rights. Nor did they study to please man with fine and eloquent orations, or well-arranged and flowery essays. There was nothing metaphysical or speculative advanced on the great topics of revelation. They never attempted to reduce the unfathomable doctrines of the resurrection of the dead, the future state, and the future judgment, to human comprehension, and thus strip them of their glory; but presented them as subjects of faith, and urged them on the consciences of men. The theological discussions and disputes, and hair-breadth distinctions on doctrinal points, which have disturbed the churches, racked many a weak and trembling saint with anguish, and thrown up stumbling-blocks in the way of sinners, and perhaps paved the way to hell, were not thought of in the first ages of the church, or at least were never entertained by the ministers of Christ. The way the apostles understood their Lord and their commission may be easily gathered from the history of their labors, as contained in the Acts of the Apostles; and we think if the style and manner and doctrine of their preaching were studied, the present ministry in large numbers would be ashamed of themselves. Ministers, we apprehend, are responsible, to a great extent, for the views men who hear them entertain of God's word and its divine doctrines—probably for the trains of thought and tendency of their lives. Our great adversary, the devil, wants no better and more efficient agencies to ruin men's souls, and build up his own kingdom, than ministers false to their trust. Men who fill the sacred desk every Sabbath, and who are charging the minds of their hearers with wild and extravagant and anti evangelical notions, are driving them into the snare of the devil, and their blood will God require of them another day. It is true, every person ought to test the truth of what is presented, either from the pulpit or any where else, by the Bible itself, and cannot be justified by man, and will not be by God, for embracing error, as all are responsible for what they believe. At the same time, the teacher of religion must be awfully responsible for leading others astray from the truth. The professed minister of the gospel must preach what God's word tells him, and not venture on the dangerous ground of speculation. God tells him to preach his gospel to a guilty and perishing world, and woe to the man who does not do it. The Apostle Paul passes the most awful denunciation upon the man or angel who dares to venture on any other ground. Ministers are responsible for the doctrines they preach and the topics they bring before their congregations, and it is to be feared that many who have been engaged in that solemn calling would be glad at the great day to have all their sermons consumed in the conflagration. But no, it cannot be—they will stare them in the face forever, and be a source of the greatest anguish.

Nor is the minister's responsibility confined to his public ministry; it extends to his example. Oh, it is not enough to preach the truth, but the truth must be lived; the truth must shine out in the spirit and actions of the man; and demonstrate the excellence and power of his faith in the doctrine preached. Let but the life correspond with the doctrines taught, and then we may expect great things. Some one has said, that in order to make a good orator there must be a good man. In the ministry it is emphatically true, as every one knows and feels, and of which the minister himself must be verily conscious. Much self-examination and self-denial, and watchfulness, and prayer for divine help, are felt to be very essential by the true and faithful and compassionate minister of Christ, lest he betray his trust, and throw a stumbling block in the way of the sinner, and discourage those who fear and love the Lord.

The minister of the gospel is greatly responsible for the condition of the church where he is pastor. By preaching false doctrine, or by preaching up the various isms afloat in the religious world, or by discussing the politics of the day—in fact, by any course of preaching which is not authorized by the Master whom he professes to serve—the church may be disturbed by conflicting opinions, and thrown into faction and strife. If the pastor of a church becomes indolent, and does not feed the flock with wholesome, instructing, and stimulating truths, in all their variety, the membership will be discouraged and disaffected, and the cause retarded. And what an important bearing on the welfare of the church has a minister's life! He cannot disgrace himself by unholy living, without leaving a stain on the church itself, and a stain not so soon wiped away. In some cases, a long time has elapsed before the church recovered herself, and a succeeding minister has had much to do before he could obtain the confidence of the people, either in the church or in himself. Some churches have been corrupted, divided, and broken up, through inconsistent and erroneous ministers.

Upon the whole, the ministry is a great work to be engaged in—a work requiring much piety and the spirit of Christ—a work taxing all the energies, time and talents of the man—a work the results of which will be good or immensely evil, both on the church and the world, and awfully solemn or inexpressibly delightful, at the great day—a work upon which no one ought to enter, and which never can be properly performed, only as we have the instruction and calling of Heaven.

GEORGE R. WHEELER.

SALEM, N. J.

CRITICISING SERMONS.

A fact is stated in the life of the Rev. Dr. Alexander, which shows the ill effects of injudicious criticism upon the services of the sanctuary. He says, that when a boy, living in a retired portion of the country, and without the stated means of grace, on one occasion a traveling clergyman delivered a sermon which left a deep impression on his mind. This, he tells us, however, was entirely obliterated when he reached home, by the disparaging remarks of his parents on the performance. And this, we fear, is frequently the result of similar incautious conduct. Too many look upon the sermon as a mere exhibition of elegant composition and rhetorical effort. They fail to recognize in it the preached word, or to remember that the minister is not using his own weapons, but the sword of the Spirit. Christians too frequently evince the same disposition, and are dissatisfied unless the sermon comes fully up to their own expectations, or is adapted to the peculiar frame of mind in which they may be indulging. No one can tell the effect produced upon others by a message, which, indeed, may not have suited our own case, but have fully met the wants of others equally needy. Satan is always busy at work to destroy the seed sown, and if the unconverted find that those who profess themselves to be Christians are dissatisfied with the manner or matter of the preacher, it will take but little to obliterate any good impressions made. Every gospel sermon, however poor the language, or unfortunate the diction, may be blessed by the Spirit of God—and we should take heed lest, without being aware of it, we are assisting in quenching his blessed influence. "The Lord is in his holy temple, let all the earth keep silence before him." [Episcop. Recorder.

A man must possess fire in himself before he can kindle up the electricity that thrills the great popular heart.

MARY MAGDALENE.

BY THE LATE FRANCIS S. KEY.

I.

To the hall of the feast came the sinful and fair,
She heard in the city that Jesus was there:
Unheeding the splendor that blazed on the board,
She silently knelt at the feet of the Lord.

II.

The hair on her forehead so sad and so meek,
Hung dark on the blushes that burned in her cheek;
And so sad and so lowly she knelt in her shame,
It seemed that her spirit had fled from her frame.

III.

The frown and the murmur went round thro' them all,
That one so unhallowed should tread in that hall;
And some said the *Poor* would be objects more meet
For the wealth of the perfume she poured on his feet.

IV.

She heard but her *Saviour*, she spoke but in sighs,
And she dared not look up to the heaven of his eyes;
And the hot tears gushed forth with each heave of her breast,
While her lips to his sandals were throbbingly pressed.

V.

In the sky, after tempest, as shineth the bow—
In the glance of the sunbeam as melteth the snow,
He looked on the lost one, her sins are forgiven—
And Mary went forth in the beauty of Heaven.

LAST DAYS OF JUDGE JEFFRIES.

Those who have read the acts of Lord Jeffries, the inhuman Judge who displayed his savage atrocity when Baxter and Bunyan were brought before him for trial, will recognize the hand of a righteous yet terrible Providence, in the wretchedness he must have endured in his last days on earth. We copy from the third volume of Macaulay's History of England the following extract:—

As soon as William became King, many of the Whigs began to demand vengeance for all that they had suffered from the Tories. The king recommended to Parliament an act of general amnesty to guard the public mind. Inquiries were at length instituted. Among the many culprits brought before the House, there was one who stood alone and unapproached in guilt and infamy, and whom Whigs and Tories were equally willing to leave to the extreme rigor of the law. On that terrible day which was succeeded by the Irish Night, the roar of a great city, disappointed of its revenge, had followed Jeffries to the draw-bridge of the Tower. His imprisonment was not strictly legal; but he at first accepted with thanks and blessings the protection which those dark walls, made famous by so many crimes and sorrows, afforded him against the fury of the multitude. Soon, however, he became sensible that his life was still in imminent danger. For a time he flattered himself with a hope that a writ of Habeas Corpus would liberate him from his confinement, and that he should be able to steal away to some foreign country, and to hide himself with a part of his ill gotten wealth from the detestation of mankind; but, till the government was settled, there was no Court competent to grant a writ of Habeas Corpus; and, as soon as the government had been settled, the Habeas Corpus act was suspended.

Whether the legal guilt of murder could be brought home to Jeffries may be doubted. But he was morally guilty of so many murders, that, if there had been no other way of reaching his life, a retrospective Act of Attainder would have been clamorously demanded by the whole nation. A disposition to triumph over the fallen, has never been one of the besetting sins of Englishmen; but the hatred of which Jeffries was the object, was without a parallel in our history, and partook but too largely of the savageness of his own nature. The people, where he was concerned, were as cruel as himself, and exulted in his misery, as he had been accustomed to exult in the misery of convicts listening to the sentence of death, and of families clad in mourning. The rabble congregated before his deserted mansion in Duke street, and read on the door, with shouts of laughter, the bill which announced the sale of his property. Even delicate women, who had tears for highwaymen and housebreakers, breathed nothing but vengeance against him. The lampoons on him which were hawked about the town, were distinguished by an atrocity rare even in those days. Hanging would be too mild a death even for him; a grave under the gibbet too respectable a resting-place; he ought to be whipped to death at the cart's tail; he ought to be tortured like an Indian; he ought to be devoured alive. The street poets portioned out all his joints with cannibal ferocity, and computed how many pounds of steaks might be cut from his well-fattened carcass. Nay, the rage of his enemies was such, that, in language seldom heard in England, they proclaimed their wish that he might go to the place of wailing and gnashing of teeth, to the worm that never dies, to the fire that is never quenched. They exhorted him to hang himself in his garters, and to cut his throat with his razor. They put up horrible prayers that he might not be able to repent, that he might die the same hard-hearted, wicked Jeffries that he had lived. His spirit, as mean in adversity as insolent and inhuman in prosperity, sank down under the load of public abhorrence. His constitution, originally bad, and much impaired by intemperance, was completely broken up by distress and anxiety. He was tormented by a cruel internal disease, which the most skillful surgeons of that age were seldom able to relieve. One solace was left him—brandy. Even when he had causes to try and councils to attend, he had seldom gone to bed sober. Now, when he had nothing to occupy his mind save terrible recollections, and terrible forebodings, he abandoned himself without reserve to his favorite vice. Many believed him to be bent on shortening his life by excess. He thought it better, they said, to go off in a drunken fit than to be hacked by Ketch, or torn limb from limb by the populace.

Once he was roused from a state of abject despondency by an agreeable sensation, speedily followed by a mortifying disappointment. A parcel had been left for him at the Tower. It appeared to be a barrel of Colchester oysters, his favorite dainties. He was greatly moved; for there are moments when those who least deserve affection are pleased to think that they inspire it. "Thank God," he exclaimed, "I have still some friends left." He opened the barrel; and from among a heap of shells out tumbled a stout halter.

It does not appear that one of the flatterers or buffoons, whom he had enriched out of the plunder of his victims, came to comfort him in the day of trouble. But he was not left in utter solitude. John Tutchin, whom he had sentenced to be flogged every fortnight for seven years, made his way into the Tower, and presented himself before the fallen oppressor. Poor Jeffries, humbled to the dust, behaved with abject civility, and called for wine. "I am glad sir," he said, "to see you." "And I am glad," answered the resenting Whig, "to see your Lordship in this place." "I served my master," said Jeffries; "I was bound in conscience to do so." "Where was your conscience?" said Tutchin, "when you passed that sentence on me at Dorchester?" "It was set down in my instructions," answered Jeffries, fawningly, that I was to show no mercy to men like you, men of parts and courage. When I went back to Court I was reprimanded for my lenity." Even Tutchin, acrimonious as was his nature, and great as were his wrongs, seems to have been a little mollified by the pitiable spectacle which he had at first contemplated with vindictive pleasure. He always denied the truth of the report that he was the person who sent the Colchester barrel to the Tower

A more benevolent man, John Sharp, the excellent Dean of Norwich, forced himself to visit the prisoner. It was a painful task, but Sharp had been treated by Jeffries, in old times, as kindly as it was in the nature of Jeffries to treat any body, and had once or twice been able, by waiting till the storm of curses and invectives had spent itself, and by dexterously seizing the moment of good humor, to obtain for unhappy families some mitigation of their sufferings. The prisoner was surprised and pleased. "What," he said, "dare you own me now?" It was in vain, however, that the amiable divine tried to give salutary pain to that seared conscience. Jeffries, instead of acknowledging his guilt, exclaimed vehemently against the injustice of mankind. "People call me a murderer for doing what at the time was applauded by some who are now high in public favor. They call me a drunkard because I take punch to relieve me in my agony." He would not admit that, as President of the High Commission, he had done any thing that deserved reproach. His colleagues, he said, were the real criminals; and now they threw all the blame on him. He spoke with peculiar asperity of Sprat, who had undoubtedly been the most humane and moderate member of the board.

It soon became clear that the wicked judge was fast sinking under the weight of bodily and mental suffering. Dr. John Scott, prebendary of St. Paul's, a clergyman of great sanctity, and author of the Christian Life, a treatise once widely renowned, was summoned, probably on the recommendation of his intimate friend Sharp, to the bedside of the dying man. It was in vain, however, that Scott spoke, as Sharp had already spoken, of the hideous butcheries of Dorchester and Taunton. To the last, Jeffries continued to repeat that those who thought him cruel did not know what his orders were, that he deserved praise instead of blame, and that his clemency had drawn on him the extreme displeasure of his master.

Disease, assisted by strong drink and misery, did its work fast. The patient's stomach rejected all nourishment. He dwindled in a few weeks from a portly and even corpulent man, to a mere skeleton. On the 18th of April he died, in the forty-first year of his age. He had been Chief Justice of the King's Bench at thirty-five, and Lord Chancellor at thirty seven. In the whole history of the English bar, there is no other instance of so rapid an elevation, or of so terrible a fall. The emaciated corpse was laid, with all privacy, next to the corpse of Monmouth, in the Chapel of the Tower.

PRACTICAL PRAYER.

In the vicinity of B——, lived a poor but industrious man, depending for support upon his daily labor. His wife fell sick, and not being able to hire a nurse, he was obliged to confine himself to the sick bed and family. His means of support being cut off, he soon found himself in need. Having a wealthy neighbor near, he determined to go and ask for two bushels of wheat, with a promise to pay as soon as his wife became so much better that he could leave her and return to his work. Accordingly, he took his bag, went to the neighbor's, and arrived while the family was at morning prayers.

As he sat on the door stone he heard the man pray very earnestly that God would clothe the naked, feed the hungry, relieve the needy, and comfort all that mourn. The prayer concluded, he stepped in and made known his business, promising to pay from the avails of his first labors. The farmer was so sorry that he could not accommodate him, but he had promised to lend a large sum of money, and he presumed neighbor A—— would let him have it.

With a tearful eye and a sad heart, the poor man turned away. As soon as he left the house, the farmer's little son stepped up and said—

"Father, did you not pray that God would clothe the naked, feed the hungry, relieve the distressed, and comfort mourners?"

"Yes; why?"

"Because, father, if I had your wheat, I would answer that prayer."

It is needless to add that the christian father called back his suffering neighbor, and gave him as much as he needed.

Now, Christian readers, do you answer your own prayers? [New York Evangelist.

Neither men nor women become what they were intended to be by carpeting their progress with velvet; real strength is tested by difficulties.

OUR CONTROVERSY WITH S. S. GRISWOLD—NO. 7.

If Bro. G.'s newly imbibed doctrine were merely a denial of strict philosophical identity between the natural and spiritual bodies, reason would that we should bear with him. But this is not the whole of it. It ignores any relation whatever between what is laid in the grave and what comes to view in the resurrection. The spiritual body is received at the moment of death—at the very instant of sloughing off the material organization. It comes *not* from the grave, therefore, and the last triumphant shout of the ransomed, "O grave, where is thy victory?" has no pertinence. The grave actually *has* triumphed over all that was put into it. Death and hell do *not* deliver up the dead which are in them, for, according to Bro. G.'s theory, they hold nothing that Christ wants. (Rev. 20: 13.) The shout of the descending Lord will *not* awaken those that are in their graves, for there are none there to come forth. (John 5: 28.) What does our reviewer's theory do with such texts as these?

We make no attempt at explaining what the exact relation between the buried and raised bodies is; philosophy furnishes no help here. But that there is a relation much more intimate than Bro. G.'s theory acknowledges, we are satisfied. The mediatorial work of Christ is too intimately concerned with the *grave* to consist with the Swedenborgian fancy. Jesus Christ gathers *something* from the GRAVE, and his mediatorial work is represented as being directed towards the accomplishment of this result.

The *simultaneous* resurrection of the saints is completely set aside by this visionary system. The resurrection is a process that is going on all the time. Is this in accordance with what Paul taught the Thessalonians and Corinthians? Does it answer to the typical instruction of the Old Testament? Were not the Israelites introduced into Canaan in a body, at one and the same time? And shall not the true Israel, the circumcised in heart, be introduced into the heavenly Canaan in a body? Did the saints of the Old Dispensation rise from the dead as soon as they gave up the ghost? Were they made perfect at once? Or did God provide that they without us should not be made perfect? (Heb. 11: 40.)

The Judgment of the Last Day falls by the same stroke. "It is appointed unto men once to die, and after this the judgment." (Heb. 9: 29.) But this, according to the system under consideration, means—not that judgment will begin after death shall have finished its work upon the whole race of mankind, but—that each individual passes to judgment the moment he dies. God hath appointed no particular day, in which He will judge the world in righteousness, (Acts 17: 31,) but is carrying on the inquest continually. The "coming" of Jesus Christ, to pronounce his people just, and to punish the wicked with everlasting destruction from his presence, (2 Thess. 1: 7, &c.,) is an every day affair. His "so coming IN LIKE MANNER as the disciples saw him go into heaven," (Acts 1: 11,) is not to be looked for. "The end, when he shall have delivered up the kingdom to God, even the Father; when he shall have put all enemies under his feet," cometh—when?

Referring to our article of April 5th, Bro. G. makes a "note" in brackets to this effect: "Bro. B. says the body of itself neither *transgresses* a law nor obeys it, and yet he now asks how the body can be punished for its *transgressions*. Does that display 'good tact'?" Why, no, it does not display "good tact," and we rather wonder that you yourself originated such a blunder. But "Jove sometimes nods." If the reader will refer to Bro. G.'s article of the 22d of March, he will find that the query was submitted whether, "if the course of nature is fully adequate to reward and punish the soul for its transgressions, it does not follow, that the same course of nature is equally fully adequate to reward or punish the body for its transgressions?" So then the expression "the body punished for its *transgressions*" originated with Bro. G. himself. We quoted the above language, and immediately added, "And how, Bro. G., could the body be punished for its transgressions, in the future world, *if it should never reach that world?*" We simply used his own language, though we omitted the usual quotation marks; yet our reviewer, in his simplicity, never seems to have discovered it. We used his own language, accepted what appeared to be his own idea, and argued the point accordingly; but we were careful to tell him, in the very next paragraph, that "we never said any thing about the body being punished for *its* transgressions."

Our reviewer evades the force of Job 19: 26, 27, by taking shelter under Dr. Barnes, who says, "I confess that this passage has no reference to the Messiah and the doctrine of the resurrection." We have before us a new translation of the Book of Job, by Samuel Lee, D. D., Regius Professor of Hebrew in the University of Cambridge, Eng., &c.; a work of great learning and research, and quite as much entitled to confidence as that of Dr. Barnes. After a thorough investigation of the passage in question, he adds, "All of which contains, as far as I can see, a most decided declaration on the part of the patriarch, of his belief in the resurrection of the dead." And he further adds, "It is true, a sense very different from that now offered has often been deduced from this remarkable passage. Many learned men have seen any thing here but declarations respecting the Saviour and the resurrection of the dead; and, I will allow, had I been willing to persuade myself of the soundness of such interpretations, I could have easily acquiesced in their views. I feel bound, however, *to follow* the text, not to wrest and force it to follow me. I cannot for a moment suppose, as some have done, that it is the business of an interpreter first to determine, either that the ancients could or could not be informed, at this period, of doctrines such as these; or, that it is his duty to take *any* sense which may possibly be made out, but which shall in no respect savor of mystery." Sheltered by such authority, we still cling to the patriarchal declaration as sustaining our conclusions with regard to the resurrection of the body. T. B. B.

LATE AT MEETING.

Of the many causes which operate to mar the services of the sanctuary, and the order of the house of God, on the Sabbath, there is none more common, or practiced with so little seeming consciousness of wrong, as going late to meeting. Who that has been in the habit of attending church, whether in city, village, or country, has not been annoyed by the opening and shutting of the door, the tramp of heavy boots, or the light step and rustling silk, as he bows his head and tries to raise his thoughts to God in unison with his pastor's prayers, which, in the noise and confusion, he is endeavoring to hear? What minister is proof against such jarring sounds as are inflicted upon him every returning Sabbath? If there was any necessity for this evil, he might overlook it, and suffer in silence. But he knows there is not; for those persons who are habitually late at meeting are often those who live nearest; and, what is still worse, let the bell be rung half an hour later than usual, and they will be just about as much too late as before; showing conclusively, that it is not a want of time, but merely the force of habit. This fault is so wide-spread in all of our churches, that it really seems to me to demand attention, and a strong effort should be made to eradicate the evil. I do not know as there is one class affected with the fault more than another; in fact, it seems to prevail more or less in all. Sometimes the deacons are subject to it; and I have even known the pastor of a church subject to it occasionally; and frequently it prevails among our most thorough business men—men who never fail in punctuality when they have a business engagement, can always be in time to take the cars or steamboat, even if it starts at the first ring of the bell, and seem to think it decidedly out of character not to be in time. I do not know how it may appear to others, but it does seem to me that a proper respect for our pastor, for our brethren, for the ordinances of the church, should be sufficient to prompt us to make an earnest effort to overcome this evil habit; and if this motive is not sufficient to arouse us, let us reflect, that on that day we profess to worship God, and that at the appointed time we hope the Spirit of God will meet with us to bless and sanctify the Sabbath exercises to our good and God's glory; and can we reasonably hope, when we manifest so little anxiety on the subject as to be half an hour too late, that the Spirit will wait to meet us, or that God will be pleased with us when we treat our appointments to meet in his service with so much less respect than we do mere worldly engagements? LAY BROTHER.

THE WANT OF MINISTERS.

The inadequacy of the supply of gospel ministers, is felt among all denominations. In an article on the subject, one of the editors of the *Independent*, a Congregationalist pastor, says that "it is hard to find a competent minister for an important and responsible post, without detaching some one from a position almost equally important." One of the causes of this deficiency, especially at the West, is supposed to be the multiplication of sects, which contracts the field a minister can occupy, and discourages many who would otherwise be inclined to engage in the work. Of other causes, the writer enumerates several:

"Shady-side literature has doubtless had its effect in deterring young men from a work which seems to involve a life-long struggle with penury. There has doubtless been much exaggeration of the physical wants and trials of the ministry. Yet many are the parishes in which, while farmers are growing rich upon famine prices, the minister still has doled out to him in uncertain installments the meager salary fixed in cheaper times. It is easy for committee-men and deacons to shake their heads while clutching their purse strings, and devoutly say that ministers should not be worldly-minded or preach for filthy lucre. But what shall the end be of those professors, who, through worldliness and covetousness, deprive a church of the services of a competent pastor?

"While this state of things exists in many churches, other fields of honorable and useful labor have multiplied their attractions for young men during the past ten years. Formerly it was almost a matter of course, that every young man who had obtained a liberal education should enter one of the three standard professions, law, medicine, divinity. Now, however, editing, teaching, engineering, architecture, scientific agriculture, and divers other spheres of intellectual activity, present to educated and enterprising young men powerful attractions. The range in the choice of professions is greatly extended, and the pious youth in college no longer looks to the ministry as a matter of course. Most heartily do we rejoice in the increased facilities thus given for the employment of talents and education in the service of society; but we deprecate the influence of such avocations in turning aside young men from the ministry.

"But the main cause of this decline of the ministry is to be found in the worldliness of the churches. Can a father, whose daily toil and care are given to the increase of riches, who talks of money as if this were the one thing to be gained in this life, whatever may be hoped for in the next, who lives for money, who is either covetous and close-fisted, or ambitious and extravagant, still making wealth his household god—can such a father wonder that young men do not enter the ministry? Will his own sons choose that work? If other fathers are like him, can he expect that their sons will enter the self-denying work of the ministry? If Christian mothers live for pride and fashion, can they wonder that their sons do not take up the cross and follow Christ?"

LETTERS FROM PALESTINE—NO. 22.

Death of Mrs. C. S. Minor.

The news of the death of this devoted fellow laborer in the vineyard of the Lord, has ere this traversed the Mediterranean and Atlantic, and carried sorrow to many of the friends of missions, especially to those practically interested in the spread of the gospel in Palestine. The only son, adopted daughter, and relatives, have our heartfelt sympathies. Mrs. M. was taken ill about the first of August last, and died the sixth of November. She was confined most of this time to her bed, under sufferings indescribable. She was calm, and at peace with God. Though often desiring to live for the work's sake, yet she as often prayed, "Thy will, O Father, be done."

Slowly and painfully did disease do its work. When fully sensible of her departure, she really longed to be with Christ, in whom was all her trust. She was blessed with the full possession of her mental faculties and of speech to the last. Her funeral took place on the 7th ult., and besides the presence of the members of our little society, was attended by many natives, who appeared to feel that they had lost a valued friend. Her remains rest on a portion of the land she purchased a year ago, and by her named Mount Hope. It is about half an hour from Jaffa.

It is but a just tribute to departed worth to say, that single-handed and alone, toiling hard, and persecuted, often without means, braving and overcoming all, she undertook and carried on a great and blessed work. Her mortal frame yielded at length to the crushing influence of the excitement and exposure incident upon the work. She was a woman of much prayer, strong faith, timid, yet showing remarkable energy of character, and at all times abounding in good works. She was ready, and instant, in season and out of season, to minister to the sick and suffering, to teach the poor how to help themselves to a living, and at the same time to point them to the Redeemer and Saviour of men. "She hath done what she could." She feels no more the sufferings of this present time, but rejoices in the glory of the Redeemer around the throne of God.

May her example of faith, of prayer, and of good works, stimulate us all to do with our might what our hands find to do, for the time is short. How important to be prepared for the summons which shall call us away from earth to heaven. W. M. J.

DEC. 26, 1855.

FROM THE LAND OF CANAAN—NO. 6.

DECEMBER 12, 1855.

DEAR SISTERS,—Doubtless you will hear, before this will reach you, that death has entered our colony, and taken our much-beloved but now deeply-lamented sister, Mrs. Minor, whose memory will ever be dear to us all. It has been my privilege to witness the closing scene of her life. Her mind was clear and active; her constant theme the goodness of God; and her gratitude to Him was unbounded. Sister Minor was an uncommonly spiritual Christian, and when I have seen her hope under her depressing circumstances, her faith and trust in God, I could then see how it was that she had relinquished all to come a pioneer in this work. But, alas! the trying climate, the lack of comforts, the trials, labors, and perplexing cares, have brought her life soon to its close. This may be the case with all of those who are now upon the field; still, we do not shrink from the work, but rejoice in it; we only ask that our labors may receive the smiles of our Heavenly Father, and that the seed now sown in weakness may yield abundantly when Christ shall send forth his reapers to gather in the harvest.

Dec. 16th.—We hear to-day that the cholera is still raging in Beirut. The Rev. Mr. Whiting, a devoted missionary of the American Board, fell there, one of its first victims. There have been a number of cases at Tyre, Sidon, and Kaiffa, and it seems destined to track the whole of the eastern continent. The sick whom I mentioned in my last letter have recovered; the medicine which we then needed came from a source from which we had the least expected it. Esq. Stilwell, of New York, stopped with us a few days, and when on his way home he sent some medicine to us from Alexandria. I can see the same divine hand in this which hitherto hath helped us; and I feel admonished that I should ever indulge one feeling of discouragement or doubt. We feel, in reviewing the merciful dealings of God with us since we gave ourselves to this work, that we have much reason for humble gratitude, that we were kept in safety while upon the bosom of the great deep, and since here, although surrounded by disease and death; and while some have been obliged to leave on the account of ill health, and others have fallen, yet death has not been permitted to invade the little band which your Board sent forth accompanied by many prayers; and the prayers of our brethren and sisters have not been in vain. I felt, when the shores of our loved native land faded from our view, that we needed, in our circumstances, the faith of Abraham, when it was said to him, "Get thee into a land that I will shew thee;" for there were dangers to be encountered, and difficulties to be met; and we knew not what was to be the result of our labors among God's chosen descendants. We still walk by faith, and not by sight.

Dec. 18th—Evening. The cares and the labors of this day are over; all is quiet; and I am seated by the side of the nice little stove which our dear sisters in Westerly sent to us. The Lord remember and reward them, for their efforts in behalf of this and every other good work, and may he ever manifest himself to them, in the tenderness of his love, and the richness of his grace. I have been out the most of this day visiting the sick—before noon in Jaffa, this afternoon in the gardens outside. My part in this work gives me much intercourse with the people of every grade—and I find a real comfort, especially in visiting the poor and the sick, in their low mud hovels. While I am trying to relieve suffering humanity, it is my constant aim, and daily prayer, that I may so present the love of Christ, that it may take deep root in the soul, and bring forth the fruits of holiness.

Dec. 23d.—The autumn or "early rain" has not come as usual in due season to put in the winter crops. The Pasha has sent a request to the people, that they supplicate the throne of grace, that the dire judgments of God may be removed, that he may send again the showers of heaven, to moisten this dry and thirsty land. The Mussulmen have had three days of fasting. They go out every morning upon the plains to pray, while the other sects pray in their churches and in their synagogues. When I contemplate *only* the present condition of this land and people, my heart saddens and sinks within me. Much of the land which was once fruitful is now barren; the vine, fig, and olive, which crown the hills, yield unwillingly their scanty fruit. A large portion of the population are degraded and groan in poverty. The brightness of the gospel light, which once shone gloriously here, has faded; and only glimmers amid the dark shades of an apostate church. Yet when I look to the sacred volume, which reveals the fullness of divine mercy and love, and turn to the pages of prophecy, a light springs up in my soul, and I am inclined to believe that the time will not be very long ere this land will again be fruitful, and God's ancient people, Israel, will be restored to their royal dignity and their temporal glory. My heart kindles at the thought, that the gospel of Christ will then be triumphant, and its consummation will then be made manifest.

MARTHA SAUNDERS.

DENOMINATIONAL LITERATURE.

To S. S. GRISWOLD:

Dear Brother,—In answer to your question in the *Recorder* of Jan. 31st—"Will Bro. Hull, or some one else, just inform us what kind of literature Seventh-day Baptist literature is or would be?" &c—I would say, that there is always some peculiar principle that gives rise to a Christian denomination, which makes it to differ from other denominations of Christians. Through the whole course of the existence of that denomination, it is animated and impelled onward by that vital principle, shaping its peculiarities and molding its destinies. A denomination is known among other denominations, and distinguished from them, as one individual is known among and distinguished from other individuals, not simply by his physical structure, but also by the *spirit* that animates him. This spirit is the *power* of the organization, manifesting itself through all the various channels of development. Such, then, is the literature (or mind) of a denomination, and this is to be employed to recuperate its own energies, and to extend its principles over the domain of universal mind. A Sabbatarian literature, then, differs just as much from the literature of other denominations, and from the world, as Sabbatarians differ from them. N. V. H.

INDIVIDUAL MISSIONARY ACTION.—The N. Y. *Examiner* says that Rev. A. T. Rose, one of the missionaries in Burmah, relinquished his connection with the American Baptist Missionary Union, soon after reaching the field of his labor. Mr. Rose was not satisfied with some things in the administration of the Union, and was altogether dissatisfied with what he conceived to be its want of an outspeaking hostilitity to slavery. We are not informed of the way in which he has been supported since he ceased to be a missionary of the Union, but we have lately heard that a wealthy and liberal iron merchant of the Pearl-street Church, Albany, (the Rev. Dr. Hague's,) has assumed the support of Mr. Rose, and that letters are now on their way to Burmah, apprising him of the fact.

PRINCETON COLLEGE.—The whole number of graduates from Princeton College thus far is 3,090, and there are still living 2,023. The first class, 1748, contained six members, of whom five became clergymen; the sixth was a signer of the Declaration of Independence. Among the graduates there have been 1 President of the United States, 2 Vice-Presidents of the United States, 18 Members of the Cabinet, 12 Foreign Ministers, 32 Chief Justices of particular States, 20 Governors of States, 32 Presidents of Colleges, 7 Vice-Presidents of Colleges, 74 Professors in Colleges, 5 Bishops of the Protestant Episcopal Church—Claggett, Hobart, Meade, Johns, and McIlvaine.

JERUSALEM.—A letter, addressed to the editor of *L' Univers Israelite*, from Jerusalem, dated Tischri 5616, gives the following account of the institutions founded by M. Albert Cohn:—

1. The hospital, which is as yet on a small scale, for the founder was aware that it was necessary to begin thus, in order eventually to accomplish something greater. Notwithstanding, the register of this establishment affords the following results of those treated since the 26th July, 1854, to September 13th, 1855:—

	Men.	*Women.*	*Children.*
Discharged cured	285	231	516
Left in improved health	20	18	38
Died	9	6	15
In course of treatment	12	8	20
Total	326	263	589

37,000 prescriptions have been given from the dispensary to poor patients.

2. The loan society, founded by Baron Amschel de Rothschild, of Frankfort, with a capital of 100,000 piastres, has advanced, to hundreds of poor families, from 100 to 500 piastres, without interest.

3. The trade association, founded by Baron Alphonse de Rothschild, for placing forty boys with Jewish Masters, with whom they receive religious instruction every day, for one hour and a half. They receive also a monthly allowance of 26 piastres. This institution is in a very flourishing state.

4. The lying-in institution, founded by the Baroness Betty de Rothschild, furnishes linen to sixty poor women, and clothes for the child, to the value of 200 piastres, and 50 piastres in money.

5. Every Friday, bread is distributed, in the name of Madame Mathilde Cohn, to 120 poor persons.

ASCENSION ISLAND.—The *Missionary Herald* for February states that two letters have been received from Mr. Doane, in the first of which he gives an account of his voyage from the Sandwich Islands to his new home, and his arrival there; and in the second, dated May 11th, 1855, he presents the earliest chapter of his missionaay experience on Ascension Island:—

"We appear to be living as securely here as we should in Boston. We are treated with respect by all who come about us; and many of the natives are daily calling to see us." Some of the difficulties which the brethren of this mission are obliged to contend with, are described in the following words: "Not a native boy or girl, man or woman, can we get to do any thing for us. Our family work I am obliged to share with my wife; and my co-laborers do likewise. I am familiar with the kitchen and the wash-tub. All the out-door work, moreover, I must do. I must go after firewood, bring it home in a small canoe, and then cut it. I am not disheartened. One good result, at least, will come from all this. When the natives see us toiling thus, all wet with perspiration, all sore with toil, coats off, perhaps in the water up to the knees, they will see that we have not come here to play the gentleman."

DR. DUFF IN INDIA AGAIN.—The prayer of this devoted servant of Christ has been answered, and he has had the holy joy of preaching the words of life to hundreds in that dark land. In a letter dated at Bombay on the 9th of December last, he says:—

"It was with gratitude to God that on Monday last I cast my eyes again on the Ghaut mountains, beyond Bombay, under the full blaze of an India sun, and soon found myself among the friends of the mission, and surrounded by hundreds in native costume.

"The second night after my arrival I had the privilege of addressing an audience of *three hundred and fifty* native educated young men, who listened to me throughout with an earnestness and fixedness of attention that could not be surpassed on the part of an intelligent auditory in Britain or America. In this case you see beautifully exemplified the effect of a thorough English education.

"The vernaculars of this portion of India are the Marathi and Gujurati. These are totally different from Bengali, Hindi, &c., of our eastern side of India. Had these young men, then, not learned English, I must have been dumb amongst them. But from their knowledge of English they were prepared to listen and benefit from an address delivered to them in English by one who was a stranger to their vernacular."

MISSION TO THE HOLY LAND.—The Edinburgh *Witness* notices the departure of Rev. Thomas Wright, who with Dr. Bonar is to join a party of gentlemen from Scotland, that have been traveling in Egypt for some time. The party is then to proceed through the Desert to Mount Sinai; then they are intending to traverse the land of Idumea, visiting the ruins of Petra, and other places of interest in that land. Thence they visit Jerusalem and other places of note in Palestine. The principal object of the mission is to examine the Written Valley in the Wilderness, as it is called, near to Mount Jabul, as it is well known that the whole face of this mountain at its base is covered with written characters, generally supposed to have been done by the children of Israel during their sojourn in the wilderness. As these have never been deciphered, Mr. Wright takes out with him ample apparatus to copy them all off, and bring home with him. If this can be done, and they can be read, they will no doubt throw a great deal of light on Bible knowledge. Mr. Wright will likewise take copies of other spots of interest, which will perhaps tend to illustrate them more to the public mind.

THE MADIAI.—In a recent letter from Nice the writer says:—

"My interviews with the Madiai were very interesting—they retain their simplicity and piety, and always seem to regard themselves as poor, very poor, sinful creatures, on whom the Lord has had mercy. I dined with ——, and he told me that he had once asked them to dine with him; they declined, and added that it would not be proper for them to do so, unless it were to dine with his servants. Francisco has the depot of Bibles of the British and Forign Bible Society; and it is good to see him seated in a little room with shelves filled with Bibles and Testaments in many tongues, himself a living witness to the truth he loves, and for which he and his wife have suffered almost unto death.

BIBLE SOCIETY IN RUSSIA.—The *Independent* says that an Evangelical Bible Society has existed in Russia since 1831. It has its center in St. Petersburg. Its statutes have been approved of by the Emperor, and it is presided over at present by the Imperial Adjutant-General, Baron Neyendorff. According to the seventh report published by the Society (on the years 1848 to 1853) it numbers 205 affiliated Societies, and extends from Finland to Siberia and the coasts of the Black Sea. Bibles in the German, Esthnic, Latin, Polish, Dutch, Danish, Lettish, French, Swedish, English, and Finnish languages are spread among the Protestants of the Russian empire. In many parts of the empire there is still a great scarcity of Bibles; in Esthland, e. g., many Protestant villages are found which have not a single copy of the Bible, and among 120 children who assembled at a church visitation, there was not one that had seen a Bible or a New Testament in his life. The interest shown by the Protestant population is increasing. Thus the nobility of Gourland have subscribed not only considerable individual contributions, but also 150 rubles yearly as a corporation.

CONTRAST.—A Congregational Home Missionary at Leavenworth, Kansas, entrusted letters for the post-office to a slaveholding neighbor, who carried them to the office of the pro-slavery paper, where they were opened and read in search of anti-slavery sentiments. The missionary afterwards upbraided the slaveholder, when the latter knocked him down, bruised him severely, and was attempting to gouge out his eyes, when some neighbors came to the rescue and saved him from such a calamity. The wounded missionary writes: "We live without arms, and our door is only fastened by a small wooden pin, but the Lord is on our side—I will not fear."

PROHIBITION IN NEW YORK CITY.—The Grand Jury of the Court of Sessions in New York, last week, was charged by the new Judge, Capron. In regard to the Prohibitory Law, Judge Capron distinctly instructed the Jury that the Act is Constitutional, and that it is their duty to regard it *as valid*. Statistics of intemperance were introduced into the Charge, in order to exhibit the importance and the urgent necessity of the law. This is the first Judicial endorsement of the Prohibitory Law in New York City.

RELIGIOUS INTELLIGENCE.

The Sardinian Minister of Public Instruction, Lanza, has issued a number of new circulars concerning education in State schools, all tending to diminish the influence of the priesthood. In consequence of this, a great many priests, who are professors, have withdrawn from the public institutions. The Sardinian troops in the Crimea, both common soldiers and officers, show a great zeal to procure and read the Bible. More than 4,000 Bibles and Testaments have been distributed among them.

The Pope declared in the last consistory his intention to have one cardinal from each of the prominent Catholic nations residing at Rome. From France the Bishop of La Rochelle is selected; from Germany, the Archbishop of Munich. It is also again rumored that Cardinal Wiseman will likewise be requested to take up his residence in Rome, as he is considered there the most learned *of all* cardinals, and his services will be frequently needed.

A Texan correspondent of the *Protestant Churchman* says:—"We want clergymen in Texas—and we want those who are willing to endure hardship as good soldiers of Christ—and the question is, where shall we get them? We want some *thirty or forty* immediately; and the demand will probably be for many years much greater than the supply. From whence can we hope to draw, to meet this annually increasing demand?"

The Rev. Mr. Moffat has sent a very interesting journal to the London Missionary Society, giving an account of his third and last visit to Moselekatse, the barbarian King of the Matebale, in South Africa. This "Napoleon of the desert," who is almost adored as a god, received Mr. Moffat with love and veneration, and allowed him the largest utterance.

It is said that Rev. Dr. Bushnell, of Hartford, contemplates a trip to Kansas, in company with a colony formed in New Haven for a permanent settlement in the new *Territory*. The Doctor will undertake the journey in hopes of curing a bronchial affection, from which he is a sufferer.

Rev. Dr. Marselus, during the past 36 years which he has been the pastor of the Reformed Dutch Church, corner of Bleecker and Amos streets, has administered the sacrament of the Lord's Supper to his people 136 times, and on each occasion he officiated himself, except once, when he was prevented by sickness.

A missionary of the Presbyterian Board, writing from Texas of the privations of some of his fellow-laborers in that State, says, "I have known brethren—Presbyterian ministers—here, to live whole weeks without a morsel of meat of any kind, and one who lived on boiled corn for a month!"

There are some members of a community, said the sagacious and witty Thomas Bradbury, that are like a crumb in the throat: If they go the *right way*, they afford but little nourishment; but if they happen to go the *wrong way*, they give a great deal of trouble.

The *Western Watchman* chronicles revivals of much interest in Chariton, Dent, and Lincoln counties, Missouri. Special effort and prayer on the part of God's ministers and people, have resulted, through the Holy Spirit, in the conversion of many.

Rev. C. C. Williams, pastor of the Second Baptist Church in Plainfield, N. J., has offered his resignation, to take effect on the 1st of April next. His resignation has been accepted by the Church.

The Congregational Church in Hamilton, C. W., has renewed its expression of kindness and esteem towards its pastor, the Rev. E. Ebbs, by another New Year's donation of two hundred dollars.

The church at Chapelton, Jamaica, has sent $250 to the London Missionary Society, as a special donation on hearing of the embarrassed state of the finances.

A Protestant paper is about to be established in Madrid, the first Protestant paper in Spain.

General Intelligence.

Proceedings in Congress last Week.

SECOND-DAY, FEB. 4.

In the SENATE, petitions were presented from several naval officers who felt aggrieved by the action of the Naval Retiring Board, and the subject was discussed at some length, but no action taken. Numerous bills were introduced, principally for internal improvements, and one by Mr. Adams to extend the term of naturalization. On motion of Mr. Fish, the Finance Committee were instructed to inquire whether the smaller Spanish coins may not be removed from circulation, or have a value established by law to accord with their intrinsic value, and to avoid the fractional parts of a cent.

In the HOUSE OF REPRESENTATIVES, the Speaker administered the oath to support the Constitution of the U. S. to the representatives of States and the delegates from Territories, including Mr. Whitfield from Kansas. William Cullom, of Tennessee, was chosen Clerk; and then the members of the House selected their seats.

THIRD-DAY, FEB. 5.

In the SENATE, a resolution was introduced, and after some discussion laid on the table, appropriating two hundred cords of wood to *the suffering* poor of Washington, to be paid for out of the contingent fund. A bill was introduced authorizing the San Francisco Mint to make gold coins of the value of $100 and $50, to be called "Unions" and "Half-Unions." A speech by Mr. Foote on the Central American question occupied the remainder of the day.

In the HOUSE, Adam J. Glossbrenner was chosen Sergeant-at-Arms, Nathan Darlington door-keeper, and Robert Morris post-master. Eight dollars a day, in addition to his regular salary, was appropriated to John W. Forney, the late Clerk, from Dec. 3 to Feb. 4.

FOURTH-DAY, FEB. 6.

The SENATE appropriated $1500 to buy fuel for the suffering poor of Washington, and made the Mayors of Washington and Georgetown the distributors of the same. The balance of the day was spent in discussing a resolution calling for the journal of the late Naval Retiring Board.

The HOUSE spent the whole day in an ineffectual attempt to elect a Printer.

FIFTH-DAY, FEB. 7.

In the SENATE, nothing was done except to direct the Committee on Finance to prepare and report the General Appropriation Bills. Adjourned till Second-day.

In the HOUSE, notice was given of several bills to be introduced, among which was one to secure Homesteads to actual settlers. The Speaker was authorized to appoint the Standing Committees. A good deal was said; but nothing done, about electing a Printer. Adjourned till Second-day.

European News.

One week later news from Europe was received in New York on the 9th inst., by the new steamship Persia.

The Persia brings intelligence of further progress towards peace. Orders have been transmitted from St. Petersburg to the Russian army in the Crimea to cease all further hostilities until the results of approaching negotiations be known. It is also stated that the French and English Cabinets have come to a perfect agreement as to the mode in which the negotiations are to be carried on. At the same time the belligerent powers continue their preparations for an earnest continuance of the war should peace not result from the present endeavors. It was stated, but afterwards contradicted, that Generals Pelissier, Codrington, and Omar Pasha had, like Gortschakoff, received orders from their respective Governments to stop hostilities. Such orders will not be sent till an armistice be formally concluded. It is hoped that such armistice may be signed on or about the 2d of February.

Said Effendi, jester to the Sultan, has just died in Constantinople, at the astonishing age of 120 years and 7 months. He held the post of buffoon under four Sultans, and retained his comic powers to the last.

The Coroner's Court has returned a verdict against William Palmer, to the effect that he murdered his brother, Walter Palmer, by prussic acid. An unusual number of murders are on record in the English papers just at present. Among others of note is that of a London lawyer, (Mr. Waugh,) shot dead in the street by a hunchback client.

The Belgian Steam Transatlantic Navigation Company's new screw steamship Belgique, Captain Tuck, put back to Southampton, at which port she arrived on Thursday night, Jan. 24th. The Belgique left Antwerp on the 31st of December, but in consequence of a disarrangement in her machinery, was detained at Southampton until January 6, on which day she left, but owing to a second accident, was compelled to put into Plymouth Sound, from which she again sailed for New York on the 10th. After reaching about 700 miles west of the Lizards, one of her boilers was found to be burned out, and the ship leaking to a considerable extent. The mainmast had also sunk. Finding that a continuance of the voyage would be dangerous, the Belgique was forced to put back, and it was only by the united efforts of the passengers and crew that she was kept afloat, the pumps having been kept going night and day. She had four to six feet of water in her hold, on reaching Southampton. She has been taken into dock for repairs. The weather was good after she left Plymouth.

The Crisis for Kansas.

We cannot state the case more fully or impressively than to give the following extract from a Washington letter in the New York *Courier and Enquirer*, a paper certainly not to be accused of any ultra anti-slavery views:

"To me it appears evident that the people of the Northern States are not aware of the real condition of things in Kansas. I believe that without large supplies of men, money, ammunition and fire-arms, a massacre will take place there in the spring. The message will greatly aggravate the aggressive and violent spirit of the Missouri borderers. If we neglect until the spring opens the great duty of reinforcing our people, the opportunity for defence will have been lost. I think I know something of the character of the men with whom they will have to deal. Two years ago I showed that they would do precisely what they have done, and I now state my conviction that a civil war is about to be commenced in Kansas, of which the object, on the part of the aggressors, will be the utter extermination of the Free-State settlers in the Territory, or their expulsion from its soil. Atchison and Stringfellow openly declare themselves prepared for the greatest excesses, and every circumstance of this deplorable controversy furnishes a proof that they will have the means of executing their plans unless timely provision be made for meeting and defeating their attacks."

Lynching in Kansas.

The pro-slavery party in Kansas seem determined to carry their measures at the expense of murder and civil war. The latest exhibition of their spirit is thus narrated in one of our exchanges:—

A portion of the inhabitants of Leavenworth resolved not to lose their votes in the election of officers of the state government about to be organized. They therefore repaired to Easton, a village a few miles distant, and there exercised their civil rights on the 17th of January, at the house of Mr. Minard. They were threatened by a band organized and armed under the name of "Kickapoo Rangers," but finished their business, and began to scatter for home. A couple of gentlemen named Sparks were waylaid and one of them captured by the Ruffians, but rescued by a resolute party of Kansans led by E. P Brown, a highly esteemed citizen, formerly of Michigan. A pretty sharp skirmish ensued, in which the assailants were repulsed, with several wounded, one of whom soon died. Next morning, Brown, Sparks, and three others, supposing the danger over, started for their homes, and when within a mile of Leavenworth, they were attacked and surrounded by about forty banditti. Brown called on his comrades to cock their revolvers and resist, but was overruled by them, and they all surrendered, and were carried back to Easton, and all released but Brown, whose resolute character made him specially odious. He was held through the day, and after sunset was led out, as the captors said, to be hung. But at length it was agreed that they would rather "lynch" him. The *Herald of Freedom* says—

This was agreed to, when several persons sprung upon him with hatchets and bowie knives, and commenced stabbing, chopping, beating and kicking him until he was felled to the earth, after receiving three mortal wounds in his head with hatchets, and numerous other injuries, any of which would probably have caused his death.

After lying upon the cold earth for a while, consciousness seemed to return, when he rose and attempted to escape, but he was again taken, beaten, kicked, and dragged to a wagon, in which he was carried to his home, three-fourths of a mile distant, and given in charge of his wife.

She interrogated him as to how he had received the injuries, and he responded faintly, though audibly, "I have been murdered by a gang of cowards, in cold blood, without any cause!" Immediately afterward he expired.

SUMMARY.

Mrs. Gullage, of Edgefield, S. C., was burned to death on the 18th ult. She had carried dinner to her husband, who was working in a new-ground near their residence. While he was eating she sat upon a log which was in close proximity to a burning brush heap. By some unlucky mishap her clothes caught fire. Affrighted, she ran, scarcely knowing whither. Her husband, and a negro fellow with him, succeeded in overtaking her, and tore her clothes from her. But it was too late. She was already badly burned. She lingered in much pain until the night of the 19th, when she died.

On the 4th inst., a train of cars on the railroad from Philadelphia to Harrisburg, Pa., was thrown from the track near Whitehall, Montgomery County, in consequence of the breaking of a rail. One man was killed. Twenty-seven persons were more or less injured—the most seriously wounded being Mr. T. S. Watson, of St. Louis, who had one of his legs broken. He was one of the survivors of the Gasconade accident, on the Pacific Railroad, and was recovering from the injuries he then received. Quite a number of members of the Pennsylvania Legislature were in the cars, but none of them were seriously injured.

Twenty-three children, comfortably fitted out by the Children's Aid Society, left New York, Feb. 7th, for Pennsylvania, with Mr Baker, to be provided with good country homes there. Some of the children had dissipated parents, others had sick fathers and poor mothers, who were glad to secure good homes for their children. One young girl had been turned out by her father and stepmother, as she had refused to beg for them. Another said that her mother was a shirt maker, and the work had been taken away from her.

One of the largest staples of the Detroit market is white fish. From Fighting Island to the northern point of Belle Isle, a distance of seventeen miles, there is one complete fishery. The catch of the last season has been remarkably flood—over 7,000 barrels, or 700,000 fish. About half of these have been sold fresh at an average of 11 cents each. The 3,500 barrels held, when sold, will net the holders at least $36,750, free of all expense, thus making the receipts of these fisheries $40,600.

In Washington, Feb. 8th, Gen. Cass slipped and fell on the Patent Office steps. He fell a distance of four steps, and was picked up and conveyed to the National Hotel in a state of insensibility. His forehead was badly cut, and when taken up he was bleeding profusely from the temple and the mouth. He was speechless for some time. The physicians in attendance think that the injuries sustained by him will not prove serious.

The first prosecution in Cazenovia, N. Y., for selling liquor contrary to law, was commenced on Thursday against Capt. M. C. Hill. The suit was tried on Monday, and the Jury brought in a verdict against the defendent, who was fined $50 and costs.

The brig Samuel Peters, of New Orleans, came in collision with the ship Hovey, of Maine, and sank in three minutes afterward. The Captain and four seamen were saved on board the Hovey, but the mate and five seamen were drowned.

Died, in Royalton, Fulton County, Ohio, March 24, Samuel Hinkle, aged 90 years. Mr. Hinkle was formerly from Seneca County, New York. Fought at Bunker Hill, but was never able to get a pension. He emigrated to Ohio, about eighteen years ago, with his son. His son died about six years ago, willing all his property to his children, making no provision for his father! and they threw him on to the town, notwithstanding they were worth their thousands.

Some very commodious rooms, called "Mechanics' Coffee and Reading-rooms," have been opened on the corner of Tenth street and Avenue D, New York, for the especial benefit of the Mechanics. They are to be as cheerful and well furnished saloons as any grog-shops of the City, and have all the best English and American papers and periodicals It is expected that it will be a kind of Club-house for workingmen of the Eleventh Ward, where all the conveniences for sociality and improvement will be offered.

In consequence of the large number of squatters who have intruded upon the Indian reservations in Kansas, it has been found necessary to issue strict orders for their removal; but, because of the severity of the season, all action will be suspended until Spring, upon a pledge being given by these persons that they will then quietly remove with their families, give up all claim to the same, and not return until the lands are lawfully opened to settlement.

The beginning of the month of February has been signalized on the Erie Railroad by the withdrawal of all Sunday passenger trains. Milk and Freight cars continue to run as usual. The new arrangement went into effect on the 3d inst. The Cincinnati Express, which formerly ran through on Sunday from the West, now lies by at Corning, and resumes its trip on Monday; taking the place of the Night Express on that day.

Mr. Edward Warren, late proprietor and editor of the Austrian Gazette, formerly the Austrian Lloyd, has been named by the Government as Director of the new Credit Mobilier in Vienna, with a yearly salary of $12,000. Mr. Warren is an American, and for the last twenty years has been engaged in commercial pursuits in different parts of Europe, his principal interests being at Trieste.

A dispatch dated Washington, Saturday, Jan. 26, says: The destruction of vines, fruit trees, and shrubbery, by the intensely cold weather that has prevailed here for four weeks, has been very great. Prof. Page states that it is probably greater than has ever before been known in this latitude and locality. After a thaw, the injury done to vines and rosebushes, and peach, apricot, and cherry trees, will be more apparent than now.

The donations to the Albany Medical College have amounted to $75,000. Of this sum $50,000 have been expended in buildings, land, and for the support of the institution during the four years of its existence—leaving a surplus of $25,000. Thirty gentlemen of Albany contributed to its permanent endowment $1,000 each.

A bill for the suppression of gambling has passed to a second reading in the House of Delegates of Maryland. It imposes fines ranging from $200 to $1,000; one half the amount to go to the informer, and the other to the use of the public schools. The bill also provides for the suppression of the Maryland lotteries. The penalties are very stringent.

The Death of Commodore Morris is announced in the Washington papers. He expired at his residence in Washington, of inflammation of the lungs, in the 72d year of his age. He entered the Navy in 1799, and was, in the year 1813, for gallant and distinguished services, promoted to the rank which he held at the time of his death.

It is said that the President of the United States, at a recent public levee, turned his back upon Senator Hale, the honored representative of his own native State, in revenge for the severity of Mr. Hale's remarks on his annual message. He will be the first who has done it if he gets any advantage in a personal conflict with Mr. Hale.

The winter vergalieu, or Columbia vergalieu, is a pear that will pay most liberally any man who can and will cultivate it. A small lot of these pears, which were brought to market some two months since, sold for the enormous price of $30 to $33 per barrel; and the largest of them were retailed at 12½ cents each.

Fears are felt for the safety of the U. S. Mail Steamship Pacific, which sailed from Liverpool for New York, Jan. 23d, and is considerably over-due. The steamer Alabama has been sent in search of her, and there is talk of sending the U. S Steam-brig Arctic on the same errand.

Mr. John S. C. Abbott has recently received from the Emperor of France a rich gold medal and a letter in acknowledgment of the Emperor's appreciation of Mr. Abbott's History of Napoleon, a copy of which the author had transmitted to His Majesty through Hon. Mr. Mason, our Ambassador in Paris.

There was a disastrous fire in Rome, N. Y., on Wednesday night of last week, destroying a large block of buildings, together with most of their contents. John Miller, a grocer, was burned to death in the buildings. These buildings were occupied as grocery and shoe stores.

A sad disaster occurred in the East River, between New York and Brooklyn, on the morning of Feb. 4th. The brig William H. Safford, of Bangor, Maine, while lying at anchor, was cut through and sunk by ice driven against her by the tide, and eight out of ten persons on board were drowned.

In New York, most of the city railroad cars run on Sunday. In Brooklyn, however, they are not allowed to run; but petitions in favor of their running on certain routes are frequently sent in to the Common Council. It is probable the request will be granted.

Mrs. E. Ginness, of Montour County, Pa., has obtained a verdict of $500 against Messrs. Horton & Kapp, for the death of her husband, who was killed by jumping from a stage-coach of the defendants, about two years ago.

In Cincinnati and other large cities arrangements are being made to celebrate the 22d February in a style worthy of the occasion of which it is the anniversary.

There were 11,234 arrests for intoxication in Philadelphia last year.

Fred. Douglas lectured in the Assembly Chamber at Albany, N. Y., Feb. 5th.

A dispatch dated Keyport, N. J., Monday, Feb. 4, says: A young man named Elisha Bugle was found dead on the ice, alongside the sloop Dasty Miller, at Keyport Dock, this morning. The sloop had been robbed on Friday night, and the Captain, William Crane, had set a loaded gun in such a position that the opening of the cabin slide would discharge the contents into the legs of the person opening it. Bugle had apparently stooped when pushing back the slide, as the entire charge of buckshot entered his heart, killing him instantly.

On the 5th of April a regiment of volunteers from Alabama will leave Montgomery for Kansas under the command of Major Buford. The regiment will be composed of 400 men, divided into companies of 50 each, commanded and drilled by officers chosen by themselves. The outfit is to be six blankets, one gun, one knapsack and one frying pan. Major Buford is to pay the expenses of the regiment to Kansas, and in return the members are to acquire a preëmption and pay him out of that. The men are bona fide settlers, who go to Kansas as a permanent place of residence.

The Baltimore Sun notices the arrival of the brig Sylvina with a cargo of guano. This is the first arrival of guano at that port from the Caribbean Islands for the Philadelphia Company, under the contract with the Venezuelan Government, by which that Company have secured the right to take the deposits of guano from the group of Islands in the Caribbean Sea, numbering in all about seventy, besides the reefs in their vicinity, all of which are covered with guano.

A game of draughts was played by telegraph recently, between Mr. Cary, telegraph operator in Jersey City, and Mr. Merrihem, operator in Philadelphia. Over an hour was required to play the game, and several spectators witnessed it at the different stations. The blocks upon the checker-board were numbered, by which means the moves were directed. The contest was an exciting one, and resulted in favor of Philadelphia.

Miss Catharine Beecher delivered a lecture in Cincinnati on the 27th ult, before the Common School Teachers, on the means of improving the health of the present generation, and especially the female sex. She is connected with an association in New York, called the American Women's Educational Association, whose object is to inquire into the causes of the deterioration of health of the present race of females, and the remedies.

A dispatch received at Washington, Monday, Feb. 4, from Independence, Mo., to W. M. F. Magraw, Mail Contractor on the Plains, states that the thermometer is 22° below zero, and the snow three or four feet deep on a level on the Plains. The Santa Fé and Salt Lake mails, which started on the 1st inst., have returned. All the men and animals on the Salt Lake route are supposed to have been frozen on the Plains.

A decision has been given favorable to the establishment of the Central Park, New York. The decision was rendered by Judge Harris at a special term of the Supreme Court. The Judge confirms the report of the Commissioners, as well as the Constitutionality of the act of the Legislature granting the Park, and also the correctness and legality of all the proceedings of the Commissioners.

A collision occurred on the Michigan Southern Railroad, a half mile west of Hillsdale, Michigan, Feb. 6, between the Eastern and Western Express trains. The trackman, baggageman, fireman, and one other man, were killed, and an engineer, brakeman and train-boy each had a leg broken. The baggage-car of the Eastern train was burned, with all the baggage and the mails.

A dispatch dated Washington, Thursday, Feb. 7, says: Mr. Forney is dangerously ill with inflammation of the bowels. His illness is supposed to have been produced by the excitement and over-exertion incident upon the discharge of his late duties as Clerk of the House of Representatives.

The Library of Hamilton College has been enriched by the valuable gift from F. R. Spencer of a portrait of the late Chancellor Kent. The brothers Spencer have identified their names with Hamilton College; one by a telescope, the other by finished portraits of Irving and Kent.

According to the record kept at the Pennsylvania Hospital, the mean temperature of the past month was 24°, which is 8° below the average for the last 30 years. It was the coldest January on the record, though January, 1840, was within a fraction of the same temperature.

A London cabman lately prosecuted Fanny Kemble for neglecting to pay eight-pence, his proper fare, for carrying her with a lot of bandboxes across the city. The Justice ordered her to pay up the 8d., also 2s. for costs, and 2s. 6d. for the cabman's loss of time.

A dispatch dated Utica, Monday, Feb. 4, says: Our city is again infested with incendiaries. Two grocery stores and two barns owned by B. Churchill and George C. Potter, George street, were consumed at an early hour yesterday morning. Loss $7,000.

The New Jersey Legislature adds to its perquisites this year, for each member, a leather valise containing a brace of razors, shoe brushes, fine-tooth comb, needles, bodkin, &c., &c., and all the etceteras to furnish a gentleman's dressing room.

The Executive Committee of the New York State Temperance Society has issued an address to the friends of temperence throughout the State, for the purpose of calling attention to temperance publications.

The New York and Erie Railroad Company have just concluded a contract with Cleveland ship-builders for the construction of two propellers to be used in the line between Dunkirk, Cleveland and Toledo.

A dispatch dated Baltimore, Wednesday, Jan. 30, says: The steam boiler in the Canton Iron Works in this city burst this morning, killing one men and severely injuring several others—two fatally.

The New York Times of Feb. 11th says that the steamer Star of the West sailed Saturday for Nicaragua with 300 fillibusters on board.

The bill extending the time for the collection of taxes in all the towns of the State of New York to the 1st of March has passed both branches of the Legislature.

The maple sugar crop of the year 1855 is estimated by the Washington Agricultural Bureau at $2,720,000.

Large numbers of sheep have been imported into California during the last year, and it is supposed that, in a few years, that article will become one of its staple exports. Two cargoes of Merino sheep have been imported from Australia, a large number from Sonora, and it is stated that 50,000 have been driven across the plains from Texas to California by the Colorado route. It is said that the southern portion of the State offers admirable facilities to wool-growers.

Prunes have been very successfully cultivated in Pennsylvanis. Among the economists in Beaver county, they have been grafted on plums. Mr. Pfeiffer, of Indiana, raised prune trees in large numbers, and sold them at exorbitant prices, some at $5 and $10. He had some of the fruit at the Pennsylvania State Agricultural Fair, held at Pittsburg, which sold readily at 50c. a quart.

Eli Thayer, of Worcester, gave an address on Kansas in Henry Ward Beecher's church, Brooklyn, and $40,000 was taken in Emigrant Aid Company's stock. A gentleman from New York, formerly a "silver grey" in politics, has presented fifty shares—$1000—of Emigrant Aid stock to Rev. Dr. Bushnell, who is about to emigrate to Kansas from Hartford.

After a long controversy, Col. Fremont's Mariposa (California) claim has at length been settled by the complete recognition of his title by the United States. The claim covers nearly 45,000 acres of land, the real value of which is not known, but is now estimated by millions. It will be the largest and most valuable title ever made by the government.

Buttons, rivaling jet in beauty of gloss and finish, are now made from India rubber. The United States navy and several large clothing houses have adopted the new style.

The Albany Evening Journal says the entire number of men killed by the wars of 1855 is over three hundred thousand. Seventy-three battles have been fought, and no such bloody record has been presented in any year since the days of the field of Waterloo.

J. B. Gouriet, the oldest member of the literary fraternity in France, aged 82, lately died in an almshouse in Paris. At the beginning of the century he possessed considerable reputation as an author.

A letter from Naples of the 28th ult., says: Vesuvius has been thundering, and a new mouth has been opened on the very top of the mountain, from whence lava is flowing out.

A five hundred dollar Bible is advertised for sale in the Philadelphia *Ledger*. The ornaments on the cover are of solid gold.

Hon. Joseph Smith, of Warren, R. I., has bequeathed $5,000 for the benefit of the west district school of that place.

New York Markets—Feb. 11, 1856.

Ashes—Pots $6 50; Pearls 7 75 a 8 00.

Flour and Meal—Flour, 7 50 a 7 62 for common to good State and superfine Michigan, 8 00 a 8 31 for Ohio, 8 87 a 11 00 for extra Genesee. Rye Flour 5 25 a 7 00. Corn Meal 3 87 for Jersey.

Grain—Wheat, 1 90 for Western red. Rye 1 27 a 1 30. Barley 1 18 a 1 24. Oats 41 a 44c. for Jersey, 44 a 46c. for State, 47 a 49c. for Western. Corn 84 a 86½c. for Western mixed. White Beans 2 50.

Provisions—Pork 14 00 for prime, 16 12 for mess. Beef 9 00 a 9 75 for country prime, 10 00 a 11 00 for country mess Lard 10¼ a 10¾c. Butter 20 a 24c. for Ohio and Western, 25 a 30c. for State, 30 a 34c. for Orange County. Cheese 9 a 10½c. Eggs 25 a 27c. per doz. for fresh.

Potatoes—1 75 a 1 88 per bbl. for Carters, 2 00 a 2 12 for N. J. Mercers, 1 62 a 1 75 for Pinkeyes, 1 37 a 1 50 for Western Reds.

Hay—1 12 a 1 31 per 100 lbs.

Apples—1 75 a 2 25 per bbl. for Greenings, 2 25 a 2 50 for Spitzenbergs.

Dried Fruit—Apples 5 a 5¼c. per lb. Peaches 14 a 15c. per lb.

Cranberries—13 00 a 16 00 per bbl.

Nuts—Hickory Nuts 2 50 a 2 75 per bushel. Black Walnuts 75c a 1 00 per bushel. Chesnuts 2 00.

Turnips—White 56 a 62c. per bbl. Russia 75 a 88c. per bbl

MARRIED,

On the 20th ult., in Little Genesee, N. Y., by Eld. Thomas B. Brown, DELAVAN KELLER to NANCY WIXSON, both of Clarksville, Allegany Co., N. Y.

In Hopkinton, R. I., Feb. 4, 1856, by Eld. P. S. Crandall, Mr. JONATHAN G. BOSS, of Hopkinton, R. I., to Miss MARY L. BATES, of South Kingston, R. I.

In Brookfield, N. Y., by Eld. W. B. Maxson, on the 6th inst., Mr. STEPHEN BROWN to Miss LUCINDA A. ELLISON, both of Brookfield.

In Lockport, on the 6th inst., by Eld. Rowse Babcock, Mr. HORACE BROWNING to Miss JULIA UTLEY, both of Lockport.

DIED,

In Little Genesee, N. Y., Jan. 28th, JOSEPH MAXSON, in the 85th year of his age. The deceased was one of the earliest settlers of the community in which he lived, and was held in high esteem by all who knew him. The 1st Seventh-day Baptist Church of Genesee was constituted in his house, and he was one of the first, if not the very first, to affix his name to the Covenant and Articles upon which it was founded. From the beginning, he was one of its pillars, and the prayers of his declining days were for its welfare. Owing to enfeebled health, he had not been able to appear in the sanctuary for the last two or three years; but, after suffering his appointed time, his spirit was quietly dismissed from the earthly house of this tabernacle to dwell with the spirits of just men made perfect.

LETTERS.

D E Maxson, J M Allen, Noyes Spicer, P S Crandall John Monn Jr, T R Chase, Albert Babcock, J Kenyon, Ray Green, T H Spencer, Ephraim Maxson, D P Curtis, N V Hull (T L p'd Jan. 31,) John Whitford, L M Cottrell, W E Arnold, J P Livermore, S H Blackman, Albert Wells, J B Wells.

RECEIPTS.

☞ All payments for publications of the Society are acknowledged from week to week in the Recorder. Persons sending money the receipt of which is not duly acknowledged, should give us early notice of the omission.

WILLIAM M. ROGERS, Treasurer.

Rogers' Hotel and Dining Saloons,
KEPT ON THE EUROPEAN PLAN,
No. 4 Fulton-st., New York,
Near Fulton Ferry.
☞ Rooms to let by the day or week.
CLARKE ROGERS } Late of Fulton Hotel.
HENRY ZOLLVER }

Savery's Temperance Hotel
AND
TELEGRAPH DINING SALOON,
No. 14 Beekman Street, N. Y.
KEPT ON THE EUROPEAN PLAN.
MEALS AT ALL HOURS OF THE DAY.
LODGING ROOMS,
From $2 to $3 per Week, or 50 Cts. per Night.
BELA SAWYER, Sup't. JOHN S. SAVERY, Proprietor.

Bibliotheca Sacra,
AND AMERICAN BIBLICAL REPOSITORY.—The Thirteenth Volume commenced Jan. 1, 1856. This volume will be enlarged to 900 pages; will be printed on a new, large, and beautiful type, and on paper superior to that of any previous volume. This Quarterly contains articles of permanent value, by some of the ablest writers in the country.
In its department it has no superior, and no Minister can afford to be without it.
It is the most learned, the largest, and the cheapest Quarterly of its kind in the country.
TERMS—$3 per annum in advance.
$4 if not in advance.
W. F. DRAPER, Andover, Mass.

Alfred Highland Water-Cure.
THIS establishment, for the cure of Chronic Diseases, is conducted by H. P. BURDICK, M. D. The facilities in this "Cure" for the successful treatment of Diseases of the Liver, Spine, Nerves, Female Diseases, Bronchitis, Incipient Consumption, &c., are not excelled in any establishment. Patients will have the benefit of skillful Homeopathic prescriptions—an advantage found in but few "Water-Cures." Especial attention will be given to diseases commonly called *surgical cases*, such as Hip Diseases, White Swellings, Cancers, (in their early stages,) and Caries and Necrosis of bone.
Connected with the establishment is a Dental Shop, where all calls in that profession will be attended to.
Address, H. P. BURDICK,
Alfred, Allegany Co., N. Y.

Central Railroad of New Jersey,
IN connection with the Lehigh Valley Railroad, opened to Mauch Chunk—WINTER ARRANGEMENT, commencing Nov. 19, 1855. Leave New York for Mauch Chunk from Pier No. 2 North River, at 7 30 A. M. For Easton, at 7 30 A. M. and 3 15 P. M. For Somerville, at 7 30 and 10 45 A. M., and 3 15 and 4 30 P. M. The above trains connect at Elizabeth with trains on the New Jersey Railroad, leaving New York from foot of Courtlandt street, at 7 30 and 11 A. M., 3 and 4 P. M.
Leave Plainfield for New York at 7 05 and 9 05 A. M., and 1 40 and 6 13 P. M.
JOHN O. STERNS, Superintendent.

Hudson River Railroad.
TRAINS leave Chambers street daily, for Albany and Troy. On and after MONDAY, Nov. 19, 1855, the trains will run as follows: Express Train 7 A. M., connecting with Northern and Western Trains. Mail Train 8 30 A. M. Through Way Train, 12 M. Express Train 5 P. M. For Hudson 3 30 P. M. For Poughkeepsie—Way Freight and Passenger Train, 12 30 P. M. For Peekskill, 5 30 P. M. For Sing Sing, at 4 20 and 9 P. M. For Dobbs' Ferry, 7 15 and 11 A. M. The Dobbs' Ferry, Sing Sing, Peekskill, and Hudson Trains stop at all the Way Stations. Passengers taken at Chambers, Canal, Christopher, and 31st streets. SUNDAY MAIL TRAIN at 4 P. M., from Canal street, for Albany, stopping at all the Mail Stations. M. L. SYKES, Jr., Superintendent.

Merchant Tailoring Establishment.
THE subscriber, having sold his interest in the firm of A. D. Titsworth & Co., of Plainfield, and located himself at the corner of Fulton and Pearl streets, New York, as Merchant Tailor and Manufacturer of all kinds of Clothing, would respectfully invite his friends, and as many others as feel disposed to study economy, to give him a call, feeling assured that his experience in the business will enable him to do better for his customers than they can do for themselves. He will employ the best of workmen, and give to the business his whole attention.
Cloths, Cassimers, and Vestings, of the latest patterns, constantly on hand, and made to order in the most approved manner, at short notice.
Also, any persons wishing cutting done for their friends at home, by observing the following directions, can be accommodated with any style they wish:—
Coat Measure—1st. Placing the measure at socket bone of neck, down to center of arm or shoulder; then to waist above the hip, and length of coat. 2d. From seam of back, giving width of back; then to elbow and length of sleeve, bending the arm in right angle. 3d. Breast and waist, noting the position, whether stooping forward or extra straight.
Vest—1st. From socket bone down front, giving length of vest. 2d. Breast and waist measures.
Pants—1st. From hip bone to thigh joint and knee, and length. 2d. Waist, hip, thigh, and knee measures.
Also, any persons wishing to avail themselves of my assistance in selecting a stock of clothing or other merchandise, will find me at my office every day, except Sabbath day. All orders thankfully received and attended to with dispatch.
Terms, cash on delivery.
E. B. TITSWORTH, Merchant Tailor.
☞ I can accommodate a Sabbatarian with an office in my room.

Seventh-day Baptist Publishing Soc.'s Publications.

The Sabbath Recorder,

Published Weekly.

Terms—$2 00 per Annum, in Advance.

The Sabbath Recorder is devoted to the exposition and vindication of the views and movements of the Seventh-day Baptist Denomination. It aims to promote vital piety and vigorous benevolent action, at the same time that it urges obedience to the commandments of God and the faith of Jesus. Its columns are open to the advocacy of all reformatory measures which seem likely to improve the condition of society, diffuse knowledge, reclaim the inebriate, and enfranchise the enslaved. In its Literary and Intelligence Departments, care is taken to furnish matter adapted to the wants and tastes of every class of readers. As a Religious and Family Newspaper, it is intended that the *Recorder* shall rank among the best.

The Sabbath-School Visitor,

Published Monthly.

Terms per annum—Invariably in advance:

One copy	$ 25
Five copies to one address	1 00
Twelve copies to one address	2 00
Twenty copies to one address	3 00
Twenty-eight copies to one address	4 00
Forty copies to one address	5 00

The Seventh-day Baptist Memorial,

Published Quarterly.

Terms—$1 00 a Year, 25 Cents a Number.

Each number of the *Memorial* will contain a lithographic portrait of a Seventh-day Baptist preacher, together with a variety of historical, biographical, and statistical matter, designed to illustrate the rise, progress, and present condition of the Seventh-day Baptist Denomination. Wood-cuts of meeting-houses will be introduced from time to time in connection with the history of the churches.

[The first, second, and third volumes of the *Memorial*—being for the years 1852-3-4—may be had bound, for the subscription price and the cost of binding.]

The Carol:

A Collection of original and selected Music and Hymns, for the use of Sabbath-Schools, Social Religious Meetings, and Families. Compiled by Lucius Crandall. 128 pages octavo; price 35 cents per copy.

The *Carol* is designed principally for Sabbath-Schools, and contains Music and Hymns adapted to all ordinary occasions, and to such special occasions as the sickness of teachers, funerals, anniversaries, &c. A number of pieces suitable to social and public worship, together with a few Temperance Songs, are included in the book. It contains 93 tunes, and 156 hymns.

☞ Orders and remittances for the above should be addressed to the General Agent, GEORGE B. UTTER, No. 9 Spruce-st., New York.

Postage.

The postage on the Sabbath Recorder is 13 cents a year in the State of New York, and 26 cents in any other part of the United States, payable quarterly or yearly in advance.

The postage on the Sabbath-School Visitor is 3 cents a year in the State of New York, and 6 cents in any other part of the United States, payable in advance.

The postage on the Seventh-day Baptist Memorial is 2 cents a year in any part of the United States when paid in advance, or 4 cents a year when not paid in advance.

Miscellaneous.

From "The Crayon."

Wanderings in the Southwest.

NO. 8—Concluded.

All day we journeyed over the rolling table lands, now destitute of every species of shrub; instead were clumps of the *Dasylyrion*, a rigid, bearded, linear-leaved plant, which throws up from its center a spike from six to twelve feet high, which, in its season, bore its flowers, but it was now dry; it is known as the bear grass. As the road passes over the higher ground, the eye ranges for many miles over a dreary expanse of loose stones, and the dry stalks of the "bear grass." Twenty-four miles brought us to the first water. This is stagnant in the ravine. My attention was called to a little spot by the road-side, full of mournful interest, which awakened memories of that eventful year when so many found uncoffined graves on that long journey to the land of gold. A small heap of stones told where a young girl was left in a nameless grave. The teamster knows the spot and the wolf howls her requiem. My tent could not be pitched for the want of sufficient soil to receive the stakes, and I slept in the ambulance, but there was a mule tied to each wheel, and as it was a long time since I slept in a cradle, I found my situation about as comfortable as might be supposed. The following day we descended another long cañon, down, down, until we find ourselves again at the Devil's river, much nearer its source; but the channel is still deep, and the banks, rising about as high as the Highlands of the Hudson, are rounded and interrupted by ravines, but the stratification is nowhere concealed. The bottom of the river is covered with rounded masses of stone and thickets of small trees. We camped near where the river widened into a small lake, on the margin of which a grove of pecans had grown to a great size. Wild turkeys resort to them at night. As the sun went down I planted myself near them to take a turkey when he came in to roost, but the pecans were lying thick around me, and I employed my time in picking them up until I had gathered a peck, which so well satisfied me that I returned to camp, but I paid dear for them. The *Rhus* or poison-oak, covered the ground beneath the trees, but as I had often exposed myself to it along the river bottoms of Texas and California with impunity, I gave no attention to it, but it was long before I could forget it. A turkey, a fawn, and some fish, were taken by the men. The road from this crossing continues up the bed of the river, which soon becomes lost in the rocks. The mules labor hard among the round stones which are left in heaps by the water after heavy rains. Camped at the head of the valley, near a pond, called Beaver Lake. A large flock of turkeys flew away into a thicket of small live oaks. I saw where one alighted in a dead tree, and with great difficulty worked my way through the tall weeds that intervened, until I reached the spot where I expected to see the turkey: a large bird was perched at long range, and thinking it to be the bird I was after, I fired, and away flew a fish-hawk with one leg dangling below him, and at the same instant flew the turkey, from a tree directly over my head, with both legs in good order. I appeased my vexation by shooting three teal on the pond, and determined to have my satisfaction by waylaying them when they came in to roost. But in this I had as little success, though I spent two hours in a dense thicket where they ought to have come. Others were more successful, however, and more turkeys were slain than we could use. The succeeding day we again reached the table lands, if those can be called lands which are little else than rock. There we saw the first prairie-dog-town. This was to me an object of great interest, one which had been associated in my mind with the adventures of Clark and Lewis, and the far interior of the great West, destined to be, for ages to come, as it had been from time immemorial, the home of the savage.

These are landmarks that are necessary to make one realize how far he has wandered from the land where sleep our forefathers who heard the war-cry of the Indian. But, independently of associations, the prairie-dog is an interesting animal. This community was small and limited by the nature of the ground. A small valley or depression in the ground had received the alluvium from the higher ground about it, to the depth, apparently, of several feet, and into which the marmot can readily excavate his burrow. They dig them a rod or more distant from each other, and never appear to stray far away, for, except in these, they have no protection from birds of prey, as well as wolves. They feed on the short, fine grass that seems to be confined to these flats. As this region is often many months without rain or dew, and the localities they select many miles from water, and the solid limestone which underlies the soil forbids deep excavations, it seems probable that they lived generally without water, or only such as the juices of the grass afforded them, and an examination of the stomach of one killed by the sergeant confirms me in that opinion. Their general appearance is that of the squirrel family, though they are twice the size of the grey squirrel, and their tails not half the length of their bodies. When they hear an unaccustomed sound they will rear themselves upon their hind feet to see what it means, and when they discover a white man approaching, with a gun in his hand, they run to their burrows, and looking over the little breast-work which is thrown up about them, they set up the barking which has given them the name of prairie-dogs, to which the red squirrel of the North has just as much claim, and whose bark, when you disturb him, very closely resembles this marmot's. A small burrowing owl is common in these towns, but what business it has there I could not learn. We descended from these table lands into another wide valley, several hundred feet deep, and camped near where there was a little water standing in a "hole," in a rocky ravine. The feet of the animals soon made it mud, but still they drank it. The scenery here was very picturesque. A valley about a mile wide, with a smooth, level floor, covered with grass and mesquets, here reduced to a diminutive shrub, is shut in by the table lands protruding in distinct heads, like hills, their flat tops on a level with the general surface of the table lands, and all presenting near their summits a perpendicular wall, like a parapet to a fort, or the wall of an old castle, from which the earth slopes abruptly down to the floor of the valley. From our camp that night I counted eleven of these "castle mountains," as they have been called. The heavy strata of rock presenting themselves are uniform throughout, and were once continuous, but the action of running water for ages has made this deep valley, and separated their headlands a mile asunder. All the next day we journeyed through this valley to where it opens into another at Howard's Springs. This is another noted camping-place. So scarce is water in this region, for the most of the time, that any party passing either way near it must stop here. The water rises in considerable quantity through the pebbles in the bed of the *aroyo*, and disappears as suddenly. Even water-fowl are forced to resort to it, and in the muddy pond ducks are always to be found. It lies in the great Comanche trail to Mexico, and is reputed to be a dangerous pass. A few small trees grow near the spring, and a small thicket of willows grows in a ravine at the foot of a ledge of limestone, in the crevices of which juniper trees, here called "cedars," begin to show themselves. I killed a turkey in the afternoon, and finding that they resorted to the willows to roost, I arranged with the sergeant that we should go at sundown to the bluff and shoot them as they came in. When I arrived at the spot there was a number of them in full sight, but as the sergeant had not come, I waited for him until it became so dark that I could scarcely see them. When he came, it was arranged that we should fire simultaneously, but one turkey only was killed, and we could no longer distinguish them in the obscurity of the night. Still we were disposed to hunt them, and we traversed the ravine, one on each side of the willows, until we could no longer distinguished each other. I had been stealing my way quietly along for some time without hearing any thing from my friend, and I hailed him; when he exclaimed, close by me, "My God, Doctor, is that you? I thought it was a turkey!" He had indeed been following me for some time, trying to get a good sight at me, and my calling to him, perhaps, saved me from the effects of a charge of slugs from his musket. The next day we traveled out of the valley and camped on the table land at the head of a cañon, whose depth we were prevented from seeing by the growth of cedars. The rain-water in rocks served our animals, and the grass was much better than we had seen for a week. In this vicinity, the prairie-dog towns are numerous, and herds of the prong-horned antelope were seen. They are very timid, and so difficult to shoot that their horns are rarely seen in the possession of any one but their natural owner. I arrived on the following day at the encampment, where I now write, on Live-oak-creek.

J. D. B. S.

Burning Green and Dry Wood.

An opinion still prevails, in many parts of the country, that green wood gives out more heat than the same bulk of dry. We have even seen persons throw water upon dry wood and upon burning coal, under the impression that more heat was thus obtained. In 1850 we were making a trip down the Mississippi River, on one of two rival boats that chanced to be testing their relative speed. We took a station near the firemen to observe the means used for getting up extra steam. As our boat was evidently falling behind, the firemen explained the reason to be, that the rival boat had taken on a portion of green fuel at the last "wooding station," and so to be even with them a dozen buckets of water were actually drawn up and sprinkled over the dry wood, "to make the fire hotter." We think instances of such ignorance of the principles of combustion and heat are not common among experienced engineers and firemen; still, very many persons believe that if wet or green wood is no better, it is quite as good as dry, and large numbers of those who prepare dry fuel do so for convenience of starting and keeping up fires rather than for the profit of it. Let us look at this matter a little.

In all cases of combustion or burning, heat is not manufactured, but *developed*. There is just as much heat in a given bulk of fuel and air when entirely cold as when they are in rapid combustion. The heat results from the chemical union of the air with the carbon (coal) of the fuel. They condense in uniting, and the heat, before latent or concealed, is now "squeezed out"—so to speak. An expanded, porous sponge, may appear dry, and yet become a wet mass when sufficiently compressed. In like manner apparently cold wood and air may become a heated mass when sufficiently condensed by mechanical means or by chemical action, as in the oxidizing or burning process. The principle we would impress is this, that in all cases of condensation, that is, when bodies are made to occupy less space, heat is developed. Hammering a piece of iron into smaller bulk will develop heat enough to make it quite hot. The condensation of the watery vapors of the air into rain or snow gives out heat, and we say "it is too cold for much snow or rain." Boring wood or iron—in short, every action, mechanical or chemical, that compresses the particles of substances together develops heat. Expansion, on the contrary, takes up and secretes, or hides heat. When water changes to steam, it occupies some 1,700 times as much space, and hides or secretes a vast amount of heat. The steam formed by a pint of water, though no hotter apparently than boiling water, in reality contains five or six times as much heat.

In burning green or wet wood, the dry portions, especially the carbon, unites with the oxygen of the air; the two occupy no more space than the air before, and the condensation gives out heat in a sensible, useful form. But the other portion, the water, does not burn nor unite with any other substance; it is converted into steam, and during the process, it secretes or hides (renders latent) a large amount of heat besides what is required to raise it to the boiling or steam point. If the steam could be separated from the smoke and conveyed from the stove or fire-place into the room, it would then condense to water again and yield up its latent heat; but this is not practicable nor desirable.

A block of solid green wood one foot square (one cubic foot) will weigh about 60 pounds, and when well dried only about 40 pounds. This 40 pounds is all that aids in producing heat. The 20 pounds is water, which, during the seasoning process, escapes gradually, but if burned rapidly it must all be converted into steam before it can be got rid of. A certain amount of heat is first withdrawn from useful purposes to raise the sap to a boiling point, and then several times as much more is secreted when it changes to vapor. We see then that a cubic foot of dry wood will, in burning, heat, say 120 pounds of water to boiling, and still afford as much heat for other purposes as would be yielded by the same block burned green.

A cord of wood, (128 cubic feet,) if entirely solid, would weigh, when green, from 6,000 to 8,000 pounds, and when dry, from 4,000 to 5,000 pounds—a difference of more than a ton weight in a solid cord, which must be handled in loading and unloading, and what is usually quite as important, must be carted from the grove to the place of consumption. As wood is usually piled up, one-fourth to one-third its bulk is occupied by the spaces between the sticks, so that the weight of a cord of green wood is from 4,000 to 6,000 pounds, (two to three tons,) or less in the lighter kinds. Still, for every cord of green wood taken from the grove at least 1,000 pounds of useless water is handled.

In whatever way we look at this matter, the use of green wood, under any circumstances, is not economical. Let every one improve this season of the year in getting enough wood cut and drying to supply all the wants of the farm until a year from next June or July, or until next Winter's cutting shall have had sufficient time to get thoroughly dry. Wood will season even in the coldest weather, and on this account it is better to cut down at once all that must be carted home during the present Winter. [N. Y. Times.

Guano—Super-Phosphate of Lime—Barn-Yard Manure.

A correspondent makes sundry inquiries in regard to the comparative value, &c., of the above fertilizers, to which we answer: Well-peserved barn-yard manure, when it can be had in sufficient quantities and within a reasonable distance of the place where it is to be used, is generally the cheapest and best fertilizer. When there is not a supply of this at hand, genuine Peruvian guano is the best substitute. There is so much adulteration and deception practiced now-a-days, that it is unsafe to buy the article, except of dealers who have an established reputation, and who can give reliable assurance of having obtained their supply direct from the agents of the Peruvian government.

There are a variety of other brands of guano, but these are so variable in their character and value, that the Peruvian may be set down as the cheapest, even at double or treble first cost.

Super-phosphate of lime is also a variable article, greatly depending for its efficiency as a fertilizer upon the process adopted by the individual makers. Much of its value is due to the ingredients incorporated with the burned bones and sulphuric acid, which are the bases of the manufacture, and which essentially constitute the super-phosphate. In dissolving bones in sulphuric acid, a considerable quantity of sulphate of lime *(plaster of paris)* is formed. This, with the free sulphuric acid remaining, and the Peruvian guano or the salts of ammonia added when super-phosphate is put up for market, may be the chief source of any good effects resulting from its use. Simple, pure super-phosphate of lime, though sometimes producing good results, apparently at least, is not yet established as being valuable for miscellaneous crops. For turnips and other root crops, it has in most cases been found useful, though not always profitable. Unless made by some one who has unusual facilities for obtaining ammonia from gas factories or other sources, cheaper than it can be supplied by guano, it would seem to be preferable to procure the pure guano itself, instead of a compound containing only a small per centage of it.

Safety of Railroad Traveling.

At a recent meeting of the English Railway Club, which is composed of the representatives of the principal English Railways, Mr. Edward G. Watkin, the General Manager of one of the most extensive lines, presided and made a speech, which was received with great attention. He said those present represented £300,000,000, employed more than 90,000 men, and administered a revenue of £20,000,000 annually. In regard to the safety of railway traveling, Mr. Watkin furnished some novel statistics. He said he had often thought that if a person wanted to be in the safest place in the world, he should get into a first class railway carriage and never leave it. In 1854, the English railways carried 111,000,000 passengers; the number killed in consequence of accident, beyond their own control was 12. Those 111,000,000 traveled about 15 miles each, so that it was clear a man must make between 10 and 11 journeys, traveling between 150,000,000 and 160,000,000 miles—and that would take, he had calculated, between 2000 and 3000 years—before a fatal accident might happen to him. Now, he challenged comparison, in point of safety, between railway traveling and that of any other mode of traveling, of any other avocation.

Rearing Stock.

Having had considerable experience in the raising of stock, I wish to state through the columns of the *Farmer*, a few facts connected with it. There is a mistaken idea prevalent among many farmers, that if a creature is fed high while young, it will naturally be tender, and must so be fed through life to be kept in good condition. A thing that is worth doing at all, is worth doing well; if farmers would have fine, well proportioned cattle, they must be well cared for during their first years, and this is the main point; if a calf is kept growing all of the time the first year, the probability is that it will make a fine creature, if it have enough even of poor hay to eat. My method of raising calves is this; let them suck one half the cow gives for four or five weeks, keeping fine hay before them, and giving them, once a day, a handful of meal or oats, or a few crusts of bread soaked in water; then learn them to drink porridge made of skim milk and buckwheat flour, or meal that has been sifted. In this way they seldom scour at all; and if one does, I take a little white pine charcoal, finely pulverized, and mixed with lard enough to make it adhere, spread this mixture on a piece of bread, and give it, which is a certain cure. I feed in this way until they are three months old, when they will do to wean. A few oats should be given once a day a while longer. During the first winter they should be kept in a warm stable, and have all the good hay they will eat; after this they will grow well and keep in good condition on meadow hay. In this way it is no uncommon thing for my three years old steers to weigh 3,000 lbs.

And what is true of calves, is true of colts in a greater degree, as it is the symmetry of form, and gracefulness of movement in the horse, in which consists his highest value. If the colt is allowed to become stunted while young, all the high keeping that can be given in after life never can restore that which he has lost. I have known a man who wished to raise up a tough horse for his own use, who kept his colt in an open shed, with nothing but poor hay to eat, and it was tough indeed; tough to look at, tough to drive, and a sorry looking thing altogether. A colt should be kept in a warm stable, with plenty of good hay, a pint of oats and a pint of sliced carrots every day during the first winter, and here I would say, that I consider grooming of as much importance as good keeping; farmers, as a general thing, pay too little attention to this; a good rubbing from head to foot, once a day, is worth as much to a horse as two quarts of oats. If farmers would keep three things in view, in regard to young animals, we should soon see a great improvement in the stock of New England, which are these—feed, feed well, feed high.

A. F.

Effects of Heat upon Meat.

A well-cooked piece of meat should be full of its own juice or natural gravy. In roasting, therefore, it should be exposed to a quick fire, that the external surface may be made to contract at once, and the albumen to coagulate, before the juice has had time to escape from within. And so in boiling. When a piece of beef or mutton is plunged into boiling water, the outer part contracts, the albumen which is near the surface coagulates, and the internal juice is prevented either from escaping into the water by which it is surrounded, or from being diluted or weakened by the admission of water among it. When cut up, the meat yields much gravy, and it is rich in flavor. Hence a beef-steak or a mutton-chop is done quickly, over a quick fire, that the natural juices may be retained. On the other hand, if the meat be exposed to a slow fire, its pores remain open, the juice continues to flow from within, as it has dried from the surface, and the flesh pines, and becomes dry, hard, and unsavory. Or if it be put in cold or tepid water, which is gradually brought to a boil, much of the albumen is extracted before it coagulates, the natural juices for the most part flow out, and the meat is served in a nearly tasteless state. Hence to prepare good boiled meat, it should be put into water already brought to a boil. But to make beef-tea, mutton-broth, and other meat soups, the flesh should be put into cold water, and this afterwards very slowly warmed, and finally boiled. The advantage derived from simmering, a term not unfrequent in cookery books, depends very much upon the effects of slow boiling as above explained. [Chem. of Com. Life.

Trees from Seed.

A few years ago we made a large collection of the seeds of shade and ornamental trees, both deciduous and evergreen, and planted with much care, but did not get a seed to vegetate. This season we have found out what was the matter; we planted too deep. It is well known that in the pine-regions of Georgia, this has been a great mast year, and we now find everywhere where the winged seeds have met the surface soil, they have thrown out roots, and begun the form of a tree. They had no planting but what nature gave them, and dame nature is a tolerable horticulturist. We invariably plant tree seeds; just soil enough to preserve the moisture is all that is necessary. An ornamental tree, grown from seed, may be made any thing the cultivator wishes it. A fruit tree grown by seed is the most likely to be healthy, and may prove a sure and valuable variety. It has been a question of time with most of us; we could not wait for tree seeds to form trees. A pine seed will make boards in twelve years. Apple seeds will make fruit-bearing trees in four years. Grapes in eight and ten years. Peaches and plums in two years. The China tree seed will make a good shade tree in four years. A man may have a forest or an orchard from seed, if he will. Even the acorn and hickory nut may be planted with profit. Plant tree seeds, reader, and you will be astonished at the work of your hands in a few years.

How to Wash Flannel.

Some women possess quite a knack in washing flannel, so as to prevent it fulling. It is not soapsuds nor rinsing waters that thicken up flannel in washing, but the rubbing of it. Cloth is fulled by being 'pounced and jounced' in the stocks of the fulling-mill with soapsuds. The action of rubbing flannel on a wash-board, is just the same as that of the fulling-mill. Flannel, therefore, should always be washed in very strong soapsuds, which will remove the dirt and grease, by squeezing, better than hard rubbing will in weak soapsuds. It should also be rinsed out of the soap in very warm water, and never in cold, as the fibres of the wool do not shrink up as much in warm as in cold water, after coming out of warm soapsuds. Great care should be taken to rinse the soap completely out of the flannel. This advice will apply to the washing of blankets, the same as it does of flannel. [Scientific American.

AMERICAN SPIRAL BULLETS IN ENGLAND.—English papers state that the interior spiral bullet of J. W. Cochran, of New York, has been highly approved in England, where the inventor now is, for the purpose of introducing it there. This bullet, having three spiral grooves in its interior chamber, and a very minute passage at the point, receives a whirling motion round its long axis when discharged from a smooth bored fire-arm, and has, therefore, the same direct flight as a ball discharged from a rifle. Numerous plans have heretofore been tried to give bullets such a motion from a smooth bored fire-arm, but they all failed because they (the bullets) were formed with projecting spirals, and were, therefore, constructed upon wrong principles. The projections met with such a resistance in passing through the air, that their extent of range was greatly reduced. Cochran's bullets are smooth outside and of conical form, so that they offer less resistance to the air than a common rifle bullett. It is stated that he has received orders from the British Government for manufacturing a great number of his shot for cannons. [Scientific American.

NEW MODE OF TREATING HORN.—The London *Artisan* mentions an invention for softening horn, and rendering it elastic like whalebone. The horns are cleansed, split, opened out and flattened, and impressed for several days in a bath composed of 5 parts of glycerine and 100 parts of water. They are then placed in a second bath, consisting of 3 quarts or nitric acid, 2 quarts of pyroligneous acid, $12\frac{1}{2}$ lbs. tanning, 5 lbs. bitartrate of potash, and 5 lbs. of sulphate of zinc, with 25 gallons of water. After leaving this second bath, it will have acquired a suitable degree of flexibility and elasticity to enable it to be used as a convenient substitute for whalebone.

AN EXTRAORDINARY CASE.—A young lady, daughter of Mr. Henry Walker, residing in Thoroughfare Neck, New Castle County, Md., was taken some time ago with the most agonizing pain in her left foot and ancle, threatening her with lock-jaw, caused by a piece of glass having pierced it when there years old. It appears she had suffered no inconvenience from three months after the accident until recently, when her father became alarmed, and took her to Philadelphia to get the opinion of Dr. Charles D. Greene, who decided that a piece of glass still remained in the foot, and advised an operation, to which Miss Walker consented, and, severe as it was, it was borne with great firmness. Dr. Green performed the operation, and found one piece of glass—measuring an inch in length and a quarter in width—imbedded in a hollow which it had formed in the heel bone, being covered by gristle very difficult of cutting through—explaining the reason why it remained in one position so long, having been in that situation fourteen years, as Miss W. is now seventeen years of age. It is very likely if the fungus degeneration of the soft parts of the heel had not occurred, the glass might have remained any number of years without being serious. Miss W. is now doing well.

UP WITH THE TIMES.—Some one, who feels the need of being "up with the times," writes to the Philadelphia *Christian Chronicle* as follows: "We have had 'The Women of the Bible,' 'The Daughters of the Bible,' and many other things in that line; and now we are having from one of the pulpits in New York, 'The Mothers of the Bible,' with the usual varieties. Please announce through your valuable columns that I propose commencing a course of sermons on 'The *Men* of the Bible,' among the subjects of which will be the following: Adam, the Grandfather of all; Noah, the First Sea Captain; Esau, the Man with *the Heavy* Beard; Absolom, the Fast *Young* Man; Nebuchadnezzar, the First Pure Vegetarian; Felix, the Free-Lover, etc."

VARIETY.

Mrs. Beaumont, of Grant County, (Wis.,) claims to have discovered a plant that yields two fibrous products—one resembling cotton, and the other flax—that are particularly well adapted for the use of paper-makers. The Buffalo Express has given this matter some attention, having submitted specimens of the flax of the paper plant to the inspection and opinion of practical and experienced paper manufacturers. The plant grows readily, is easy of culture, and yields the flax abundantly—three to five tons to the acre. The product is worth $100 per ton. There is already a field of this plant in culture in Wisconsin.

The shipping built in the State of Maine, during last year, was 215,903 73 tons, and the tonnage at present owned in the State is 806,606 22 tons. The tonnage, estimated at the value of $50 per ton, would amount to $40,000,000. In addition to this, the builders in the State own an interest in vessels sold out of the State estimated at $10,000,000, making the total amount invested in that species of property by the citizens of Maine, $50,000,000. No European State, with the exception of Great Britain, has so large a commercial marine as Maine.

The Salem (Mass.) Observer publishes the statistics of the fishing business of Marblehead for 1855. It appears that 44 vessels are engaged in the business, giving employment to 312 men. In the "Summer fare," 29,653 quintals, or 756,600 fish. were taken; in the "Fall fare," $12,077\frac{3}{4}$ quintals, or 264,000 fish. The average weight of a thousand fish of the Summer fare was $38\frac{1}{2}$ quintals, and the average number per quintal was 26 fish. The average weight of a thousand of the Fall fare was $45\frac{1}{2}$ quintals, and the average number per quintal was 22 fish.

A trunk was recently found in New York containing a mass of documentary history of that State during the ten years succeeding the revolution, an examination of which has brought to light many rare and valuable papers, not the least of which is an autograph letter of General Washington to Gov. George Clinton, dated March 27th, 1783. The letter is in a perfect state of preservation, and is congratulatory upon the conclusion of peace between the United States and Great Britain.

A large merchant and importer says we are paying more duty on artificial flowers than on railroad iron. He says the women are not educated right. They are going to bankrupt the country unless there is a change. More is thought of show than substance. We pay scores of millions annually for ladies' ornaments which are of no use. We cannot afford it. It is worse than sinking the gold in the sea.

It is said that, by the late steamer from Europe, Mr. Hield, now attached to the Walnut-street Theatre, in Philadelphia, received from the writers of the Signet in Edinburg the announcement that he is entitled to about $22,000. The Edinburg Dramatic Fund has been divided among the surviving subscribers, and the above sum is the share of Mr. Hield.

Mr. A. Bronson, of Meadville, Pa., says from fifteen years' experience, he finds that Indian meal poultice, covered with young hyson tea, softened with hot water, and laid over burns or frozen flesh, as hot as can be borne, will relieve the pain in five minutes. If blisters have not arisen before, they will not, after it is put on, and one poultice is generally sufficient to effect a cure.

There are various sorts of reproofs—innumerable corrections—to which man, in the course of his life, is necessarily subject; which he feels deeply, yet which appear not to the world; but there is no reproof so stinging as self reproof; and for a man to be conscious that he has baffled himself, is for him to be as unhappy as man can be.

At a celebration of St. Andrew's Society, at Ontonagon, the following figured in a bill of fare under the head of game: Beavers Tail, Saddle of Caribou, Cranberry Sauce, Bear Steak, Mountain Ash Sauce; Porcupine *à la* Ontonagon, Waboos, Buffalo Tongue, Buffalo Rump roasted, Red Deer, Mashlum Scone.

An Eastern paper relates a story of a lad who was boasting to a comrade of the beauty of his father's house. "It's got a cupola," said he, "and it's going to have something else." "What is it?" asked his companion. "Why, I heard father tell mother this morning that it's going to have a mortgage on it."

New York and Erie Railroad.

ON and after Wednesday, Oct. 31, and until further notice, Passenger Trains will leave the pier foot of Duane-st., New York, as follows:

Buffalo Express at 7 A. M. for Buffalo direct, without change of baggage or cars. At Hornellsville this Train connects with a Way Train for Dunkirk and all stations on the Western Division.

Mail at $8\frac{1}{4}$ A. M. for Dunkirk and Buffalo, and all intermediate stations. Passengers by this Train will remain over night at Owego, and proceed the next morning.

Newburg Express, at 4 P. M, for Newburg direct, without change of cars.

Rockland Passenger at 4 P. M. via Sufferns for Piermont and intermediate stations.

Way Passenger at 4 P. M. for Otisville and intermediate stations.

Night Express at 5 P. M. for Dunkirk and Buffal

Emigrant at 5 P. M. for Dunkirk and Buffalo and intermediate stations.

On Sundays only one express train, at 5 P. M.

These Express Trains connect at Elmira with the Elmira and Niagara Falls Railroad, for Niagara Falls, at Buffalo and Dunkirk with the Lake Shore Railroad for Cleveland, Cincinnati, Toledo, Detroit, Chicago, &c.

D. C. McCALLUM, General Sup't.

Ayer's Pills.

FOR all the purposes of a Family Physic. There has long existed a public demand for an effective Purgative Pill which could be relied on as sure and perfectly safe in its operation. This has been prepared to meet that demand, and an extensive trial of its virtues has conclusively shown with what success it accomplishes the purpose designed. It is easy to make a physical *Pill*, but not so easy to make the best of all *Pills*—one which should have none of the objections, but all the advantages of every other. This has been attempted here, and with what success we would respectfully submit to the public decision. It has been unfortunate for the patient hitherto that almost every purgative medicine is acrimonious and irritating to the bowels. This is not. Many of them produce so much griping pain and revulsion in the system as to more than counterbalance the good to be derived from them. These *Pills* produce no irritation or pain, unless it arises from a previously existing obstruction or derangement in the bowels. Being purely vegetable, no harm can arise from their use in any quantity; but it is better that any medicine should be taken judiciously. Minute directions for their use in the several diseases to which they are applicable are given on the boxes. Among the complaints which have been speedily cured by them we may mention Liver Complaint, in its various forms of Jaundice, Indigestion, Langor and Loss of Appetite, Listlessness, Irritability, Billious Headache, Billious Fever, Fever and Ague, Pain in the Side and Loins, for in truth, all these are but the consequence of diseased action of the liver. As an aperient, they afford prompt and sure relief in Costiveness, Piles, Colic, Dysentery, Humors, Scrofula and Scurvy, Colds, with soreness of the body, Ulcers and impurity of the blood; in short, any and every case where a purgative is required.

They have also produced some singularly successful cures in Rheumatism, Gout, Dropsy, Gravel, Erysipelas, Palpitation of the Heart, Pains in the Back, Stomach, and Side. They should be freely taken in the spring of the year, to purify the blood and prepare the system for the change of seasons. An occasional dose stimulates the stomach into healthy action, and restores the appetite and vigor. They purify the blood, and, by their stimulant action on the circulatory system, renovate the strength of the body, and restore the wasted or diseased energies of the whole organism. Hence an occasional dose is advantageous even though no serious derangement exists; but unnecessary dosing should never be carried too far, as every purgative medicine reduces the strength, when taken to excess. The thousand cases in which a physic is required cannot be enumerated here, but they suggest themselves to the reason of every body; and it is confidently believed this Pill will answer a better purpose than any thing which has hitherto been available to mankind. When their virtues are once known the public will no longer doubt what remedy to employ when in need of a cathartic medicine.

Being sugar wrapped they are pleasant to take, and being purely vegetable, no harm can arise from their use in any quantity.

For minute directions, see the wrapper on the Box.

Prepared by Dr. J. C. AYER, Practical and Analytical Chemist, Lowell, Mass.

Price 25 Cents per Box. Five Boxes for $1 00.

Ayer's Cherry Pectoral,

FOR the rapid cure of Coughs, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption. This remedy has won for itself such notoriety for its cures of every variety of Pulmonary diseases, that it is entirely unnecessary to recount the evidences of its virtues in any community where it has been employed. So wide is the field of its usefulness, and so numerous the cases of its cures, that almost every section of the country abounds in persons publicly known, who have been restored from alarming and even desperate diseases of the lungs by its use. When once tried its superiority over every other medicine of its kind is too apparent to escape observation, and where its virtues are known, the public no longer hesitate what antidote to employ for the distressing and dangerous affections of the pulmonary organs which are incident to our climate. And not only in formidable attacks upon the lungs, but for the milder varieties of *Colds, Coughs, Hoarseness, &c.* and for Children it is the pleasantest and safest medicine that can be obtained.

As it has long been in constant use throughout this section, we need not do more than assure the people its quality is kept up to the best that it ever has been and that the genuine article is—

The Sabbath Recorder,

PUBLISHED WEEKLY

By the Seventh-day Baptist Publishing Society,

AT

NO. 9 SPRUCE-STREET, NEW YORK.

Terms:

$2 00 per year, payable in advance. Subscriptions not paid till the close of the year, will be liable to an additional charge of 50 cents.

☞ Payments received will be acknowledged in the paper so as to indicate the time to which they reach.

☞ No paper discontinued until arrearages are paid, except at the discretion of the publisher.

☞ Communications, orders, and remittances, should be directed, post paid, to

GEO. B. UTTER, No. 9 Spruce-st., New York.

Liabilities of those who take Periodicals.

The laws declare that any person to whom a Periodical is sent, is responsible for payment, if he receives the paper, or makes use of it, even if he has never subscribed for it, or has ordered it to be stopped. His duty in such a case is not to take the paper from the office or person with whom the paper is left, but to notify the publisher that he does not wish for it.

If papers are sent to a post-office, store or tavern, or other place of deposit, and are not taken by the person to whom they are sent, the postmaster, store or tavern-keeper, &c., is responsible for the payment until he returns the papers, or gives notice to the Publisher that they are lying dead in the office.

LIBERALITY IN THE CHURCH.

A public meeting was held in the City Hall, Glasgow, for the purpose of hearing addresses in connection with the scheme recently inaugurated in Edinburgh for the erection of additional manses, and the extinction of debt remaining upon Free Church property. Rev. Dr. Guthrie said:—

Look across the Atlantic to America, and you find that there they are complaining that all the energy, talent, and power of the rising youth of that country are going to other professions and mercantile business instead of the Church. Look across the Irish Sea, and you will find the same thing in Ulster. Look to your own city of Glasgow, in which, I am *told, there is* a singularly small number of students coming out for the ministry of the Free Church. That is to me a most melancholy fact. But I do not wonder at it; I am at liberty to devote myself to poverty, if I choose; but I don't know that I am at liberty to devote my family to the poverty with which ministers must lay their account. I do not want wealth in the Church; I do not want the attractiveness of wealth set up; but I want the repulsiveness of poverty removed. People talk of ministers being spiritual men, but I wish to know if they think I can keep up a body of six feet two and a half inches on air.

It is very easy to talk about ministers being men of spirituality—I wish we were more so than we are—but I would pray such talkers to remember that we are men of like passions with themselves, and men of infirmities too. My doctrine is, "Lord, lead us not into temptation;" and I want every Christian parent to be delivered from the temptation to which I know some have yielded, of turning away the aspirations of their children from the ministry, and directing them to more lucrative occupations. I want our young men of talent to be delivered from the temptation of seeing their brethren made comfortable in other professions, while they are ground down with difficulties. And I don't want our ministers to be doing what I know some of them are doing, maintaining themselves on their private means; on what does not belong to them, but to their children. I tell you that I have heard it said in my own ears, in my own house, by two most respectable ministers of our Free Church, that the very last profession on earth to which they would rear a son was that of a Free Church minister. That is a sad and melancholy state of matters, which will be most injurious to our Free Church. And let me tell you that there are Free Church ministers who have not that in their power, though they had it in their wish. I once entered a lovely Free Church manse. The minister, a most devout, excellent man, who would be an honor to any Church, was from home, and his lady in conversation told me that she had a son who had been attending Edinburgh College. I said I would be most happy to see him, and presumed, on learning that he had not been up last session, that he was in bad health. When I sympathized with her on that understanding, a most painful expression passed over her face, and I, seeing it was a painful subject, dropped it. I thought to myself, Now, that son has turned out to be a mother's heart-break; like other sons, he has gone away with a mother's prayers and tears on his cheek, and a father's blessing on his head, and has become the victim of some of the vices of our large towns. But I began to think again, Is it possible that that young man may have been kept there at home, and lost the best year of his life, because of the difficulty of sending him to college? So, after conducting worship in the inn where I was living, I slid the conversation on to the manse and the minister, and said, "By the by, the minister's son was not at the college last session, do you know the reason why?" Upon which, to the credit of the man's kindly feelings and delicacy, he drew his chair to mine as close as he could, and whispered, "They were not able to send him." I don't know a better test than that of whether our ministers are adequately provided for. *I know that there are some people who do not care what a minister gets.*

Some people think, I have no doubt, that when Dr. Candlish or I go to the pulpit, we have nothing to do but open our mouths, and out come the sermons like water out of a pump. Some people think that all other professions may be respectable, but that it is quite reasonable that a minister should be a poor man. I know a small town where a dancing-master, who spends five weeks of the year, carries away, for teaching the children to kick up their heels, more money than two worthy ministers of the place get all the year round. Some think that a minister is all the better for being kept poor. There was a friend of mine who was assistant to his father, a Seceding minister, and got £80 a year, while the father got £100. After his father's death, the question was, whether the minister should be kept at his old allowance of £80, or get the £100, like the father. Whereupon an honest man stands up in the congregation and said, "Moderawtur, Aw'm clear to keepkin the lad tae the aughty, and my reason is just this, that the Church never had ministers since she was a Church like them she had when they went aboot in sheep's skins and goats' skins, and lived in holes an' caves o' the earth." Well, that it is all very well; but I would be glad to know what the Edinburgh people would think of Dr. Candlish and me, if we were seen walking in Prince's street, my worthy friend in a goat's skin, and your humble servant in the clothing of a sheep? I meet that old, narrow minded, worthy man, by the high authority of Matthew Henry, and I am disposed to leave the whole question in his hands. He said, and I believe the experience of the world will prove it, that a scandalous maintenance makes a scandalous ministry. Poverty and piety are not identical things. I have high ideas of the office of the ministry. With Paul, I would so magnify my office, that I would like to see the finest genius and the noblest talent in the country, devoted to that noblest office. Of course desire piety—that is the first thing; but am not one of those who think God generally works by the weakest instruments; though he may do so to show his power. For that cause God called forth the wisdom and statesmanship of Moses, the poetry of David, the imagination of Isaiah, the burning fervor of Ezekiel, the pathos of Jeremiah, the logic and eloquence of the apostle Paul—for that cause God sent down his own angels from heaven; and more than that, and above that, for that cause God sent down his own blessed Son. I set the pulpit in the highest position which any man can occupy on earth; and I desire, piety being granted, to see the first genius and the noblest talent of our country consecrated to the service of my blessed Master. I do not speak for myself and existing brethren. We will very soon be mouldering in the dust. But I am exceedingly anxious for the fate of our Free Church, that the vexations and annoyances of debt and difficulty be taken out of the way of the rising ministry, and God grant such liberality to you and others, that our youth may see no obstruction in the poverty of the ministry in coming to lay their noble talents at the feet of Jesus!

FREE DISCUSSION.

To the Editors of the Sabbath Recorder:—

"One of the Subscribers" seems to be actuated by a commendable solicitude lest you should not carefully enough study your duty as the constituted guardian of the "established opinions, practices, doctrines, or duties, of the people whose organ" you are appointed to superintend. Will you permit "*Another* of the Subscribers" to join with this "one" in expressions of deep and lasting concern for the prosperity of our people, and most especially for the *purity of the young*. Our hope is in them; let us by all means, then, preserve them from a superstitious veneration of antiquated follies, a blind credulity in the unfounded pretensions of Science, and above all from a misapprehension of the true import of Divine Revelation. No agency, perhaps, is more efficient in doing all this, than our family newspaper, if properly conducted.

The extent to which you have allowed the discussion of various religious questions, seems to have caused this solicitude on the part of this "one subscriber." And if I understand him correctly, he thinks you have yielded too much to the demand of "free discussion." If this be not the case, then his cautions and suggestions were all uncalled for, and he was simply aiming at an imaginary evil. Now I think it is the undoubted right of this subscriber thus to express himself through our paper, and thus *freely* to discuss this question, in addition to the many interesting ones which have been discussed for the last six or seven years. Indeed, the question he has chosen to discuss has interested the church in all ages, and is a most vital one. I have therefore hoped that some abler pen than mine would enter the list, and give this question a most thorough discussion through the columns of the *Recorder*. This, of course, would not be deemed out of place by this "subscriber," since he has introduced it himself, and persists in urging it. I am sure he cannot be so egotistical as to claim that *his view alone* of the question is fit for publication, and that his alone tends to "illustrate and justify the Scriptures, and honor God, as well as benefit man." If he thinks so, that does by no means make it so. There are very many subscribers who think his view is as far from the true one as it can possibly be, and yet they do not deny his right to publish it thus freely, even though it be at their expense to some extent; nor do they think that their *own views* alone have a right to appear in the columns of the *Recorder*. They believe in a free and candid and Christian-like *exchange* of views. Nor do they require that every man's opinions shall coincide with their own, to entitle them to publication in our family newspaper. With this view, they commend the Editors of the *Recorder* for thus opening its columns to the discussion of so many and so deeply interesting questions; while they do most heartily thank the many brethren who have devoted their time and talents in the discussion of these questions, thus making our family paper a most welcome visitor to their hearth stones. They are also under especial obligations to the Corresponding Editor, for the ability and candor manifested in the discussion of such a multitude of interesting subjects.

Now I do not suppose that those brethren who have continued their discussions since this "subscriber" entered his protest, meant the least disrespect for him. Indeed, I do not suppose that the writer in a late *Recorder*, who subscribes himself "*Who Knows?*" meant to injure *this* subscriber's feelings, by introducing a *new* "*geological theory*," after that subject had been quite extensively discussed by others. He only thought he might throw some light on the previous discussion, by the expression of his views; and certainly the protest of this "subscriber" cannot have very great weight against the introduction of geological theories into our paper, since he himself has introduced one at the close of his last article. Now suppose some other subscriber should take up the gauntlet thus thrown down by this "subscriber," who so much dreads the tendencies of these "*theories*"—would the discussion be allowable or not? If *allowable*, then the "subscriber" does not believe his own teachings; but if *not allowable*, then he had no business to introduce his "*theory*."

I am glad "One of the Subscribers" has stated so clearly the objects of a family newspaper. It is as follows: "The object of a family newspaper, published as the organ of a denomination, I understand, is to set forth and maintain the religious doctrines, sentiments, and views of the people whose organ it is." Just so I understand it, exactly. Now whose views, whose sentiments, has this paper been setting forth, in all these discussions which give this "subscriber" so much trouble? Have they not been the views of "*the people* whose organ it is?" It may not be that the views of *all* "*the people*" have been expressed, but certainly a large number of the people have thus expressed their views. And shall those who have *not* thus availed themselves of the "organ," say to those brethren who have, "This is *our* organ, and *we* are the people?"

In looking over the file of the *Recorder* for the last five or six volumes, I find such subjects discussed as "The Equality of the Races," "The Freedom of the Will," "Regeneration," "Communion," "The Sabbath," "The Future Destiny of the Wicked," "The Soul's Immortality," "The State of the Dead," "The Resurrection," "The Atonement," "Geology and the Bible," "Free Discussion," and numerous others, adapted to make a family newspaper readable and useful. Now who have discussed all these questions? I think every one of them have been of "*the people whose organ the paper is*," and many of them those whom, for many years, "*the people*" have delighted to honor. Why, then, is not our paper fulfilling its function, in "setting forth the views and sentiments of the people whose organ it is?" If others of "the people" whose organ it is have other "views and sentiments" to set forth, I have not the least doubt but they will find admittance to to the columns of the *Recorder*, if they will send up well written articles.

But I must differ from this "subscriber" in the last item of his definition of our family newspaper—"and to publish such other matter as is in accordance, and not in conflict therewith;" that is, not in conflict with the views of the people whose organ the paper is. Now, for one, I often get tired of reading my own views over and over, from the beginning of the year to the end thereof, in my family newspaper. I much prefer to find, occasionally, a well-written article containing some *different* view, so that I may learn something of what the great busy world is thinking and saying, and so that my children may know that men do not all think alike, and thus, as I throw them forth into the world of thought and action, they may not be surprised and overwhelmed by the first opposing sentiment they meet. With this view, nothing would please me more than to see occasionally a well-written article in defense of the *Sunday Sabbath* in the *Recorder*. My children could thus learn of the sentiment which they will be called to combat in future life, and I could teach them *how* to combat it. But suppose they be never allowed to know of that sentiment, except by garbled extracts and misrepresentations; what surety have I that when, as men and women, they mingle with the thronging world, this sentiment, all new and unexpected, will not overwhelm them, and swallow them up? As a subscriber of the *Recorder*, and a Sabbatarian, I would thank the ablest advocate of Sunday-keeping in the world to advocate his belief through its columns. It is "*free discussion*" on this question that shall gain the victory for the truth. So of *every question*. Free discussion ever has been, and ever will be, the great instrumentality by which truth comes to light; and hence error and crime only shun it. What an eternal condemnation, then, do all those institutions fulminate against themselves which shrink away from public gaze, and seek to hide behind gag rules, party platforms, secret organizations, and ecclesiastical creeds. The human mind is awake, and every creed, and dogma, and proposition, whether of science or of politics or of religion, must come to the test. The days of inquisitorial restraint are passed away, and the glorious era of free thought and of free discussion has dawned.

I grant, that the human mind, in the exercise of its newly discovered powers, may at times overleap the bounds of proper exercise, and produce a reaction. But infinitely less is such reaction to be dreaded than the eternal stillness of conservatism, which looks up with holy horror from its stagnant depth, upon the world's commotion, and cries, "Peace, peace." The world and the church need something else more than they need *peace* just now, and they are likely to get it, in spite of all their profound denunciations of agitation and discussion. The creating energy of neither gods nor men will be content always "*to create oysters*." Oysters are good in their place, but they can hardly claim to be the grand ultimatum of creative power. They must be content to remain a poor shell fish, nor look with envious eye on the superior orders of beings which swarm around them. So no one creed or sentiment which springs from the creative energy of the human intellect, can safely place itself across the path of human progress, and say to the surging billows of thought and feeling which lash against them, "Thus far, and no farther." Agitation, in the moral world no less than in the physical, is God's own appointed means of renovation. Thus truth has always been shaken from error, and planted eternally sure on its own broad basis. It may indeed be very discomforting for hoary-headed error to be thus intruded upon, and for opinions, resting on tradition and prejudice alone, to be stirred up and sent afloat without a rudder on the billowy deep of these stormy times. But they must come to it. No surly growl, or fulminating bull, of the Pope, as he sat in fancied security among the seven hills of "the eternal city," could save him from the crash of the elements, which the great agitator of Erfurth had set in commotion. His day of reckoning had come; and so will come a day of reckoning for all false systems and sentiments. Let it come quickly, and in God's own way. For this purpose he has ordained "free discussion," and in the accomplishment of this purpose he has ever crowned it with signal success.

For wild fanaticism, and unbounded license, I have not one word to say. I only plead for *free discussion*, restrained only by an enlightened judgment and a well-developed conscience. May our *family paper* remain *ever*, as *now*, the impartial medium through which this God-ordained instrument of human progress can work out its sublime results.

ANOTHER OF THE SUBSCRIBERS.

For the Sabbath Recorder.

BIBLES *versus* SHARP'S RIFLES.

One of the questions which seems yet unsolved is, What is Christianity—what does it permit, and what forbid? However simple and easy of understanding the gospel has been thought to be, yet it seems that even the nineteenth century has thus far failed to produce a finality about it.

One of the great errors of the present day is a spirit of compromise—a spirit which always comes out but second best. Christianity, as taught by Jesus, has ever stood the stern antagonist of all compromise with sin. It therefore stands preëminently exalted above every system of morals ever taught. In fact, unless its righteousness exceeds that of any other system, wherein consists its superiority or divinity? Heathenism has inculcated morality much higher than Mormonism or Slavery Propagandism. Judaism stood infinitely higher in its anti-slavery principles than American Christianity. Judaism never disgraced its statute books with a Fugitive Slave Law; but, on the contrary, under President Solomon's administration, old Shimei was put to death for undertaking to return a fugitive, and one of his own servants. See 1 Kings 2: 36—46. Is it not plain, then, that the Christianity of this country, in its anti-slavery spirit, falls far below Judaism, and, I may add, below Mohammedanism, even in Algiers?

And not only in this respect has Christianity fallen, but also in respect to its War Spirit, or the want of the true Christ Spirit, is it equally fallen. Instead of copying after its Author, the Prince of Peace, it now outvies all heathenism in its warlike attitude and armaments for self defense. The Christian intellect seems bent on discovering new and improved instruments of death, some of which have been impiously baptized as "peace-makers."

Among the many engines of death which have had their origin in Christian civilization, is Sharp's rifles. These are getting to be considered of more moral agency than the Bible. If such be the fact, ought not the Bible Society immediately to commence their manufacture; and as lead is now high, it might be thought expedient to run some of their types into bullets; for although they may not be permitted to send Bibles into the houses of the southern slaves, they might speed a bullet to the heart of the master, which perhaps would convert him, or at least convince him how you loved him, and only killed him because you loved him. It is written, I believe, that "the letter (type) killeth." Rev. Henry Ward Beecher is reported as saying:—

"He believed that the Sharp rifle was a truly *moral* agency, and that there was more moral power in one of those instruments, so far as the slaveholders of Kansas were concerned, than in a hundred Bibles. You might just as well (said he) read the Bible to buffaloes as to those fellows who follow Atchinson and Stringfellow; but they have a supreme respect for the logic that is embodied in Sharp's rifles. The Bible is addressed to the conscience, but when you address it to them, it has no effect—there is no conscience there. Though he was a peace man, he had the greatest regard for Sharp's rifles, and for the pluck that induced those New England men to use them."

Now who can believe that Jesus would ever have used such language? How different was his spirit, when he told his disciples that they knew not what manner of spirit they were of! Admitting that one might as well read the Bible to buffaloes as to those "border ruffians," does it follow that we have a right to send the ball of a Minnie or Sharp's rifle through them? Dare Mr. Beecher say, that when men act like brutes we have a right "to send them to damnation" with the crack of a rifle, as Mormonism maintains? Dare Mr. Beecher say, that those in whom conscience is seared as with a hot iron, are to be shot down, like wolves and tigers? Mr. Beecher says he is a peace man. Jesus Christ was a peace man; and where, I ask, did he ever intimate his great regard for deadly weapons, and the "pluck" that would use them? Well may Mr. B. call it "*pluck*," for he dare not call it Christianity. Jesus had quite a different pluck. His pluck was a moral heroism, which could forgive even his murderers. I am pained to my very soul to hear such language fall from the lips of such a man. And yet why blame Mr. B.? Does he not stand on the platform of modern Christianity? I dare not admit, however, that he stands where Jesus, and Paul, and the early Christians, stood. While I admire the outbursting spirit of liberty in Kansas and elsewhere, still I cannot sanction the use of murderous weapons to defend it. And when I hear Christians—yea, Sabbath-keeping Christians—quoting H. W. Beecher's speech as the true exponent on this question, I can only say, 'The most fine gold has become changed," and ask myself, where can I find primitive Christianity? A sense of duty which I owe to my Redeemer, as well as a wish to let my brethren know how I stand, and whither I am leading the lambs of the flock, has led me to pen the above.

S. S. GRISWOLD.

Having admitted the foregoing letter of Mr. Griswold, we ought, perhaps, to accompany it with Mr. Beecher's explanation of his views, which we find in a recent number of the *Independent*. It seems that the N. Y. *Observer* took Mr. Beecher in hand for the statement quoted and commented upon by Mr. Griswold. In his reply to the *Observer*, Mr. Beecher says:—

"We do not exactly understand the ground of the *Observer's* criticism. Is the doctrine of personal physical self-defense wrong? Is it wrong for a community to defend itself by force against force? Is it this what the *Observer* means?

Or, if physical resistance to physical violence is right, does it mean that the people of Kansas had no just occasion of alarm, and no reason for arms? Or, supposing they *had*, is the *Observer* of opinion that Sharp's rifles were not a proper weapon? Or, is the offense only this, that a *clergyman* should encourage and praise those wise men for doing their duty courageously when wickedly attacked? Or, is it only the comparison made between the efficiency of Sharp's rifles and the Bible when employed to beat off drunken vagabonds?

The facts were simply these: A peaceful town was for many days threatened with assault and destruction by a lawless band of marauders, who, in morals, character and purpose, were plainly nothing different from so many pirates on the sea, or bandits upon the land. To attempt to restrain such men *only* by an appeal to their justice, to their respect for human rights, to their conscience—men raked together from the purlieus of a frontier Slave State, drugged with whisky, and hounded on by broken-down and desperate politicians—to neglect proper means of defense, to refuse arms and intrenchments, and to trust goods, dwellings and life to such a frenzied crew of unmitigated scoundrels, would have been little short of absolute madness.

But these very men *do* understand the force of courage; of firmness; of the spectacle of armed citizens, who will calmly defend their rights with such force as may be necessary for their preservation.

We praised them for their wisdom and their courage. We praise them again. Their stand was noble, and salutary to the country. It was worthy of New England, and of that New England ancestry which, amid wars and revolutions, built those foundations on which the *Observer* stands to revile their descendants for a worthy imitation of their fathers' traits! And we said, that in the circumstances in which the men of Lawrence were placed, the knowledge that they had of Sharp's rifles, and were determined to use them, would produce a more salutary impression upon vagabond politicians, and work more efficiently for peace, than all the moral suasion in the world. Since the world began, moral suasion has always been the better for a little something to stand on. Honesty is a very good thing, but laws, courts, and officers, help men very much in the exercise of that moral grace. Humanity is very excellent. But among men given to assault and battery, the certain penalty of the law is found to give potency to abstract humanity. A switch over the door enables the parent to address himself to the reason of his child with greater success than if no switches grew or were used! And we are not sure whether the day of switches is not made too short. If careless or conscience less Editors, who are more eager to make a sharp hit than to inquire after the truth, knew that they would be taken by some venerable and competent man into a retired room and soundly whipped, we have a strong suspicion that it would produce more salutary moral impressions upon *them* than reading the Bible seems now to do.

The Bible is a book of moral truths. In that sphere where moral truths are proper, it stands before all other instruments. But moral influences are not designed nor adapted to every work which needs to be done. In engineering, in husbandry, in navigation, there are powers which are mightier in these spheres than a Bible. Where timber is to be felled and hewn, an axe is better than a Bible. Nor is it detracting from the merit of the Book to say so. If a child is learning its figures, an Arithmetic is better than a Bible. At sea, for purposes of navigation, a book of logarithms is better than a Bible. Or would the reverential editor of the *Observer* tell the sailor, bewildered by storms, and now about to take an observation in the first bright day, by looking at the sun and using a sextant or quadrant, that the Bible and the sun of righteousness would be far better for finding his latitude and longitude? This would not be a whit more absurd than the pious sentence in the *Observer* about the sword of the Spirit being better for the defense of Lawrence against armed Missourians than is any rifle!

If the walls of the *Observer* office were tumbling down, would the editor be shocked to hear his mechanic say that brick and mortar were better than Bibles for repairing them? In times of a riot in a city, will not the knowledge that a company of soldiers is marching down upon them, with Mayor Wood at their head, have a more salutary moral effect upon them than to know that the editor of the *N. Y. Observer* was coming to read them some chapters out of the Bible? If thieves and burglars are to be morally reformed, the Bible is the fountain of right influence. But while a thief is picking your pocket, or a burglar is prying open your door, would you treat him to a Bible or a police officer?

Indeed, the Scriptures themselves give us the highest instances and proofs that physical treatment is sometimes the most powerful preparation for moral treatment. Christ healed the body, relieved the distressed, fed the hungry stomach, and then preached the sentences of immortal truth. Only when the earth quaked and the rocks rent did the Roman feel conviction and cry out, "This was the Son of God!" The songs and hymns of Paul and Silas wrought no effect. The miraculous wrenching open of their prison-doors, and all the other tokens of power so impressive to the senses, brought the jailor to his knees a convicted sinner. Indeed, this truth is hardly disputed. It is the merest captiousness of a fault-finding disposition to make it an offense for a man to say that there are cases in which physical forces produce moral effects more certainly than the highest moral truths. And if there ever was a case it was this very one in hand. The drunken rabble had been taught that courage was the height of manhood, and that cowardice was the most despicable vice. They had been taught that a Yankee was a coward to his heart's core, that the smell of powder was more potent upon his fear than even money upon his avarice.

When, then, these ignorant fellows saw courage added to thrift; a calm, unboastful but immovable determination to defend their rights, and to die rather than to yield one hair's breadth of principle, it inspired both respect and fear; and there can be no question, in the minds of any who know what such sort of men are made of, that this armed courage of the Kansas emigrants, did more to produce a recognition of their rights, than a hundred sermons or a thousand Bibles. And we say again, and with more emphasis than ever before, that when men have been left ignorant and uneducated, when Northern moral imbecility has left them without the least respect for the rights of Northern men, when drunk with whisky, and urged on by brawling leaders, it is no time to deal with them by Bibles. That work should have been done before. That being neglected, and the crew of infuriate wretches being on the eve of a murderous assault, the sword and the rifle are now in order. By them only can the danger be averted and rights maintained. Let thieves and assassins and rioters, know that their schemes of violence would never be resisted except by moral means, and society could not stand *a month!*

We are quite enchanted with this unworldly spirit so graciously assumed by the *Observer*. In this hard, knowing world, innocence soon loses its artlessness. It is therefore altogether refreshing to find a man who has the ingenuous simplicity to say that Bibles are better for the defense of a city than a trench and rifles? We fancy to ourselves the mild and benignant editor, of the *Observer*, walking his rounds as a sentinel in Lawrence, armed with a folio, and committing to memory over night those texts which the next morning are to prove more potent with a rabble of drunken bandits than Sharp's rifles!

If the *Observer* had only lived earlier, what lessons of wisdom might it not have given to Cromwell! *He* gave his soldiers, to be sure, a pocket-piece in the shape of a collection of texts—a sort of pocket-pistol Bible. But no one ever heard of their using them in battle, instead of sword and musket.

Our ancestors, too, had real long ugly-looking swords, made of steel and sharpened on grindstones, and when the Indians attacked them they used them! The *Observer* would have said to them, as it has said to us: "The Word of God, brethren, is sharper than any two-edged sword; *such a sword is better than any rifle*."

The old church at Norwich, Ct., was originally built upon a great rock or cliff, not far from its present location, and the Puritans used to carry their muskets *and* Bibles with them to church; the one for the inside work and the other for outside work. When the sentinel, as he did in several instances, descried an Indian foe, these unenlightened men, unblessed with *Observers*, laid down their Bibles and took up their rifles, and went at the Indians, just as the Lawrence people would have gone at the heathen in Kansas had not their discretion ran away with their valor. The editor of the *Observer*, had he been there, would have done no such thing. *He* would have been seen going down to the Indians with a Bible, reading English texts to Pequot ears, and saying to all who expostulated, "Such a sword is better than a rifle." This course might not have been inconsistent with self preservation, for all superstitious savages have a kind of respect for the insane, as if they were peculiarly inspired.

One thing is very certain, that if the recommendation of armed valor is a heresy; if to praise the efficacy of weapons of war in the day of battle be a sin, I sin in company with pretty much the whole New England clergy in those old times which tried men's souls. And we have not forgotten that eloquent sermon of Robert Hall—that light of piety and eloquence, in the age just completed—in which he sent forth the armed band before him to war, and invoked the aid of the God of battles in their behalf. We have not forgotten, and shall not soon forget, the record and the legends of the heart-stirring exhortations made in our own land to those who were to defend their country. And we are even willing to part company with the *Observer*, that we may keep company with the venerable New England clergy from the days of the Mayflower.

PERSEVERANCE.—A pious old negro, who lived in a region where the people were in the habit of getting religion every time a new minister came around, and then losing it again before the next quarterly meeting, was once asked how he accounted for these facts in accordance with his belief in the doctrine of the final salvation of all true believers. He replied, 'When the people gets religion themselves, they are mighty apt to lose it as quick as they got it; but when religion gets them, it takes hold and holds on, and never lets 'em go until it takes 'em clean up to heaven.'

General Intelligence.

Proceedings in Congress last Week.

SECOND-DAY, FEB. 11.

In the SENATE, it was voted that the Secretary of War report whether any, and if so what additional fortifications are necessary for the defense of the Harbor of New York and Brooklyn Navy Yard. The Post Office Committee were directed to consider whether something may not be done to secure the benefits of Cheap Ocean Postage, and the Judiciary Committee were instructed to consider the expediency of revising the Public Statutes.

In the HOUSE OF REPRESENTATIVES, three votes were taken for Printer, but without an election.

THIRD-DAY, FEB. 12.

In the SENATE, after some unimportant business, the Central American question was discussed by Messrs. Wilson, Mason and Butler. The former gentleman, in a somewhat lengthy argument, took the ground that, notwithstanding the declaration of the President, which has been so many times reiterated, that our relations with Great Britain are in a complicated condition, the people themselves have no apprehensions—which is proved by the fact that matters proceed in their accustomed course. The discussion of the subject was finally postponed to Second-day, on account of the indisposition of Mr. Clayton, who wished to be heard.

In the HOUSE, three ineffectual ballots were had for Printer.

FOURTH-DAY, FEB. 13.

In the SENATE, resolutions of the Massachusetts Legislature were presented denouncing the Fugitive Slave Law as unconstitutional, and calling upon the President to protect the people of Kansas against outrage. The Committee on Post Offices were instructed to consider the expediency of establishing a system of International Post Office Exchanges, and the Committee on Commerce was di[illegible]d to make inquiries as to the propriety [illegible]olishing the Hospital Tax exacted from seamen of the commercial marine and boatmen on the Western waters.

In the HOUSE, Wendell was elected Printer, and the Standing Committees were announced.

FIFTH-DAY, FEB. 14.

In the SENATE, the Annual Report of the Seperintendent of the United States Coast Survey was presented; a bill providing for an overland mail from some point on the Mississippi River to San Francisco was introduced, and a discussion was had on the President's Kansas Message, and on the action of the Naval Retiring Board. Adjourned till Second-day.

In the HOUSE, the most important matter was the presentation of the memorial of A. H. Reeder, contesting the seat of J. S. Whitefield, as the Kansas delegate, which was referred to the Committee on Elections. The President's special Kansas Message was referred to the Committee of the Whole, after an ineffectual attempt on the part of the Republicans to get it referred to the Committee on Territories. Adjourned till Second-day.

Kansas Affairs.

The President of the United States has issued a Proclamation, warning all persons, either outside of or in Kansas, against taking part in any aggressive movements against "the constituted authorities of the Territory." He recognizes the officers chosen by the aid of Missourians as the "constituted authorities," and the laws enacted by them as the "organic laws," and threatens to suppress any insurrection movements by U. S. troops if necessary.

Meanwhile, the crisis thickens. Letters from the coolest-minded men there speak of an armed invasion by the ruffians as certain, unless the preparations of the inhabitants for self-defense shall deter Atchison and his followers. The settlers are determined to defend themselves to the utmost, and with the resources in hand will not be subdued without a terrible cost to the champions of slavery. They are organizing and training companies, providing arms and ammunition, etc.

General Pomeroy addressed the citizens of Worcester, Mass., on the 10th inst., in behalf the freemen of Kansas, and in the course of his remarks observed that on the Saturday previous he had been able to send to General Robinson fifteen hundred dollars, and on the previous Saturday two thousand dollars, all of which had been generously contributed at a few meetings which he had been invited to address.

At the close Mr. Thayer stated that a large number of men in that city were at work hastening the completion of one thousand rifles, which he was individually about to send to the settlers. But for immediate use he would pay for ten Sharp's rifles, at $25 each, if others would make up the number to a hundred; the sum of $575 was subscribed at once, and a committee chosen to complete the amount. [Independent.

Ohio and Kansas.

Under date of Lawrence City, Kansas, Jan. 21, J. H. Lane, C. Robinson, and George Deitzler, free-state officers of Kansas Territory, wrote to Gov. Chase of Ohio, to the effect that an overwhelming force of citizens of Missouri is organizing upon the borders of Kansas, with the avowed purpose of invading the Territory, demolishing its towns, and butchering its Free-State citizens. This letter the Governor brought before the Legislature in a Message setting forth the progress of slavery aggression in Kansas. The Legislature took prompt action in the matter, by passing resolutions approving the Constitution adopted by the late Kansas State Convention —instructing the Senators of Ohio, and requesting its Representatives, to use their best endeavors for the admission of Kansas into the Union as a State—and requesting the Representatives to vote for the immediate admission of A. H. Reeder to a seat in the House of Representatives in Congress, as a delegate from Kansas, until such admission of Kansas as a State.

Governor Chase's statement of the past doings and present position of things in Kansas is very concise, and should be read by every citizen. We copy it:—

The progress of slaveholding aggression is very remarkable.

In 1820 the Slave Power insisted on the admission of Missouri as a Slave State, and effected its purpose by engrafting on the bill for its admission a perpetual prohibition of Slavery in all the remainder of the territory acquired from France, north of the south line of Missouri, extending westward to our frontier.

In 1854, the Slave Power demanded the repeal of the prohibition of 1820, and effected its object by engrafting on the Nebraska-Kansas bill, which provided for the repeal, an express declaration that the people of the Territory should be left "perfectly free to form and regulate their own domestic institutions, subject only to the provisions of the Constitution of the United States."

In 1856, the slave power insists that under this declaration the people of the Territory have no power at all to exclude Slavery, until, under an enabling act of Congress, they proceed to form a State Constitution, preparatory to admission into the Union.

That this pretension would be advanced was foreseen and predicted, when the Nebraska-Kansas Bill was under discussion; and it was, indeed, indirectly sanctioned by the refusal of its supporters to adopt an amendment to the bill, expressly recognizing the right of the people to exclude Slavery.

Whatever construction, however, may have been intended by the Slaveholding supporters of the bill, and whatever countenance to that construction may be afforded by the phraseology of the act itself, it is certain that, throughout the Free States, the conviction is nearly universal, that the people of Kansas, deprived of the protection of the prohibition of 1820, have, and ought to have, complete right and full power to protect themselves against the evils of Slavery.

To prevent the people from exercising this right and power, armed bands, from the neighboring State of Missouri, invaded the Territory at the time appointed for the first election of members of the Territorial Legislature, (March 30, 1855,) and, having taken possession of the polls, and excluded the legal voters, selected themselves the persons who were to constitute the Legislature, without regard to their place of residence, whether in Missouri or in Kansas.

The acts of this spurious Legislature were worthy of its origin. Having excluded the few Free State members who held certificates of election, they proceeded to promulgate, in the form of laws, a series of pretended statutes which have no parallels in the annals of legislative usurpation. The Governor of the Territory, who attempted, ineffectually, to restrain their excesses by his Executive veto, was removed from office by the President of the United States, and thus full scope was given to their utmost extravagance.

As if disposing of a conquered province, they proceeded to decree the establishment of Slavery, and to secure it against popular opposition, by providing for the appointment of Sheriffs and other officers, by Commissioners of their own creation, without allowing to the People any voice whatever in their selection, and by imposing on the exercise of the right to vote at future elections of members of the Legislature, conditions with which none but the supporters of Slavery could comply.

It was impossible for men, not themselves prepared to be slaves, to admit the validity of this spurious legislation. The people of Kansas refused to submit to disfranchisement by the usurpers. Left without valid laws, and remitted to the original right, inherent in every community, to provide for its own safety and good order, they proceeded, in regular convention, to appoint a day and prescribe the manner of electing a delgate to Congress, and to provide for holding a convention to frame a constitution, preparatory for admission into the Union as a State.

On the 9th of October last, the day designated for the election of a delegate to Congress, Andrew H. Reeder was chosen to that office; and on the 23d of the same month a State constitution was promulgated by the convention elected for that purpose. On the 15th of December this State constitution was ratified by the people, and on the 15th of January, just passed, an election was held for State officers and members of the State Legislature. The Governor and Secretary, whose signature are affixed to the appeal herewith transmitted, were chosen at this election.

While these things were in progress the Territory was again invaded, early in December, by armed bands from Missouri, now called into action by an extraordinary proclamation from Wilson Shannon, who had been appointed Governor of the Territory in place of his removed predecessors. The town of Lawrence was actually beleagued, and its destruction fiercely threatened. The people of the Territory rallied to its defense, and for many days, civil war was imminent. At length, however, the Governor became sensible of the error he had committed, and succeeded in inducing the invaders to retire.

Their presence had been marked by outrage, rapine and murder. The withdrawal was angry and reluctant. It indicated a remission of hostilities, not a peace.

Hence, it is not surprising that the election of State officers under the new Constitution, on the 15th of January, was made the occasion of further hostilities. The Territory was again invaded, and an actual rencounter took place between the invaders and the settlers. Some time after its termination, a respected citizen, an emigrant from Kentucky, of the name of Brown, who had been engaged in it upon the Free State side, was seized and inhumanly murdered by the opposition party.

The communication which I transmit, expresses a strong apprehension that preparations are now making for a new invasion, with greater numbers, and more ample provision of implements of destruction than any which has preceded it. Information from other sources confirms the opinion that this apprehension is not groundless.

It is impossible to contemplate these things without deep feeling. They are the legitimate fruits of the repeal of the Missouri Prohibition. It may not be possible at present to reëstablish that prohibition. It is, perhaps, not probable that Congress, as at present constituted, will consent to the admission of Kansas into the Union, under her Free State Constitution. The General Assembly of Ohio has, perhaps, no legislative power to redress the wrongs of the people of the Territory; but still something, not unimportant, may be done. The General Assembly can express the sense of the people of Ohio, in resolutions addressed to their Senators and Representatives in Congress. They can recommend the admission of Kansas as a Free State; the enactment of a suitable law securing freedom of elections in case the Territorial Government be not superseded; and what perhaps is of more importance still, the prompt admission of the Delegate of the People to a seat in Congress, that he may have the most favorable opportunity of gaining the attention of the National Legislature to their wants and their wrongs. The General Assembly may also, by suitable resolutions, commend the cause of Kansas to the warm sympathies and liberal contributions of their constituents. They will not, I am sure, invoke the prompt action of the people in vain.

European News.

One week later news from Europe was received in New York on the 17th inst., by steamer Canada, and telegraph from Halifax.

No intelligence of the missing steam-ship Pacific had reached England before the sailing of the Canada—a circumstance which adds greatly to the solicitude felt in this country for her safety. [Since the foregoing was in type, it is rumored that the Pacific had put into Shannon.]

The preparations for the peace conference were still progressing, and it was thought that a short armistice would forthwith be agreed upon.

The British Parliament had assembled, and the Queen's speech, which was quite meagre, made no mention of American affairs.

A paragraph copied from the London Morning Advertiser, states that at an interview between Lord Clarendon and Mr. Buchanan, at the Foreign Office, very angry words passed between them relative to the Central American question. This statement, however, needs confirmation.

The war news is generally quite uninteresting.

California News.

Two weeks later news from California has been received since our last.

Agricultural accounts are better, and news from the mines more encouraging.

In the line of political news, we are informed that on the 7th of January the Legislature of California assembled, and on the 8th both House were organized by the election of Know Nothing officers. Hon. D. R. Ashley, of Monterey, was chosen temporary President of the Senate, and Hon. J. F. Farley, of Amador, Speaker of the House. The Legislature had been occupied up to the 21st of January, the day the steamer left, with the Senatorial question. No candidate had been chosen, and the prospects of an election were not very bright.

Charles Cora had been tried in San Francisco for the murder of General Richardson, late United States Marshal for the Northern District of California, but the Jury were unable to agree upon a verdict. A new trial, it is stated, would soon take place.

From Oregon, we receive the particulars of the great battle fought at Fort Walla-Walla, which, according to previous advices, had fallen into the hands of the Indians. The contest lasted from the 9th to the 13th of December, and resulted in the triumph of the Volunteers, under Col. Kelley. The Indians lost sixty men killed, and as many wounded; the loss of the Volunteers was also severe

Late Saudwich Islands papers mention the death of Mr. George M. Chase, United States Consul at Lahaina. The inhabitants of Hilo were in great apprehension, lest the stream of lava from the recent eruption of the adjacent volcano should overwhelm them.

From Nicaragua, we learn that President Rivas had issued a decree, suspending all official communication with Hon. J. H. Wheeler, United States Minister, and revoking the powers conferred upon Col. P. H. French. The reason given for this suspension of diplomatic relations is, "that the Government of the United States, in opposition to the public opinion of that nation, has declined to recognize the present administration of Nicaragua."

The Feejee Islands.

Important news from the Feejee Islands has been received *via* Panama. The United States ship John Adams had arrived at the Islands to seek reparation for the many cruelties committed by the natives, especially upon American seamen; but from the obstinate character of these savages, the Commander was compelled to resort to arms to attain his object. Five engagements took place, and as many Feejee towns were destroyed. A treaty was at last concluded with the King, by means of which it is hoped that American seamen will not be molested for the future.

In this connection, our readers will be interested in the following extract from a letter written to a gentleman in Philadelphia by an intelligent American who has resided in the Feejee Islands twenty-three years. Under date of Oct. 10, 1855, he says:—

Most of the whites that were residing here at the time of your visit are dead. The old King of Ambou (Tanoa) is dead. The King of Somo Somo, and all his sons, have been killed by Sam, the Chief of Ambou. The King of Rewa, and all his brothers but two, have been killed by the same man; and he has done nothing else but slaughter his countrymen ever since he has been in power.

Tui Levuka, the chief of this place when you were here, was killed, and most of the people in the town, by the people of the mountains of Ovoluu. His son is now Chief of the place, and is at war with Ambou, and has been so for these two years past; that is, ever since our town was burnt by that party. Old Tui Muthwater was killed by Goungtober shortly after you left, and the people have been at war ever since.

The burning of Tye and Swalib, and the chastisement at Malolo by the exploring expedition, has had a most lasting effect on the natives of these places, and I think that a white man in either would be as safe as in the city of New York, at Malolo in particular, as they consider themselves belonging to America, and the question has been often asked by them, why they were not visited by the ships of war from America, as the island and people belong to them?

The Missionaries that were at Somo Somo left there without one proselyte. Mr. Hunt is dead, and also Messrs. Cross and Cargill The mission has been doing next to nothing till of late, but they are now going on rapidly; young Saru has turned Christian for a while, and the Tonga people have been here for these last six months spreading starvation and destruction all over the group. They have now full possession of most all the Weather Islands; some of them are about leaving for their homes at Tongataleon.

There are about 60 or 70 whites on Ovoluu, and about 200 children of half castes. Of late there have been some dreadful massacres on these islands, by the Tongese, say 650, at two different times, have been killed.

SUMMARY.

A fortnight's later news from the Isthmus of Panama, has been received, and very late intelligence from the South Pacific and Australia. From Panama, we learn that a revolution in that State was threatened, and trouble, in consequence, apprehended. A riot had taken place in Aspinwall, between the natives and the Jamaicans; the timely interference of the authorities, however, prevented any serious mischief. The South Pacific news is not important. Incendiarism had been at work in Valparaiso. Peru was, as usual, in an unsettled condition, and a revolution against Castillo was anticipated.

At a meeting of the American Tract Society, held recently in New York, the Secretary, (Rev. Mr. Cook) congratulated the audience on the cordial appreciation of their labors by the Christian public. During the past month $56,000 had been collected, which was $18,000 more than had been subscribed during the same month last year, and the aggregate amount subscribed and collected during the past year is more than $10,000 in excess of the sum collected during the previous year.

We learn from the Chicago Daily Press, that on the night of the 2d inst., the house of Levi Philips, near Waukegan, was burnt, and that himself and daughter perished in the flames. The family consisted of Mr. Philips, two grown up daughters, and a hired man. The fire took while all were asleep, and had made such progress that only one of the daughters and the hired man were able to effect their escape. Sad to tell, the former was so badly burned, and frozen afterwards, that her recovery is considered doubtful, and she must be a cripple for life if she survives her injuries.

The Shreveport (La.) Gazette of the 19th January says: Mr. James G. Cox, for many years a citizen of this parish, set out with his negroes some time in December for Western Texas, where he had determined to locate. We learn that while crossing a prairie forty miles wide, the cold northers attacked his party, and eight of his negroes froze to death, and two of his wagons were cut up and burned as fuel to save the lives of himself and the balance of his negroes.

Rev. Dr. Achilli, of Rome, Italy, preached in New York on Sunday evening, Feb. 10. A large audience was in attendance, as the learned divine is widely known, as well on account of his secession from the Church of Rome, as by the excitement he caused in England upon his advent there, and more especially by his law proceedings, some two years ago, against Dr. Newman, formerly a distinguished divine of Oxford, but now a convert to Catholicity, and a leading champion of that belief.

A short time since, in a town of Essex County, an elderly maiden lady died, possessed of considerable property. During her life she has been noted for her accumulative propensities, and at her decease a large amount in specie was found in a box in her house, the key of which was hung around her neck. Among her accumulations there was a pile of bank notes, several hundred dollars of which were on banks that had failed or been closed up.

Professor Edward T. Channing, formerly Boylston Professor of Rhetoric and Oratory in Harvard College, died at Cambridge, Mass., on Thursday, at the age of 65. Prof. Channing occupied the Boylston Professorship for thirty-two years—from the Autumn of 1819 until 1851, when he resigned. In 1847, Harvard conferred upon him the honorary degree of Doctor of Laws. He was one of the early conductors of the North American Review.

Six slaves belonging to Mr. Levi Dougherty, who lives on Fourth street, between Madison and Russel, Covington, Ky., together with two belonging to Mr. Gage, residing in the same neighborhood, made their escape from bondage on Sunday night. They crossed the river about eleven o'clock, and ere this are far on their way towards Canada. Their aggregate value to their owners was about eight thousand dollars.

From the Yazoo Democrat we learn that the Circuit Court of that County recently adjourned, after a protracted session of four weeks. The criminal docket occupied nearly half of the time, there being a large amount of business on hand the most of which was of the worst of crime. Six men, three white and three black, were found guilty of murder, and sentenced to be hung on the 16th of February.

A dispatch dated Washington, Tuesday, Feb. 12, says:—Albert Rust appeared in Court this morning and gave bail in the sum of $500 for his appearance at the Criminal Court, to answer for his assaults upon Horace Greeley, a few weeks since. He was arrested at the instance of Francis C. Treadwell, of New York, who acted, it is understood, without solicitation from Mr. Greeley.

A resolution asserting that the Missouri Compsomise ought not to have been submitted to *even to save the Union*, has passed the popular branch of the Alabama Legislature, by a vote of 62 to 26. The author of the resolution is the son of a United States Senator who represented Alabama when the compromise wns passed in 1820, and who voted for it.

In the Superior Court at Boston the Jury in the case of John L. Brown, charged with having applied harsh and scandalous epithets to the character of a sister of his deceased wife, returned a verdict of $3,666 for the plaintiff.

John Fitzgerald, on trial at Auburn, N. Y., for the murder of his father, mother and brother, on the 30th August, 1855, in the town of Steeling, was found guilty after a twenty minutes absence of the Jury.

The New Haven Journal, Feb. 13, says: P. T. Barnum has been put into bankruptcy here, and Frederick Croswell, Esq., has been appointed Trustee of his estate.

The number of persons relieved or supported as paupers in Massachusetts during the year, was 18,227. The whole number of State paupers was 7,742. Number of foreign paupers who came into the State and became a public charge, 627.

The next Fair of the New York State Agricultural Society will be held on Sept. 30, Oct. 1, 2 and 3, at Watertown, provided the citizens furnish the security required by the Executive Committee before the 1st of April next.

The whole number of passengers transported during the past year on the seven railroads leading from Boston was 8,111,030, or 25,900 for each working day. The number in 1854 was 8,761,760, the diminution being 650,730.

The ship John J. Boyd, Capt. Austin, arrived at this port on Saturday with 528 Mormon emigrants on their way to Great Salt Lake. They left Liverpool on the 15th of December.

Kingsbury and Henderson have been sentenced to nine years and six months imprisonment in Clinton Prison, for robbing Gen. Halsey at Saratoga Springs, last Summer.

Several persons in Boston and vicinity, who were born on the 29th of February, propose to celebrate the anniversary of their births the present year.

John H. Manny, the inventor of "Manny's celebrated Reaping and Mowing Machine," died at his residence at Rockford, Ill., on the 31st of January.

The fares on the Boston and Providence Railroad have been raised twenty per cent. on the transient, and fifty per cent. on season ticket passengers.

The Ohio Deaf and Dumb Asylum at Columbus now has 148 pupils, equally divided between the sexes. A new edifice is needed badly.

The Mississippi River is closed above Cairo, but is navigable to New Orleans. The Ohio River is open to Smithland.

The United States Treasurer reports that the net amount in the public treasury, subject to draft on the 28th ult., was $24,081,550.

New York Markets—Feb. 18, 1856.

Ashes—Pots $6 50, Pearls 7 75 per 100 lbs.

Flour and Meal—Flour 7 37 a 7 56 for various grades of State, 7 50 a 7 75 for Indiana, Michigan and Ohio, 8 50 a 10 75 for extra Genesee. Rye Flour 5 00 a 7 00. Corn Meal 3 87 for Jersey. Buckwheat Flour 2 37 a 2 62 per 100 lbs.

Grain—Wheat 1 90 for Southern red, 2 12 for Western white. Rye 1 25 a 1 28. Oats 41 a 44c. for Jersey, 45 a 48c. for State, 49 a 52c. for Western, Corn 75 a 82c. for inferior to choice new Yellow and White.

Provisions—Pork 13 75 for prime, 15 75 for mess. Beef 8 87 a 9 62 for country prime, 10 00 a 11 00 for country mess. Lard 10½c. Butter 18 a 22c. for Ohio, 23 a 27c. for common to good State, 28 a 30c. for prime. Cheese 9 a 11c.

Apples—1 75 a 2 25 for Greenings, 2 25 a 2 50 for Spitzenbergs.

Potatoes—1 37 a 1 50 per bbl. for Western Reds, 1 62 a 1 75 for Pinkeyes, 1 75 a 1 88 for Carters, 2 00 a 2 12 for Jersey Mercers. Turnips, per bbl., 75c. for White, 88c. for Russia.

MARRIED,

Dec. 20th, near Shiloh, N. J., by Rev. W. B. Gillett, Mr. DAVID MCGEAR to Miss MARY J. HANN, of Stoe Creek.

By the same, Jan. 30th, Mr. ARCURIUS AYERS to Miss HANNAH BURNS, all of Salem Co., N. J.

By the same, February 7th, at the bride's father's (Mr. Seely Tomlinson) Mr. PETER S. MATTISON, of Bridgeton, to Miss ELIZABETH J. TOMLINSON, of Stoe Creek.

In Bolivar, N. Y., Feb. 10th, by Eld. H. Cornwell, Mr. BENJAMIN HOOD, of Wirt, to Miss HARRIET L. ALLEN, of the same place.

By Eld. L. Andrus, on the 13th ult., Mr. CALEB WILCOX, of Hartsville, Steuben Co., to Mrs. SALLY C. GILLETT, of Wirt, Allegany Co., N. Y.

DIED,

At Shiloh, N. J., Jan. 30, Mr. CHARLES BONHAM, son of Elisha Bonham, after a long illness, terminating in consumption, aged 22 years. He has left a widow and two children.

At the residence of her son, Jeremiah Davis, of Stoe Creek, Mrs. SUSANNAH DAVIS, aged about sixty years. She had been long a person of deep affliction; at times reason had been dethroned. Always, when in her right mind, she lived the life of the true Christian, waiting anxiously for the time of her departure to come. She had been for years a consistent member of the church. The death of the righteous is peace.

At Lima, Rock Co., Wis., with complicated disease, RANDOLPH D., son of Manville and Cynthia S. Babcock, aged two years and eight days.

LETTERS.

W B Maxson, N V Hull, L Andrus, E R Clarke, Erastus Clarke, Robert Church, M Babcock, Charles Spicer, Jepthah F Randolph (all plain—right on book,) L T Rogers, Henry Ernst, C W Langworthy, J R Butts, W B Gillett, "S," Amos Burdick, S S Griswold, J R Champlin, J L Boyd, S Burdick, J M Todd, C D Langworthy, A A Lewis, A M Whitford.

RECEIPTS.

☞ All payments for publications of the Society are acknowledged from week to week in the Recorder. Persons sending money the receipt of which is not duly acknowledged, should give us early notice of the omission.

Alfred Highland Water-Cure.

THIS establishment, for the cure of Chronic Diseases, is conducted by H. P. BURDICK, M. D. The facilities in this "Cure" for the successful treatment of Diseases of the Liver, Spine, Nerves, Female Diseases, Bronchitis, Incipient Consumption, &c., are not excelled in any establishment. Patients will have the benefit of skillful Homeopathic prescriptions—an advantage found in but few "Water-Cures." Especial attention will be given to diseases commonly called *surgical cases*, such as Hip Diseases, White Swellings, Cancers, (in their early stages,) and Caries and Necrosis of bone.

Connected with the establishment is a Dental Shop, where all calls in that profession will be attended to.

Address, H. P. BURDICK,
Alfred, Allegany Co., N. Y.

Book Agents Wanted,

BY STEARNS & SPICER, PUBLISHERS AND WHOLESALE BOOKSELLERS, *Indianapolis, Indiana*.

We are in the *very heart* of the *best section* of the Union for the successful prosecution of the Subscription Book Trade, as testimony of which we need only refer to the unparalleled success of our agents during the past year, many of whom are still in our employ. Our books are of a character calculated to secure for us and our agents the *highest confidence* of the reading community, and we wish to engage the services of those only who will help us to *sustain* it. Our proximity to the field of labor enables us to attend personally to the interests of our agents, and fill their orders at short notice, saving them the delays and heavy expense of transportation from the eastern cities. Men of energy and business habits will find this a work worthy their attention. All communications promptly answered. STEARNS & SPICER.

Hudson River Railroad.

TRAINS leave Chambers street daily, for Albany and Troy. On and after MONDAY, Nov. 19, 1855, the trains will run as follows: Express Train 7 A. M., connecting with Northern and Western Trains. Mail Train 8 30 A. M. Through Way Train, 12 M. Express Train 5 P. M. For Hudson 3 30 P. M. For Poughkeepsie—Way Freight and Passenger Train, 12 30 P. M. For Peekskill, 5 30 P. M. For Sing Sing, at 4 20 and 9 P. M. For Dobbs' Ferry, 7-15 and 11 A. M. The Dobbs' Ferry, Sing Sing, Peekskill, and Hudson Trains stop at all the Way Stations. Passengers taken at Chambers, Canal, Christopher, and 31st streets. SUNDAY MAIL TRAIN at 4 P. M., from Canal street, for Albany, stopping at all the Mail Stations. M. L. SYKES, Jr., Superintendent.

Merchant Tailoring Establishment.

THE subscriber, having sold his interest in the firm, of A. D. Titsworth & Co., of Plainfield, and located himself at the corner of Fulton and Pearl streets, New York, as Merchant Tailor and Manufacturer of all kinds of Clothing, would respectfully invite his friends, and as many others as feel disposed to study economy, to give him a call, feeling assured that his experience in the business will enable him to do better for his customers than they can do for themselves. He will employ the best of workmen, and give to the business his whole attention.

Cloths, Cassimers, and Vestings, of the latest patterns, constantly on hand, and made to order in the most approved manner, at short notice.

Also, any persons wishing cutting done for their friends at home, by observing the following directions, can be accommodated with any style they wish:—

Coat Measure—1st. Placing the measure at socket bone of neck, down to center of arm or shoulder; then to waist above the hip, and length of coat. 2d. From seam of back, giving width of back; then to elbow and length of sleeve, bending the arm in right angle. 3d. Breast and waist, noting the position, whether stooping forward or extra straight.

Vest—1st. From socket bone down front, giving length of vest. 2d. Breast and waist measures.

Pants—1st. From hip bone to thigh joint and knee. and length. 2d. Waist, hip, thigh, and knee measures.

Also, any persons wishing to avail themselves of my assistance in selecting a stock of clothing or other merchandise, will find me at my office every day, except Sabbath day. All orders thankfully received and attended to with dispatch.

Terms, cash on delivery.

E. B. TITSWORTH, Merchant Tailor.

☞ I can accommodate a Sabbatarian with an office in my room.

Seventh-day Baptist Publishing Soc.'s Publications.

The Sabbath Recorder,

Published Weekly.

Terms—$2 00 per Annum, in Advance.

The Sabbath Recorder is devoted to the exposition and vindication of the views and movements of the Seventh-day Baptist Denomination. It aims to promote vital piety and vigorous benevolent action, at the same time that it urges obedience to the commandments of God and the faith of Jesus. Its columns are open to the advocacy of all reformatory measures which seem likely to improve the condition of society, diffuse knowledge, reclaim the inebriate, and enfranchise the enslaved. In its Literary and Intelligence Departments, care is taken to furnish matter adapted to the wants and tastes of every class of readers. As a Religious and Family Newspaper, it is intended that the *Recorder* shall rank among the best.

The Sabbath-School Visitor,

Published Monthly.

Terms per annum—Invariably in advance:

One copy	$ 25
Five copies to one address	1 00
Twelve copies to one address	2 00
Twenty copies to one address	3 00
Twenty-eight copies to one address	4 00
Forty copies to one address	5 00

The Seventh-day Baptist Memorial,

Published Quarterly.

Terms—$1 00 a Year, 25 Cents a Number.

Each number of the *Memorial* will contain a lithographic portrait of a Seventh-day Baptist preacher, together with a variety of historical, biographical, and statistical matter, designed to illustrate the rise, progress, and present condition of the Seventh-day Baptist Denomination. Wood-cuts of meeting-houses will be introduced from time to time in connection with the history of the churches.

[The first, second, and third volumes of the *Memorial*—being for the years 1852-3-4—may be had bound, for the subscription price and the cost of binding.]

The Carol:

A Collection of original and selected Music and Hymns, for the use of Sabbath-Schools, Social Religious Meetings, and Families. Compiled by Lucius Crandall. 128 pages octavo; price 35 cents per copy.

The *Carol* is designed principally for Sabbath-Schools, and contains Music and Hymns adapted to all ordinary occasions, and to such special occasions as the sickness of teachers, funerals, anniversaries, &c. A number of pieces suitable to social and public worship, together with a few Temperance Songs, are included in the book. It contains 93 tunes, and 156 hymns.

☞ Orders and remittances for the above should be addressed to the General Agent, GEORGE B. UTTER, No. 9 Spruce-st., New York.

Postage.

The postage on the Sabbath Recorder is 13 cents a year in the State of New York, and 26 cents in any other part of the United States, payable quarterly or yearly in advance.

The postage on the Sabbath-School Visitor is 3 cents a year in the State of New York, and 6 cents in any other part of the United States, payable in advance.

The postage on the Seventh-day Baptist Memorial is 2 cents year in any part of the United States when paid in advance, or 4 cents a year when not paid in advance.

Miscellaneous.

From "The Crayon."

Wanderings in the Southwest—No. 9.

CAMP LANCASTER, TEXAS, Oct., 1855.

There is an extensive region of country lying west and north of the sources of the rivers of Western Texas, that will forever remain a desert—a region to be traversed by the caravan of the trader, wild winds, and wilder savages. Though subject to heavy rains, they generally occur at such long intervals that the roads through it have, of necessity, to be determined by the few localities which furnish a constant supply of good water. The Camanches and Apaches rule it, and not a party travels through it that its strength and condition is not known by these matchless free-booters, while they manage to escape observation so completely that their presence is rarely suspected, until animals are lost, or one of the party is shot down by the arrow of an invisible foe, though their mode of warfare partakes much of the dashing chivalry of the Middle Ages, sometimes charging upon a superior force with lance and shield. As horsemen they are unrivaled; they sit very ungracefully, lolling about as they ride, as if drunk or too indolent to sit up; but, when roused to action, their energy is fearful. Their hideous yells—in making which they pass the hand rapidly over the mouth—and diabolical attire, are as appalling as the suddenness and fierceness of the attack. There is really little in them to command our admiration or respect: they rarely fight from any other motive than plunder or self-defense, and will never do the latter when there is a good chance to run, their tactics being those of attack and not of defense. They are very economical of their blood, esteeming the life of an Indian an equivalent for six white men, and no expedient unworthy a brave, whereby he may save his invaluable life, or any advantage too mean, in order to kill an adversary. In nothing is their sagacity more apparent than in the success with which they elude pursuit; it is rarely, if ever, that they are found when they are expecting pursuit; and that in a country so open as hardly to afford concealment. Major Simonson cautioned me, when I left Fort Clark, to be always prepared for an attack, and I would see no Indians, and so it proved. Our mules were secured by strong chains to the wagon-tongues, so strong that, in case of an attempt to stampede them, their necks would break before the chains; and each soldier lay down near where his horse was picketed, with his gun at his side, and a vigilant watch was kept during the night.

To check the incursions of the Indians, the War Department establishes posts at the most important watering-places. The one at which I now write is near the junction of the "Live Oak Creek" with the Pecos, about eighty miles from where the latter empties into the Rio Grande. The creek is about seven miles long, and affords a constant supply of clear, good water. On it are several groves of small live oaks; there are also a few gum-trees, and hack-berries, willows, grape-vines, and rank weeds, almost conceal the water, while they mark the course of the creek through a wide, deep valley. The Pecos rises in the mountains of New Mexico, north of Santa Fe, and flows eight hundred miles without apparent increase. It is only about sixty yards wide; but its waters are deep, rapid, of a chocolate color, and saline taste. Its banks are bluff, and covered with rank grass, which nearly conceals its course; and, when riding through the valley, it is startling to find oneself for the first time upon the brink.

The valley of the Pecos is no less remarkable than the river itself. When approaching it on the table lands you see only an apparently unbounded, rolling plain, with occasional glimpses of deep gulfs or cañons on the left, until you find yourself upon the brink of a precipice, among great masses of detached limestone, ready to tumble down by a little effort of your foot, down, crashing and bounding until they finally rest in a ravine, where thousands have fallen before. The valley is perhaps three or four miles wide, and bounded on the opposite side, as on this, by continuous walls of rock. As the eye wanders down the valley, it sees scarcely an object to arrest its attention. A thousand feet down, and off through the centre of the plain, the river pursues it winding and mysterious course, invisible from the long, yellow grass, away to the south, until the blue of the rocky cliff is lost in the deeper blue of the distance. The engineers who, in 1849, surveyed this road to El Paso, were many weeks in finding a pass across this valley. There are few places where a mule could descend directly from the table lands into the valley. Having gained the bottom, the scenery is picturesque, and not so barren as it appeared. A perpendicular wall of rock forms a bulwark around the summits of the whole amphitheatre of hills composed of strata of great thickness, into which the caves, of which I spoke in my last, are excavated; from this bulwark an escarpment descends with greater or less abruptness to the floor of the valley, which again has a very gradual descent to the river. The valley is covered with low, thorny bushes, and grass intervening. One of the most remarkable features of this inhospitable region is the hostility with which every plant bears arms; some are entirely of thorns, compounded and decompounded, and so closely aggregated, that a sparrow could not build her nest in them. The Spanish bayonet, or Yucca, conspicuous and defiant, adds its many-pointed arguments why this is no country for a white men; and the trenchant briers of the Chaparral would strip him of his best defense, unless it were of buckskin. Under foot is concealed, half-buried in the ground, and protruding with the grass, the venomous thorns of eight or nine species of Echinocacti. On the abrupt slopes, among the broken fragments of limestone and flints, a species of aloe spreads its thorny-pointed leaves just high enough to pierce the fetlock of a horse. These grow more numerous the higher you ascend. The animal world is in keeping with the vegetable. Centipedes and millipedes, of extraordinary size; scorpions; tarantulas *(mygale)* or spiders, one of which I have, which, when living, spanned seven and a half inches; the vinagron, a repulsive crustaceous animal, about three inches long, with claws like a crab's, and whose odor is so strong, when crushed, as to forbid its being killed in your tent—are all very common, and reported to be poisonous(?). There is a species of the true tarantula *(Lycosa)* found here, whose four eyes in a quadrangle, and each a line in diameter, glare upon you with the brilliancy of a wolf's in the dark. Add to these the rattle-snake, which you are liable to meet at any moment, at your tent door and in your bed, the "horned frog," and other saurians, spotted and striped, and you have a bill of fare around which Macbeth's witches might have "danced right merrily." Rich as this region is in insects and reptiles, it is poor in ornithology. Wild turkeys are abundant, and easily killed, as they are forced to resort to the few trees at night; and our best hunters often kill a half dozen on consecutive nights. Their food is despised by the Indians as enervating; hence the abundance of them in all those regions not frequented by white men. Two species of quail are common, but not abundant. The vultures hover about the camp, and among them the croak of the raven is often heard. Sometimes a kingfisher may be seen sitting moodily upon a dry tree, over the water; a sparrow flits away noiselessly from the bush before you; or a wren, busily engaged with her own domestic affairs, has no time to spend with you, and only stops to respectfully touch her tail to her head as you pass, and seems to wonder what so sensible a looking fellow can be doing in so desolate a country. Hawks are common, and they seem to have a hard time of it.

A few days since I was startled (for small things sometimes startle us in such a region) by hearing a great outcry among the captain's poultry, in an adobe house just building in front of the tent where I was sitting; I ran to the spot, where I expected to find a dog with one of the chickens, but in one corner of the roofless house, behind a log, was a hawk struggling with a rooster of twice his weight, his large yellow eyes glaring defiance, and refusing to release his prisoner until I almost had him in my grasp; he then only retreated to a staging just out of reach, where he made a determined stand, and replied to the stones which I threw at him, by winks, until the captain returned with his gun and shot him. This month has witnessed the passage over us of great numbers of wild geese and ducks on their way south; on one occasion I noticed that the five first birds in the angle in which a flock were passing over our heads were mallard ducks. This is a curious fact, and shows that these wild geese are veritable *geese*, and not *know nothings*, that they should be led off by an old drake and companions. Blue and green winged teal visit the creek, and the avocet, goosander, and some other migratory water-birds and waders are sometimes seen; quadrupeds are still fewer. The black bear, wolf, and fox, I have seen, as well as the great long-eared hare and small rabbit. The common deer of Texas, though not so abundant as in the alluvial country below, are sufficiently so, and the black-tailed deer of California are sometimes seen on the table lands, with the antelope and marmot. A small digitigrade herbivorous animal inhabits the holes in the cliffs, but I could never see it, and there was no means of taking a specimen. Decayed horns of the buffalo remind us that this was once their range, but it is far to the north that the Indians now hunt them.

(To be continued.

The Territory of Kansas.

A correspondent of the *Independent*, under date of Kansas City, Dec. 5, 1855, gives the following important information relative to the characteristics of Kansas Territory:—

I was induced to take the somewhat laborious and expensive journey to "view the land," in order to *know* how far to encourage immigration. Various representations had been made by those who had come out, and some of whom had *returned*. In a tour of about two hundred and fifty miles up into the Territory, I have made careful observations upon doubtful points, and, I think, am prepared to give a reliable and unprejudiced report.

1. THE SOIL. The fertility of the country has never, to my knowledge, been called in question. It requires but a glance at the *prairie grass* to see what *that is*. The bottoms, which are remarkably wide, and a large proportion prairie, are sufficiently elevated and sandy to be suited to cultivation; and of exuberance fully equal to the Miami bottoms, or any others in the land. The table-lands, which cover the larger portion of the surface, elevated from fifty to two hundred feet above the bottoms, are equal to any rolling prairie. Upon this point, however, I need not enlarge.

2. WATER. Complaint has been made of *scarcity of water*, as an objection to the country. To those who expected to find rivulets and springs, as in a timbered region, such would be the apperance. But those acquainted with prairies are aware that the absence of such little streams is a constant fact in *all* prairies, and probably a *chief cause* of them—by removing all obstructions from the sweep of the fires that destroy the forest.

The question upon prairies, is not whether they are furnished with running water sufficient for agricultural purposes, but *how conveniently* can it be obtained by digging; and is it of good quality when found? Upon much of the flat prairie in Illinois it is found too near the surface; and receiving the surface water with insufficient filtering, is unwholesome. On the rock prairie, in Southern Wisconsin and Northern Illinois, a rolling prairie, and one of the most fertile—on which the flourishing towns of Janesville, Beloit, and Rockford are situated—it is usual to dig sixty to one hundred feet for water; an average, probably, of eighty feet. And wells are the chief dependence away from the Rock River. Of course, it is not only *expensive* digging, but laborious "drawing" from such wells, for man and beast. During the whole distance that I traveled in Kansas, water had been obtained by digging twenty to thirty feet, chiefly through clay or marl, sometimes a thin bed of limestone; and when found, it is of an excellent quality, impregnated, of course, with lime, as nearly all secondary, tertiary, or alluvial formations are. As a prairie country, therefore, there can be no objection on account of *water*. I would here remark, that its hould be a *primary* object of the immigrant to secure *well-water*. Many, by using water from the surface, have imbibed a poison, which has resulted in chills and fever, or other bilious disease.

Nor must this arrangement be considered an *inconvenience*. The salt and water troughs will infallibly call up a herd of cattle, morning and evening; and any urchin would sooner pump the water than scour the plains to find them and drive them up; while a glorious open pasture is provided for them gratis, on the prairie.

3. TIMBER. There is a *deficiency of timber*. In this respect, the region through which I passed did not meet my expectations. It is not, however, an *entire destitution* in any one section. You are never, as on the Grand Prairie in Illinois, "out of sight of land." There was not a moment in my tour when I could not *see* timber in some direction; frequently on both sides, ahead, or in the rear; but the deposits are six to twelve miles apart, and of *limited extent*. The lines of woodland upon the creeks, and sometimes on the Kansas bottoms, are very narrow and light. Not that there would be a serious deficiency for the wants of the country, till more could have time to grow, *if it could be suitably parceled out*. But the first settlers who go in pre-empt it all, and leave those who come after to the open prairie.

There are opportunities, especially on the Indian Reservations, which are soon to be opened to pre-emption, for colonies of twenty to one hundred families to go in and locate upon eligible situations, and by agreeing to share the timber proportionally among them, have an ample supply for all.

This is the only *fault* to be found with the country. In every other respect it excels; and even in this nature has provided remarkable substitutes. There is abundance of limestone in the edge of the bluffs, everywhere, for *building*; there is coal for *fuel*; and the osage orange, which in *three years* grows into an impenetrable hedge, for *fencing*. So that comparatively little timber will be required.

4 HEALTH. I have seen no *local cause* of disease. No stagnant water; no marshy land, not one acre; no bayous from the river; the bottom sufficiently sandy to absorb the rains as they fall; no east winds; few sudden changes; the climate in winter uniformly dry and moderately cold. That there will be intermittent fevers, to some extent, in the early settlement of the country, is probable, especially on the *bottoms*; but there is nothing to cause an apprehension of general miasmatic diseases; and for tendencies to pulmonary complaints, no better region could be found. Free from the debilitating effect of extreme Southern heat, and from the damp winds, wet winters, and sudden changes of the Middle, Atlantic, and Ohio States, with a remarkably pure and exhilarating atmosphere, it opens a most favorable asylum for consumptive and asthmatic subjects.

5. FACILITY OF MAKING A COMMENCEMENT. To one only accustomed to woodland, it will hardly be credited with what ease remunerative crops can be put into the new land. There are men here who came in last March with only two yoke of oxen and a boy, whose crop this year is worth $2,300. With such an establishment any industrious man can put in fifty acres of corn, which, upon the sod, will produce two thousand bushels, and four acres of potatoes, good for one thousand bushels. At present prices, they would both be worth $3,000; but those prices are not to be expected hereafter. Of hemp, sixty dollars worth to the acre is a fair yield on old land, and will be the most valuable staple. Heretofore it has only been cultivated by slave-labor, and of course no improvements introduced in the method of preparing it for market. In ordinary seasons, a farmer, with two plow-boys, and Yankee enterprise, may realize, in addition to corn, hay and feed sufficient for home consumption, the following harvest:

25 acres of hemp, at $60 per acre,	$1,500
25 acres of wheat, at $10 per acre,	750
3 acres of potatoes 750 bushels, at 50 cents,	375
10 acres of oats, 40 bushels, at 40 cents,	160
Crop for market,	$2 785

The inducements for mechanics are equally strong. In addition to wages, from two to three dollars per day, they can now secure, by pre-emption, a good farm for future cultivation, and render their families independent of want.

Thus, while aiding to save so beautiful and desirable a section of our country from the blighting curse of slavery, each individual may be building his own house and laying the foundation, if not of a fortune, at least of a welcome independence.

Locating Land in the "Great West."

The following extract from a letter published at Bloomville, N. Y., will give our readers some idea of the way business is done at the land offices in the "Great West."

"I will give you a little sketch of the way they do business in these parts. The land office at Decorah was advertised to open on the 24th December for entries, and there was a general rush to the office, as needs be after being closed so long a time. Suffice it to say, that there were five hundred men in waiting, and at about eleven o'clock on Sunday evening they began to gather on the stand at the door, and at daylight there were from fifty to one hundred men in waiting, although the mercury ran as low as twenty degrees below zero at the time. At last the long looked for hour arrived, when there was a general rush to see who would be first. They filled the room so full that one gentleman, in his haste, dropped some warrants, and could get out only by crowding over men's heads out of the room down the steps into the street. After some thirty-five or forty had made an entry of one-fourth section, they were politely told by the Register, that the office was closed till Wednesday at ten o'clock, so that we had to quietly retire from the office and wait. On Tuesday, about four o'clock, the crowd began to gather at the door of the office, to stand till the next day at ten, although the weather was of the severest kind, say as low as twenty-five degrees below zero."

The London Post Office.

The following interesting particulars, gathered from an article in the last number of Putnam's Magazine, entitled "The London Post Office," will give some idea of the machinery by which this immense establishment is kept in motion. To the outside spectator little is to be seen except a plain, substantial stone building, some 400 feet by 130, supported by Ionic pillars, and having a large hall for the accommodation of the public; but it is one of the busiest places in that great emporium, and the individual at its head has under his direction an army of 20,000 persons. There are employed in London 1385 letter carriers, for whom are provided rooms in the Post Office building, where they sort and arrange their letters. There are 739 clerks, stampers, sorters, and sub-sorters engaged in the reception, delivery, and dispatch of the mails, which are so arranged that all letters leave London, no matter in what direction, at the same hours—nine in the morning, and nine in the evening. Men on foot, on horseback, and in carts, are constantly engaged during the day in collecting letters from the various sub offices; and to induce publishers of newspapers to get their papers ready early in the day, mail carts are sent to their houses at certain hours to transport their papers to the central office. Each letter goes through from ten to fourteen processes, and the wonder is, how 500 men can handle 200,000 with so little confusion and so few mistakes. A spectator is always astonished at the rapidity with which the letters are made to pass under the stamp. An active stamper will stamp and count from seven to eight thousand an hour.

Cranberry Culture.

Isaac Flint, of North Reading, Mass., furnishes the following statement of his experience in cultivating Cranberries:—

In the autumn of 1843, I built a dam and flowed the swamp from that till August, 1846; then let off the water.

The following October, burnt over the swamp, and set the vines. The vines were cut up with a sharp hoe or shovel, and set in hills, three and a half feet apart; the bunches about the size of a quart measure.

In raising from the seed, I planted in October, 1846, about half an acre; crushing each berry between the thumb and finger, and placing it just under the mud; single berries in a hill, three and a half feet apart. Also, sowed broadcast a number of bushels the following spring. Very few vines appeared from them for two or three years; no berries till 1852, then very small; in 1853, good size, in quantity worth picking.

My practice has been to stop the water in October, and keep it on till May, or until the weather is warm enough to start vegetation—then lower it down to the top of the vines, and keep it on them until I think the spring frosts are over, then let the vines be fairly out of the water until the berries are grown—say from 10th to 15th August—then draw it off for ripening and picking.

We found three or four small beds of native vines on the swamp, after we let off the water to set the vines, and a few very fine berries; there is now probably a dozen beds that bear berries.

In 1850, we picked seventeen bushels of berries on the swamp; in 1851, twenty-eight bushels; in 1852, ninety-three bushels; in 1853, we estimated them at one hundred and fifty bushels.

In 1852, the native vines produced, by estimation before selling, forty bushels; the transplanted vines, sixty bushels; the increase this year is, principally, from the transplanted vines.

I now give you a statement of the proceeds:

1850.	picked 17 bus.,	sold 15½ bus. for	$25 20	
1851	" 28 "	" 26 " "	70 00	
1852	" 93 "	" 93 " "	300 00	
1853	" 52 bbls.,	" 52 bbls., "	380 00	
1854	" 47 "	" 47 " "	305 00	
1855	" 50 by estimat.,	prob. val.	500 00	
				$1581 00

I learn from the first annual report of the Secretary of the Board of Agriculture, that the cost of preparing land and setting vines is $1 50 to $1 87½ per rod, which is very extravagant, compared with the manner I have pursued:

Cost of building my dam, by contract	$20 00	
Ox labor, furnished by myself, estimat.	5 00	
Setting vines on about an acre	25 00	
		$50 00
The cost of stopping and letting off water, and taking care of the same since 1846, yearly, $10 00	$90 00	
Reckoning the cranberries for the past six years at six hundred bushels, and the cost of picking and marketing the same at 75 cents per bushel	$150 00	
		$540 00
Net profit on $50 expend. in nine years		$1041 00
Yearly income on $50		115 67

Respectfully yours, ADDISON FLINT.

NORTH READING, Sept. 25, 1855.

I hereby certify that the above statement, in regard to the management, the quantity sold, and the amount received, are correct.

ISAAC FLINT.

NORTH READING, Sept. 25, 1855.

Since the above statement was made, (says the *Watchman and Reflector*,) we have learned from Mr. Flint, that he had just fifty barrels of cranberries as his crop of 1855, which he sold for *thirteen dollars* a barrel, delivered at the depot two miles from the house, making the pretty sum of *six hundred and fifty dollars*, as the product of two acres of what was quite recently an almost worthless bog meadow.

Watch Manufacture.

The third branch in importance in Switzerland is the fabrication of watches and jewelry, which employs about twenty-four thousand workmen. This industry is nearly equally divided between Geneva, and a district of the Jura mountains near Neufchatel.

Its origin in the latter place is as curious as its growth is remarkable. A horse dealer, named Peters, in 1679, brought from London a watch, which was the first ever seen in the Jura; it got out of order, and was intrusted to an ingenious mechanic, named Daniel-Jean Richard, a native of the place, to be repaired. The young man succeeded in repairing the watch, and in so doing studied the structure of it, and conceived the idea of making one like it.

He had first to invent the necessary tools, and after six months of diligent labor, produced an excellent watch; the movements, springs, box, engraving, gilding, &c., were all the work of his own hands. The watch was a marvel, and the renown immediately brought the young man many orders for watches. He took his four brothers and three other persons as apprentices, instructed them in different parts of the work, and was soon successfully launched in a prosperous business.

Watch-making requires genius and skill, a knowledge of the laws of mechanics, sober habits, and steady hands The mountains are favorable to this—clear, cold air, short summers long winters, sterility, barrenness; no temptations without to distract the attention or corrupt the habits; sobriety is inevitable and is necessary. A sedentary, silent life, is that of the watchmaker, and the climate favors it.

Les Ecoles d'horlogerie (clock schools) are provided for the instruction of youth. In this manufacture, as in cotton or silks, the labor is chiefly performed in the houses of the workmen. Very few females are employed in this, or in the fabrication of jewelry, and those few only in polishing. Clocks, chronometers, watches of every kind and quality, are made to the number of 200,000 to 230,000 annually, varying in price from one dollar to eight hundred dollars, and exported to all parts of the globe. [N. Y. Evening Post.

THE EFFECT OF THE WEATHER ON RAILWAY MACHINERY.—The Superintendent of the Erie work-shops at Susquehanna, reports that he has never known so hard a winter upon iron in his life. It has been with great difficulty, and by working a large force of men several nights, that he could keep the road supplied with power. Something like a dozen locomotives were brought in disabled—some with pumps frozen up and bursted; some with side rods broken; some cylinders bursted; but the greatest difficulty was in the broken tires of wheels. These are of the best wrought iron, over two inches thick, but they were not sufficient to withstand the difference of contraction between the cast iron centres and the wrought iron bands upon a frozen road, where all elasticity was congealed to a rocky solidity. The breakage of axles, wheels, rails, and in fact all the stationary or moving iron, has required a most untiring vigilance, and an extraordinary expense.

Sheep.

The following is a summary of an article of of fifty pages, in the *Transactons of the Royal Society*, on experiments in fattening sheep.

Consumption of Food.—Sheep of different breeds consume quantities of food in proportion to their respective weights when at an equal age, stage of feeding, &c., that is to say, three sheep weighing 100 lbs. each, will consume the same quantity of food as two sheep of 150 lbs. each.

Sheep on good fattening food—such as cake or corn, with chaff and roots—will consume weekly about 4¾ lbs. of cake, 4¾ lbs. of hay, and about 70 lbs. of roots, for every 100 lbs. of their live weight.

When fed as above, they will consume every week one-seventh of their own weight of the dry substance of food; that is, after deducting the moisture it contains.

Rate of Increase.—Sheep well fed and under cover will increase about two per cent. per week upon their weight; that is to say, 100 lbs. live weight will increase from 1¾ to two lbs. per week.

To increase 100 lbs. in live weight, sheep will consume about 2½ cwt. of cake or corn, 2½ cwt. of hay, chaff, and 1½ to 1¾ tons of roots.

The increase of a fattening sheep is at the rate of about 1 lb. live weight to 8 or 9 lbs. of the *dry substance of the food* consumed.

Live and dead weights, &c.—Hoggets or tegs (under twelve months old,) and in a lean or store condition, will contain about one half of their weight carcass, and about one half offal.

Shorn sheep, sufficiently fat for the market, will contain about fifty lbs. of carcass in every 100 lbs. of the unfatted live weight.

Sheep in an ordinary state of fatness yield from 7 lbs. to 14 lbs. of offal and loose fat per head, according to breed and size; the long wools giving the least, and the Downs the most.

Value of Increase, &c.—The value of the increase of fattening sheep is less than the cost of the food consumed to produce it; the difference is to be charged to the manure.

The value of the total offal is from 4s. to 6s. per head, independently of the wool.

[Prairie Farmer.

Theme for the Minstrels of Freedom.

The sacrifice of a Roman maiden by her father to preserve his daughter's chastity, his house's honor, has inspired the songs of poets, and furnished themes for dramatists. In the future of our Republic, will be sung the lays of Freedom, and inspired scholars will with passionate and stately verse chronicle the martyrdom at Cincinnati by a slave mother of her own children. Baffled in her efforts to escape from slavery, she rescued her little ones from the clutchets of the pursuers by delivering them with the knife to Death. With a Roman temper that one day will be classic, she preferred to see them corpses to beholding them slaves. The name of this desperate devotee of Freedom should be preserved by the press. Her deed is one that will live in men's memories.

How intrusive—how omnipresent in all our affairs, and all our localities—is this discordant thing of slavery. It supplies tragedies to our villages, commotions to our cities, treasons and civil war to States and Territories. It makes divisions in churches, ruptures in parties, and controversies between Commonwealths. It clogs with its unprincipled rapacity the civil affairs of a nation, and demands that the law-making of a Congress of thirty-one States be subjected to its control. From a condition of tolerated existence within the Republic, it has grown and got aggressive, till it casts a shadow upon Freedom, and clutches at half the Continent. Use unfortunately dulls the general apprehension of its advances upon the Republican element and the free soil of the country. But surely the bloody offering made to it at Cincinnati on the 27th day of January in Christ's year 1856, will shock men's attention. What an expression of the misery and the wrong of African slavery, is the cutting by a woman of the throats of her children, to save them from reversion to her master's hands in company with herself! What a reproachful stain upon Free Soil is the blood of these innocents! How it cries out against a compact, which permits the chase through the North of mothers fleeing from bondage with their babes, whom they would rather see dead than apprehended under the permissions of the dishonoring engagement! What a fiery protest against the perversion of law and civil power in a land of freedom, was the act of this slave woman, sheltering her childing in the grave from social injury—finding no shelter upon the earth!

The Israelites, fugitive slaves from Egypt, took with them their children through the Red Sea, and had them the companions of their freedom. Less fortunate, the fugitive slaves of Kentucky, after crossing the Ohio, have to murder their offspring to save them from pursuit and reversion to endless bondage. The Justice that saved the waters of the bitter sea from the blood of fugitives, will not forever permit the border stream of Freedom to be stained with its testimonial drops.

[Evening Journal.

THE DANGERS OF THE FLORIDA COAST.—The coast of Florida, directly bordering the straits of the Gulf of Mexico, is probably more dreaded by the seaman than any other in the world. The amount of shipping that has been lost upon the reefs during a period of twenty-five years is enormous, and the amount exposed to the dangers of the shoals, but saved by the wreckers or by the exertions of those on board, would appear to be almost fabulous. We believe that one hundred vessels annually touch upon the reefs. Of this number not more than twenty become total losses; forty receive assistance from the wreckers and are brought into harbor; and the remainder, receiving little injury, get off unaided and incur no expense. The average annual loss to owners and underwriters cannot fall much short of $300,000.

Central Railroad of New Jersey,

IN connection with the Lehigh Valley Railroad, opened to Mauch Chunk—WINTER ARRANGEMENT, commencing Nov. 19, 1855. Leave New York for Mauch Chunk from Pier No. 2 North River, at 7 30 A. M. For Easton, at 7 30 A. M. and 3 15 P. M. For Somerville, at 7 30 and 10 45 A. M., and 3 15 and 4 30 P. M. The above trains connect at Elizabeth with trains on the New Jersey Railroad, leaving New York from foot of Courtlandt street, at 7 30 and 11 A. M., 3 and 4 P. M.

Leave Plainfield for New York at 7 05 and 9 05 A. M., and 1 40 and 6 13 P. M.

JOHN O. STERNS, Superintendent.

Bibliotheca Sacra,

AND AMERICAN BIBLICAL REPOSITORY.—The Thirteenth Volume commenced Jan. 1, 1856. This volume will be enlarged to 900 pages; will be printed on a new, large, and beautiful type, and on paper superior to that of any previous volume. This Quarterly contains articles of permanent value, by some of the ablest writers in the country.

In its department it has no superior, and no Minister can afford to be without it.

It is the most learned, the largest, and the cheapest Quarterly of its kind in the country.

TERMS—$3 per annum in advance.
$4 if not in advance.

W. F. DRAPER, Andover, Mass.

Ayer's Pills.

FOR all the purposes of a Family Physic. There has long existed a public demand for an effective Purgative Pill which could be relied on as sure and perfectly safe in its operation. This has been prepared to meet that demand, and an extensive trial of its virtues has conclusively shown with what success it accomplishes the purpose designed. It is easy to make a physical *Pill*, but not so easy to make the best of all *Pills*—one which should have none of the objections, but all the advantages of every other. This has been attempted here, and with what success we would respectfully submit to the public decision. It has been unfortunate for the patient hitherto that almost every purgative medicine is acrimonious and irritating to the bowels. This is not. Many of them produce so much griping pain and revulsion in the system as to more than counterbalance the good to be derived from them. These *Pills* produce no irritation or pain, unless it arises from a previously existing obstruction or derangement in the bowels. Being purely vegetable, no harm can arise from their use in any quantity; but it is better that any medicine should be taken judiciously. Minute directions for their use in the several diseases to which they are applicable are given on the boxes. Among the complaints which have been speedily cured by them we may mention Liver Complaint, in its various forms of Jaundice, Indigestion, Langor and Loss of Appetite, Listlessness, Irritability, Billious Headache, Billious Fever, Fever and Ague, Pain in the Side and Loins, for in truth, all these are but the consequence of diseased action of the liver. As an aperient, they afford prompt and sure relief in Costiveness, Piles, Colic, Dysentery, Humors, Scrofula [illegible], Colds, with soreness of the body, Ulcers and [illegible] of the blood; in short, any and every case where a purgative is required.

They have also produced some singularly successful cures in Rheumatism, Gout, Dropsy, Gravel, Erysipelas, Palpitation of the Heart, Pains in the Back, Stomach, and Side. They should be freely taken in the spring of the year, to purify the blood and prepare the system for the change of seasons. An occasional dose stimulates the stomach into healthy action, and restores the appetite and vigor. They purify the blood, and, by their stimulant action on the circulatory system, renovate the strength of the body, and restore the wasted or diseased energies of the whole organism. Hence an occasional dose is advantageous even though no serious derangement exists; but unnecessary dosing should never be carried too far, as every purgative medicine reduces the strength, when taken to excess. The thousand cases in which a physic is required cannot be enumerated here, but they suggest themselves to the reason of every body; and it is confidently believed this Pill will answer a better purpose than any thing which has hitherto been available to mankind. When their virtues are once known the public will no longer doubt what remedy to employ when in need of a cathartic medicine.

Being sugar wrapped they are pleasant to take, and being purely vegetable, no harm can arise from their use in any quantity.

For minute directions, see the wrapper on the Box.

Prepared by Dr. J. C. AYER, Practical and Analytical Chemist, Lowell, Mass.

Price 25 Cents per Box. Five Boxes for $1 00.

Ayer's Cherry Pectoral,

FOR the rapid cure of Coughs, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption. This remedy has won for itself such notoriety for its cures of every variety of Pulmonary diseases, that it is entirely unnecessary to recount the evidences of its virtues in any community where it has been employed. So wide is the field of its usefulness, and so numerous the cases of its cures, that almost every section of the country abounds in persons publicly known, who have been restored from alarming and even desperate diseases of the lungs by its use. When once tried its superiority over every other medicine of its kind is too apparent to escape observation, and where its virtues are known, the public no longer hesitate what antidote to employ for the distressing and dangerous affections of the pulmonary organs which are incident to our climate. And not only in formidable attacks upon the lungs, but for the milder varieties of *Colds, Coughs, Hoarseness, &c.* and for Children it is the pleasantest and safest medicine that can be obtained.

As it has long been in constant use throughout this section, we need not do more than assure the people its quality is kept up to the best that it ever has been and that the genuine article is—

The Sabbath Recorder,

PUBLISHED WEEKLY
By the Seventh-day Baptist Publishing Society,
AT
NO. 9 SPRUCE-STREET, NEW YORK.

Terms:

$2 00 per year, payable in advance. Subscriptions not paid till the close of the year, will be liable to an additional charge of 50 cents.

☞ Payments received will be acknowledged in the paper so as to indicate the time to which they reach.

☞ No paper discontinued until arrearages are paid, except at the discretion of the publisher.

☞ Communications, orders, and remittances, should be directed, post paid, to

GEO. B. UTTER, No. 9 Spruce-st., New York.

Liabilities of those who take Periodicals.

The laws declare that any person to whom a Periodical is sent, is responsible for payment, if he receives the paper, or makes use of it, even if he has never subscribed for it, or has ordered it to be stopped. His duty in such a case is not to take the paper from the office or person with whom the paper is left, but to notify the publisher that he does not wish for it.

If papers are sent to a post-office, store or tavern, or other place of deposit, and are not taken by the person to whom they are sent, the postmaster, store or tavern-keeper, &c., is responsible for the payment until he returns the papers, or gives notice to the Publisher that they are lying dead in the office.

Rates of Advertising.

For a square of 16 lines or less—one insertion	$ 75
" " each subsequent insertion	50
" " six months	6 00
" " one year	10 00

For each additional square, two-thirds the above rates.

THE MINISTER'S TIME.

What we said about "One Sermon a Week," has led, by a very natural association, to some thoughts upon the subject indicated by the title of this article. We have only to premise, that it would be a matter of great regret with us, should the design of our remarks be misunderstood.

Few persons seem to consider how precious is a minister's time. Every other person's time is more important than his. The merchant has a run of customers, and he cannot leave them to spend an afternoon with visitors; he is readily excused. The farmer's work crowds him; he cannot drop it to talk an hour or two with neighbors. The mechanic has a job on hand, which he desires to complete; he cannot be hindered. The lawyer has a case, in which the *temporal* interests of his client are concerned; he must prosecute it without interruption. The physician excuses himself from any and every kind of call, which is not in the line of his business. To all these the right of their time is conceded by universal consent.

But the minister—how is it with him? Does any body know? Does any body *care?* He has seated himself in his study, his Bible and implements of writing are before him, and he has commenced preparing his sermon for the next Sabbath. He thinks of the souls that will come before him to be instructed in the way of life; of the requisition laid upon him to be "a workman that needeth not to be ashamed, rightly dividing the word of truth;" of the responsibility he is under with reference to the salvation of his hearers, (Heb. 13: 17, 1 Tim. 4: 16, Ezek. 33: 7, 8;) of his duty to labor mightily to present every man perfect in Christ Jesus, (Col. 1: 28, 29;) of the solemn fact, that some hear the gospel to their own everlasting ruin, (2 Cor. 2: 16.) And saying within himself, "Who is sufficient for these things?" he bows before God, earnestly supplicating the wisdom he needs for the work he has undertaken. Again he betakes himself to labor; writes half a page; is in the midst of some important train of thought, the tendency of which he sees dimly, but wants time and freedom from interruption to perfect it; when a message comes that Mr. A. awaits his presence below. From the nature of the message, he knows that Mr. A. has no particular business with him; and were he a merchant, or a lawyer, or a farmer in the midst of harvest, instead of a minister, he might send word that the urgency of his duties rendered it necessary for him to be excused; and the excuse would be *appreciated.*

But let the minister undertake to excuse himself in this way, and the chances are ten to one that he gives offense. The neighbor who has called, has little or no idea that his minister's sermons cost him *labor.* He has no idea that his minister trains himself to exactness, by *writing* his discourses. The discourses are so simple, the language from beginning to end is so plain, the ideas presented are all so level to the comprehension of the rudest mind, that he is quite sure that they are extemporaneous; or, if written, committed to writing without any great effort. He has not the most distant conception, how much labor it costs to make things *plain* to the common people. What reason, then, is there, (for he cannot see any,) that the minister cannot give his time to any and every body that calls?

Or perhaps it is well known, that the minister does not write his discourses; that he is a useful, efficient, and acceptable pastor notwithstanding. Nay, he appears as exact in his reasoning, as close and consecutive in method, as the man that writes with great care. But is this exactness, this clearness of method, this constant acceptableness to his hearers, this efficiency of labor, attained without care or premeditation? Is there any man, who can go to the pulpit, Sabbath after Sabbath successively, and each time bring forth "things new and old," without time to prepare himself? The antiquated idea, that a man whom God has called to preach needs no other help than what the Spirit gives when he stands before his audience, is one which we are not disposed to spend time in refuting; people of good sense will not advance it. No uninspired man, we are certain, can be profitable as a minister, who does not give himself to close thinking, no matter whether he write his sermons in full, or simply make outlines of them in what are called skeletons; and in order to this close thinking, he must withdraw himself into retirement.

We insist on it, then, that a minister should not be *needlessly* interrupted. By no means, however, would we insinuate that his neighbors should not call on him. If they called on profitable errands, it would be better if they called oftener than they do. If they call on him for instruction, for spiritual counsel, for advice in reference to church matters, for any thing, in short, which has reference to the good of their own souls, or to their pastor's welfare, their calls are not out of place. But what we mean, is that they should be exceedingly careful how they draw upon his time, when they have no particular object in view beyond their own entertainment. If their calls are merely to chat in a neighborly way, let them be short, remembering that the minister's time is precious. Or let them chat with the family, while the pastor is left to prepare something for their instruction on the Sabbath.

We may find it difficult to express ourselves on this subject, so as not to be misunderstood; it is somewhat of a delicate nature. For aught we know, some may think that we go for putting an austere distance between a minister and his people. But we can assure them, that this is farthest from our intention. A considerate regard for the urgency of his duties is what we wish to impress upon the minds of the people with respect to their pastors. And all we ask, is that the minister's calling shall not be under-rated, when compared with other occupations; that the right of making the most of his time be conceded to him, as well as to the farmer, the merchant, or the lawyer. And when it is remembered that the minister demands this, not for his own profit or emolument, as merchants, lawyers, and others, usually do, (for his business is commonly any thing but a lucrative one,) but that he may the better answer his duty to Christ who has called him, the people should be all the more ready to concede it.

We thus write, because some are inconsiderate as to this point. Nobody really intends to hinder a minister from his work, but some are *thoughtless,* not properly considering how urgent the minister's work is. Let them bear in mind, that he is engaged in the King's business; and that, though an easy familiarity between him and his people is suitable and becoming, yet demands upon his time for purposes which have no direct bearing upon the cause of Christ, should be cautiously and sparingly made. Calls *upon* him, however, constitute but a very small part of the obtrusions upon his time, unnecessarily made, and destructive of his efficiency as a laborer. Other things, to which we have neither time nor space to allude at present—things which a just appreciation of his office by the people of his charge might obviate as well as not—impair his usefulness to an extent beyond conception. Let what we have said suffice for the present. T. B. B.

LAYING ON OF HANDS.

The laying on of hands is a custom that appears in the history of the Jews from a very early date. Nor is it restricted to any particular occasion. It also in its use embraces a somewhat wide range of objects. In Genesis 48: 14, which is the first instance in which it appears in the Divine Record, it is employed by Jacob in bestowing blessings upon his sons Ephraim and Manasseh. In Exodus 29: 10, it is employed in *consecrating* a bullock as a sacrifice to God; also, 15th and 19th verses, in the case of the sacrificial ram. See also Lev. 16: 21, in the case of the consecrated goat. In the case of the blasphemer, Lev. 24: 14, all the witnesses laid their hands upon his head, so bearing public testimony against him, that the congregation might stone him. In Numbers 8: 10, the children of Israel put their hands upon the Levites, consecrating them to the work of the ministry. By the laying on of Moses' hands, Joshua was dedicated to his work as leader of Israel, Num. 27: 23. This perhaps is a sufficient number of passages to indicate the prevalence of the custom among the Jews in their early history, and to show that it was used on occasions widely differing in their nature.

Coming to the days of Christ, we find this custom still prevailing, and equally varying in its uses. In Matt. 19: 13—15, we have the record of Christ's putting his hands on "little children," and declaring that of such is the kingdom of heaven. See also Mark 10: 14—16, Luke 18: 16, &c. In Mark 6: 5, 16: 18, Luke 4: 40, &c., laying on of hands was employed in healing the sick. In Acts 8: 17, it was employed in the impartation of the "Holy Ghost." Read the entire context, with the question in your mind, "For what were hands laid on these Samaritans?" and see whether the Apostles did not both pray for them and lay their hands on them that they might receive the Holy Ghost. Besides, let it be remembered, that the position of the Jews and the Samaritans toward each other had been a hostile one; that they had had no "dealings" with each other; and that, so far as we know, the jealousies existing between them had not as yet been completely removed; and that, since the Saviour's ascension, no miracle had been wrought in token of God's purposes of mercy toward these Samaritans; and that the special token in such instances was the gift of the Holy Spirit, (see Acts 10: 47,) and I think no further doubt can exist as to the object of the laying on of hands in this instance.

An instance of laying on of hands, somewhat similar to this, is recorded in the 19th chapter of this book. Paul, on coming to Ephesus in Asia, found certain disciples, of whom he inquired whether they "had received the Holy Ghost since they believed?"—to which they answered, that they had not even heard of such a thing. After further conversation on the subject, Paul laid his hands on them, and they received the Holy Ghost, and spake with tongues, and prophesied. That any other object than the impartation of this miraculous gift appears in the history, I think will not be claimed.

Reliance, however, is mainly had, for the continuance of this "rite" in the church, upon a statement in the sixth chapter of Hebrews, 1st and 2d verses: "Therefore, leaving the [elementary] principles of Christ, let us go on unto perfection, not laying again the foundation of repentance from dead works, and of faith toward God, of the doctrine of baptisms, and of laying on of hands, and of resurrection of the dead, and of eternal judgment." The strength of the argument lies in the connection of laying on of hands with the "doctrine of baptisms." But what does *baptisms* mean? Can it be said that it refers to the ordinance of baptism, as commanded by Christ? To this there is a fatal objection; it is *plural,* not singular. If it be said that it means the baptism of *water* and the baptism of the *Holy Ghost,* and therefore the plural form, I answer, that while it is true that such an association constitutes a plural number, the difficulty remains. It is still to be determined what are the *ideas* and *facts* associated in the term baptisms. This can only be determined by a correct exegesis of the whole passage. Let us then premise—1st. That Paul was writing to Jews—persons having a religious vocabulary of their own, with which all their thoughts were clothed. 2d. That Paul was himself a Jew, and intimately acquainted with all the modes of thought and expression of his people. 3d. That he was writing to them on a subject where, of all others, these modes of expression would be likely to appear. 4th. That there was at this time no Divine Record save the Old Testament for their instruction; so that the forms of speech used by the Apostle must almost of necessity be interpreted by it. Now for the text in its connections. Please remember, that the Apostle, in the preceding chapter, is charging his brethren with having come short of those Christian attainments which were justly expected of them—that they were only rudimental Christians—children weak and sickly—using "milk" instead of "strong meat"—and therefore had no solid growth. He would now raise them out of their infant state. But this can not be done while they feed on elementary principles. These he exhorts them to leave, going on to perfection, to Christian manhood. Now, where do we find these elementary principles of the doctrine of Christ? Are they not taught in the Old Testament Scriptures? Did not the whole system of sacrifices under the former dispensation rest on the fact that our works were death-producing? And further, did they not speak of one whose blood should purge our consciences from these dead works? See chapter 9: 14, &c. Hence the ground of the Jew's "faith toward God." As to the doctrine of baptisms, was it not contained in their repeated ablutions required in the tabernacle and temple services? See chapter 9: 10. It was for this purpose that the laver was erected in front of the tabernacle, (Ex. 30: 18, 31: 9, 35: 16,) and that the brazen sea and laver were erected in connection with the Temple of Solomon, 2 Chron. 4: 3—5, 1 Kings 7: 26, &c. As to the "laying on of hands," see the former part of this article. Touching the resurrection of the dead and the eternal judgment, are they not taught in the Old Testament also? See Isaiah 26: 19, Ezek. 37: 1, &c., Daniel 12: 2—"*And many of them that sleep in the dust of the earth shall awake, some to everlasting life, and some to shame and everlasting contempt.*"

The foundation, then, of all those doctrines, is laid in the Old Testament, and it seems to me far more natural to so interpret the passage. Looking through the Scriptures, then, I find no warrant for requiring newly baptized persons, as such, indiscriminately, to pass under imposition of hands. Nor do I find a single instance where it is performed in connection with, and as conditional of, church membership. *It is more than is required.* N. V. H.

THE WORK OF THE CHURCH.

WILL IT SUCCEED?

We answer, Yes. And in considering this point, it may be well to look back on the past, in order to see what has been done. There was a time when an universal pall of moral darkness hung over all mankind. Some few light spots tended to mitigate the awful gloom, and these only made the darkness more terrible. At length the harbingers of day appeared in the character of prophets, and the last one in the Baptist John. The Sun of Righteousness arose, and a new dispensation commenced, when the Son of God had done his work on earth—had suffered, died, and risen again, and ascended to the mediatorial throne. The Spirit's light and power were felt on the day of Pentecost, and those who had been endowed with power divine began the mighty work of reforming and renovating the world. The work of the church was then commenced in good earnest—the darkness began to give way, and Satan trembled on his throne. Oh, what glorious things were achieved by the vigorous and unwearied labors of those inspired men. Persecution, arising from the antagonistic principles of human nature, roused up and supported by infernal agency, threatened the suppression, and even destruction of the church, which had thus made an attack upon the kingdom of Satan. In spite of all, however, the light spread, and persecution only aided in its diffusion. There have been, since that remarkable era, some desperate efforts by anti-Christian powers, both political and nominally Christian, to stop its progress, and blot out the light, but in vain. That new organization at Jerusalem began a work accordant with the divine commission, which has never ceased, never failed, and never can. That blessed light has been rising higher and higher, and spreading itself over the earth. The British Islands, once savage, superstitious, and cruel, have undergone such a glorious transformation, by Christain effort, and it may be by the missionary labors of some of the apostles in the onset, as to be in these last ages a point from which the light of the gospel has been transmitted to distant lands. The British missionary, of different communities, has set his foot on almost every spot of the globe, and by the communication of divine knowledge, has thrown down the altars of idolatrous worship, demolished heathen temples, erected altars and temples for the praise of the great Redeemer in their place, and gathered multitudes of the heathen, from all climes, around the standard of our common faith, and is still onward in his course, with the holy resolve never to surrender, so long as there is a heathen to be converted. This great country, where once dwelt none but the red men of the forest, and the various tribes of Indians, living a savage life, and under the various superstitious rites and practices of heathenism, has to look not to colonization chiefly as the great instrument of its present privileges and wealth and honor, but to the church of God, which has planted the Christian religion by its labor and influence on its moral soil. America, but recently discovered, comparatively, stands out as the wonder of the world, for her progress, and her privileges, and her future prospects, and all must be traced back to the work of the church.

Amazing moral changes have passed over the vast continent of India within this last sixty years. The mighty and apparently indestructible fabric of idolatry and superstition, has been made to tremble at the weapons of Christian warfare, which are not carnal, but spiritual, and mighty through God to the pulling down of strong holds. The Burman Empire, with its splendors, and gorgeous, and we may say blasphemous, titles, is succumbing to the power of the once crucified but now exalted Saviour. The poor wandering Karen tribes are flocking into the fold of Jesus, and by an instrumentality purely native, are pushing their way through the remaining darkness, in order to save their countrymen from death. The Islands of the Southern Seas, once entirely idolatrous, offering human sacrifices to their gods, murderers of their own offspring, have experienced a universal regeneration; they are, it is said, entirely Christianized. Such have been the changes there, through missionary labor, that we may suppose the martyr Williams does not regret having shed his blood in the enterprise. Extraordinary men have been raised up to accomplish great things, such as Whitfield, and Wesley, and Carey, and Brainard, and Judson, and others. But the church, in her various departments, laboring for one and the same noble object, has effected a glorious revolution in the earth, and raised up a vast multitude to sing redeeming grace and dying love. Through the length and breadth of our land, the temples of the Lord adorn our cities and villages; and our own denomination, but a few years since small, very small, as a mere speck in the religious world, occupies now a respectable position among the churches, and sends her ambassadors of peace and mercy to distant lands, presenting the Saviour's claims, and proclaiming the whole law of the Lord. What more might have been done, had we been more faithful and more pure, we cannot say. Nor can we say what she is destined to do exactly, but we believe great things, provided we take up the work of the church in good earnest, and maintain that zeal and exemplary piety required of us.

In reviewing the past, however, and remembering that the work and the object are the same, we may be encouraged and labor on, with the certainty of success. The Lord never does his work by halves, but will carry it on to completion, and by the same agency as he has always done.

The present short essay only looks at the past; another, and our last on this subject, will be the prospect before us.

GEO. R. WHEELER.

SALEM, N. J.

SETTLEMENT IN KANSAS.

WEST UNION, Iowa, Jan. 25, 1857.

To the Editors of the Sabbath Recorder:—

I have seen in your paper several articles in respect to a Sabbath-keeping colony in the West. I wish to say, through the same medium, to the Seventh-day people, that now is the time for them to be moving. There is a large territory open in Kansas for settlement, in one of the best climates in the United States for northern people to settle in; and if the friends of the Sabbath should neglect to improve this opportunity immediately, and let it pass for a year or two, they will lose the chance to make a choice of locations, as the best will all be taken up by First-day people; and for this cause I would say, let there be one general effort made, throughout our denomination, to make a permanent settlement of Sabbath-keepers in Kansas territory, and the writer of this will, if life is spared, endeavor to help make it. I would say to those who have no home or land in the East, if they can raise enough to move them there, and keep them a year, let them go on and make claims, and by doing this they can make a little fortune as easy as they can make a living in an old-settled country. I have known men who could hardly make a living when I moved to Iowa, and they are now rich farmers, with from fifty to two hundred acres of land under cultivation. I left Ohio seven years next May, and when I got here I was worth one thousand dollars; and through the blessing of God my property is worth eight thousand dollars now. I just mention this in hope that it may induce others to emigrate to the West, and better their situation. My advice to the friends of the Sabbath of the Lord our God is, not to stray off by single families alone, but get as many together as possible, and form as large settlements as possible, and take your ministers along with you, and form societies, and constitute churches, that you may enjoy spiritual as well as temporal blessings, and by so doing we may receive God's favor, and honor him in keeping his holy commandments, and attending to all the ordinances of God's house. We have lived destitute of all these blessings since we have lived here. We have been often invited to unite with other churches, but we cannot, on account of our Sabbath principles. We will say, in conclusion, is there not a minister of the gospel in our denomination who will rally his forces, and form a colony on the broad and fertile prairies of Kansas, and invite, through the *Recorder,* the scattered Sabbath-keepers to join him there? We believe that hundreds would gladly meet him there.

R. LIPPINCOTT.

A SURPRISE PARTY.—The *Independent* says that another specimen of the modern invention known as the "surprise party," was witnessed a few evenings since at the house of a lady in Washington street, Brooklyn. The party was made up mostly of members of Plymouth Church, although Rev. F. E. M. Bacheler, pastor of the Park Congregational Church, had been invited, apparently as an "outsider." After he arrived, however, his eyes were opened to the trap, and he succeeded in getting away only after consenting to receive a purse amounting to about a hundred and fifty dollars! Mr. Bacheler's own people recently played a similar trick upon him, to the still more grievous extent of two hundred dollars.

THE ALBION ACADEMY.

We find in the Janesville *Daily Democratic Standard* the following notice of the Academy at Albion, Wis.:—

This Institution has been in operation a little over two years. It opened under embarrassing circumstances, but has thus far grown up like a tree well planted. Its location has been regarded by some as prejudicial to its interests, but on the contrary it is decidedly advantageous. It is situated three miles from the Fulton Depot, on the Milwaukie and Mississippi Railroad. It is in a retired, rural, and healthy district, surrounded by a flourishing farming community. There is not a single saloon or grocery where the young and idle may gather, to contract vicious habits. There is one hotel, kept on the most strict temperance principles. It is, we believe, the only Teacher's Institute in the State. Over thirty from this Institution are at present engaged in the occupation of teaching. The people of the surrounding community have done nobly in erecting two large and convenient buildings at a cost of $13,000. One, three stories high, is 36 by 48 feet. The other, of four stories, 36 by 64 feet, with a wing 20 by 30 feet. These include a large chapel, lecture rooms, and a commodious boarding hall, with private rooms for one hundred students, under the immediate supervision of the Teachers. There have attended this Institution during the year ending Jan. 12, over three hundred students. The system of instruction is well calculated to secure the highest discipline of mind. The scholar is required to exercise his own powers to their full extent, while the teachers spare no pains in giving the student the most thorough and profitable course possible. An accurate register is kept of the scholarship and conduct of each student. A Collegiate Charter has been obtained, and it is intended, through the united efforts of the people and a permanent Faculty, to place this Institution on a foundation which will make it a permanent blessing, not only to the present, but to future generations, and an honor to educational interests.

A FREE COLORED MAN RESCUED FROM SLAVERY.

An interesting case of the rescue of a free colored man from Slavery, has just occurred, which is narrated as follows in the N. Y. *Tribune:*—

Anthony Adams is a young colored man about 19 years of age, born and bred in Port Jervis, town of Deerpark and County of Orange, in the State of New York. In November, a year ago, in his capacity as a mariner, he shipped in New York on board a schooner bound to Plymouth in North Carolina, a trading town at the head of Albemarle Sound. There he was taken sick and sent to the hospital, where he remained until the schooner had left. Recovering, he shipped on board a fishing boat, then worked for a time in Plymouth, but was again taken sick. In June last, being then able to be about, though not fit to work, while in conversation with the hands on board a steamboat which runs between Plymouth and Edenton, on the opposite side of Albemarle Sound, he found that unexpectedly to him the boat had left the wharf. Attempting to get out and on shore, he was seized by the master of the steamboat, who accused him of being a runaway slave, tied him and carried him to Edenton, N. C., and immediately on arriving there sent him to jail.

It seems that in North Carolina they have a law subjecting all outside barbarians, who are not of a sufficiently white complexion to suit the taste or secure the confidence of the North Carolinese, to a fine of $500 for presuming to come into that Christian and civilized State "to reside;" with the alternative, that should the fine not be paid, the culprit, after a certain detention, shall be sold into slavery for a time sufficient to raise the amount. Under this law, as it would seem, Adams was tried and sentenced; but as he claimed to be a freeman, and was believed to be so by some citizens of Edenton who investigated his case, and as, so far from having come voluntarily into the county in which Edenton is situated "to reside," he had been brought in against his will, and bound hand and foot, these gentlemen—of whom Col. Paine, a Representative in Congress from North Carolina, was one—caused this judgment to be set aside, or at least prevented any sale from taking place under it. But this did not secure the release of Adams, who, as he had no free papers, was still kept in prison as a runaway slave, with the prospect of still being sold to pay his jail fees.

The first intimation which the friends of Adams had of his imprisonment in North Carolina was not from any official or citizen of that State, but from a gentleman of New York, who, about the time of Adams's imprisonment, being on a visit to Edenton, became aware of the fact. He saw the man, heard his story, and returning to New York, in compliance with a promise to Adams, addressed a letter to Mr. Bennet of Deerpark, whom Adams had mentioned as able to prove him a free man. This letter, which was dated July 21, 1856, informed Mr. Bennet that if Adams's account of himself was true, his release might be procured "without any difficulty" by sending to Edenton previous to the next County Court, which met in August, affidavits to prove his freedom; and the letter gave the name of a lawyer who would act in the case "without charge," and to whom the papers might be sent. Affidavits were accordingly prepared, duly authenticated, and sent as directed, with a request that if any further proof were needed information should be sent to Mr. Bennet, and also a statement of the jail fees and other expenses.

Nothing further, however, was heard of the matter till about the 1st of December, when a letter was received by Mr. Bennet, dated Nov. 17, from the Clerk of Chowan County Court, the county in which Edenton is situated, mentioning Adams's account of himself, and stating that he was held in the jail of that county as a runaway slave, and was liable to be sold for the charges of his imprisonment, amounting then to about $75. It appeared from this letter that the depositions formerly sent had been received, "but being taken ex parte, were not introduced." Nothing, it would seem, in the shape of written testimony, would be likely to satisfy the exigent demands of the North Carolina law. The only certain method was for some person who could prove Adams to be a freeman to be at the trouble and expense of going on to Edenton for that purpose.

Now, there is a law of this State, enacted in 1840, and seemingly with a view to precisely such cases as this, which provides, among other things, that "whenever the Governor of this State shall receive information satisfactory to him that any free citizen or any inhabitant of this State" "is wrongfully seized, imprisoned or held in slavery in any of the States or Territories of the United States, on the allegation or pretense that such person is a slave, it shall be the duty of said Governor to take such measures as he shall deem necessary to procure such person to be restored to his liberty and returned to this State"—and the act goes on to authorize the Governor to appoint an agent for this purpose, and to pay all necessary expenses. The case of Adams was thought, by those interested in it, to come fully within the letter as well as spirit of the above act, and application was accordingly made to Governor Clark to appoint an agent under it. But it seems he was "advised" that the case of Adams did not come within the law, and on that ground declined to take the action requested. Previous, however, to the receipt from the Governor of this refusal, other correspondence had taken place by which the Deerpark gentlemen had been stimulated to act at once on their private responsibility without waiting for the Governor's motions.

A taunting and insolent letter signed Fred. L. Roberts, and dated Edenton, Dec. 14, 1856, had been addressed to Senator Seward at Washington, stating the fact of Adams's detention in jail and the danger he was in of being sold, and representing it as a "burning shame" that the citizens of Port Jervis, after notification of this fact, should allow a citizen to remain in jail "simply because they are too penurious to come on and recognize him," and "a damnable shame that the great State of New York, after shrieking for negro feeedom, voting for Fremont and free negroes, should abandon one of her citizens." To this letter, three days after its date, Senator Seward replied, thanking the writer for the information, stating that he had written to Port Jervis on the subject, and, to prevent any embarrassment or delay on the subject of costs and fees, authorizing the writer to draw on him at sight for the amount, whatever it might be. It was in consequence of Senator Seward's letter to Port Jervis that, without waiting for Gov. Clark's decision, Mr. Bennet was induced to undertake a journey to North Carolina for the purpose of identifying Adams as a free citizen of New York, upon which mission he started on the 29th of December last. Stopping at Washington on his way, he saw Col. Paine, and obtained from him the true history of the case, with letters of introduction to persons in Edenton. Upon payment of costs and fees, Adams was released without objection.

DR. SPRING ON SECTARIANISM.—The New York *Observer* gives intelligence of the improved health and returning eyesight of that distinguished Presbyterian divine, Dr. Spring, and thus speaks of a late sermon by him on the furtherance of the Gospel:—

> "His discourse was founded on the words, 'the furtherance of the Gospel,' and in stating some of the obstacles to the spread of the Gospel, he took occasion to mention as one of the chief, the divisions of the Church of Christ. Nothing, he said, is more inexplicable and distressing than these thousand divisions into which the church is rent. I see one Gospel, simple and sufficient, and I cannot understand the reason that leads men who receive it to adopt so many and such conflicting views. My distress is so great that I am ready to exclaim, '*O that my head were waters, and mine eyes a fountain of tears.*' Alas for this spirit of sectarianism and this love of domination in the Church of God. I do not undertake to say what is the best *form* of the church. My whole life attests my preference; but I love Christianity more than I love Presbyterianism, and I love Presbyterianism only because I find it identified with Christianity."

EDUCATION FOR THE MINISTRY.—It is said that the Faculties of the N. Y. University and Theological Seminary, were, not long since, invited to the house of one of our merchant princes, and asked how brief a course of study they could wisely and conscientiously commend for a certain number of young men, chosen for their piety and intellectual promise, to prepare them for the ministry. The great and increasing demand for ministers, was, of course, the motive for abridging the course of study to the shortest practicable period; and after due consultation, it was decided that by arranging a curriculum specially for the purpose, and by a combination of the ordinary studies of the two institutions, a course deemed adequate under the circumstances, might be made up, which would extend only through four years, in both College and Seminary. On this basis, the proposal was then made by the gentleman referred to, to select and to educate at his expense, FIFTY YOUNG MEN for the four years' course, at an estimated cost of $300 per year for the entire term—a sum practically contributed to the education cause of $16,000 per year for four years.

RAILROAD FROM JAFFA TO JERUSALEM.—About a month ago—says a letter from Jaffa of the 4th December—a British war steamer came into our roads and landed some engineers, who immediately started for Jerusalem, with the object, it is said, of making a survey for a railroad about to be made by an Anglo-French company. They reported on their return that it was very easy to accomplish the undertaking by laying out the line not along the present route from Jaffa to Jerusalem, but along an older one of the time of the Crusaders, passing by the village of Syda.

LIBERAL GIFT.—Mr. W. Brown, M. P., whose promised gift of £12,000, toward the erection of a new library and museum for the town of Liverpool, has been previously noticed, has thrown even that munificent offer into the shade by one which he has now made to the town council, and they accepted. Mr. Brown, in a letter to the Mayor, which was read at the council meeting on Thursday, proposes to construct, at his own cost, a new building for the purposes of a free library and museum. The cost is likely to be £30,000.

A THANKSGIVING ADDRESS.

Delivered in the Seventh-day Baptist Meeting-House at Plainfield, N. J., on Thanksgiving Day, Nov. 29, 1855, by E. M. Dunn.

Nearly two hundred and fifty years ago, on a barren and unfrequented spot on the shores of Lincolnshire, at the still hour of midnight, was collected a little band of pilgrims, whose feet were then treading for the last time the land of their nativity. Exiles for truth, they were resolved to endure the severity of a long voyage at sea, and the perils and the hardships of a frontier life, that they might worship God without that restriction of conscience which the Church of England imposed upon them. They had designed to embark during the darkness of the night, that they might escape unobserved by the officers of the government. But when the appointed hour came, the vessel which was to carry them away had not arrived. On the next day, as the expected boat tremblingly neared the shore, that company of Christian fugitives, men, women, and children, silently and stealthily went on board. They at first landed, and for several years found shelter, upon the shores of Holland; but eventually came hither to our country, and made their final settlement upon the barbarous coasts of New England, together with that company of Puritans who at a later date, in 1620, left the land of their fathers for the same reason, that they might enjoy a purer form of church discipline and religious worship. The privations and difficulties incident to a removal to an unsettled region, are always great; but the suffering and the toil, the danger and the distresses which our Pilgrim fathers were obliged to encounter, were sufficient to have discouraged men of common fortitude. The inclemency of the wintry season, and their destitution of the comforts of life, induced distressing sickness, which carried off half of their original number in less than three months, and prostrated many others; the hostility of the Indians, and withal the rigors of their situation, caused them to feel their dependence upon God, and to implore help from Him who always hears the cries of His faithful children. And in view of the severity of their lot, they resolved to set apart one day of humiliation—a day of fasting and prayer—that God would ameliorate their condition. As their petitions were being granted, when prosperity began to smile upon them—as the cheerful village took the place of the forest and the schools and churches were springing up over the land—they deemed it proper to make this day of humiliation a festival of rejoicing and thanksgiving. This, in brief, is the history of Thanksgiving Day. It comes down to us a New England institution, of illustrious origin—an offspring of noble parentage, and cherished at the present day, especially by the sons of New England, with Puritanic fidelity. The custom of celebrating this festival has extended from State to State, and has now become almost universal. It is founded upon the idea that the God whom we serve is a being of infinite goodness, that we are utterly dependent upon him for the smallest blessing we receive, and that every good thing we enjoy, whether great or small, is the gift of God.

Let us, in the first place, dwell for a few moments upon a consideration of the goodness of God in his manifestations of love toward us. Most truly did that affectionate and beloved disciple of our Lord and Master assert, that "God is love." It would seem almost superfluous to attempt to demonstrate this assertion. Yet we need to be frequently reminded of its proofs; otherwise, strange as it may seem, we shall fail to realize it, and shall lose that life and felicity which the constant recognition of this truth is designed to impart. The evidence of God's kind beneficence are visible everywhere, as innumerable as the leaves of the forest or the stars of the firmament. The intelligent mind, even without the aid of the Bible, from a close observation of nature's works, arrives at the conviction that there is one great Being who has created all things—that this Creator is perfect in goodness, presiding for good over the destinies of his creatures. The heathen philosophers, reasoning from nature's works, came to this conclusion; and aside from God's mode of justifying and redeeming a lost world to himself, they entertained no very incorrect ideas of his character and greatness. Look out, my friends, upon the universe around us. Behold the handiwork visible everywhere. Do you not discover marks of love and benevolence traced upon every thing? If it be not sacrilegious to make the inquiry, let me ask, what created object is there, tree, shrub, fruit, mountain, vale, lake, streamlet—the stars of the firmament that twinkle like angel's eyes looking out from the windows of heaven—the birds of the air, or any of the varied species of animal life—whose form or nature you would change or in the least modify to make it the better subserve our good and happiness? There is no defect. It has been pronounced good by Him whose infinite comprehension and skill have planned and executed the work. We may criticise and carp at the most ingenious inventions and elaborate works of men, but the creations of God in a healthy mind elicit no other emotions than the highest admiration and warmest gratitude. However clearly we may be impressed with the truth of God's goodness, when we contemplate the fullness of the outer world, to "satisfy the desire of every living thing," the impression is much more vivid and forcible when we contemplate our human nature—the beautiful adjustment of each and all the bodily organs to perform the harmonious and essential functions of the physical economy. How, from the use of every limb, from the susceptibility of the delicate net-work of the nerves—how, from the exercise of each organ, when in its normal condition, buoyancy and pleasure are spontaneous! No scientific analysis is requisite to make us all observe the sublime display of God's goodness in our physical and mental formation. Our affections, our reasoning faculties, our exercise of the will, our memory, our perceptions of the beautiful, our veneration, our hope, our fear, all point to happiness as their legitimate aim and end. But, says one, if we are constituted for happiness—if we are surrounded with all the conditions favorable for unceasing bliss, and organized so that the physical, intellectual, and moral, all blend in harmonious action, what means all this confusion and jargon? Why is it that vice is always contending with virtue?—that the lustful propensities of the flesh are ever warring against and stifling the dictates of conscience? Why all this prostrating sickness, disheartening poverty, troubles that hedge up our path, and these bitter afflictions? Why is it that we are always fighting one against the other, and each against himself? True enough, this condition of things clearly shows that some great misfortune has befallen man since his first creation—that this organization, which was designed to give joy and peace, has now become so deranged as to produce contention and misery. Blind and deluded must be that individual who can for a moment doubt the iniquity and utter depravity of the human race. Who is to blame for this? Surely not God. His goodness is just as great as if we had not transgressed his holy law, but, living in conformity with his requirements, had enjoyed blessedness as our continual portion. But when man had once violated the law of God, had sinned against One of infinite perfection, had thereby forfeited eternal life and merited everlasting death, when the divine hand was raised to inflict a most righteous penalty, that God himself, in the person of his only son, should assume our fallen humanity, endure the ignominious and cruel death, that we might be restored to his fellowship and favor, then did God's goodness appear more striking than ever. When we contemplate this last exhibition of his love, our conception of his beneficence is greatly expanded; and now that he sends his Holy Spirit to convict of sin, induces us to give our hearts to him and abandon our sinful courses, now that in temptation he sustains us, that he gives us as much prosperity as we are fitted to enjoy, that by chastisement and trials he purifies us, that he makes all things work together for our good, that he keeps us within the hollow of his hand, leading us from one degree of spiritual advancement to another, and at last receives us as heirs of the eternal inheritance—what shall we say of God's love? We think of it—our minds are filled with its conception—yet we cannot comprehend it—we are lost—it reaches out far beyond man's power of comprehension. If such be the goodness and love of God, what follows? What follows, but that we should obey the first and great commandment, "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind." Do we, my friends, understand the full extent and nature of that love which God requires of us? If we fail to obey this command, what base ingratitude! The ancients regarded ingratitude as the most heinous offense. They were right. We do likewise. We can pity and forgive the man that robs us of our property. But here is one whom we have befriended in many ways—to whom we have shown favor after favor, and repeated gift upon gift. We do not ask, we do not expect, we do not even want, that he should return us any thing that will be equal to the amount that we have benefited him. But we do expect that he will make some manifestation that he feels grateful for our kindness to him, some recognition that he appreciates and esteems us as his benefactor. If he fails to do this—if he acts as if he did not know that we were striving to make him happier—or as if, conscious of it, he disregarded it—we call him a brute, and declare that he is insensible of what belongs to a man. We cannot endure it. Such is the emotion we have for ungratefulness. If you wish to get rid of a valuable friend, who strives in various ways to make your pathway more pleasant, just manifest a seeming ignorance or indifference to his kind attentions, and depend upon it, if he is not a parent, or other relative, or has much more of the grace of God than most individuals, he will very soon leave you. But what shall we say of our ingratitude to God? The blessings he has conferred upon us in every conceivable manner we cannot at all appreciate. He does not ask us to repay him—that would be impossible; but simply that first having loved us, we should love him. If we refuse this, if we act contrary to God's wishes, if we do that which most displeases him, what vile ingratitude! Well may the sinner fear lest the wrath of God should be let loose upon his guilty soul—lest to-day, when he least expects it, he may be summoned at the judgment bar of the Almighty, and receive that just and lawful sentence pronounced upon the guilty, which can never, never be repealed.

Secondly, let us consider our intimate dependence upon God. The idea of dependence upon some divine power has been prevalent in all ages and among all nations. The Bible was not necessary to teach us this truth. It is founded upon the universal consciousness that we are subject to the control of a higher, invisible power. Heathen nations, who have never heard of the word of God, entertained this idea as generally as Christians; and, judging from mythological history, we must conclude that the sentiment of dependence upon a superhuman power was more general among the ancient heathens than with us. This may be accounted for in part from the fact that the light of science never having risen upon them, what is plain and explainable by us on scientific principles, appeared to them dark and mysterious, and when they beheld a natural phenomenon readily accounted for by us, but which they could not explain, they were in the habit of supposing it was brought about by some divine agency, to signify the will of the Deity. They regarded many things insignificant to us, as indicative of the will of the Omnipotent Mind. They considered the flight of birds as ominous of good or evil, according as they flew to the right hand or left. When they consulted the oracles, and desired divine teaching, they expected to obtain it by some visible signs, and they never failed to find some silly object which their foolish imaginations transformed into a divine response to their petitions. They established a multitude of signs by which they interpreted the counsels of the gods. These signs were of course arbitrary. But as they implored divine direction in the undertaking of every enterprise, whether of great or small moment, it is not altogether unreasonable to suppose that God would sometimes make use of those means to make known his will. Since God has controlled and disposed of every thing from the foundation of the world according to his good pleasure, it may be plausible to suppose that he made use of these agencies which they foolishly established to carry out his own designs and purposes. It is to be feared that they exhibited a greater sense of their dependence upon the unknown gods than we do upon the known and true Jehovah. Throughout all Christendom there is a great deficiency in this matter. But what says the word of God? "A man's heart deviseth his way, but the Lord directeth his steps." "There are many devices in a man's heart, nevertheless the counsel of the Lord, that shall stand." "Man's goings are of the Lord; how can a man then understand his own way?" "For promotion cometh neither from the east, nor from the west, nor from the south. But God is the judge; he putteth down one and setteth up another." The Bible is filled from beginning to end with the declarations that the omniscient, omnipotent God is the sovereign disposer of all the affairs of mankind—that "he makes the wrath of man to praise him, and the remainder thereof he restraineth"—that he defeats the plans of the wicked, and causes the righteous to prosper. Why then this seeming declaration upon the part of man, that he is able of himself to do all necessary things? I do not say that we all ignore the Deity entirely—that there is no fervent prayer for divine aid and protection. Far from it. Yet none can deny, but there is seemingly too little. Kingdoms declare war with the idea that if they are victorious, it must result from a superior force of numbers, from superior military skill, from greater courage, from such conditions as human calculation can provide for. They do not appear to realize that God can and may by his invisible movements bring about results which will baffle all human calculation, which cannot be accounted for at all by man's reasonings. David, a mere stripling, a beardless youth, inexperienced to war, a keeper of his father's sheep, without any sword or shield, but with a simple stone and sling, went out to encounter the prodigious Goliah, an experienced and fully equipped warrior. What human discernment would have foretold but that, according to Goliah's prediction, David would have been slain, and his flesh given to the fowls of the air and the beasts of the field? But no; contrary to the expectation of all Goliah's host, their proud, valiant, and boasted champion was slain. When the Israelites fled from bondage in Egypt, human wisdom would have supposed they would have been overtaken by Pharaoh with his mighty hosts. In all human probability, this would seem to be the issue; but how different the result! When the American Colonies resolved to resist the tyrannical encroachments of Great Britain, and declared war against their mother country, the American forces were so small, and the English so great, that a deliberate, calculating mind, would have decided the contest would be short, the colonies would be subdued at once; and it has been a matter of wonder why those old revered patriots risked the contest. They were driven to desperation. But, guided by the unseen hand of God, and contrary to the expectation of wise politicians, they achieved a victory against an overwhelming majority of numbers, which casts a shadow over all preceding triumphs. Blessed be the memory of our immortal Washington, whose strong sense of dependence upon God, and implicit faith in him, enabled him to hope for success against the most foreboding prospects. It was George Washington who appointed our first National Thanksgiving. His example might well be imitated by each individual who shall hereafter be honored with the Presidency of this Republic.

Thus it has ever been the Supreme Mind that has been thwarting and overreaching the plans of human wisdom, turning and overturning the destinies of kingdoms and individuals. Yet we have not learned, or are continually forgetting, our entire subjection to Providence. Many of our modern reformers, intent on removing existing evils, and ameliorating the condition of the human race, exhibit a great want of faith in God's disposition and ability to co-operate with them or to fight against them. They cannot realize how bending the knee in prayer will bring about the feeding of the hungry, the abolition of slavery, the uprooting of intemperance, the education of the ignorant, the downfall of Popery, or any desirable result. They deem human exertion sufficient to the work. Through a sentiment that effort without prayer is better than prayer without effort, they adopt the false belief that effort without prayer is as good as effort with prayer. True, they have a loose faith that God promotes and blesses all good movements in general, but no clear, well-defined, all-conquering, yet submissive faith, that wrestles with the Lord as did Jacob, and would not let him go until he had obtained the blessing which he earnestly desired and expected. It is not to be denied but some good may result from their efforts. Perhaps, by the unsolicited blessing of the Lord, they may succeed, in some instances, in drawing living water from the rocks, yet it is to be feared that they themselves will never be permitted to reach the heavenly Canaan. In our business pursuits, are we not apt to forget, that whether or not we may labor assiduously, God may or may not make us to prosper? If the tradesman succeeds, he congratulates himself; it is the result of his well-directed energy, his assiduity, prudence, and business tact. It is not to be doubted but these qualities are the more immediate causes of his success. But he forgets that for all these characteristics he is indebted to a higher power, and that beneath all his strenuous efforts God, unseen in his movements, has been working in his behalf, presenting to him favorable opportunities, warding off threatening dangers and disasters, causing the tradesman unconsciously to provide for future difficulties long before they were seen by human eye, preventing sickness, giving him enthusiasm, guiding his decisions rightly, and in many ways which we cannot discern, pouring prosperity in upon him. But the thriving business man takes the credit to himself. "'T is I who have done it." If his next door neighbor is unsuccessful, we attribute it to his inattention, to his extravagance, to the want of some or all of those requisites essential to success. These undoubtedly may be the immediate causes of his failure. But why not believe, as in the other instance, that God underneath is operating, and through these channels making this one unsuccessful, for as wise reasons as induced him to give prosperity to the others? It is a difficult matter for us to believe and to feel that God has any thing to do in directing and restraining us. If he comes and burns down our storehouses, blights our crops year after year, shipwrecks our vessels and empties our treasures into the sea, or snatches away a bright and beloved child, we then have some feeble misgivings of a visitation from Providence. God must come in the lightning, in the hurricane, or in the sweeping conflagration, or we do not recognize him. Just as if, by a tiny thread, by silent and unseen causes, he could not turn us hither and thither whithersoever he would have us go. We are apt to think that if God acts, he must work miraculously; whatever happens according to the course of nature we say is not of God. We consider the laws of nature fixed, and that God has nothing to do with what is brought about naturally. Why, he usually operates in this way. Had God nothing to do with David's slaying Goliah? Yet that occurred as naturally as our meeting here to-day. The armies of the Philistines and the Israelites were in the battle-field; David was tending his father's sheep at home; his father sent him to carry some articles of food to his brethren who were in the army; when he reached his brethren, he saw this Philistine champion, who had presented himself for forty days, morning and evening, challenging the hosts of Israel to send him a man to fight with him, and that army should be regarded victorious whose champion was successful. This way of deciding contests was quite common among the Greeks and Romans. David's patriotism and piety was aroused, and he went out to encounter Goliah. Saul equipped him in military costume, put on him his own armor, his helmet, his coat of mail, and gave him his sword; but it did not fit David, neither was he accustomed to using the sword, and naturally enough he laid it all aside and preferred his stone and sling. Had he fought with the sword, he would have been compelled to fight in close combat, and his antagonist being an experienced warrior, would have had the decided advantage; but with the sling he could throw at him from a distance, and David was skillful in the use of the sling. It is said that slingers can throw a stone within a hair's breadth, without missing, and with the force of a bullet. There is nothing wonderful in David's striking Goliah—it would have been wonderful if he had not struck him; and when prostrated, he ran up and beheaded him. It was all a simple and natural occurrence, yet who will deny that God was in it? Who dare deny but God had to do with the wreck of the Arctic and the loss of those three hundred lives? Still, the whole occurrence can be accounted for on natural principles. It is no proof that God is *not* in an action, because we can trace the more immediate causes. Deeper down in the nature of things than we are permitted to look, are the beginnings of God's movements. We see only the last cause, not the first, and mistake the last for the first. Were you sick, and prayed for restoration, God would most likely restore you in the natural way; he would place around you conditions favorable to recovery. But when recovered, would you confine your gratitude to the physician only? Yes, we are dependent upon God for every thing, both great and small.

But do you say, If God is everything, must the creature fold his arms and remain passive, expecting every good without any effort? By no means. God frequently repeats the injunction, that we must labor, must be diligent, must exercise all the faculties he has given us—our reason, our prudence, our invention—that whatsoever our hands find to do, we must do with all our might. We should be just as intent in seeking good as if we supposed we could obtain it without divine assistance, yet entertaining as the fundamental idea, that every blessing is of God. These are the two distinct features of the true idea of dependence upon the Supreme Power. Together they form one complete and glorious unit—the beautiful idea of faith taught in the Bible.

Again, though we are strong in the belief that God disposes of all our individual affairs according to his own good pleasure, if, by imprudence, dishonesty, or by the influence of any evil propensity or improper mode of acting, we fall into trouble and adversity, we are not to charge it upon God, but we are to take the blame to ourselves, and heartily repent of our sin and folly. But, on the other hand, if prosperity dawns upon us, we are never to take the credit to ourselves, but give the praise all to God, just as the Christian chides himself solely for every short coming and inclination to evil, but when in the enjoyment of religion and the realization of the blessedness of a purified heart, gives all the praise to God, reserving not the least credit to himself.

But, says one, "I don't like this idea of attributing all of our good intentions and all our temporal prosperity to God, but if we exhibit any short comings and suffer failures we must take the blame upon ourselves. It's a poor rule that don't work both ways. It does n't accord with human reason." It is but very little, my friends, that the human reason can account for. If human reason is to be the test, pray give us a solution of the humanity and divinity of Christ, of the resurrection, &c. I will tell you what it does accord with; it accords with that which is of higher authority than the human reason—the sentiment existing in every Christian heart, produced there by the operation of the Holy Spirit, the conviction, that if he has anything that makes him to differ from the vilest of the vile, it is all—not a part, as some say, but all—owing to the grace of God, and if guilty of any delinquencies, these are wholly chargeable upon himself. Precisely so does he regard his temporal blessings and afflictions.

One reason why we have so little faith in the superintending care of Providence, is that we come so far short of obeying God's commands. Did we live as God requires, we should have as full confidence that he was directing us in all of our affairs, as if we saw him doing it. God's being invisible need not prove any barrier to our faith in Him. Faith is the glass through which we see him. Obedience keeps the glass bright. Our want of trust in God is the cause of very nearly all of our troubles. Our troubles mostly arise from discontent, anxious solicitude. There is very little absolute pain, bodily torture, such as the cutting or burning of a limb. It all arises from a troubled spirit. We are all bent down with a depressing weight, like Atlas, who was compelled to bear the world on his shoulders. The traces of anxious care are furrowed on every brow. We are constantly fretting lest we shall not obtain the object we are seeking. The rich man fears poverty; the poor, starvation. The sick man is fearful that he may not recover; health stands in dread of unseen sickness and sudden death. We always stand in awe of some huge monster that we imagine lurks in our path a little way ahead of us. We are doing well enough in this present hour, but oh! the morrow, the uncertain future. God tells us to roll our burdens upon him—not a part, and reserve as much as we can bear up under, but to throw off all this depressing weight, trust in him, and rejoice, happy, free, joyous as the birds of the air. Blessed is that man whose trust is in the Lord; contentment is his continual feast. What others consider afflictions and blessings, he regards alike as the welcome dispensations of Him who maketh all things work together for good to them that love him.

It is customary, on the return of this anniversary festival, to notice the special occasions of gratitude that have occurred during the past year. We have already taken so much of your time, that for the present a brief notice must suffice. It has not been twelve months since the cry of desolation and famine was heard in pitiable notes throughout the length and breadth of the country. Honest Industry went begging employment, and the grim monster *Want* knocked at many a door where before he had been a stranger. The pauper and the inebriate were not its only victims, but helpless children, respectable widows, sons and daughters of American born citizens, upon whose characters rested the stain of no foul disgrace, were found lifeless, famished, and frozen, on the highway and in the miserable hut. God had restrained somewhat the fullness of his bounty, and millions of his pensioners were threatened, and many experienced actual starvation. Temptation and adversity brought to light the hidden dishonesty which had lurked in the hearts of men in whom the public had formerly reposed the utmost confidence. One year ago to-day there went up from the pulpits of the land one universal prayer of thanksgiving, that God had taught us the folly of this hot and unholy pursuit after riches; that he had humbled the pride of bankrupt merchants, and had taught us, in tones that some could hear, the unreliable nature of earthly treasures. But now the scene is changed. You have been gathering the fruits of one of the most bounteous years that God has ever bestowed upon you. Your granaries are full; your business is prosperous; and with a cheerful heart and a strong hand you feel fully equipped to grapple with the severities of the approaching Winter. To-day, as with generous hearts you assemble around the festive board, cast one thought upon the suffering millions who would rejoice to feed on the crumbs that fall from your table, and thank God, that as a people and a church, he has blessed us so abundantly with these unmerited favors. He has graciously prevented most of us from dwelling in the princely palaces of the rich, while he has lifted you all out of the vale of distressing and pinching poverty, giving you to enjoy that glorious mean for which Agar prayed. The many peculiar advantages of your situation, the privileges of the sanctuary, your extensive means of education, your society, the refinement and pleasures you enjoy, should elicit emotions of genuine thanksgiving. The afflictive stroke of Providence may have fallen heavily upon some of you, but perhaps you can recognize in it the hand of God, drawing you in love nearer to himself. It is difficult to realize that a blessing is wrapped up in every painful dispensation. But in the next world we shall clearly see how all our hardships have worked together for our good. Then shall we rejoice that we were obliged to pass through a dark and stormy pilgrimage, knowing that the ills of the flesh have wrought out for us a far more exceeding and eternal weight of glory. Just as in the picture the deep spots of shadow, from contrast, make the light more prominent, so the trials of this present life will render brighter the felicities of heavenly joys. We are not without occasions of a public and national character for which to be grateful. The progressive steps that have been taken in several States in the temperance reform give good reason to hope that the aggravated evils of intemperance will ere long have passed away. We could wish that the recent election had given us ground to hope for the passage of a Prohibitory Law in our own State before the close of another session. But this is reserved to a day, we trust not far distant. The Christian has great reason for thankfulness that the general movements of the age, the rapid increase of our educational institutions, the agitation of the great question of personal freedom, the opening of the broad and fertile lands of the West, and probably the present war in the East, are all paving the way for a wider spread of the Gospel, for the upbuilding of God's kingdom on the earth; for which object let us labor and pray, with firm reliance on God, until with us the battle is ended, the victory is won, through our Lord Jesus Christ.

ABOUT GOSSIP.

A curious idea prevails, pretty generally, that it is not altogether right for people to indulge in a little quiet gossip about the character, the actions, or even the business of their acquaintances or neighbors, as though we are not all fully entitled to enjoy the right of free speech! The monstrosity of such an idea is so great as to excite contempt so strong that language cannot be found to express the virtuous indignation that swells many bosoms. A pretty idea, truly! And yet it is a singular fact, that such an idea has always prevailed; but the belief has not been of any great moment, inasmuch as it is so rarely reduced to practice. Occasionally some one will be so strangely eccentric as even to rebuke the indulgence of a little cosy gossip about the private character and affairs of people. It is refreshing to know that such rebukes do not have a lasting effect, and generally cause a further unlimbering of the tongue, as a practical manifestation of the most absolute independence. The anti-gossip theory sounds very nice, but the idea is simply preposterous that such a plan could be practically carried into effect. Why, the wheels of society would at once be "scotched," tea-parties would be deprived of their cream, club-rooms of their soothing cigars, and stores of their attractive pop-corn; women would sink into their family circle, and men would find themselves forced to be content to spend their evenings at home. Not gossip, indeed! What an absurdity in this enlightened and independent age!

Mrs. A. appears in costly garments; certainly Mrs. B. has a right to whisper to her neighbor that she is ruinously extravagant, and that her husband owes for them, and cannot pay his debts, though probably she only surmises such to be the fact. Mrs. C. gives a large party; of course Mrs. D. did not wish to be invited, and she declaims against such entertainments from a sense of duty, and not because she was neglected. Mrs. E.'s husband keeps his carriage; and certainly Mrs. F. is privileged in circulating the fact that his great-grandfather worked for his daily bread. Mrs. L. has moved into a new house, thoughtless of the fact that Mrs. J. is confiding to others a startling narration of the days when her needle was her only support. Mrs. K. wears that old-fashioned bonnet, which Mrs. L. is confident is caused by meanness. Mrs. M. has got that old cloak, which Mrs. N. is sure her grandmother wore. But Mrs. O. has made the discovery of the season, and that is that Mrs. P. and her husband quarrel like cats and dogs; she passed their house and heard them, not knowing that the wife was in the best of humor at the time, trying to get a favorite book from her husband. But we will not continue the record of those little eccentricities of society; enough is here stated for illustration. We feel bound to say, that men are not in the slightest degree exempt from the same peculiarities of the other sex. There is often this difference: the ready words of men sometimes directly undermine the credit of neighbors, and weaken what otherwise would stand firm and weather a business storm.

Probably there are those who would consider the above nothing better than slander on the part of persons indulging in such remarks. They are mistaken; it is only a skeleton of ordinary gossip, frequently uttered to while away time, and not always with a deliberate intention to do serious injury to others. Perhaps at times a spice of envy may be at the bottom of some of the remarks. But then it is so natural to gossip, that any attempt to restrain the custom might be treat ed as an infringement upon the "manners and customs" of society. [Nantucket Inq.

GOOD SECURITY.

"Uncle Oliver," said the pastor of a country church to an elderly farmer of his flock, "I wish you would carry a load of wood to old Mrs. W., the widow of our Christian brother who lived so long just beyond you on the road to D——."

"I will try to do it," said the farmer, "but to whom shall I look for the pay?"

"Read," said the pastor, "when you first go home, the first three verses of the forty-first Psalm, and then if you want any better security for payment, call on me."

It was but a few days after, that the old gentleman met his pastor, and said, "I like that security you mentioned, and have no fear that it will fail me in the time of need; for my heart so felt the assurance, when reading it, that I could scarce close my eyes that night."

Thus it is often found that the "word of truth" is most precious, when with childlike trust it is received into the mind and heart. We do not need to wait for the time in which the promise is to be fulfilled, for the "earnest" is given by the Holy Spirit, when the Word is taken as a practical truth, and obeyed cheerfully.

MORAL GOVERNMENT AS AFFECTED BY CHRIST'S MEDIATION.

We have thought that one or two articles upon the government of the world as modified by the mediation of Christ, might be seasonable, at the present juncture. It is a subject upon which there is great diversity of opinion, while there are not a few who have no well-settled notions about it. Whether we can contribute any thing to clear the views of those who are befogged, must be left to the judgment of others; we shall be content when we have done what we can.

Justification is certainly a different thing, under the Gospel, from what it is under the Law. By the Law, the whole world stands guilty before God, sinners being incapacitated, both by the power of indwelling corruption and their transgressions already past, from rendering such a righteousness as it requires. Therefore, they can never be justified by the deeds of the Law. This is not only the doctrine of the New Testament; it was taught by them of old time. "Enter not into judgment with thy servant; for in thy sight shall no man living be justified." (Ps. 143: 2.) "If thou, Lord, shouldest mark iniquities, O Lord, who shall stand?" (Ps. 130: 3.)

By the Gospel of Christ, sinners are not incapacitated from attaining justification; for such is the manifold wisdom of God, that he has a way in which he can justify the *ungodly*. (Rom. 4: 5). By this new and living way, justification is bestowed as a gratuity, not as a reward in consideration for services rendered. (Rom. 3: 24, 4: 4, 11: 6, Tit. 3: 7.) Default of such services does not, therefore, stand in the way. The simple exercise of faith, without the works of the law, is all that is necessary to make the sinner just before God. (Rom. 3: 28.) This also was the doctrine of old time; for the prophet says, "The just shall live by faith," (Heb. 2: 4)—a passage which Paul cites to prove that he preached no new doctrine on this subject. (See Rom. 1: 17, Gal. 3: 11, Heb. 10: 38.)

Now since, according to the Law, it is required of a man that he perform good works in order to his justification, while, according to the Gospel, no such requirement is made of him, but justification is bestowed as a gratuity; since, according to the former scheme, man cannot receive this blessing till he has earned it by his own merits, while, according to the latter scheme, he receives it as the free gift of God, antecedent to any merit or desert of his own; is it not clear that, in this one respect at all events, the moral government of the world is modified by the mediation of Christ?

To show more clearly the modifying influence, in this respect, let it be remarked that, by the Law, man cannot be justified till he has finished his probation; by the Gospel, on the contrary, he is justified the very moment he exercises faith in the Lord Jesus Christ. Adam never stood before God *justified*; when he fell, he fell not from a state of *justification*. He would have been justified, had he remained steadfast to the end of the time fixed for his probation; and being once justified, he could not fall. But the believer stands before God *justified*—stands in that state from which there is no drawing back unto perdition, (Heb. 11: 39)—consequently, stands just where Adam would have stood, if he had proved faithful to the end of his state of trial.

According to this modification brought about by the mediation of Christ, God does not *wait* to see whether mankind will keep the Law or not; it was settled in Adam that they would not. He *waits* for a very different purpose, namely, that from among the condemned children of Adam he may separate a people for himself, and accomplish in them, and upon them, his purposes of grace.

Thus it appears that the mediation of Jesus Christ operates to bring about a stay or postponement of the execution of the penalty which sinners have incurred by transgression, in order that "the remnant according to the election of grace" may be brought to "know the only true God and Jesus the Christ whom he has sent." But for this, the penalty of the Law must have been executed immediately, as soon as it was determined that man was not true to his Creator. T. B. B.

Rectors and Curates in England.—A brisk quarrel has lately sprung up in Oldham, England, between a rector and his curate. The Incumbent is Rev. Thomas Lowe; the Curate, Rev. Mr. Parsons. Mr. Lowe is an absentee clergyman, in consequence of ill health, and so all the labor of the parish of St. Mary's fell upon the unhappy Curate, who, like the excellent Vicar of Wakefield, has his own troubles with his superior. Rev. Mr. Lowe, it seems, ordered Rev. Mr. Parsons to refrain from appropriating any of the emoluments arising from the Church, "whether as fees, silks, hat-bands, gloves, or from any other source." The Curate replies that he had only pocketed such things as would not have been given at all if the Rector was to have them. He claims that he received legally a regular fee of twenty shillings for preaching a charity sermon, and says that if Rev. Mr. Lowe insists upon his restitution of this money, he (the Curate,) "shall feel obliged to expose such abuse and misappropriation of it through the press." Preaching on a week-day, says our Curate, is an extra duty, *for which there is an extra fee*. The entire correspondence appears in the London papers. Minimum pay and the maximum of labor appears to be the fate of curates nowadays, even as it was in Goldsmith's time.

THE INSUFFICIENCY OF PHARISAIC RELIGION TO SAVE.

"For I say unto you, that except your righteousness shall exceed the righteousness of the Scribes and Pharisees, ye shall in no case enter into the kingdom of heaven." Matt. 5: 20.

The Scribes were learned men among the Jews, and therefore men of high standing and influence. The Pharisees were a religious sect, who had separated themselves from the common people, and made great professions of superior holiness. This class of religionists, in the days of our Saviour, were numerous, wealthy, and influential. Some of their doctrines were true, but their lives were corrupt. Jesus, who "knew what was in man," exposed their wickedness and hypocrisy, and plainly told the people that they must have a religion of a different kind, in order to be saved. Though more than eighteen hundred years have passed away since the sermon on the mount was delivered, yet even now there are men among us who exhibit the characteristics of the Pharisees. Let us for a few moments contemplate some of these.

1st. *They divided the precepts of the law of God into lesser and greater commandments.* All the precepts of the Decalogue were alike uttered by God on Sinai, all of them were engraved on tables of stone, and all are alike binding upon men. And he who feels as he ought, will have respect unto all of them. The Pharisees seemed to think that the least one might be broken without much if any guilt. And even now there are not a few who seem to think that some of the commandments of God, and some of the institutions of Christ, are of so little importance, that little or no guilt attaches to their non-observance, while it would be very wicked, in their view, to violate the others. But Jesus taught that "whosoever should break one of these least commandments, and teach men so, should be of no esteem in the kingdom of heaven.

2d. *The Pharisees had a great regard for the traditions of the elders* These, they contended, had come down from Moses, and were as strictly observed by them as the real commandments of God, and more so, inasmuch as they made void the fifth commandment by their tradition. So now, many rites are scrupulously observed by religious people, which God never commanded, while others, which he has commanded, are not attended to at all by them. And in some instances, some thing else is substituted for what he has required, and called obedience! We have an instance of this in the observance of the first day of the week, instead of the seventh, 'the Sabbath of the Lord our God." True, it is urged that something a little different from the letter of the law will do just as well, or even better, but God hath said, "To obey is better than sacrifice."

3d. *The religion of the Pharisees was outward and showy.* "They made long prayers" in public places; they gave alms, as was supposed, very liberally, and fasted often. Yet their chief design in all this was not to please and glorify God, but "to be seen of men," and obtain praise from them. "They had their reward." Men called them pious and benevolent, but they had no reward from Heaven. For "God abhors the sacrifice, where the heart is not found." Doubtless there are many, even now, whose great object in their religious acts, prayers, and gifts to the cause of benevolence, is not a regard for the glory of God, and the wants of suffering humanity, but a reputation for piety and benevolence among men. If this motive were taken away, these would fall into irreligion, and their goods now bestowed upon objects of charity would be withheld. The Pharisees were "like whited sepulchres, beautiful without, but within full of dead men's bones and all uncleanness!" How needful it is to examine ourselves, and ascertain whether our motives are pure, for without love we are nothing. God regards the intention of the soul, and if this be not right, we shall be found wanting.

4th. *They desired marks of distinction, and titles of honor, from men.* Said Jesus, "They love the uppermost places at feasts, and the chief seats in the synagogues, and to be called of men Rabbi." "The word Rabbi," says Mr. Barnes, "literally means great." It was a title given to eminent teachers among the Jews. The Pharisees were gratified with such titles, and wished them given to them to denote their superiority. There are professed Christian men now, plenty of them, who, not contented with equality with their brethren, wish to have the preëminence in the church. And men now love to give and receive titles of distinction. But Jesus taught his disciples to be humble. Said he, "He that is greatest among you shall be your servant. Be not ye called Rabbi, for one is your Master, even Christ, and all ye are brethren."

5th. *The Pharisees hindered the people from embracing Christ and salvation.* Their doctrines were so corrupt, and they were so deceptive, and yet so influential, that they virtually shut up the kingdom of heaven against men. So now great numbers of professed Christians, by their erroneous doctrines, but more especially by their unholy lives, misrepresent the pure religion of Jesus. By their dishonesty and worldly-mindedness; by being slaves to appetites, passions, and the fashions of the world, they actually fail of obtaining salvation themselves, and by their influence, hinder others from being saved.

6th. *The Pharisees, while professing great holiness, wronged the poor.* Said Jesus to them: "Ye devour widows' houses, and for a pretence make long prayers." Says Mr. Barnes, "They induced widows and poor people to commit the management of their property to them as guardians and executors, and then took advantage of them and defrauded them." So even now there are those who profess to have attained to entire sanctification, who "grind the faces of the poor," who "oppress the hireling in his wages," and regard not the rights of the widow and the fatherless. Said Christ of such, they "shall receive the greater damnation."

7th. *They were more zealous to proselyte men to their views of religion, than to persuade them to be good.* Said Jesus to them, "Ye compass sea and land to make one proselyte, and when he is made, ye make him two fold more the child of hell than yourselves." There are those among us, too, who make great efforts to persuade men to embrace their peculiar doctrines, and sometimes those doctrines are true; but having proselyted them to their faith, leave them without further religious instructions or holy influences, so that they become worse than before, and sometimes worse than those who proselyted them.

8th. *They were scrupulous in matters of comparatively small importance, while they neglected entirely those of very great importance.* They "paid tithes of mint, anise, and cummin, but omitted the weightier matters of the law, judgment, mercy, and faith." There are those now who are very punctilious about outward observances, who at the same time are faulty because they do not "do justly, love mercy, walk humbly with God," and place entire confidence in him.

9th. *While they professedly admired the religion of the ancient prophets, they imitated those who persecuted and slew them!* The Saviour said to them, "Ye build the tombs of the prophets, and garnish the sepulchres of the righteous Wherefore, ye be witness to yourselves that ye are the children of them that killed the prophets." At the present time, many admire those who have lived godly and self-denying lives in past ages, who at the same time hate the doctrine they preached, and despise and persecute those in this age who are faithful enough now to walk in the footsteps of these ancient worthies! Should Christ come again, as he did before, would he not be despised and rejected by professed Christian people, and shut out of their houses of worship?

And now, having examined some of the characteristics of Pharisaic religion, and seen how much it is at variance with the pure, humble, lovely religion of Jesus, let us examine our lives, and the motives of our hearts, and see whether or no our righteousness exceeds that of the Scribes and Pharisees. A showy religion may serve a purpose here for a little while, but "without holiness no man shall see the Lord." Let us then seek earnestly to become "pure in heart." C. A. O.

NEWSPAPER ACCOUNTS.

Newspaper accounts furnish an interesting subject for study. There are some men—perhaps one in a hundred—who consider such accounts sacred, and pay them as promptly as they pay notes at the bank. Such men are genuine patrons, and the publisher experiences a sensation of pleasure every time he comes across their names. There are others—perhaps one in ten—who pay their newspaper accounts the first time they are asked for the money, but never think of forwarding it to the office, or handing it to a local agent, unasked. It does not occur to them, that when they subscribe for a paper they promise to *send* the pay for it just as much as the publisher promises to *send* them the paper, and that a neglect to *send* the pay is as culpable on their part as a neglect to send the paper would be on the part of the publisher. There are others—probably one in two on ordinary subscription lists—who consider their newspaper accounts due only when they can pay them without the least inconvenience, in some instances once a year, and in others once in five years, but seldom until they have been asked several times for the money. And yet this class of persons are for the most part prompt in meeting ordinary engagements; they would be mortified beyond measure to have a note protested, and would consider the charge of slackness a slander. What makes this difference in their sense of obligation to meet different accounts? Perhaps they think the newspaper is not worth what it costs, and that paying for it at all is a sort of charity. If so, it would be much more manly to discontinue their subscriptions at once, and not create expectations only to disappoint them. Or, perhaps they think that newspapers are supported by such a large number of persons, that the delinquency of a single subscriber will scarcely be felt. If this reason is a good one for delinquency on the part of one subscriber, it is good for all; and before professedly conscientious persons act upon it, they would do well to consider what would be the consequence if all were to act upon it. Most newspapers, especially denominational papers, have to calculate closely, and use the utmost economy, to make ends meet from year to year; and any neglect on the part of subscribers to meet the expectations created by their subscriptions, adds so much to the burden of those whose duty it is to see that such papers are published. A few unpaid subscriptions would be no great burden for a publisher to bear, but when such subscriptions are counted by hundreds, and the dues from single individuals amount to five or ten dollars each, they become often very onerous.

We have lately been making out bills against those who owe for the *Sabbath Recorder*, and the facts brought before us while engaged in this work naturally suggest such thoughts as the foregoing. Perhaps an illustration would be useful, and we will state how we found matters at one post-office, which will serve as an example of many others. At that office we had fifty-four subscribers, of whom ten had paid for volume 12, twenty-five owed $2 each for volume 12, three owed $4 each, one $5, one $6, one $10, and one $12. The 12th volume, be it understood, is now about three-quarters completed, and more than three-quarters of the expense of publishing the paper for the volume has already been paid. If our receipts from the office in question had come in only fast enough to meet the expense of papers sent, there would have been due us at that place just $27; instead of which, our dues there footed up $97 50. And yet this office is in an old and rich country, and we are told that nearly every subscriber there is "as good as the bank" for the amount of his indebtedness. Such are newspaper accounts.

RELEASE OF PARDON DAVIS.

The unexpected news of the release of our brother Pardon Davis from his almost hopeless imprisonment, will cause a thrill of joy throughout the entire denomination; for, although there may have been some differences of opinion in regard to the expediency or propriety of Bro. Davis' course which caused his incarceration, there certainly was no one, professing to be a follower of Christ, who could withhold sympathy for his sufferings, or earnest prayer for his speedy deliverence from his worse than Egyptian bondage. And now that deliverence has come, as we firmly believe, in answer to prayer, ought we not "to thank God and take courage." And ought we not, also, to consider, that if the sufferings and bonds of Bro. Davis, for a few years only, were sufficient to call out the sympathy and prayers of not only the church of which he was a member, but of the whole denomination, much more ought their earnest, agonizing prayers, to be raised for our brothers and sisters "whom *Satan* hath bound, lo, these many years," and who, if not delivered by the special interposition of God's saving power, must not only suffer twenty years, but an eternity of imprisonment in the regions of endless misery and despair? May this signal evidence of answer to prayer, in the deliverance of Bro. Davis, lead us to pray always in faith, and much more abundantly.

Lay Brother.

THE REVIVAL AT SOUTHAMPTON.

In looking over the *Recorder* of Feb. 21st, I find a notice of a revival at Southampton, Ill. In reading it, my heart swells, and my eyes fill with tears. A little more than one year ago, I was with the church at that place. There I found near relatives and old acquaintances, as well as strangers whom I had never before seen. I found them happily located in a beautiful country. But the church was in a low state, and there were some things connected with the society, which were perplexing and disheartening. Other things, however, gave promise of better times coming. It seemed to me that the great thing wanting at Southampton was a revival of religion—one that would reduce into place dislocations! For this I have earnestly prayed. And now that it has come, I sincerely bless my God! O may it be thorough—universal! May my dear aged relatives and kindred, who have gone to be buried on that beautiful prairie, that their graves may be surrounded by the graves of their children and grand-children, be permitted, in Heaven's mercy, to witness, as the closing scene of life, a flourishing and united church in the new home of their choice, that they may have this testimony "that they please God!" My heart sings for joy, and mine eyes overflow with tears!

N. V. H.

Union Theological Seminary.—In this excellent Institution there are now 96 students—6 resident licentiates, 19 seniors, 31 of the middle class, and 40 of the junior class. The whole number of Alumni is 408; deceased, 29; number now living, 479. The Faculty consists of Rev. Edward Robinson, D. D., LL. D., Professor of Biblical Literature; Rev. Thomas H. Skinner, D. D., Professor of Sacred Rhetoric, Pastoral Theology and Church Government; Rev. Henry B. Smith, D. D., Professor of Systematic Theology and Librarian; Rev. Roswell D. Hitchcock, D. D., Professor of Church History; and Rev. Chas. S. Dunning, Instructor in Hebrew and the kindred Languages.

The edifice is at No. 9 University Place, near Washington-square, New York. It has recently been greatly enlarged, and now contains a chapel, library, four lecture rooms, and convenient private rooms and dormitories for about eighty students. The rooms have been furnished with carpets, chairs, tables, beds and bedding, chiefly through the liberality of one of the friends of the Seminary. The students have a boarding association in the Seminary, in which the average price of board has never been more than $2 a week, and is usually less. Washing is done at an expense not exceeding 50 cents a dozen. The cost of fuel need not exceed $5 a year for each person. Gas is introduced into all the rooms. The library of the Seminary contains about 22,000 volumes, chiefly rare and valuable works; about three-fourths of which are from the library of Leander Van Ess. A large number of volumes have been added during the present year.

Slavery and the Church.—Anthony Burns, the fugitive slave, whose return to his master caused so much excitement, trouble, and governmental expense in Boston, has since been purchased by a subscription made up at the North, and set free. He was, it seems, a religious man, and a member of a church at a place called Union, Fauquier Co., Virginia. On becoming free, he went to Oberlin College, Ohio, to educate himself for the ministry, and wrote back to Virginia to his old pastor for a letter of dismission from the church. In answer to this, he received a preamble and resolution, unanimously adopted by the congregation, excommunicating him from the communion and fellowship of the church for having "absconded from the service of his master, and refused to return voluntarily, thereby disobeying both the laws of God and man."

A Veteran Candidate.—Among the candidates for the Chaplaincy at Washington, is a Rev. Daniel Waldo, nominated by General Granger, of the Syracuse District, who presents the following statement of his claims to the kindly consideration of the House:—

"The Rev. gentleman is a clergyman of the Congregational Church. He is now in his 94th year, and has been a minister of that church without spot or blemish for more than 70 years. He is yet erect, cheerful, and active, and quite gifted in his profession. I have known him personally from my early childhood. Mr. Waldo was taken prisoner by the British on York Island, and confined with several hundred more in the far-famed and fatal Sugar-house Prison in the city of New York, where he endured sufferings and cruelties equaled only by those on board the Jersey prison ship. I hope the House will take this occasion to show its grateful respect for this venerable and goodly relic of the times that tried men's souls—this almost only last remaining soldier of the war of the Revolution."

A Prosperous Church.—The *Puritan Recorder* says that Mount Vernon Church, Boston, consisting of 47 members, was organized June 1, 1842, and the Rev. Edward N. Kirk, D. D., their present pastor, was installed the same day. Since that time there have been added to the church 1,032 members; 663 from other churches, and 369 by profession. There have been dismissed, at their own request, 310; died 69, and excommunicated 8, leaving the present number of members 692. During the first year and a half, while they worshiped in the Masonic Temple, no record was kept of their charitable contributions. But since the dedication of their new meeting house, in Ashburton Place, on the 4th of January, 1844, to January 1, 1856, a period of 12 years, the church and society have contributed to the various benevolent societies and other charitable objects of the day $98,127 53, in addition to the payment of $60,000 for the erection of their house, and $51,000 current expenses of public worship, making a total of $209,227 53.

Liberality to Colored People.—A Baltimore correspondent of the *Christian Chronicle* says that William Crane, known for forty years as an ardent, liberal, and wise friend of the black man, has just got into operation a plan admirably adapted to promote the desire of his heart. He has erected, in a very central spot, a noble edifice, at a cost of about $20,000, exclusively for the benefit of the colored population, of which there are 30,000 in Baltimore. This large edifice contains a place of worship capable of holding seven or eight hundred persons, several large school rooms, and halls for lectures, etc., while the first floor is rented out for stores. A pastor, a principal of the school, and a female teacher, are all at work, and, so far as I could learn, are each very superior persons in their way. Some of the classes were examined in my presence, in grammar, geography, etc., and showed an excellent readiness to learn.

Abyssinia.—A correspondent of the *Record* states, that Dr. Krapf has traversed the whole breadth of Abyssinia, a journey of about 700 English miles, from the shores of the Red Sea to the banks of the Blue River, and quotes the following words from one of his letters:—"All our enemies are removed, and new rulers in Church and State are in power, and manifest a friendly disposition towards us." He makes mention of the King Theodosius, who is a most remarkable person; he has forbidden slavery and polygamy in Abyssinia; he has ordered all the Mohammedans to embrace the Christian religion within two years, or to leave the country. He means to conquer the Gallas, and make them Christians! He was most kind to Dr. Krapf, and gave him a safe conduct through his country.

A Jewel to put to the Crown.—The late Dr. Payson, when engaged in paying pastoral visits to his spiritual flock, happened one day to enter "the house of mourning," and there he found a disconsolate mother, whose darling child had just been "taken from the evil to come," whom he thus addressed: "Suppose, now, some one was making a beautiful crown for you to wear; and you knew it was for you; and that you was to receive it and wear it as soon as it should be done. Now, if the maker of it were to come, and, in order to make the crown more beautiful and splendid, were to take some of your jewels to put into it, should you be sorrowful and unhappy because they were taken away for a little while, when you knew they were gone to make up your crown."

The Colored People of Ohio.—A delegation of the colored citizens of Cincinnati, consisting of Messrs. John J. Gaines, Peter H. Clark, and William Downs, recently visited Columbus, with a view to confer with members of the General Assembly upon the propriety of the passage of a law to permit the colored people to elect the directors of the schools supported by themselves and attended by their children. The delegates were well received and listened to indulgently by gentlemen from various parts of the State, and the prospect is that the petition which they bore, signed by a very large number of the most intelligent colored people of Cincinnati, and many white citizens of respectability, will be responded to by the legislation desired.

A Washington letter in the Baltimore Sun contains the following paragraph:—"It is worthy of note, that in the United States there are 3,800,000 Roman Catholics, whilst in the Senate and House of Representatives there is but one member each who even make a profession of that faith. In the Cabinet, the Supreme Court of the United States, the Senate and the House, there is not a single foreign-born citizen. Surely, Americans are ruling America."

Two hundred clergymen, in the cities of New York and Brooklyn, have subscribed each one share ($10) to the United States Inebriate Asylum.

RELIGIOUS INTELLIGENCE.

The committee consisting of Messrs. J. W. Parker, William J. Hubbard, and Asa D. Smith, appointed to award a premium of $500 (offered by the late Rev. Thomas A. Merrill, D. D., Middlebury, Vt.,) to the author of the best treatise on "The Right Way, or the Gospel applied to the Intercourse of Individuals and Nations," have awarded the said premium to the author of the manuscript marked No. 6, who, on the opening of the sealed envelop containing his name, was found to be the Rev. Joseph A. Collier, Pastor of the Reformed Dutch Church of Geneva, N. Y. This volume of three or four hundred pages is now in the press, and will be issued in a few weeks by the American Tract Society, the donor having provided, in addition to the premium, the sum requisite for perpetuating its circulation by that Society.

Rakotona Radama, Prince of Madagascar, was converted to Christianity in 1846, and has ever continued a zealous and consistent Christian, amid the fiercest persecutions. Being an only son of the Queen, and heir apparent, he is able to do much to prevent the outbreaking of his mother's hatred against Christians, though he cannot abolish the law forbidding the people to embrace the Christian religion.

A correspondent of the *N. Y. Observer* says: "Outporings of the Spirit have been enjoyed recently in Fayetteville, N. Y. Upwards of fifty in the Presbyterian Congregation have expressed hope—of this number thirty-nine at the last communion season, a few weeks since, made a public profession of religion, twelve receiving the rite of adult Baptism. Some of the young men converted now have the ministry in view."

A great convention of Irish Romanists has been held at Buffalo, under the auspices of Bishop Hughes, to promote the settlement of emigrants from Ireland in separate districts of country in the West or in Canada, that they may thus maintain their religion and control the education of their children. The practical difficulty in the way is the impossibility of making such separate communities of Irish papists prosper.

At New Orleans a lady who owns twenty slaves that she feels desirous of emancipating, applied to the First District Court for permission to set them free and allow them to remain in the State. The jury in the case could not agree, thus virtually refusing to comply with the petition. The idea of the jurors was that there was too much of that sort of population now, and that they should be removed out of the State.

It has been stated in several of the religious papers that the Rev. Dr. Patton, of New York, has undertaken a temporary agency to raise twenty thousand dollars for the erection of churches in Kansas. This statement is true, as far as it goes, but it omits an important item. Dr. Patton has undertaken the work *gratuitously*, from love to the cause.

A Boston paper says that the Park Street Society recently presented to its pastor, the Rev. A. L. Stone, a purse of $1000. This is a generous tribute to worth of intellect and heart. Mr. Stone enjoys an enviable and merited popularity, both in the pulpit and parish.

The Hempstead (L. I.) Enquirer says that a party of youths made their tour of New Year's calls in that village, headed by a young man of 96 years of age, Rev. Zachariah Greene, accompanied by his junior, Mr. John Bedell of 84. The united ages of *the six* were a little over 400 years.

Rev. D. C. Lansing, D. D., lately preached in Brooklyn a sermon commemorative of the fiftieth year of his ministry. Dr. Lansing has passed through *more than sixty revivals of religion*, been instrumental in erecting eleven churches, and various seats of learning.

The Oriental *Christian Spectator* records the fact of the ordination, as a minister of the Church of England in India, of the first Sikh who has sought the Christian ministry. His name is Doad Singh, and he has been for about nine years a convert.

The Richmond *Enquirer* advocates the passage of a law by the Legislature of Virginia, which shall prevent Northern men, residing in that State, from writing letters to their friends, or to newspapers, exposing the vices of slavery.

At Corning, N. Y., about fifty persons have professed hope in Christ. One of the physicians of the place was among the anxious, calling aloud for mercy; also one of the hotel keepers—he has resolved to abandon the sale of liquors.

The *Watchman* states that a work of grace is in progress in South Hampton, N. H. A number of conversions have occurred in the Sabbath-school, and also among heads of families.

During last year, in Silesia, 811 Roman Catholics enrolled their names on the Protestant registers. A similar increase of Protestants in that province has been going on for years past.

Dr. Brown and wife, missionaries from India, in connection with the Baptist Missionary Union, have returned to this country, and are now in Philadelphia remaining for the Winter.

Geology and the Bible.—Six articles on this subject have come to hand within a few days; among which is one in review of the new theory of "Who Knows?"—another in answer to the questions of L. A. Davis and a "Truth Seeker"—and a third in reply to "J. S." How to dispose of these papers is not yet determined. If we print one, perhaps we ought to print all; but this we are loth to do, for the reason that one of the writers, at least, has fallen into the common fault of discussing, not simply the subject in hand, but also the persons who oppose what he considers to be truth. Probably the *good* articles will not spoil if we take a little time to think of the matter before deciding to reopen the discussion.

Lectures in DeRuyter.—On the 11th of March, a lecture will be delivered in DeRuyter, N. Y., by **Wendell Phillips**, Esq.; subject, "The Lost Arts." On the following day, March 12th, a lecture will be delivered by Rev. John Pierpont. Two such lecturers ought to draw large audiences.

General Intelligence.

Proceedings in Congress last Week.

SECOND-DAY, FEB. 18.

In the SENATE, in answer to a resolution calling for information in regard to the affairs of Kansas Territory, a message was received from the President, transmitting various documents. A debate ensued, which was not concluded.

In the HOUSE OF REPRESENTATIVES, the President was, on motion, requested to furnish a copy of the laws passed by the Legislature of Kansas, and copies of all the Executive proceedings and correspondence of the Governor. A bill was introduced reëstablishing the boundaries of Kansas Territory, and prohibiting Slavery there and in Nebraska, which was referred to the Committee on Territories. Mr. Lane, delegate from Oregon, introduced a bill to enable the people of that Territory to form a State government, preliminary to admission into the Union.

THIRD-DAY, FEB. 19.

In the SENATE, several communications were presented, among which was one from the Secretary of State, in reply to a resolution calling for a copy of the report of the adjudications made by the Board of American Commissioners to Paris to audit and liquidate the spoliation claims of American citizens against France, stating that there is no such report in his Department. The consideration of Kansas affairs was then resumed, and, after considerable debate, during which the actions of Atchison, Gov. Shannon, and others, were discussed quite freely, the subject was postponed until Second-day.

In the HOUSE, the Kansas contested election case occupied attention, on a request from the Committee on Elections to be empowered to send for persons and papers. The matter had not been decided when the House adjourned.

FOURTH-DAY, FEB. 20.

The SENATE ordered the printing of ten thousand copies of the map of Central America, prepared by the United States Court Survey, in consideration of the fact that the existing maps of that country are all of British origin, and incorrect. A bill was reported for the relief of the officers and soldiers of the army who sustained losses by the disaster to the steamship San Francisco The Central American question was taken up, discussed by Senators Butler, Crittenden and Mason, and made the special order for Third-day next; after which the resolution calling for a copy of the journal of the Naval Retiring Board was adopted.

In the HOUSE, a bill was introduced by Mr. Mace to prevent the extension of Slavery in the Territories north of 36° 30′, which caused considerable sensation. A point of order was raised, that no notice had been given of it previously, and the Speaker deciding that it was in order, his decision was appealed from. The matter was not decided when the House resumed the consideration of the request of the committee on Elections for power to send for persons and papers in the Kansas contested election case. The resolution was passed, but finally the vote was reconsidered, and the request for power referred back to the Committee, with instructions to report the grounds on which the request was made.

FIFTH-DAY, FEB. 21.

The SENATE passed the bill providing for the establishment of a Young Men's Library in the District of Columbia. Executive documents relative to Indian disturbances on the Pacific Coast were then received; after which several bills of no real importance were passed; and the Senate adjourned to Second-day.

In the HOUSE, Rev. Daniel Waldo of Syracuse was elected Chaplain. [Mr. Waldo is a Revolutionary soldier, now in the 94th year of his age. He has been a Congregationalist pastor for more than 70 years] George E. Badger and Prof. Felton were appointed Regents of the Smithsonian Institute. Among several internal improvement bills introduced, was one for a railroad and telegraph to the Pacific. The House adjourned to Second-day.

European News.

Two steamers from Liverpool—the Atlantic and the Asia—arrived at New York last Sunday, bringing one week later news from Europe. Unhappily, they bring no tidings of the missing steamship Pacific.

An extraordinary state of excitement seems to have pervaded the public mind of England, just previous to the Atlantic's departure, on the subject of the difficulties with this country, growing out of the Central American question and the enlistment affair. The London and Provincial papers are full of spirited articles on the subject, in which a very natural and wholesome horror is expressed at the bare possibility of any interruption of the friendly relations existing between England and the United States. There had been meetings of the Chambers of Commerce of Manchester and Liverpool, in which the subject was discussed and resolutions passed deprecating war. The excitement does not appear to have grown out of any official developments that had been made by the English Government, or from any messages of an unfriendly nature between Lord Clarendon and Mr. Buchanan. Our Minister was not present at a soirée given by Lady Palmerston, which appears to be the extent of the actual manifestation of angry feelings, if any were entertained by him

The peace negotiations were considered to be in a favorable state, and the war was looked upon as virtually at an end, but still reinforcements were going forward to the Allies in the Crimea as actively as ever, and they had continued the work of demolition in Sevastopol until all the docks had been blown up. The protocol was signed by the Plenipotentiaries of the high contracting Powers at Vienna on the 1st of February. The Congress was to assemble in Paris on the 20th inst.

Queen Victoria had determined on creating a new "Order of Valor," and the "Lords" were discussing with great energy the power of the Crown to create Peers for life, in consequence of the election of Baron Parke to the House of Lords.

The market accounts, both from England and France, are discouraging for Grain and Flour, while for the Cotton Trade they continue to manifest decided firmness, and an upward tendency, at Manchester for Goods and Yarns. The general manufacturing interest of Great Britain and France appears to have felt a sensible revival since the Peace movements on the Continent, and the fall in food.

It is stated that England and France will immediately send two Commissioners to Rio Janeiro to concert measures with Brazil, "for the prevention in future of occurrences such as have recently again rendered some of the finest portions of the east coast of South America a prey to revolutionary license!"

A French company is about to purchase eight large steamers from the British General Steam Navigation Company, with the view of establishing steam lines between France and America.

A dispatch from Constantinople announces that the Sultan has approved the project of internal reform. The project contains nineteen articles, and among these are provisions which render all the Christian subjects of the Porte eligible for public appointments. Separate and mixed tribunals are proposed for the administration of justice equally to Moslem and Christian. All persuasions may hold property on the same tenure. The police of the Empire is to be reorganized and extended. Provision is made for free education. and generally the concessions are of the most ample and liberal kind.

The Republicans.

A National Republican Convention was held last week at Pittsburg, Pa., which adopted a Declaration of Principles, an Address to the People of the United States, a Plan for a National Organization, and agreed to hold another National Convention at Philadelphia on the 17th of June. The following is the Declaration of Principles unanimously adopted:—

We do therefore declare to the people of the United States, as the objects for which we unite in political action—

First—We demand and shall attempt to secure the repeal of all laws which allow of the introduction of Slavery into territories once consecrated to freedom, and will resist, by every Constitutional means, the existence of Slavery in any of the territories of the United States.

Second—We will support by every lawful means our brethren in Kansas, in their constitutional and manly resistance to the usurped authority of their lawless invaders, and will give the full weight of our political power in favor of the immediate admission of Kansas to the Union, as a free, sovereign, independent State.

Third—Believing that the present National Administration has shown itself to be weak and faithless, and that its continuance in power is identified with the progress of slave power to National supremacy, with exclusion of Freedom from the Territories, and with increasing civil discord, it is a leading purpose of our organization to resist and overthrow it.

Monster Sleighing Parties.

On the 12th of February a party of some 100 double and single sleighs, from Clinton, Conn., with banners flying, accompanied by the Clinton Band, under the escort of Captain Ashbel Hull, Marshal of the day for the Clinton division, started on a sleighing party to visit the ancient and respectable town of Guilford. At Madison a party from that town united with those from Clinton, under Dr. R. Webb, Marshal of the Madison division, with music by Old Gents' Band, forming a line of sleighs near 200 in number, and extending over two miles in length. They were met by a party of 40 horsemen from Guilford, in uniform, on white, black and bay chargers, who escorted them into the borough of Guilford, forming a moving line of sleighs, two tier deep, around the Guilford Green, of one-quarter of a mile on each square. They were greeted with the waving of handkerchiefs, the trees and columns of the public and private buildings being dressed with flags, which, with the music of the Clinton and Old Gents' Bands, the jingling of bells, the caprisoned horses, and the moving of flags and banners in the procession, formed a spectacle grand in the extreme. The party consisted of about 1,000 persons, and seemed to say, Beat this who can.

On the 16th of February, this visit was returned by a sleighing party from Guilford and vicinity, consisting of 242 double and single sleighs, and about 1,200 people, accompanied by the New London Band, and about 40 horsemen in uniform from Madison. The costume of the sleighing party seemed of every design from the reign of Queen Anne to the present time. They were met on the town line of Clinton and escorted into the borough by the Clinton Light Horse, in full costume, under G. E. Eliott. The village was decorated for nearly two miles with flags and streamers, the private dwellings were decorated, and a triumphal arch was raised over the town bridge, with a flag bearing the motto "Welcome." The private dwellings were thrown open and the guests made at home. This caravan consisted of sleighs of all descriptions, with flags flying, and mottoes of various devices. A more beautiful day never shone. On arriving at the centre of the village, all the bells rang out a merry peal, and such a spectacle has never been seen in Connecticut—probably never in New England—double rows of sleighs one and a half miles in length, horses ornamented, flags and banners flying. The Clinton and New London bands playing the most spirited National airs, the balconies lined with the beauty of the village—all conspired to render it a Sleighing Party not to be forgotten. [N. Y. Times.

HOUSE OF INDUSTRY.—The new House of Industry at the Five Points was dedicated on Thursday, Feb. 14th, with appropriate religious services. This building is a noble monument of Christian philanthropy and reform. It occupies the site of one of the worst dens of infamy and crime in the vilest section of the city. The House of Industry covers a large plot of ground, is seven stories high, built in a plain but massive style, and with every precaution against fire. The basement room is neatly fitted up for a chapel. The offices of the Association, the apartments of the principal, and a variety of store-rooms, occupy the second and third floors. In the fourth story are school rooms capable of accommodating six hundred children. The upper stories are fitted up in plain style for dormitories. One wing of the building contains work shops and rooms for education in various branches of industry. In another wing are the kitchen, wash rooms, etc. The building is well warmed and ventilated, and is supplied throughout with Croton water. The plan of the Directors is to make it in a great measure self-sustaining, through the industrial labors of those who are sheltered and trained within its walls; but a large sum is yet needed to pay the first cost of the enterprise. The object commends itself to every Christian heart. [Independent.

THE EVILS OF COMPULSORY PRE-PAYMENT OF POSTAGE.—Mr. Pliny Miles delivered a lecture before the Massachusetts Legislature, on the 14th inst., upon the need of postal reform. In the course of his lecture he mentioned a few of the mishaps which have occurred under the law of compulsory pre-payment:

A gentleman in Boston mailed a letter to a person at a distance for a charitable purpose, and in consequence of forgetting to put a stamp on it, it miscarried, and came back to him in the course of four months.

Another gentleman, Mr. Ticknor, mailed a letter with a draft in it of $2,400, and the stamp accidentally fell off in the Post-Office. Of course it "miscarried," and caused him great trouble.

A gentleman in Michigan had a letter lost, in consequence of its not being pre-paid, that contained a witness' testimony in an important lawsuit, and before another copy could be had the witness died, and for want of the testimony he lost the suit, and an estate of thirty thousand dollars.

A lady in Ohio, who was separated from her husband, heard from him by letter, promising to come and live with her if she wished it. She was very anxious to have him, and wrote to inform him. Her servant girl stole the stamp off, the letter went to Washington, was destroyed "by due process of law," and the husband not hearing from his wife, married again. The lady read the marriage in a newspaper, fell on the floor in a fit, was taken up, and died the next day—*murdered by an unjust Post-Office law!*

SUMMARY.

The issue in Kansas is very narrow, but important. President Pierce declares that the people of Kansas must be compelled to obey the laws enacted by the late pretended Legislature. "Law and order" exact this obedience, and the whole power of the Federal Government will be used to sustain "law and order." Gov. Shannon, in his letter to the President of Nov. 28, speaks of the "law and order party" in opposition to the "Free-State party." It is contrary to "law and order" in Kansas for the inhabitants thereof to desire and seek to make it a free State; and unless they can be put down in this attempt, Gov. Shannon tells the President, "there is an end to all practical government, and it becomes a useless formality."

The Hutchinson Brothers, says "Life Illustrated," are going to settle in Minnesota after their long rambles. They, in company with other gentlemen of kindred spirit, have purchase a tract of land on one of the forks of the Crow River, and there they have already founded the town of Hutchinson. The town is to be built and governed partly on the associative principle; that is, some of the buildings are to be owned and used in common, such as the Town Hall or Assembly Rooms, the Library, Reading Room, and others. Mr. Judson J. Hutchinson, with his usual liberality, has presented a fine piano for the Music Hall.

The January receipts of the Milwaukee and Mississippi Railroad are $36,589 against $32,768 same month last year. The following gentlemen were made Directors of the Road for the ensuing 12 months, at the recent annual meeting of the Stockholders at Milwaukee: John Catlin, President, E. D. Holton, S. H. Alden, E. P. Wolcott, George H. Walker, E. D. Clinton, A. E. Ray, A. Finch, Jr., H. L. Dousman, Joseph Goodrich, S. C. Hall, Anson Eldred, Hans Crocker, Nelson Dewey, E. L. Dimick, Brooks Dunwiddie, F. J. Tibbetts.

The agent and principal owner of the Collins Line expresses continued confidence that the steamer Pacific, Capt. Eldridge, now in her 31st day, has put back to Liverpool or Cork in distress, under sail, and he expects to hear of her safety by the Baltic, which steamer was to leave Liverpool on Wednesday, 20th inst. If an accident similar to the one which befell the Atlantic in the Winter of 1850–51, has occurred, a further delay of ten or fifteen days, or even twenty days, in hearing of the Pacific's return, would not be unreasonable.

The Worcester *Spy* states that Paine Aldrich, of that city, killed a valuable Alderney bull, less than five years old, costing $500, which had become so exceedingly vicious that Mr. A. feared to incur the risk of keeping him any longer. The bull received the first premium at the State Cattle Show, at Springfield, Ohio, in 1853, and was supposed to be the finest animal of the breed in the country.

The Pennsylvania Institution for the Deaf and Dumb has 155 pupils, of whom 106 are State beneficiaries, and the remainder supported by the States of Maryland, New Jersey, Delaware, and by friends. An extension of the bounty of the Commonwealth is requested by the Directors, inasmuch as the recent additions to the building will enable it to accommodate 200 inmates.

An old lady named Elizabeth Farmer, living in Newton, N H., who has been widely known for her extreme parsimonious habits, died week before last, leaving from $75,000 to $100,000 worth of property, to be divided among her nearest relatives—embracing some fifteen or twenty cousins. Most of the property consists in very heavy timber lands, some railroad stock, and a large accumulation of gold and silver coin, found snugly stowed away in an old chest.

A gentleman from Sheboygan County, Wis., says that the weather there and in the adjoining counties has been exceedingly severe during the last month. The extremities of many persons had been nipped by the frost, and large numbers of young cattle had died from exposure and want of sufficient food. Hay in that region is from $15 to $20 per ton, and very scarce at that.

Mr. Emanuel Wiess, represented to be a gentleman of much intelligence, and an extensive traveler, is now in New Orleans, endeavoring to enlist the capital and enterprise of the merchants of that city in opening a trade with Egypt, which he is very confident will prove profitable beyond a contingency.

The steamer Alabama, which left this port about two weeks ago, in search of the missing steamship Pacific, returned again last Sunday. Her cruise has been unsuccessful. She was last at Halifax, from which place she came in 60 hours. She has visited Sable Island and the Coast of Newfoundland, but was unable to proceed to the Northward of Cape Race, on account of immense fields of ice, in which she was entangled for 24 hours.

A man in Georgetown, D C., states that he has invented a composition for printers' rollers, which will not be affected by temperature—not made too soft by Summer's heat, nor too hard by Winter's cold—beside being more tenacious and durable. This improvement will obviate a great inconvenience experienced in the present composition used for rollers, and will be a most welcome discovery for printers.

The House of Representatives of Rhode Island have passed a law making any company that transports goods liable for the goods until they reach their destination, without reference to the other hands through which they may pass. If a merchant of Providence, for example, sends goods to Philadelphia, on the Stonington Road, they are liable for the injuries they may sustain on the Camden and Amboy Road in New Jersey.

For some weeks past valuable letters and packages, containing money to the amount of near $10,000, have been abstracted from the Post-Office in Columbus, Geo. Some ten days since, a bank bill of the denomination of $100 was identified as one of the bills in a missing package and traced to John Chisolm, a young man, 18 years of age, who had been occasionally employed in the Post-Office, and on that accouut gained access thereto at all hours.

The Kansas correspondent of the Missouri Democrat, who has visited every portion of the Territory, sets the population down at 60,000. The pro-slavery Postmasters, he says, take the liberty of examining all letters passing through their hands which appear to be of a suspicious character. On arriving at St. Louis, he found that thirty of his letters to the Democrat had never reached their destination. Of fifteen letters franked by Col. Lane, not one was received.

Resolutions have been adopted by the Legislature of Kentucky, declaring that it is the duty of the United States, in all future treaties with foreign countries, to see that the great staple of tobacco is placed on an equal footing with the other great agricultural interests of our common country. The Kentucky Senator is also instructed to urge the subject upon the attention of the General Government.

The Toledo (Ohio) Blade says, that a woman who had lain in jail for several weeks on a charge of larceny, obtained her liberty the other day by prevailing upon the man from whom she stole the property to marry her. The husband declined to prosecute his wife, and of course could not be made to testify against her, and she was set at liberty.

A Company has been organized in New Orleans to build a ship canal from the Mississippi River at that city to Lake Borgne, by which vessels from the Gulf of Mexico may be enabled to reach the harbor without having to be piloted and towed all the way from the Delta. It is confidently expected that the whole sum required to construct the work can be speedily raised.

By a table copied from the Boston Traveler, in which the last thirty-two Januaries are arranged according to their mean temperature, it appears that but two were colder, and twenty-nine warmer, than that of 1856, and that the difference between January 1840, the coldest, and 1838, the warmest of the thirty-two, was $14\frac{3}{4}$ degrees.

The Pittsburg Journal says that John G. Saxe, the distinguished poet and lecturer, has broken down with an attack of paralysis. He has been obliged to forfeit many of his engagements, but in a letter to the Lecture Committee of Pittsburg he expresses the hope that he may be able to resume his labors after a time.

It is estimated by the Norfolk Argus, that $3,000,000 are invested in the oyster trade of Virginia, and 700 vessels are engaged in the transportation department. The principals in the trade pay from 35 to 40 cents per bushel for them at the rocks, and pay $12\frac{1}{2}$ cents per gallon for shelling them. Upon being packed and sent to the West, they bring $2 per gallon.

The Boston papers think that, in the even of peace, the trade between this country and Russia will be a very profitable one to us, for Russian vessels will come here for many articles, in preference to going to England. The war has created a feeling against England in Russia, which will require many years of peace to obliterate.

The New York and Erie Railroad Company have purchased the right of way from the Hudson River at Harsimus Cove, in Jersey City, near the Hoboken line, to their present route, and design to erect an immense depot on the shore for the accommodation of their passenger and freight business.

The income of the State of Ohio the last year was about four and a quarter millions of dollars, and its expenses three millions and a half. It has 800 miles of canals, 600 of navigable rivers, and 2,090 miles of railroad. Its wheat crop last year was 30,000,000 of bushels, and corn 80,000,000.

The Pittsburg (Pa.) Gazette says that the buds of the peach trees in that vicinity have been killed by the severe weather, and no crop is expected next season. The Baltimore American gives a similar report in regard to the trees in that vicinity.

The Charlestonians are putting up their own ice from the ponds surrounding Charleston. They usually import it. Our Southern cities this year have their ice supply at their own doors, which will affect the trade in that article next season.

The Showkegan (Me.) Clarion says: "A heavy shock of an earthquake was felt in this vicinity at 6 o'clock on the evening of the 5th inst., and another during the same night. The earthquake of last year occurred at 6 o'clock on the morning of the 6th of February.

The Postmaster-General has directed an express messenger, named Behrans, to be prosecuted for carrying mail matter to the Associated Press as their messenger between Albany and the city of New York.

Wives of Inebriates are by law, in Wisconsin, allowed to transact business in their own names, bind out their children, and dispose of their earnings as they think best.

Among the two hundred and fifty passengers by the ship Parliament, which arrived at Boston recently, were twenty Scotch girls from seventeen to thirty years of age, destined for the Holyoke factories; making in all about five hundred "bonnie lasses" who have been imported from time to time for that purpose.

It is stated that after May next, fifteen gigantic steamships will leave England every month for the American continent, viz., seven English, four American, three Belgian, and one Portuguese. Eight of the fourteen (for one does not touch at England) will leave Southampton, and the other six Liverpool.

The Kansas Bill, introduced some time since into the Georgia Legislature, to aid in settling the Territory by appropriations from the treasury to the amount of $50,000, was called up for its third reading on the 13th inst. After a very long debate, the bill was lost on a vote of 63 against 43.

Great Britain is about to seize the Kingdom of Oude; to allow its King a pension of half a million of dollars; to reduce its army from 80,000 to 15,000 men, and to appoint the English General, Outram, Governor of the country.

The wild rice of the swamps in Minnesota has produced an abundant crop this year, and upon this myriads of ducks and geese fatted until the water froze up. The Indians also make great use of wild rice It has been sown in Connecticut, and produces well.

Five negroes from the lower end of Mason county, Kentucky, took a sleigh ride, a short time since, and crossed the Ohio river. Neither the sleigh, horses nor blacks have been heard of since.

The Legislature of Georgia passed a law on the 7th inst., which declares that so much of any will or deed as directs the manumission of any slave shall be void. The vote stood 49 to 30.

It is said that every one of the two hundred and fifty thousand soldiers around Sevastopol has cost, on an average, far more to France and England than a Gospel missionary would have done in any part of the globe.

The steamer Trevoit, which sailed from Aspinwall on the 24th ult., for England, took the largest amount of specie that ever left the isthmus on one vessel, being $2,775,000.

Governor Shannon has been summoned to Washington, and has returned to Kansas, with orders to Col. Sumner, of the army, to support him by military force if necessary.

The clipper ship Eagle Wing, of Boston, Capt. Linwell, arrived at New York, Feb. 19th, from Shanghae, in the short time of 86 days.

Long Island Sound has been closed by the ice for several weeks. The steamers from New York to Fall River now go outside of Long Island.

Washington's Birth-day—the 22d of February—seems to have been observed this year, in all parts of the country, with great eclat.

New York Markets—Feb. 25, 1856.

Ashes—Pots $6 50; Pearls 7 75 per 100 lbs.

Flour and Meal—Flour, 6 75 a 7 00 for ordinary to straight State, 6 75 a 6 87 for mixed Western, 7 00 a 7 50 for Ohio, 8 50 a 10 75 for extra Genesee. Rye Flour 4 50 a 6 50. Corn Meal 3 50 a 3 62 for Jersey.

Grain—Wheat, 7 75 for Western red, 1 75 a 2 08 for Canadian white. Rye 1 12 a 1 18. Oats 36 a 40c for Jersey, 42 a 46c. for State. Corn 75 a 77c. for Western mixed.

Provisions—Pork, 13 75 for prime, 15 75 for mess. Beef, 8 87 a 9 62 for country prime, 10 00 a 11 00 for country mess. Butter, 17 a 22c. for Ohio, 23 a 30c. for State. Cheese 9 a 11c.

Hay—1 12 a 1 37 per 100 lbs.

Tallow—$10\frac{1}{2}$ cents.

MARRIED,

At the Milton House, Milton, Wisconsin, Nov. 25, 1855, by Eld. V. Hull, Mr. ELNATHAN BOND, of Lima, to Mrs. SARAH S. WRIGHT, of Emerald Grove, all of Rock Co., Wis.

At Southampton, Peoria Co., Illinois, on Christmas day, by Eld. James C. Rogers, Mr. MASON SEELY to Miss ELLEN SEELY, all of Southampton.

In Hayfield, Pa., January 27, 1856, by Eld. A. A. F. Randolph, Mr. EBEN LEWIS to Miss MARY THICKSTON, both of Cussewago, Pa.

In Alfred, N. Y., by Eld. H. P. Burdick, Feb. 7th, 1856, Mr. ISAAC LEWIS to Miss MARANDA HULL, all of Alfred.

In Friendship, Allegany Co., N. Y., Feb 19, 1856, by Eld. B. F. Robbins, Mr. JOHN SANFORD, of West Genesee, to Miss MARY SAUNDERS, formerly of Brookfield, Madison Co., N. Y.

DIED,

At Poquetanuck, Ct., on the 15th inst., Mrs. RUTH ANN CARPENTER, widow of the late Ebenezer Carpenter, aged 53 years. The deceased was a member of the 1st Hopkinton Church, and died in hope of a blessed immortality. C. M. S.

In Brookfield, N. Y., on the 16th inst., ELIZABETH CLARKE, daughter of the late Samuel and Chloe Clarke, in the 50th year of her age. She lived and died in hope of a glorious immortality and eternal life beyond the grave, and gave satisfactory evidence that such hope was well founded. H. B. C.

On the 18th inst., in the town of Genesee, Allegany Co., N. Y. CATHARINE L. BURDICK, daughter of Jabez Burdick, aged 21 years, 6 months, and 26 days.

In Plainfield, Otsego Co., N. Y., on the morning of the 22d inst., of inflammation of the lungs, Hon. CYRUS BROWN, aged 69 years.

LETTERS.

S N Stillman, Andrew Babcock, E R Clarke, C M Lewis, David Clawson, Asa Greenman, H W Babcock, N V Hull, Abel Babcock, A C Green, V Hull, C A Osgood, John Maxson, J E Potter, H P Burdick, (this office,) A A F Randolph, Gideon Hoxsey, Jasper Davis, David Snowberger, (no Memorials since vol. 3,) A M Whitford, A R Cornwall, J G Saunders, Hosea B Clark, David Twist, R L Davis.

RECEIPTS.

☞ All payments for publications of the Society are acknowledged from week to week in the Recorder. Persons sending money the receipt of which is not duly acknowledged, should give us early notice of the omission.

WILLIAM M. ROGERS, Treasurer.

Rogers' Hotel and Dining Saloons,

KEPT ON THE EUROPEAN PLAN,
No. 4 Fulton-st., New York,
Near Fulton Ferry.

☞ Rooms to let by the day or week.

CLARKE ROGERS
HENRY ZOLLVER } Late of Fulton Hotel.

Savery's Temperance Hotel

AND
TELEGRAPH DINING SALOON,
No. 14 Beekman Street, N. Y.
KEPT ON THE EUROPEAN PLAN.
MEALS AT ALL HOURS OF THE DAY.
LODGING ROOMS,
From $2 to $3 per Week, or 50 Cts. per Night.
BELA SAWYER, Sup't. JOHN S. SAVERY, Proprietor.

Alfred Highland Water-Cure.

THIS establishment, for the cure of Chronic Diseases, is conducted by H. P. BURDICK, M. D. The facilities in this "Cure" for the successful treatment of Diseases of the Liver, Spine, Nerves, Female Diseases, Bronchitis, Incipient Consumption, &c., are not excelled in any establishment. Patients will have the benefit of skilful Homeopathic prescriptions—an advantage found in but few "Water-Cures." Especial attention will be given to diseases commonly called *surgical cases*, such as Hip Diseases, White Swellings, Cancers, (in their early stages,) and Caries and Necrosis of bone

Connected with the establishment is a Dental Shop, where all calls in that profession will be attended to.

Address, H. P. BURDICK,
Alfred, Allegany Co., N. Y.

Book Agents Wanted,

BY STEARNS & SPICER, PUBLISHERS AND WHOLESALE BOOKSELLERS, *Indianapolis, Indiana.*

We are in the *very heart* of the *best section* of the Union for the successful prosecution of the Subscription Book Trade, as testimony of which we need only refer to the unparalleled success of our agents during the past year, many of whom are still in our employ. Our books are of a character calculated to secure for us and our agents the *highest confidence* of the reading community, and we wish to engage the services of those only who will help us to *sustain* it. Our proximity to the field of labor enables us to attend personally to the interests of our agents, and fill their orders at short notice, saving them the delays and heavy expense of transportation from the eastern cities. Men of energy and business habits will find this a work worthy their attention. All communications promptly answered. STEARNS & SPICER.

Hudson River Railroad.

TRAINS leave Chambers street daily, for Albany and Troy. On and after MONDAY, Nov. 19, 1855, the trains will run as follows: Express Train 7 A. M., connecting with Northern and Western Trains. Mail Train 8 30 A. M. Through Way Train, 12 M. Express Train 5 P. M. For Hudson 3 30 P. M. For Poughkeepsie—Way Freight and Passenger Train, 12 30 P. M. For Peekskill, 5 30 P. M. For Sing Sing, at 4 20 and 9 P. M. For Dobbs' Ferry, 7 15 and 11 A. M. The Dobbs' Ferry, Sing Sing, Peekskill, and Hudson Trains stop at all the Way Stations. Passengers taken at Chambers, Canal, Christopher, and 31st streets. SUNDAY MAIL TRAIN at 4 P. M., from Canal street, for Albany, stopping at all the Mail Stations. M. L. SYKES, Jr., Superintendent.

Merchant Tailoring Establishment.

THE subscriber, having sold his interest in the firm of A. D. Titsworth & Co., of Plainfield, and located himself at the corner of Fulton and Pearl streets, New York, as Merchant Tailor and Manufacturer of all kinds of Clothing, would respectfully invite his friends, and as many others as feel disposed to study economy, to give him a call, feeling assured that his experience in the business will enable him to do better for his customers than they can do for themselves. He will employ the best of workmen, and give to the business his whole attention.

Cloths, Cassimers, and Vestings, of the latest patterns, constantly on hand, and made to order in the most approved manner, at short notice.

Also, any persons wishing cutting done for their friends at home, by observing the following directions, can be accommodated with any style they wish:—

Coat Measure—1st. Placing the measure at socket bone of neck, down to center of arm or shoulder; then to waist above the hip, and length of coat. 2d. From seam of back, giving width of back; then to elbow and length of sleeve, bending the arm in right angle. 3d. Breast and waist, noting the position, whether stooping forward or extra straight.

Vest—1st. From socket bone down front, giving length of vest. 2d. Breast and waist measures.

Pants—1st. From hip bone to thigh joint and knee. and length. 2d. Waist, hip, thigh, and knee measures.

Also, any persons wishing to avail themselves of my assistance in selecting a stock of clothing or other merchandise, will find me at my office every day, except Sabbath day. All orders thankfully received and attended to with dispatch.

Terms, cash on delivery.

E. B. TITSWORTH, Merchant Tailor.

☞ I can accommodate a Sabbatarian with an office in my room.

Seventh-day Baptist Publishing Soc.'s Publications.

The Sabbath Recorder,

Published Weekly.

Terms—$2 00 *per Annum, in Advance.*

The Sabbath Recorder is devoted to the exposition and vindication of the views and movements of the Seventh-day Baptist Denomination. It aims to promote vital piety and vigorous benevolent action, at the same time that it urges obedience to the commandments of God and the faith of Jesus. Its columns are open to the advocacy of all reformatory measures which seem likely to improve the condition of society, diffuse knowledge, reclaim the inebriate, and enfranchise the enslaved. In its Literary and Intelligence Departments, care is taken to furnish matter adapted to the wants and tastes of every class of readers. As a Religious and Family Newspaper, it is intended that the *Recorder* shall rank among the best.

The Sabbath-School Visitor,

Published Monthly.

Terms per annum—Invariably in advance:

One copy	$ 25
Five copies to one address	1 00
Twelve copies to one address	2 00
Twenty copies to one address	3 00
Twenty-eight copies to one address	4 00
Forty copies to one address	5 00

The Seventh-day Baptist Memorial,

Published Quarterly.

Terms—$1 00 *a Year*, 25 *Cents a Number.*

Each number of the *Memorial* will contain a lithographic portrait of a Seventh-day Baptist preacher, together with a variety of historical, biographical, and statistical matter, designed to illustrate the rise, progress, and present condition of the Seventh-day Baptist Denomination. Wood-cuts of meeting-houses will be introduced from time to time in connection with the history of the churches.

[The first, second, and third volumes of the *Memorial*—being for the years 1852-3-4—may be had bound, for the subscription price and the cost of binding.]

The Carol:

A Collection of original and selected Music and Hymns, for the use of Sabbath-Schools, Social Religious Meetings, and Families. Compiled by Lucius Crandall. 128 pages octavo; price 35 cents per copy.

The *Carol* is designed principally for Sabbath-Schools, and contains Music and Hymns adapted to all ordinary occasions, and to such special occasions as the sickness of teachers, funerals, anniversaries, &c. A number of pieces suitable to social and public worship, together with a few Temperance Songs, are included in the book. It contains 93 tunes, and 156 hymns.

☞ Orders and remittances for the above should be addressed to the General Agent, GEORGE B. UTTER, No. 9 Spruce-st., New York.

Postage.

The postage on the Sabbath Recorder is 13 cents a year in the State of New York, and 26 cents in any other part of the United States, payable quarterly or yearly in advance.

The postage on the Sabbath-School Visitor is 3 cents a year in the State of New York, and 6 cents in any other part of the United States, payable in advance.

The postage on the Seventh-day Baptist Memorial is 2 cents a year in any part of the United States when paid in advance, or 4 cents a year when not paid in advance.

Miscellaneous.

From "The Crayon."

Wanderings in the Southwest.

NO. 9—Concluded.

There is one drawback to hunting in this part of Texas, more serious than thorns or rocks—one never knows, when he leaves camp to go any distance, but he may be made game of himself before he returns.

> "Up the airy mountain,
> Down the rocky glen,
> We daren't go a hunting
> For fear of little men."

We never go to the creek to bathe, but our weapons are laid upon the bank, so near that they may be reached at a moment's notice. Such is the place where two companies of the 1st Infantry, under Captain Carpenter, are compelled to make themselves as comfortable as possible for an indefinite period, and protect themselves from Indians and ennui. As for any offensive operations, what can they do, without horses, against these Arabs of the American desert? As well might dragoons be used as marines on the deck of a frigate. I have had every reason to be proud as an American of the character of our army officers; one never meets with a discourtesy from the graduates of West Point, or sees one that is not every inch a soldier; and it seems entirely out of place to send such men to hunt Indians. It seems like a sad waste of science and talent. They are men worthy of a better foe. Their very energy is crippled by the necessity of conforming to orders, in so many ways, that they can accomplish nothing. The qualifications for this warfare are endurance, daring, cunning and coolness, and there should be entire freedom to conform to the necessities of the case, to hunt the Indian in his own style; to endure long marches without cooking, without baggage, in silence; to hover about the track of the savage wherever it leads; to be a shadow to a shadow. What can be expected when an officer is sent with a company of riflemen, when they are sent with a long train of wagons, which can barely carry forage for their own mules' consumption, thundering over the road, encumbered with hen coops and milch cows, tents, heavy bedding, and all the paraphernalia of the camps of a regular army, and their progress announced with a flourish of trumpets. Can we not laugh with the old warrior as he strips the flesh from the bones of a mule that he has stolen from the train the night before, and dries provision as he goes for a week's travel, and still follows the invader by the noise he makes as he goes. That these things are so, is not the officer's fault, but he has to obey orders from the Secretary of War, who has never been in the country, and has no interest in bringing the war to an end. My travels in Texas have given me sympathy for the young officer who enters the service full of ambition for advancement and distinction, and finds himself an exile, banished, with all his new-born honors, to some frontier post, away from all the elevating influences of home. Long marches, hard labor, much danger, no honor, and great privations, and if by favor of his superior he is permitted to return to the haunts of civilized men, the savings of years are spent to defray the expenses of the journey. His recreations are few. Without his dog and gun, what would he do? His West Point education has not opened to him the volume of nature in which he might find so much to instruct and amuse, his books are few, and in the dull routine of camp life he almost forgets whatever he knew. From reveille in the morning till tattoo in the night, what has he done but obey orders? And during the lone night, while he listens to the sentry's call, and the wolf's answer from the hill, what has he to think of but the chances of his promotion, or orders to some new post, which he hopes will at least afford him a change, if it does not improve his situation. He has no chances of distinction, and no hopes of promotion, but in the death of his superiors. We are all very generous when we have nothing to give, and disinterested when we have nothing to gain; but if I were an officer in the army, where so much depends upon rank, to which there is but one road, I do not know that I would not read the announcement of the demise of old Maj. Longwind, whereby I add a new bar to my shoulder-strap, with more unacknowledged satisfaction than I would of sorrow at the death of my junior officer. Capt. C., among his many good qualities, has that of a good sportsman, and in his two pointers, Cola and Quail, he finds the companionship that his long service on the frontiers has made congenial. Nor can I wonder at his attachment to them. Cola is finely developed, intellectually as well as physically; generally grave and uncommunicative to strangers, he goes into ecstacies at the prospect of a hunt, although in these adventures he generally comes back with a thorn in his foot; towards me, as his master's guest, he extends the rights of hospitality in the most cordial manner, and at the first sound of the drum that calls the garrison from their slumbers, Cola bounds through the tent curtains, and in the most impassioned manner, impresses upon my face the otherwise inexpressible joy he feels in seeing me so well; then, seeing that his kindness is appreciated, he disappears suddenly, before the ardor of our mutual congratulations has suffered from satiety. Quail, the junior dog, excels the other in the extravagance of the expressions of his regard, but I have not much confidence in the sincerity of his attachment; he makes too many friends in camp, and on several occasions I have detected him running away with one of my slippers. The steward said it was Quail that masticated my shoe-brush, and I strongly suspect him of stealing a bag of shot; at all events, I charged him with it, (the shot) upon which he barked twice, which, to say the least, was very equivocal, and he has discontinued his visits since. The readiness with which the dogs bark at night, on the approach of any unusual object, contributes more to the safety of individuals going about after dark than any thing else. It is not an uncommon casualty to have a man shot through the body with an arrow in the dark, and even in the day-time, and yet no Indian be seen. Such was the fate of a musician to one of the companies now here, while it was encamped on Devil's River.

The command here is very busily engaged in preparing winter quarters, and as the Captain had expressed a desire to send out a party to explore a shorter route to Howard Springs, but could not spare an officer to go with it, I proposed to undertake it. I was furnished with three of the best hunters at the post, Young, Dennen, and Beardall. We rode mules, and each man, besides his rifle, carried a six-shooter, a canteen of water, some biscuit, and a blanket. Descending the left bank of the Pecos about three miles, passing several cañons, we entered one that seemed most likely to furnish us the desired wagon-road; from its width, and the dry bed of a stream that bisected it, it would be called by the Mexicans an Aroyo. The cliffs on each side were not less than seven hundred feet above the ground on which we were riding, and everywhere impassable. As we advanced up this valley we saw other cañons entering to the right and left, each more narrow and impassable than the last. In the fissures of the rocks the cedars were growing, and the heads of the cañons were choked up with them. We continued on for two miles or more in the main valley, the passage of which grew each moment more difficult from the thickets and rocks rolled down into the bottom. Beardall, who was riding a short distance ahead, motioned to us to keep back, and jumping from his mule he soon disappeared amongst the bushes. He had discovered some deer, high up on the rocky sides of the ravine, descending to the Pecos for water, and they came on in a file in confidence of entire security in this secluded ravine, where never the foot of white man had traveled before, until the report of Beardall's rifle startled the echos from the rocks, and sent the deer bounding away, leaving a bloody trail. The hunter followed the track until it led into another ravine. It soon became impossible to proceed, even for the surefooted mule, from the wild confusion with which the detached rocks, and dead and living cedars, were piled by the torrents after heavy rains. It had been apparent for some time that a wagon-road through this cañon was impossible, and we had been continuing on with the hope of finding a place where it was possible to get our animals out on the table lands, where we might continue our explorations at better advantage. Choosing a spot where the rocky wall seemed more broken down than elsewhere, we dismounted, and leading each his mule by the *cabris*, or strong rope by which they are secured, we succeeded in ascending several hundred feet over the loose rock and soil to the ramparts, to which I have already alluded. The difficulties of this part of the ascent were greater than we anticipated, but, by means of ropes and whips, we finally succeeded in getting our animals upon the plains. We then laid our course by compass to find other cañons lower down, which might furnish better facilities for a road, but they were all found to partake of the same characteristics. They are so peculiar and unlike those seen further east, that I would rather subject myself to the charge of being tedious than not to give a just idea of them. Their peculiarity depends upon the solidity of the uppermost stratum of the rock, which constitutes the whole mass of the earth. This stratum is of caen stone, and though soft, is fine in texture, and firm, while that immediately below is shelly; below these, the rock becomes harder and more crystalline, affording in some of them marble of fine qualities, and unique colors. When the rains have fallen, and the water has been seeking a passage from the table lands to the Pecos, it has glided over the surface until it reached the cliff where it has underminded the solid stratum above, and by the force acquired in its fall has cut away the harder rock below, thus forming these gulfs or cañons, which, as they continue to extend into the table lands, divaricate like the ramifications of an artery, each ultimate branch terminating in a precipice. A hundred yards from the head they do not often exceed that width. There are no springs of water in them. Such luxuries occur only in the lowest places of the deepest valleys, and then but seldom.

Our progress was constantly interrupted by them; and we had no means of knowing our vicinity to them, until they yawned before us. Before we had gone far on the table lands, we found ourselves riding through a prairie-dog town, which I remembered to have seen on the day before my arrival at Camp Lancaster, and soon after came upon the road, when we saw a mail party bound to our post. They were no less astonished to see us coming up from the cañons than we were to find that we had cut off a day's journey.

We continued on to the south until three o'clock, without finding a spot where we dared attempt to descend with our mules, nor was I willing to risk it at the same place where we came up, as in the descent a single misstep would have been fatal. It was too late in the day to return by the same road, and it was determined to proceed at once to the cliff that overlooks the camp, and if we could not get our animals down, we could picket them for the night, and go down ourselves.

In passing the head of a cañon a fine buck started up from the bushes; and Young, leaving his mule, crept cautiously up to within a hundred yards, and fired. The deer fell dead in his tracks, and at the same time another sprang up from the grass, and, looking in bewilderment at his dead companion and in the direction whence the mysterious sound came, stood still while the hunter reloaded his rifle. The unwary victim fixed his attention upon me in the distance as having some connection with the alarm he had just received, his white breast exposed to full view, until another report from Young's rifle again startled him. He ran a few paces, and again stood; the other hunters were now closing around him, and two shots were fired at him as he ran, but without effect; and I exploded a cap at him myself—the only time I have snapped a gun at a deer in Texas. Young's ball had passed through his lungs, and he was fain to lie down in the grass, with his face still to his foes and his horns erect, until Young again advanced and fired. One horn bounded to the distance of a rod as the ball struck the skull at its base, and at the same instant the head sunk forever in the grass.

> "'Twas pitiful—'twas wondrous pitiful!"

But the venison was excellent; and, having beheaded and disemboweled the two, they were packed behind Dennen and Beardall, and we hurried on. I have often visited the promontory overlooking our camp, and I thought it more easy of descent than any place I had seen during the day. The sun was setting, and we had no time to lose. A herd of antelopes bounded away, with their goat-like gallop, as we rode through the prairie-dog towns. It is not a little singular that the grass on the table lands is better than in the valleys, and clear from chaparral or agaves. Young and myself pushed forward, leaving the laden mules to follow, until, fearful that they would lose our trail, I directed Young to wait for them, and follow, while I made all the haste I could to reach the desired point before dark. Having found it, I returned to meet the men, and conduct them to it. Away across the valley the sky was still red where the sun went down, and threw a glare upon all the headlands, revealing the ravines and the canvas walls of our tents, like little white spots on the dark ground far below us. Our appearance on the cliff was at once discovered in camp, for our whole figures, mules and all, stood out in bold relief upon the sky, and removed the anxiety of the commander, for a horse had been found in the vicinity of the post, with an arrow shot into him, and the mail brought news of Indian outrages in the settlements; that the Rangers had invaded Mexico, and been repulsed; and that the settlers on the Leona and other places on the road to San Antonio, were being deserted from fear of invasion by the Mexicans and Indian combined. The prospect of my safe return through the hostile country seemed bad enough; but Major Ruff was expected down in a few days with his company of mounted Rifles, on his return to San Antonio, from a reconnoissance in New Mexico, and with him I should feel safe.

A few days after the captain invited me to accompany him to the head of the creek to learn whether the grove of trees that grew there would furnish him a flag-staff, of which he stood in need. The sergeant brought me a mule to ride that was unaccustomed to the saddle, and the horn of the saddle was broken off, leaving a sharp and dangerous splinter in its place. When I was ready to mount, the captain had already started on, and I had no time to change it, so, mounting in haste, I touched the mule with my spurs, when there ensued a series of evolutions not laid down in cavalry tactics, and entirely unbecoming the high position which for a moment I held. I was in a dilemma, of which the splintered horn before me gave the more serious apprehensions, when one movement, more vigorous than the rest, projected me, rifle, spurs and all, according to the law of projectiles, into which my West Point friends had not duly indoctrinated me, over his ears, and I suspect over my own; but upon that point I had no positive impression, nor as to the point of contact with the ground. I only know, that the spurs and myself, the principals in the affair, suffered no injury; and that the captain's invaluable rifle had its sights deranged, and the steward (my esquire) said that when he picked it off the ground it was more than half-cocked, for which unwarrantable calumny I ordered him to his quarters, and stopped his grog for the day. As to the mule, I judged his conduct to be perfectly justifiable, according to the laws of honor and the land. He did no more up to that moment than he was compelled to do, to maintain his self-respect. It was not necessary that he should continue to kick at me after I was down; but then his ears were so long that he could not help it. I concluded to permit the commander to get his own flag-staff, and repaired to my tent to write, and a considerable portion of this letter was written immediately after that event, so that, if it exhibits any special dullness, you must consider the long ears, and be as charitable as I.

It would seem impossible that a person could approach within view of our camp without himself being observed, for everywhere the high, undulating outline of the cliffs affords scarcely a bush for concealment. I have seated myself for hours with a spy-glass, searching every object within its range, away for miles through the water worn gorges of the long slopes, and into the cedar-choked cañons across the Pecos, where the whole hill-sides are in shadow soon after noon, but I could never distinguish a moving object, except our own animals grazing in the valley, and the gleam of the burnished musket of the sentry on a hill near them. There was one day a cry of "bear, bear," and those who were in readiness started for the cliff nearest camp with rifles and guns to run down the bear that had been seen running along the ledges near the summit. I joined in with others, and we had a grand hunt over the spurs of the hills, and into the cañons, and one or two joined us on horseback; but at length the information was sent after us, that a soldier had seen a buzzard sailing along on a steady and slow wing, just in range with the cliff, and had mistaken it for a bear, and we were all sold. This cliff is a favorite place of resort for me before sunset, not that the view is any wider than from the valley, but the effect of the setting sun as the shadows lengthen, and one eminence after another became involved in it, revealing ravines where none were seen before, and throwing those that were into bolder relief, until at length all below me became a homogeneous grey, and the cliff on which I stood still gilded, can be imagined, but to be felt must be seen. The stratifications of limestone on the slopes are but partially concealed by the thin soil and vegetation; and, as the captain remarked, on a visit he made with me to the place, the whole topography was mapped out below us by the lines of stratification, which to me resembled watered silk.

The abstract quality of vastness in this scenery awakens an emotion of sublimity in the mind of the most indifferent observer; but when to this is added the thought of the changes which it must have undergone, the successive deposits of such innumerable strata, of the debris of countless generations, of the same forms not only, but of the whole races of marine animals, whose vast marble monument has been raised from the depths of the sea, to become the basis of a continent, and the water-worn furrows upon whose face are deep enough to excite in us the emotion of sublimity, we feel like ephemera in the infinity of duration. I have observed that the emotion produced by vast mountains is not always in proportion to their vastness, but to qualities peculiar to different regions of the world. To one who stands upon Mount Washington, in New Hampshire, and looks down upon drifting clouds, and the "wide world dimly seen," surrounded by piles of misshapen lichen-covered rocks, where no insect or spire of grass lives, eternal *desolation* is the ruling idea, and it is overpowering. So, when I have stood upon a summit of the volcanic mountains of Peru or Central America, where the altitude was as great, and the desolation as complete, but where the vitrified and sharp rocks, upon which not even lichens grew, seemed as if formed but yesterday, I am overwhelmed by the thought of the mysterious *power* that slumbered below me. I suppose that I am alluding to a fact that every lover of nature has felt, and one of a thousand that they only can. J. D. B. S.

George W. Foster, of Florence, Ala., has endowed a professorship in the college of that place, with $10,000. His endowment fills the mathematical chair, and is called the Foster Professorship.

Good and Bad Farming.

BY JOHN GOLDSBURY.

Whoever has traveled much, in any part of our country, whether North or South, East or West, cannot have failed to notice the different appearance of different farms with regard to neatness, economy, and thrift. On one farm, everything is in good order, and appears neat and tidy. The buildings are all in good repair, and the yards about the house and barn look as though they had just been swept and garnished; no litter, or lumber of any kind, is to be seen about the establishment, "There is a place for everything, and everything is in its place." Everything *on* or *about* the farm, betokens neatness, economy, and thrift. On another farm, how altered is the scene! Here, everything looks as though a hurricane had swept over the place, scattering litter, rails and lumber in every direction. The house, and barn, and fences, appear in a dilapidated state; and all the yards about the establishment are filled with broken-down carts and carriages, plows and harrows, wheelbarrows and ox-yokes, and implements of husbandry of every description. Everything *on* or *about* this farm, indicates a want of taste, neatness, economy and thrift.

The same is observable with regard to towns. Go into one town, where considerable attention has been paid to agriculture, as a science—a town not remarkably distinguished for the richness and fertility of its soil, or the care with which it may be cultivated—being rather a poor, hard, and rocky soil, and there you will behold comfortable, convenient, and well-built farm-houses and well-filled barns, cultivated fields and fruitful orchards, good walls and fences, large stocks of cattle, horses, sheep, swine, &c, and everything indicating the taste, neatness, economy, industry, and thrift of farmers Go into another town, in which little or no attention has been given to the cultivation of the earth—a town possessing all the natural advantages of a fertile, well-watered, and exuberant soil, and of a favorable location and mild climate—and there you will behold a scene, which, if it does not make you "stare like a cat in a strange garret," will, at least, induce you to quit the town as quick as possible, lest the contagious influence of such a scene should overshadow your spirit with gloom. For, as you cast your eyes about you, and behold the miserable prospect on every side—houses, barns, and other buildings, grown old and going to decay, fields covered with weeds, brambles, briers, thorns, and thistles—as you behold all this, you will be convinced, that some blighting, withering curse must have fallen upon the inhabitants of that town, and paralyzed all their energies. Otherwise, why have they neglected to cultivate and improve their lands, to repair their rusty old buildings, and to repair their broken-down fences? In order to account for such negligence on their part, one would be inclined to think that they must have been the worshipers of Bacchus, or of the drowsy god Somnus.

Having taken a comparative view of the condition of different farms in the same town, and of whole towns under different cultivation, let us now endeavor to arrive at some just estimate of their comparative values. Everything is said to be worth what it will bring in the market. Whether or not the market price be the true standard value of everything, it is not necessary for us to determine. The value of a farm, all other things being equal, should be estimated by the abundance, variety, and richness of its productions, and by the facility and ease with which it can be carried on.

A farm, which is made to produce twice the amount of productions, with the same labor and expense bestowed upon another, is certainly, for all practical purposes, worth twice as much money, though it may not bring twice as much in the market. The same is true with regard to a farm on which the owner is obliged to skim over twice the number of acres, and perform double the amount of labor, in order to obtain the same amount of crop. It is cheaper—it is easier—it requires less labor, to cultivate a few acres and cultivate them well, than to attempt to cultivate a large number, and do it imperfectly. We see, then, that the highly-cultivated farm is the most valuable and productive farm, and will generally bring the most in the market. It is skillful, practical, and scientific agriculture, which renders a farm truly valuable and productive.

The same is true with regard to towns which are made up of the different farms contained therein. Every town is to be estimated according to its productiveness; and this depends, in a great measure, upon the degree of attention which has been paid to agriculture. No matter how a town stands on the State valuation list, its real value depends upon its resources—its ability to produce all the necessaries, the comforts, the conveniences, and the luxuries of life; and these depend, in a great measure, upon the knowledge and practical skill of its cultivators. A town in which the science of agriculture has never been developed, cannot vie with another, in which art and science and perserving effort, have, for a long series of years, been carrying forward the great work of improvement. The river does not gush up at once in full tide from the ground; but it commences in a thousand springs, whose waters flow on and mingle until they become a flood, when the ships float and the sea monsters play. The sun does not rise up instantly, deluging the earth with a sudden burst of light; but faintly, at first, his rays tinge the eastern horizon; and while the shadows of the dark night are still upon the earth, higher and still higher mounts the sun, until at last his broad light is poured in full splendor upon the world, and it is day. So it is with the science of agriculture. Its beginnings are small; but it increases as it advances, till it finally changes the whole aspect of a town. [N. E. Farm.

STATISTICS OF FRENCH AND ENGLISH AGRICULTURE.—Some interesting statistics relative to the agriculture of France and England, were given in a lecture delivered a few days since in Cornwall, by M. R. de la Trehonnais. In England, out of 50,000,000 acres are cultivated, 10,000,000 are sown to wheat or other cereal crops, while in France 50,000,000 were cultivated for that purpose. The average growth of wheat per acre, in England, is 4 quarters, and in France only $1\frac{3}{5}$ quarters; while the produce of English land is about £3 4s. per acre, and that of France £1 12s. per acre. The number of sheep grown in each country is about 35,000,000, and the wool produced about 60,000 tons; but, owing to the difference in the acreage, there is something less than $1\frac{1}{2}$ sheep per acre in England, and only about $\frac{1}{2}$ of a sheep per acre in France. In France there are annually slaughtered 4,000,000 of cattle, the average weight of each being 2 cwt.; while in England there is not half the number slaughtered, but the average weight is 5 cwt.

Cultivation of Basket Willows in America.

On entering a Williamsburg Ferry-boat, the other evening, we noticed two men and a boy coming on board with four large bundles of dried willows, and we instituted some inquiries as to their origin, cost, &c. We found that these willows were imported from France and sold by a wholesale dealer in N. Y. City at the following rates:

One bundle of fifty pounds of heavy canes, quite crooked and filled with knots, cost 4 cents per pound, ($80 per ton of 2,000 pounds.) They averaged six to seven feet in length, and were only to be used for the framework of baskets, to wind other willows around.

The second bundle of fifty pounds averaged about five feet in length, and about one-fourth of an inch in diameter at the larger end. These were to be used in forming large "clothes-baskets," and cost $6\frac{1}{4}$ cents per pound or $125 per ton. They were somewhat covered with small knots, say one knot on every four or five inches.

In the third bundle of fifty pounds the willows were about four feet long, generally smooth, and having a diameter at the larger end of about one-fourth of an inch or of the size of a large penholder or goose quill. These were to be used for smaller baskets, such as work-baskets, hand-baskets, &c. They cost $8\frac{1}{2}$ cents per pound or $166 $66\frac{2}{3}$ per ton.

In the fourth bundle of twenty-five pounds the willows were one and a half to three feet long, and of small size, being scarcely as large as common wheat straws. These cost $12\frac{1}{2}$ cents per pound, or $250 per ton, and were to be used for small toy and other baskets.

The average cost of these four qualities is about $7\frac{3}{4}$ cents per pound, or $155 per ton. Taking into account the relative amount used of the several qualities, we suppose the basket-makers are now paying on an average about $130 to $150 per ton for all the willows they manufacture.

In reply to our inquiries, the basket makers stated that they preferred American willows to the European, when they could get them of the same quality at the same prices, for they were less apt to be brittle from age or dampness in crossing the ocean, or from some other cause, but that they seldom found any of the former for sale.

We have no means of ascertaining the exact amount of European willows imported annually. A large importer in this City refused to give us any information, for reasons which we interpreted to be a fear of awakening competition in a very profitable trade. From the best data within our reach, however, we think the imports amount to from fifty to seventy thousand tons a year. Allowing these to cost the importer, delivered here, $100 per ton, they amount to from $5,000,000 to $7,000,000.

The question arises, cannot these same willows be raised here at a profit sufficiently great to warrant their cultivation. We have certainly the variety of soil and climate needed, and the soil is cheap enough. The main difficulty in the way is the cost of peeling them for the market. As this has formerly been done entirely by hand, it could be accomplished with the greatest profit in those countries where labor is the cheapest. Even with this drawback we do not see why willows could not be produced at three cents per pound ($60 per ton) and yield a fair profit.

But this difficulty has been in a measure overcome by a Vermont Yankee, who professes to have invented a machine which does the peeling with great rapidity and perfection. If this machine is not yet perfect, it will doubtless soon be made so by the inventor, or some other ingenious person, and for all practical purposes this may be considered as already accomplished.

Willows will grow well in all the Northern and Northern Middle States, and, probably, also in the Southern. They can be successfully cultivated upon all low, rich lands, that are subject to a semi-annual overflow of water, and still admit of draining. With the ground well prepared, and a little care for one or two years, an annual crop of two to four tons per acre may be gathered without further outlay for fifty or a hundred years. The cuttings for an acre can be obtained at a cost of $30 to $50 per acre. They may be set in Autumn or Spring—probably the Spring is the best season, as they can be gathered and readily transported during the Winter months. We advise those interested in this matter to send to Mr. Geo. J. Colby, of Jonesville, Vt., or to Mr. Erastus Parker, of Waterbury, in the same State, and procure a circular giving the full details of variety, soil, method of cultivation, &c. These will be furnished free of cost, we believe.

It will not only be a source of profit to the cultivators, but also a public benefit to the country, if sufficient interest be awakened in this subject to induce a large number of persons to engage in the cultivation of basket willows. Baskets of good quality will be furnished more cheaply; a large amount of money sent abroad will be retained; and a new source of employment will be opened for ten to twenty thousand or more persons. The demand for the article will doubtless keep pace with any increase of product for years to come. [N. Y. Times.

EXCELLENT WASHING PREPARATION.—A lady writes us that of all the preparations she has used, and they have been numerous, she gives preference to the following:—

"Put one pound of saltpetre into a gallon of water, and keep in a corked jug; two table spoonfuls for a pint of soap, soak and boil as usual. This bleaches the clothes beautifully without injuring the fabric. It is particularly valuable for removing grass stains from the knees of little boys' pantaloons."

The Agent of the Missouri Colonization Society offers to send fifty or sixty free colored people of that State to Liberia, to pay their expenses to pension, them for six months, and provide them with houses for the same period, until they can build and provide for themselves. The recent act of the Legislature of Missouri—approved Dec. 13, 1855—sets apart $3,000 annually, for ten years, to expedite the removal of free negroes.

One of the most extensive provision establishments in Paris is about opening a branch in Columbus, Ohio; and some eight or ten of the operators have already arrived. None of them speak English, all their affairs being conducted through the medium of an interpreter.

Central Railroad of New Jersey,

IN connection with the Lehigh Valley Railroad, opened to Mauch Chunk—WINTER ARRANGEMENT, commencing Nov. 19, 1855. Leave New York for Mauch Chunk from Pier No. 2 North River, at 7 30 A. M. For Easton, at 7 30 A. M. and 3 15 P. M. For Somerville, at 7 30 and 10 45 A. M., and 3 15 and 4 30 P. M. The above trains connect at Elizabeth with trains on the New Jersey Railroad, leaving New York from foot of Courtlandt street, at 7 30 and 11 A. M., 3 and 4 P. M.

Leave Plainfield for New York at 7 05 and 9 05 A. M., and 1 40 and 6 13 P. M.

JOHN O. STERNS, Superintendent.

Bibliotheca Sacra,

AND AMERICAN BIBLICAL REPOSITORY.—The Thirteenth Volume commenced Jan. 1, 1856. This volume will be enlarged to 900 pages; will be printed on a new, large, and beautiful type, and on paper superior to that of any previous volume. This Quarterly contains articles of permanent value, by some of the ablest writers in the country.

In its department it has no superior, and no Minister can afford to be without it.

It is the most learned, the largest, and the cheapest Quarterly of its kind in the country.

TERMS—$3 per annum in advance.
$4 if not in advance.

Ayer's Pills.

FOR all the purposes of a Family Physic. There has long existed a public demand for an effective Purgative Pill which could be relied on as sure and perfectly safe in its operation. This has been prepared to meet that demand, and an extensive trial of its virtues has conclusively shown with what success it accomplishes the purpose designed. It is easy to make a physical *Pill*, but not so easy to make the best of all *Pills*—one which should have none of the objections, but all the advantages of every other. This has been attempted here, and with what success we would respectfully submit to the public decision. It has been unfortunate for the patient hitherto that almost every purgative medicine is acrimonious and irritating to the bowels. This is not. Many of them produce so much griping pain and revulsion in the system as to more than counterbalance the good to be derived from them. These *Pills* produce no irritation or pain, unless it arises from a previously existing obstruction or derangement in the bowels. Being purely vegetable, no harm can arise from their use in any quantity; but it is better that any medicine should be taken judiciously. Minute directions for their use in the several diseases to which they are applicable are given on the boxes. Among the complaints which have been speedily cured by them we may mention Liver Complaint, in its various forms of Jaundice, Indigestion, Langor and Loss of Appetite, Listlessness, Irritability, Billious Headache, Billious Fever, Fever and Ague, Pain in the Side and Loins, for in truth, all these are but the consequence of diseased action of the liver. As an aperient, they afford prompt and sure relief in Costiveness, Piles, Colic, Dysentery, Humors, Scrofula and Scurvy, Colds, with soreness of the body, Ulcers and impurity of the blood; in short, any and every case where a purgative is required.

They have also produced some singularly successful cures in Rheumatism, Gout, Dropsy, Gravel, Erysipelas, Palpitation of the Heart, Pains in the Back, Stomach, and Side. They should be freely taken in the spring of the year, to purify the blood and prepare the system for the change of seasons. An occasional dose stimulates the stomach into healthy action, and restores the appetite and vigor. They purify the blood, and, by their stimulant action on the circulatory system, renovate the strength of the body, and restore the wasted or diseased energies of the whole organism. Hence an occasional dose is advantageous even though no serious derangement exists; but unnecessary dosing should never be carried too far, as every purgative medicine reduces the strength, when taken to excess. The thousand cases in which a physic is required cannot be enumerated here, but they suggest themselves to the reason of every body; and it is confidently believed this Pill will answer a better purpose than any thing which has hitherto been available to mankind. When their virtues are once known the public will no longer doubt what remedy to employ when in need of a cathartic medicine.

Being sugar wrapped they are pleasant to take, and being purely vegetable, no harm can arise from their use in any quantity.

For minute directions, see the wrapper on the *Box*.

Prepared by Dr. J. C. AYER, Practical and Analytical Chemist, Lowell, Mass.

Price 25 Cents per Box. Five Boxes for $1 00.

Ayer's Cherry Pectoral,

FOR the rapid cure of Coughs, Hoarseness, Bronchitis, Whooping-Cough, Croup, Asthma, and Consumption. This remedy has won for itself such notoriety for its cures of every variety of Pulmonary diseases, that it is entirely unnecessary to *recount the* evidences of its virtues in any community where it has been employed. So wide is the field of its usefulness, and so numerous the cases of its cures, that almost every section of the country abounds in persons publicly known, who have been restored from alarming and even desperate diseases of the lungs by its use. When once tried its superiority over every other medicine of its kind is too apparent to escape observation, and where its virtues are known, the public no longer hesitate what antidote to employ for the distressing and dangerous affections of the pulmonary organs which are incident to our climate. And not only in formidable attacks upon the lungs, but for the milder varieties of *Colds, Coughs, Hoarseness, &c.* and for Children it is the pleasantest and safest medicine that can be obtained.

As it has long been in constant use throughout this section, we need not do more than assure the people its quality is kept up to the best that it ever has been and that the genuine article is—

The Sabbath Recorder,

PUBLISHED WEEKLY

By the Seventh-day Baptist Publishing Society,

AT

NO. 9 SPRUCE-STREET, NEW YORK.

Terms:

$2 00 per year, payable in advance. Subscriptions not paid till the close of the year, will be liable to an additional charge of 50 cents.

☞ Payments received will be acknowledged in the paper so as to indicate the time to which they reach.

☞ No paper discontinued until arrearages are paid, except at the discretion of the publisher.

☞ Communications, orders, and remittances, should be directed, post-paid, to

GEO. B. UTTER, No. 9 Spruce-st., New York.

Liabilities of those who take Periodicals.

The laws declare that any person to whom a Periodical is sent, is responsible for payment, if he receives the paper, or makes use of it, even if he has never subscribed for it, or has ordered it to be stopped. His duty in such a case is not to take the paper from the office or person with whom the paper is left, but to notify the publisher that he does not wish for it.

If papers are sent to a post-office, store or tavern, or other place of deposit, and are not taken by the person to whom they are sent, the postmaster, store or tavern-keeper, &c., is responsible for the payment until he returns the papers, or gives notice to the Publisher that they are lying dead in the office.

THE RELATION OF CHRISTIANS TO CIVIL GOVERNMENT.

That Civil Government is a law of divine order, there can be no doubt; for what is Civil Government, in its highest and purest conception, but the joint coöperation of a whole community for the highest good of *all* its members? It is not the greatest good to the greatest number, but the greatest possible good to each and to all. It is the united wisdom of the whole, for the equal benefit of the whole. Civil Government, therefore, is not any arbitrary arrangement that a select number may decree. It is the *vox populi*, the voice of the people—not of a part of the people. As all are subjects of this arrangement, and all morally obligated thus to seek for a higher good to all than could be attained without it, so all are entitled to the privilege of participating in it. What right have a few, or any number short of the whole, to organize a government that excludes another part from giving its voice in its councils? Goverments are not for the purpose of conferring emoluments or office. Any favor, therefore, that government bestows, is so much taken from what belonged to another. Officers of government are but the servants of the whole people, and such are solemnly bound to carry out the voice of the people, for their own and the people's good.

Civil Government is the shield which a whole community throws around itself, granting such protection as will afford the most favorable opportunity to every one of its members for the development of their several capacities. Such a government would ever find public opinion so preponderating on the side of right, truth, and justice, as would be a sufficient power to hold in subjection the very few that might seek to trespass on the rights of others. Such a government, therefore, would never need to resort to a war police to administer or execute its laws, for all its laws would be the voice of the whole, for the good of the same number.

Now the kingdom of Christ was designed to be just such a government, and its necessity grew out of the corruptions of what are called Civil Governments. Had these institutions done justly and loved mercy—had they regarded the just rights of all their subjects—no occasion would have existed for the founding of a kingdom which will one day overturn and supersede every one of these human institutions of proscription, despotism, and usurped rights.

The kingdom of heaven, founded by Jesus Christ, is a religious and civil kingdom, possessing all the right of worshiping God, or Jesus Christ, who is its king, and also of administering civil and political justice to all of its members. This kingdom is a perfect democracy, positively forbidding any one of its members to be called Master, while its only officer is a servant, to execute its united effort for the good of the whole. Each local community of true disciples becomes an integral part of this Republic. Manhood, womanhood, held in subjection to the principle of love to God, are the only prerequisites for membership in this kingdom. Within these Christian States, the whole machinery of a Civil Government is to be exercised. None of the members of this kingdom are permitted to go outside of these Christian judicatories for the adjustment of their difficulties, while, as a distinguishing honor conferred on the poorer subjects, they are to be selected as judges in such matters.

What, then, is the relation in which Christians stand to other Civil Governments? Must they not hold a similar relation to that which a subject of one kingdom does to the laws or government of another kingdom—a relation that can never require them to violate the principles of their own? Would it not be treason for a subject of our government to cast his influence into a foreign one, and seek to elevate that over and above his own? Christians are to seek first the kingdom of heaven, and its righteousness. Must it not then be plain, that no Christian can ever so coöperate with the kingdoms of this world as to cast his own into the shade—much less can any member of Christ's kingdom procure naturalization in any other kingdom, that requires as a condition of initiation, a violation of a fundamental principle of Christ's kingdom.

Now, one of the prohibitions to the subjects of the kingdom of heaven is a positive prohibition of oath-taking; and yet there is not one of the kingdoms of this world which does not require a judicial oath in order to one's becoming a member of them. Again, all the kingdoms of the world rely, as the last resort, upon a standing army to execute their laws. When, therefore, we take the oath to support them, do we not bind ourselves to execute their laws, even to the shouldering of the gun and the arming ourselves with the pistols? While, therefore, the potsherds of the earth will continue to strive with the potsherds of the earth, the subject of Christ's kingdom is so to identify himself with the cause of his King, as will cause the kingdom of heaven to rise and fill with its glory the whole earth. No one feels a deeper interest than myself in the stirring events of the day; and were I to act from the impulse of indignation at wrong, in Kansas or elsewhere, and had I the courage to face the cannon's mouth and hear its thunder, I might "shoulder my crutch, and show how fields were won." But I remember that I am a subject of Christ's kingdom, which seems at least to forbid me as a Christian to aid or sanction the war cry of the day. I have labored to awaken the consciences of men to the sin of slavery, (and have lost much reputation thereby,) and feel it a privilege to know, that my humble efforts may have contributed to the present state of things; and I trust that, if called to suffer by the hands of border ruffians, or governmental law, I may be able to do it as a Christian. But to take up arms against this sea of trouble, I am not prepared. If any think otherwise, let him speak, for him have I offended.

S. S. G.

FREE DISCUSSION.

To the Editors of the Sabbath Recorder:—

"For unbounded license, I have not a word to say. I only plead for free discussion, restrained only by an enlightened judgment and a well-developed conscience."

Such is the declaration, in conclusion, by "Another of the Subscribers," after belaboring me, in an article of near two columns, for having advocated nearly the same sentiment, in the suggestion for a *discreet or judicious editorial censorship*, restraining by enlightened judgment the license of correspondents. I defined my position, that "the Bible, in its obvious sense, is the religion of Seventh-day Baptists, and that the organ of the denomination, our family paper, should set forth and maintain the religious doctrines, sentiments, and views of the people whose organ it is; and farther, that *it should* publish such other matter as is in accordance and not in conflict therewith." To the latter part of this definition he demurs; understanding, probably, that all not in accordance, and necessarily conflicting, is to be unconditionally rejected. This I did not say, but I said that in my opinion *it should be received with caution.* I expressed my unqualified approval of the *free discussion* of all religious and moral subjects, and of scientific subjects, or of whatsoever the nature, provided they were not at issue with the Bible, or vital Christianity. If they were, they should be received with caution, or if they were of a dangerous or doubtful tendency. Nor did I express my disapprobation of the discussion of infidel sentiments, or scientific axioms at issue with the Bible, if the religious family paper is not the medium. After having thus expressed myself in favor of a very wide range of discussion, bounded only by the qualification that it be not at issue with the Bible, and its tendencies dangerous or doubtful, I am informed that there are very many of the subscribers who think my "view is as far from the true one as it possibly can be." But I cannot help that; though, with all deference, I will say, I do not believe it. And here allow me to say, that the introduction of this subject was not so much in distrust of editorial faithfulness, or wishing to induce them to exercise their discretion, as to suggest to correspondents, who use large license on their subjects, together with exceeding verboseness, not to provoke them to do it.

It is not my wish to notice the particulars of this article, fulminated against my position, as I do not see its pertinency. But I will say, that if he wishes to convince the world, that he is not an "*oyster*," and those under his discipline "*poor shell-fish*," and wishes to open a wider range of discussion, he can, with the approbation of the editors, (I suppose,) publish and discuss the positions of Paine, Voltaire, Hume, and others, who advocate scientific axioms, for the purpose of shaking the foundation of Christianity, that his children "may learn the sentiments in the world which they may be called to combat in future life," and that he, as he says, "could teach them how to combat them."

But I am no admirer of pugilistic exhibitions, and adopt the sentiment that discretion is the better part of valor; and he should know, that others may not be as successful in teaching their children as he, or the children of others not so teachable. I therefore beg leave modestly to protest against the serving up of infidel or skeptical sentiments and principles to my children, in a family newspaper, as I prefer, when I wish to teach those under my guardianship how to combat these errors, to supply my library with such works, and not trouble others, who beg to be excused. I do not suppose the writer *really wishes to* go to that length, though his argument sustains that position. ONE OF THE SUBSCRIBERS.

If the sun shines on a dull brick or stone, they reflect none of its beams, there is nothing in them capable of this; nor is there in an ungodly man, any natural power of reflecting the light of God. But let the sun shine upon a diamond, and see what rays of sparkling beauty it emits. Just so the Christian who has the graces of the spirit; when God shines on his soul, beams of celestial loveliness are reflected by him on the world.

THE DARK RIVER.

BY MRS. ELIZABETH H. J. CLEVELAND.

Written on the recent and sudden deaths of three persons in the town of Egremont, Mass.; a child of eight, a saint of eighty, and a physician thirty-two years of age.

Wherever we be,
On the land or sea,
A river is rolling restlessly;
It furrows the plain,
And it sweeps the main,
Then flows to the mountain, back again.
And dark as night
Is the withering blight
That follows its track on left and right,
For thousands down to its borders stray,
And thousands are taking their weary way,
Whose feet will slide
By the river's side,
And carry them down for ay.

And if on its bosom once they sail,
None ever return to tell the tale
Of the opening grave,
Far under the wave,
That swallowed their bark so frail.

Full oft we hear
Of this river drear;
It is rolling far, and it's rolling near;
In the distant land by the Crimean sea,
It hath swayed its waters heavily;
Nor calms its tide as it westward comes
To take its course through our quiet homes.

We see it not in its onward way,
And yet on its banks we careless stray;
We look on the landscape bright and fair,
Nor think of the river running there
By its gloomy shore we rise and rest,
For a mist hangs over the river's breast;
We love and hope, and we fondly dream,
Close, ever close, to the swelling stream.

And not till we miss from our hearth and home
One who has just in its wave gone down—
Not till we call, but call in vain,
Wishing the wanderer back again—
Does the shadowy mist from the stream arise,
And show us where the dark river lies.

And thus has it opened to *our* view,
Just where 't has ever been gliding through;
We can hear it it now, as it gurgles by,
We can see who are going down to die,
For the stream is sounding its sudden roar,
And it runneth swift by our cottage door.
And far on its waters, cold and dim,
A child is sinking—we mourn for him;
We can see the light on his wavy hair,
And his pale young brow, as he's floating there,
Floating alone;
And now he's gone.

But yet in the wave where the boy went down,
Another one stands,
With her aged hands,
Unlinking herself the circling bands
That would hinder her way o'er the heaving track,
And still to the shore would hold her back;
They are loosened now, and she fearless goes
Far out where the little one sunk and rose;
But her limbs are faint and are growing chill,
She cannot baffle the flood at will,
For fourscore years are upon the brow
Of her who is crossing the river now.
"The tide is swift, and it runneth high,"
She says, as she marks it with her eye,
"And the way is dark, but I see the gleam
Of the fields that lie beyond the stream,
And I fear it not—I come. I come;
The river is deep, but 'twill carry me home."

And see! as the waters rise and sink,
A strong man comes to the river's brink,
Nor heedeth the loving arms on shore
That are clinging fast—they can cling no more,
For the stream is washing his wavering feet,
And its cold embrace he must yielding meet,
For it lifts him up in its arms so wide,
And hurries him over the darksome tide.

Nor back to shore will they come again;
We shall watch the waters all in vain
For the child that left us so young and fair,
For the aged saint with her silver hair,
Or the stalwart man in his power and pride,
Who helpless sank by the river side.

And the mist will gather around the stream,
Again on its banks will we sit and dream,
And heedless be, as we were before,
Though close as then to the dangerous shore;
For wherever we be,
On the land or sea,
A river is rolling restlessly,
That draws to its bosom the great and small;
It has gathered some—it will gather all,
Then bury itself in the unknown sea,
In the measureless depths of eternity.

Feb., 1856. [Independent.

A BLOW FROM THE 140TH PSALM.

I know not what else to call it; though that would seem a little severe on *one*, at least, who was interested in the occurrence. But the following are the facts in the case:

In a certain church, whose leading men, to the number of four or five, were involved in some difficulty with their minister, there was one who seemed willing to undertake "the executive" of getting rid of him. He came in, in the evening, and informed his pastor, that *he*, as a kind of committee for the rest (those who sympathized with him) had concluded to "take up a deal with him," that he had come "to take the first step," etc., etc. The pastor asked what were the charges and specifications; or whether they were yet to be made out?—and was told that they had not fully determined of what he was to be accused; but that it was "something like *this*, which is here on this paper;" at the same time handing the minister a piece of paper with a line or two in pencil mark upon it. The minister took the paper, read it, asked several questions respecting it, and handed it back; at the same time remarking, that he supposed they who were moving in this matter knew, that not only the charge but the specification, with the time and place of offense, together with the names of the witnesses, etc, etc., were to be distinctly laid before him in writing; that he must, of course, know wherein he had offended, according to the directory in the church, and that *he*, being a minister and a member of the Presbytery, must of course be *tried* by Presbytery.

These considerations seemed new to the brother, and also to start difficulties which he was not till then aware of. He looked over his paper, read it several times, and then rather intimated, that notwithstanding there were some inaccuracies, he wished his pastor would waive all objections of that nature, and consent to regard this "the first step in the proceedings;" that if he did *not*, "it would evidently be set down as an unfavorable mark against him." He was told that *that* could not be helped; that he could not, of course, be expected to say whether he was guilty or not of a thing, until told what that thing was, or something like it; that since those brethren had made up their minds to accuse him, they must, of course, know what they were going to accuse him of, and also that it was before the body to which the minister belonged—which was the Presbytery.

There were no persons present, except the minister's wife. She sat till the conversation seemed drawing to a close, then made a remark or two, when the brother rose to depart. The pastor remarked, that it was getting late, and that he would have worship, at the same time giving the brother an invitation to stay, to which he at length reluctantly consented. The wife, sitting near the stand, took up the Bible and opened without thought to the 140th Psalm, and commenced reading as follows: "Deliver me, O Lord, from the evil man; preserve me from the violent man; which imagine mischiefs in their heart; continually are they gathered together for war. They have sharpened their tongues like a serpent; adders' poison is under their lips," etc., etc., growing hotter and hotter to the end. The pastor for a time thought to ask his wife to read some other portion; but a moment's reflection showed him, that this would evidently betray the feeling that the passage was peculiarly applicable in the case there before him, and therefore suffered her to read on. When she came to the 9th verse, and read it, the brother became exceedingly restive. Then followed the 10th, "Let burning coals fall upon them; let them be cast into the fire; into deep pits, that they rise not up again!" with the remainder of the Psalm, (which see) They knelt, and the minister tried to pray. But the awful, and apparently heaven-appointed rebuke kept rushing into his mind; and after a few sentences he gave over and rose up. The poor man was on his way to the door, and without much ceremony soon departed.

As soon as he was gone, the minister inquired of his wife how she came to take that passage on such an occasion? and was told that it was the one which came in course for that evening's devotions. The brother never asked as to "the application" of the 140th Psalm, nor what were his reasons for taking no further steps in the case of his minister.

[Genesee Evangelist.

PRAYER FOR THE WORLD.

The Conference of Evangelical Christians held in Paris last August sent out the following "Invitation to Prayer," addressed to all Christians. It can hardly fail of finding a response in the heart of every genuine lover of Christ and his Kingdom:—

Since the year 1846, when renewed efforts were made to promote a closer union between the members of the church universal, many Christians have agreed among themselves to unite in prayer on a particular day in every week. The number of those who have adopted this godly practice has continually increased; and for several years past the same day has witnessed Christians in different parts of the world offering up the same prayers for their brethren.

The Paris Conference reiterates this appeal, and urges the adoption of the practice upon all their brethren. They invite all Christians to agree in presenting their prayers to the Lord on a fixed day in every week, for the following objects:

1. For the prosperity of the church of Christ; especially imploring the blessing of God on missionary labors, whether home or foreign, established in those countries to which the persons whose signatures are attached to this document belong.

2. For the union of Christians in each country, and for the union of Christians of different countries, as all constituting the different members of the same body, which is the church of Christ.

3. That it may please God speedily to remove those obstacles which prevent the universal extension of His Kingdom, and to put an end to every system of error, idolatry, and unbelief, which opposes itself to the doctrine of the Gospel.

4. That He would be pleased to hasten the general accomplishment of prophecy, and of those promises in particular which are made to Israel, and to the world at large through them.

5. That all who unite in these prayers may, through the grace of the Holy Spirit, progress in faith, in sanctification, and in spiritual peace.

Monday morning is the time which has hitherto been observed for this united prayer.

QUAINT TITLES.

According to a writer for the *American Publishers' Circular*, our literary ancestors in the religious world employed very odd names for their books. The writer for the *Circular* notices the following as among the most significant:—

In 1686, a pamphlet was published in London, entitled "A most Delectable Sweet Perfumed Nosegay for God's Saints to Smell at." About the year 1649, there was published a work entitled "A Pair of Bellows to blow off the Dust cast upon John Fry," and another, called "The Snuffers of Divine Love." Cromwell's time was particularly famous for title-pages. The author of a work on charity entitles his book "Hooks and Eyes for Believers' Breeches." Another, who professed a wish to exalt poor human nature, calls his labors "High heeled-Shoes for Dwarfs in Holiness." And another, "Crumbs of Comfort for the Chickens of the Covenant." A Quaker, whose outward man the powers that were thought proper to imprison, published "A Sigh of Sorrow for the Sinners of Zion, breathed out of a Hole in the Wall of an Earthly Vessel, known among men by the name of Samuel Fish." About the same time there was also published, "The Spiritual Mustard Pot, to make the Soul sneeze with Devotion," "Salvation's Vantage Ground, or a Louping Stand for Heavy Believers." Another, "A Shot aimed at the Devil's Head-Quarters through the Tube of the Cannon of the Covenant." This is an author who speaks plain language, which the most illiterate reprobate cannot fail to understand. Another, "A Reaping-Hook well tempered, for the Stubborn Ears of the coming Crop; or Biscuits baked in the Oven of Charity, carefully conserved for the Chickens of the Church, the Sparrows of the Spirit, and the Sweet Swallows of Salvation." To another we have the following copious description of its contents: "Seven Sobs of a Sorrowful Soul for Sin, or the Seven Penitential Psalms of the Princely Prophet David; whereunto are also added, William Humius' Handful of Honey-suckles, and Divers Godly and Pithy Ditties now newly augumented."

HUSKS.

Many readers of the parable of the prodigal son have been perplexed by the mention of husks on which he fed in his extreme destitution. The following extract from the volume of Dr. Hackett, *Illustrations of Scripture*, may relieve them:—

"The word 'husks' is an unfortunate translation of the Greek term for which it is employed. The word so rendered signifies 'little horns,' with reference to the extended and slightly curved shape of the pods of the fruit of the Carob tree; that fruit being the article of food which the prodigal is represented as having eaten. The Carob-tree is found, not only in Egypt and Syria, but in Greece, and other parts of southern Europe. It is a large tree, with a thick foliage, and wide-spreading branches. I saw it growing on the Mount of Olives, and elsewhere, around Jerusalem. The fruit is a leguminous product, resembling the pod of our locust-tree, but much larger; it has a sweetish pulp when tender, but soon becomes dry and hard, with small seeds which rattle in the pod when shaken. It emits a slight odor, when first gathered, offensive to those whom use has not accustomed to it. The poorer class of people employ it as food in the countries where it is produced. I was told at Smyrna that it is in great request, in some of the Greek islands, as a nutritious article for fattening swine. It constituted a part of the provender (unless it was a very similar product) with which our camels were fed in traveling through the desert. I saw great quantities of this fruit exposed for sale in the market at Smyrna. Some specimens which I brought away with me averaged six and eight inches in length, though they are said to be often eight or ten inches long. It is not meant in the parable that the prodigal resorted to food absolutely fit only for swine; but that he who had been brought up in wealth and luxury was reduced to such want as to be obliged to subsist on the meanest fare."

THE GOOD PASTOR.

No character on earth has such moral beauty as the good Pastor. It is indeed a happiness of this profession, that it involves no injury of rivals—that one's success is not another's ruin. He is the village peace-maker, the school visitor, and the comforter of the sick and dying, as well as the preacher of righteousness and salvation.

By his very office he is a public benefactor, a fountain of good influences. He is the trusted friend of all his people, their counsellor and guide. To him it belongs to confirm the wavering in faith—to inspire hope and courage in those who are ready to despair; and to cheer the spirit that is about to plunge into the awful night of death. His work is complete when he sees those to whom he had preached departing from life in peace and in triumph. Leigh Richmond, in his Young Cottager, thus describes the death of that poor child:

"She turned towards me with a look of surprising earnestness and animation, saying, 'You, sir, have been my best friend on earth; you have taught me the way to heaven, and I love and thank you for it; you have borne with my weakness and ignorance; you have spoken to me of the love of Christ, and he has made me feel it in my heart; I shall see him face to face—he will never leave me nor forsake me—dear sir, God bless you.'"

Who would not prefer this benediction of a dying child to all the applauses of successful ambition? This is the pastor's joy and crown. His reward is not in fame—but in good accomplished, in tears dried, in sorrow soothed, and human spirits redeemed. The greatest minister is he who has saved from death the greatest number of his fellow beings. The secret of his power lies in preserving pure and stainless this sacred character. Great importance is given to talent and study, and justly so. But, after all, the strongest influence which one man can exert over another, is that of a superior moral being. It is the power of a sincere heart, of devotedness, of purity of life, of patience under suffering, of love and humility.

WHY AM I NOT A CHRISTIAN?

1. Is it because I am afraid of ridicule, and of what others may say of me?

"Whosoever shall be ashamed of me, and of my words, of him shall the Son of Man be ashamed."

2. Is it because of the inconsistencies of professing Christians?

"Every man shall give accont of *himself* to God."

3. Is it because I am thinking that I will do as well as I can, and that God ought to be satisfied with that?

"Whosoever shall keep the law, and yet offend in one point, he is guilty of all."

4. Is it because I am not willing to give up all to Christ?

"What shall it profit a man if he shall gain the whole world and lose his own soul?"

5. Is it because I am afraid that I shall not be accepted?

"Him that cometh to me, I will in no wise cast out."

6. Is it because I fear that I am too great a sinner?

"The blood of Jesus Christ cleanseth from *all sin*."

7. Is it because I am afraid that I shall not "hold out?"

"He that hath *begun* a good work in you, will perform it, until the day of Jesus Christ."

[Independent.

A HISTORY OF PEWS.

In Anglo-Saxon and some Norman churches of early date, a stone bench was made to project within the wall, running round the whole interior, except the east end. In 1319 they are represented as sitting on the ground, or standing. About this time the people introduced low, rude, three-legged stools promiscuously over the church. Wooden seats were introduced soon after the Norman conquest. In 1327 a decree was issued in regard to the wrangling for seats, so common, that none should call any seat in church his own, except noblemen and patrons, each entering and holding the one he first entered. As we approach the Reformation, from 1530 to 1540, seats were more appropriated, the entrance being guarded by the cross-bars and the initial letters engraved on them. Immediately after the Reformation the pew system prevailed, as we learn from a complaint the poor Commons addressed to Henry VIII., in 1546, in reference to his decree that a Bible should be in every church at liberty for all to read, because they feared it might be taken into the "*guyre*," or some "*pue*." In 1608 galleries were introduced. As early as 1611, pews were arranged to afford comfort by being baized or cushioned, while the sides around were so high as to hide those within. The services were often greatly protracted, so that many would fall asleep. Hence Swift's pithy allusion:

"A bedstead of the antique mode,
Compact of timber many a load,
Such as our ancestors did use,
Was metamorphosed into pews;
Which still their ancient nature keep,
By lodging folks disposed to sleep."

THE GREAT DIFFICULTY.

To combine business with religion, to keep up a spirit of serious piety amidst the stir and distraction of a busy and active life—this is one of the most difficult parts of a Christian's trial in this world. It is comparatively easy to be religious in the church—to collect our thoughts and compose our feelings, and enter, with an appearance of propriety and decorum, into the offices of religious worship, amidst the quietude of the Sabbath, and within the still and sacred precincts of the house of prayer. But to be religious in the world—to be pious and holy and earnest-minded in the counting room, the manufactory, the market-place, the field, the farm—to carry out our good and solemn thoughts and feelings into the throng and thoroughfare of daily life—this is the great difficulty of our Christian calling. No man not lost to all moral influence can help feeling his worldly passions calmed, and a degree of seriousness stealing over his mind, when engaged in the performance of the more awful and sacred rites of religion; but the atmosphere of the domestic circle, the exchange, the street, the city's throng, amidst coarse work and cankering cares and toils, is a very different atmosphere from that of a communion-table. Passing from the one to the other has often seemed as the sudden transition from a tropical to a polar climate—from balmy warmth and sunshine to mirky mist and freezing cold. And it appears sometimes as difficult to maintain the strength and steadfastness of religious principle and feeling when we go forth from the church into the world, as it would be to preserve an exotic alive in the open air in winter, or to keep the lamp that burns steadily within doors from being blown out, if you take it abroad unsheltered from the wind.

[John Caird.

QUARRELING.—If anything in the world will make a man feel badly, except pinching his fingers in the crack of a door, it is unquestionably a quarrel. No man ever fails to think less of himself after than before. It degrades him in the eyes of others, and, what is worse, blunts his sensibilities on the one hand, and increases the power of passionate irritability on the other. The truth is, the more peaceably and quietly we get on, the better for our neighbors. In nine cases out of ten, the better course is, if a man cheats you, quit dealing with him; if he is abusive, quit his company; and if he slanders you, take care to live so that nobody will believe him. No matter who he is, or how he misuses you, the wisest way is to let him alone, for there is nothing better than this cool, calm, and quiet way of dealing with the wrongs we meet with.

DISPUTING WITH SATAN.—An old and excellent writer gives the following valuable advice:—"If you would not be foiled by temptation do not enter into a dispute with Satan. When Eve began to argue the case with the serpent, the serpent was too hard for her; the devil, by his logic, disputed her out of paradise. Satan can mince sin, and make it small, and varnish it over, and make it like virtue. Satan is too subtle a sophister to hold an argument with him. Dispute not, but fight. If you enter into a parley with Satan, you give him half the victory." The reason is obvious; for we cannot parley with Satan without giving up *principle;* and wherever we allow ourselves to debate the question, whether we will do wrong, it is almost certain that we shall yield. Principle being abandoned, there is little else to guide, but evil passions, which strongly prompt to sin.

THE STILL SMALL VOICE.—A writer on the new birth says, "Often God does his great work in sinners' hearts so still and gently, that nobody can tell just when it was done. They often doubt it themselves—they wonder whether there can be the new heart—they are afraid they have made some mistake. Especially when some young Christians speak of a great sudden change, it makes others say, 'If that is the way we have to be converted, I can't be a Christian.' Now I want to clear up that trouble: sometimes the change in feeling is as quiet as the sun's going over our heads at 12 o'clock—it makes no noise at all, but the shadow begins to fall the other way; the fruits of godliness begin to appear; and the rescued soul is enabled to say, 'Whereas I was blind, now I see.'"

MORAL GOVERNMENT AS AFFECTED BY CHRIST'S MEDIATION—NO. 2.

Under the administration of Jesus Christ, to whom all things are committed, (Matt. 11: 27, John 3: 35, 1 Cor. 15: 27,) a *new test* of moral character is applied to mankind. Tried by the Law, man is found to have no disposition for any thing but rebellion against his Maker. In all ages, in all countries, and in all circumstances, the Law develops only enmity against God, sin seizing on "the commandment" as the occasion for working in one "all manner of concupiscence." (Rom. 7: 8) Under this test, it is found not only that man has already sinned, and brought himself under the curse, but that he is disposed to *persevere* in rebellion. The Law elicits no desire to reform.

The sinner might excuse himself, on the ground that the Law gives no hope of pardon for the past, and will make no allowance for sinful infirmities, however great might be his desire to reform. But this excuse he must not have; therefore, the Gospel operates as a *new* test whether he will cease his rebellion. This test, while it asserts the equity of the Law, and leaves it lying against the unbeliever in all its rigor, reveals "God's righteousness for the remission of sins that are past;" presents God as a compassionate Father, pitying our frailties and remembering that we are but dust; and proclaims peace by Jesus Christ to every believer. (See Rom. 3: 25, Acts 10: 36, Eph. 1: 17, Ps. 103: 13, 14.)

But what is the manifestation of moral character which is brought out under this new test? Is it found that the sinner's excuse rests upon any good foundation? Does he persevere in sinning, because there is no hope of pardon? Does he refuse to amend his ways, because there is no Spirit to help his infirmities? On the contrary, he goes on sinning still. Because there is respite, he hardens his heart; and unless a special divine influence create him anew, he proves to be as much the enemy of God under the Gospel as under the Law. It is decided—settled conclusively—by this new test, that man has no excuse for his sins. (See John 15: 22.)

This is an important point gained; it has a very intimate bearing upon the final Judgment. For it is necessary that the Judgment shall not only vindicate the justice of God, but also his patience and mercy. If it could be brought against the Almighty, in the Last Day, that he had exercised no patience with the offender—that he had not granted sufficient time for repentance, or that his readiness to receive the penitent back to favor had not been clearly manifested—then would the rigors of the Judgment be obnoxious to denunciation. But no such charge will be brought. God has tested men both by the Law and by the Gospel. By the one, he hath concluded them all under sin; by the other, he hath endured them with much long suffering. And now, if he wills to show his wrath, and to make his power known, who can justly find fault, since the Judgment makes it evident that he has endured with much long suffering the vessels of wrath fitted to destruction? (Rom. 9: 22.)

Thus the Judgment of the Last Day will be a vindication, not only of rigid justice, but of the mercy and goodness of God. And this is another very important respect in which the government of the world is modified by the mediation of Jesus Christ, namely, that human affairs, in their relation to the universe at large, are brought under the inquest of a final judgment, when every attribute of the Divine Nature will stand forth fully vindicated, and God will appear glorious in the eyes of all holy intelligences.

Since the Judgment is to be a vindication of God's mercy and goodness as illustrated in the Gospel, the execution of it is fitly committed to the Mediator. "The Father judgeth no man, but hath committed all judgment unto the Son." (John 5: 22.) It was the Son who came into the world to magnify his Father's character—to set it in a light every way honorable and worthy. It was he who came to declare the love of God—to publish his mercy to a fallen world—to set forth his readiness to forgive the penitent, and receive him back to favor. All that the Son has published, on this point, must be fully vindicated; the truth of it must be confirmed. Not an intelligence in the universe must be left in the dark here. The Son will, therefore, complete what he has begun; he will, in the Judgment Day, vindicate the truth of all that he declared respecting the love of God on earth; nor will he resign the kingdom, till he shall have done so.

The Law knows nothing of this method of administration. It teaches responsibility to the Creator—punishment for transgression, and reward for obedience; but it knows no patience—no forbearance—no long suffering. It vindicates the righteousness of God, it is true, but without the intervention of any season of respite to offenders. It punishes *promptly*; and by its very promptness, in this respect, stands in the way of that full development of the Divine Nature, in all its loveliness, which it is the office of the Gospel to bring out.

T. B. B.

The Sunday in France.—A movement is on foot in France to secure a more general cessation from labor on Sunday. There is a Central Union in Paris to promote the object, and auxiliary associations are organized in several of the large towns, as Paris, Bordeaux, Marseilles, Lille, and Valincennes. It is not proposed, however, to turn the Sunday into a Puritan Sabbath. The people are simply urged to abstain from work, go to church, and pass the day in family enjoyments. Good dinners, pleasant excursions into the country, and quiet amusements, are not only allowed but recommended by these Sunday reformers. They wish to make the day, it would seem more like the annual thanksgiving days of this country, than like the Sunday as observed by its strict advocates among us.

LAYING UP TREASURES IN HEAVEN.

"Lay up for yourselves treasures in heaven, where neither moth nor rust doth corrupt, and where thieves do not break through nor steal." Matt. 6: 20.

Anxiously and perseveringly as men labor to lay up treasures on earth, in many instances they fail of gaining the desired object. And if they do succeed in acquiring them, they cannot at all times prevent them from "taking to themselves wings and flying away." Buildings will rot down, or burn up, or they may be carried away by a flood; metals are corroded by rust; clothes become moth-eaten; banks fail; "thieves break through and steal;" and in many other ways, riches pass away from their possessor, or become worthless. And if they could be permanently retained in our possession, they could not satisfy the large desires of the mind. Man thirsts for something more substantial, more ennobling, more happifying. God has provided means to supply this want. The riches of heaven are satisfying in their nature. And it is safe to lay up treasure in heaven. There "no moth corrupteth, no thief approacheth;" there the gold is not cankered. That "inheritance" is "incorruptible, and undefiled, and fadeth not away." How, then, may we lay up treasures there?

1st. *No man can lay up any thing in heaven, till he repents of all his sins, and trusts in Christ's merits for salvation.* While living in impenitence and unbelief, men are "treasuring up wrath against the day of wrath, and the revelation of the righteous judgment of God." In this state they are making no progress toward heaven. But when a man truly forsakes his sinful course, and believes in Jesus, he puts forth his first effort towards securing a heavenly treasure; and should his probationary state immediately end, he would have an inheritance in heaven; though the treasure secured by him would be small, compared to that of those who labor and suffer long for the sake of Christ and truth. And here I would remark, that the reward which the people of God will receive, will not be the reward of debt, but of grace. God is indebted to none. But through the riches of his grace he has made "exceeding great and precious promises" to his people, which he will fulfill.

2d. *Diligence and perseverence are necessary*, in order to "lay up treasures in heaven." In the case of the person dying immediately after his conversion, this could not be, but this is an extraordinary case. In most cases, those who accumulate large treasures here, are obliged to be very industrious and persevering; and so it is with those who would "have treasure in heaven." It is "by *patient continuance* in well doing," and thus "seeking for glory and honor and immortality," that we are to obtain "eternal life." "Be thou *faithful unto death*, and I will give thee a crown of life," said Christ. No faint desires, no lazy efforts, will suffice, but persevering labor, and just that kind of labor which God appoints.

3d. We "lay up treasure in heaven" *by obeying all the precepts of God's law, and teaching others to do so.* While those who "break one of the least of God's commandments," and teach men so, shall be of no esteem in the kingdom of heaven, those who "do and teach them shall be called *great" in that kingdom.*

4th. *By enduring and overcoming temptation.* Said James, "Blessed is the man that endureth temptation, for when he is tried," (when the trial is ended,) "*he shall receive the crown of life*, which the Lord hath promised to them that love him." Temptations serve to strengthen those who resist and overcome, but to weaken those who yield to their power. How pitiful the condition of those who, "drawn away by their own lusts," are "led captive by satan at his will."

5th. *By overcoming evil passions, propensities, and appetites.* Said Jesus, the faithful and true witness, to one of the seven churches of Asia, "To him that overcometh will I give to eat of the tree of life, that standeth in the midst of the Paradise of God." To another church he said, "To him that overcometh I will give to eat of the hidden manna;" to another, "He that overcometh shall be clothed in white raiment, and I will not blot his name out of the book of life." Again, "To him that overcometh, will I grant to sit down with me on my throne, as I also overcame and am set down with my Father on his throne." Here are some of the rewards described, which shall be possessed by conquering Christians. It is necessary not only to overcome foes without, but also foes within. The love of the world, pride, vanity, anger, envy, jealousy, unchaste desires and imaginations, evil speakings, and all impure thoughts, must be subdued and driven away. These unfit us for the kingdom of God. We must obtain pure hearts. Christ said, "Blessed are the pure in heart, for they shall see God." Depraved appetites must be overcome. Said Paul, "He that striveth for the mastery is temperate in all things. Now they do it to obtain a corruptible crown, but we an incorruptible." If it was necessary to practice the most rigid temperance, in order to hope to obtain a crown of laurels, how much more so to obtain a crown of unfading glory, in the pure kingdom of God!

6th. *Christians "lay up treasure in heaven," by enduring suffering, and making sacrifices for Christ's sake.* Moses, in view of "the recompense of the reward," chose rather to suffer affliction with the people of God, than to enjoy the pleasures of sin for a season." Christ said, "Blessed are they that are persecuted for righteousness' sake, for theirs is the kingdom of heaven. Blessed are ye when men shall revile you, and persecute you, and shall say all manner of evil against you falsely for my sake. Rejoice ye in that day, and be exceeding glad, for *great is your reward in heaven!*" Paul said concerning his afflictions, "These light afflictions work out for me a far more exceeding and eternal weight of glory." Thus, by suffering for the cause of Christ, do the saints make themselves richer in the kingdom of God. And God will not forget, nor leave unrewarded, the self-denying labors of his people. Jesus said to his disciples, "Every one that hath left houses, or brethren, or sisters, or father, or mother, or wife, or children, or lands, for my name's sake, shall receive a hundred fold, and shall inherit everlasting life."

7th. *By ministering, according to our ability, to the wants of the poor, and especially God's poor*, do we "lay up treasure in heaven." The Saviour taught his hearers, not to make feasts for the gratification of their friends or rich neighbors, who would bid them again, and thus a recompense he made them; but, said he, "When thou makest a feast, call the poor, the maimed, the lame, the blind, for they cannot recompense thee, but thou shalt be recompensed at the resurrection of the just." Said Paul, "Charge them that are rich in this world, that they do good, that they be rich in good works, ready to distribute, willing to communicate, laying up in store a good foundation against the time to come, that they may lay hold on eternal life." Thus we see that the devoted Christian, while distributing his goods among the poor, and otherwise promoting the cause of benevolence, and thus lessening his earthly possessions, is increasing his treasure in heaven. But especially acts of mercy and love towards the disciples of Christ, because they are his disciples, will meet a divine reward. Jesus said, "He that shall receive a prophet in the name of a prophet shall receive a prophet's reward, and he that shall receive a righteous man in the name of a righteous man shall receive a righteous man's reward, and whosoever shall give to drink to one of these little ones a cup of cold water only, in the name of a disciple, shall in no wise lose his reward." And in the final judgment, when the servants of God shall be rewarded, the judge will say to them, "Inasmuch as ye have entertained when strangers, fed when hungry, clothed when naked, visited when sick and in prison, the least of these my brethren, ye have done it unto me." He will say unto them, "Inherit the kingdom prepared for you from the foundation of the world."

8th. *Faithful and successful ministers will accumulate immensely large possessions in the kingdom of God.* Not those who preach smooth things, and aspire after worldly honors and wealth. Not those who "strengthen the hands of the wicked by promising him life," but those who, by their faithfulness, become "pure from the blood of all men." Daniel prophesied of such, and of their glory in the resurrection state, when he said, "They that be wise shall shine as the brightness of the firmament, and they that turn many to righteousness, as the stars for ever and ever." Peter also, in his exhortation to elders, said, "Feed the flock of God which is among you, taking the oversight thereof, not by constraint, but willingly, not for filthy lucre, but of a ready mind. And when the chief shepherd shall appear, ye shall receive a crown of glory that fadeth not away." To the faithful and care-worn minister of Christ such promises are truly cheering.

We have seen that the least acts of obedience to Christ will be rewarded in heaven. This should encourage the saints "always to abound in the work of the Lord." Christ's suffering ones may be strengthened in view of the heavenly state where, with the great, innumerable company, who "come up out of great tribulation," their sufferings will be over, and "the lamb shall lead them to fountains of living water." The worldling may and should be alarmed, in view of his present and prospective spiritual poverty, and commence "laying up treasures in heaven."

C. A. O.

REVIVAL IN 3D BROOKFIELD CHURCH.

West Edmeston, Feb. 25, 1856.

To the Editors of the Sabbath Recorder:—

It may be interesting to the friends of Zion, to learn that the Third Brookfield Church has of late enjoyed a refreshing from the presence of the Lord. For a season past we have enjoyed the labors of Bro. Joshua Clark. The Lord has heard prayer, and blessed the word preached, to the revival of the church, and to the bringing in of many who have for a long time lingered around the skirts of Zion. Some, who have not walked with the church for years, have reünited with their brethren. Ten have consecrated themselves to God and his people in the ordinance of baptism.

L. M. C.

Converts to the Sabbath.—Bro. Chas. Card writes us from Troupsburg, Steuben Co., N. Y., that there is considerable inquiry there in regard to the true Sabbath, and that five persons have recently commenced keeping it.

"THE SCISSORS TALENT."

Some editors (says the *Watchman and Reflector*) indulge in ungracious flings at their neighbors who think the scissors fill an important place in the editorial sanctum. We confess we have a profound reverence for the scissors; they do better service than half a dozen long winded contributors, whose articles no one pretends to read, except when bestormed at some country tavern. A paper made up chiefly of original matter, or boasting a long list of learned contributors, is generally heavy and unreadable. The *Montreal Witness* has some very pithy and truthful comments on the self-laudations of some of our huge weeklies. It says:—

"A prominent religious sheet on this continent makes known in a variety of ways that it is the largest religious newspaper in the world, and claims support on that account, whereat some small sheets, feeling aggrieved, alledge that it is not size, but quality, that renders a newspaper worthy of support; that if a large paper has nothing worth reading, it is only the greater bore, and that a small paper judiciously filled, is as much as most people have time to read. Of course these small papers quietly assume that their matter is of a superior order to that which appears in the large one, which may be doubted. There is another ground upon which superiority is especially claimed by the sheet first alluded to, namely, a long list of distinguished editors and correspondents. It complacently assures us that it employs brains instead of scissors. But if the recommendation of size be a questionable one, this is still more so; for distinguished men have their whims and hobbies, and are sometimes apt to occupy a most unreasonable space with matters that are interesting only or chiefly to themselves. But if they be in the official position of editors or correspondents, who can decline or condense their lucubrations? We were once offered an official connection in our editorial labors with one of the greatest, ablest, and best men in Canada, which we were obliged to decline, under the conviction that if we had to publish all that he saw fit to write, and became involved in all the questions that were personally interesting to him, the *Witness* would not survive two years. Again, the boast we have alluded to quietly takes it for granted that the brains employed upon the paper in question are of a superior order to those employed upon any or all other papers. For it is the great advantage of scissors, that they can command the very best portions of the very best articles of the very best writers of both the old and new world [and of all times.] Original articles are very good, provided they be pithy, pointed, and short; but it would be great vanity, in our estimation, for any editor anywhere to pretend that his original articles were more interesting than those he could select. It is in selecting judiciously that the great strength of a newspaper lies, and it is a great comfort that by merely sitting in one's own office, looking over the papers brought by every mail, with a pair of scissors at hand, the obscurest editor can press into his service the first talents in the world. We would respectfully suggest to our brethren of the press to improve the scissors talent. It is a very great one."

THE MINISTER NOT TO MEDDLE WITH TYRANNY AND OPPRESSION, &C.

Brother Wheeler has made *some* excellent suggestions on the "Responsibility of Ministers," in the *Recorder* of Feb. 14th; and it is to be hoped that our ministerial brethren will profit by them. That article, however, contains some statements which greatly need explanation; and as one who desires to preach the gospel understandingly, I respectfully solicit such explanation.

Brother W. asks:

"What is the work the minister has to perform?" and says, "Let the sacred oracles direct us in giving a reply. 'Go into all the world, and preach the gospel to every creature,' is the commission of our risen Lord. Paul, who, we believe, knew his business well, says, 'Now then we are ambassadors for Christ, as though God did beseech you by us, we pray you, in Christ's stead, be ye reconciled to God. This was the exclusive work in which the ministers of Christ were engaged in primitive times. They meddled not with tyranny and oppression. They had nothing to do with politics and government measures. They did not harangue their audiences on civil rights, &c."

Now, if all this means anything, it means this, that the gospel may be preached in all its purity and power, and yet "tyranny and oppression, politics, government measures, civil rights," &c., are to be left unaffected thereby. The preacher of the *gospel* is to meddle with none of these. Of course, then, the *gospel itself* does not meddle with them; and hence "*tyranny and oppression*" may continue to desolate the earth, to wage war on the rights of man, to buy and sell God's image in the market, to shut the Bible to its wretched victims, and to punish as felons those who would teach the poor benighted slave to read the word of life from its sacred pages—all this may continue, even amid that noon-day splendor of millennial glory, which it is the high prerogative of the gospel to inaugurate. Nay, more, "*politics*" may become corrupt, and fill every avenue of society with their corruptions; "*government measures*" may be adopted which forbid the exercise of all the holy emotions of a sanctified soul—which forbid the Christian to "feed the hungry, clothe the naked, and deliver the poor and needy, and rid them *out* of the hand of the wicked, to loose the bands of wickedness, to undo the heavy burdens, and to let the oppressed go free, and to break every yoke." *Government measures* may even require the Christian to deliver the oppressed *into* the hands of the oppressor, to hunt the poor bleeding fugitive as he heroically flees from his dreadful prison-house, and thrust him back again.

These are no hypothetical cases "Tyranny and oppression" are at this moment doing these deeds of darkness; "government measures" are at this moment carrying out these villainous assaults on Christianity, and enacting in our very midst scenes which might well shame hell. But gospel ministers must not "*meddle*" with it! The *gospel* looks complacently on, and sees the poor frantic mother gather up her darling offspring, and start for a land of freedom. It sees her encounter perils such as appall the stoutest hearts, till at length she gathers her dear little ones around her, in the Queen City of the West. Is she free? Alas! the blood-hound is on her track; she hears his deep baying; she starts frantically, and presses her babes to her heart, and resolves to defend them. She fights *heroically*, until, overcome by fatigue and anguish, she sees the hand of the villain who calls her and her little ones his *property*, stretched out to seize them. All the agony of a crushed and bleeding heart overwhelmes her, and in that dreadful moment, to save her darlings from the grasp of demons and the hell of slavery, she seizes the keen-edged weapon, and lets out the life-blood of her infant child, and sets it free to dwell in the bosom of angels. The *gospel*, meanwhile, looks on and sees the cruel oppressor haste this dreadful tragedy; it sees him grasp this wretched mother and her surviving offspring, which she strove in vain to set free by the dreadful alternative of death. But the gospel meddles not with all this, because, forsooth, it is a "government measure!" The "*government*" authorizes all this robbery, and sends its own blood-hounds to catch *mothers and babes seeking freedom.*

Has the gospel no power to stop all this? Has the minister of the gospel no commission to "*meddle*" with such "*tyranny*" and with such "*government measures?*" Brother W. says he has not. Now, *dear brother*, please inform us *what* is to "meddle" with such abominations, if the *gospel* does not? Where is the "light of the world," the "salt of the earth," that shall purify it of these dreadful corruptions, if the gospel refuse to do it? And who shall apply this salt to these corruptions, if not the gospel minister? Give us light, for your view, as expressed in the *Recorder*, leaves the point shrouded in awful darkness.

The minister of the gospel will soon stand before God in judgment. The poor slave mother and her murdered child will stand by his side. The millions of bondsmen, whom "tyranny and oppression" have so long crushed, will stand there too. The wretched men and women, who have sought freedom and found it, by deeds of heroism such as the pen of the historian has not recorded, but whom "government measures" have thrust back again to desolation and death, will stand there too. All these shall stand before the Judge of the earth. How applicable to ministers of the gospel, who have not "meddled" with these gigantic crimes, and have not sought to break the oppressors' yoke, and give liberty and life and comfort to the poor slave, will be the words of the Judge: "Inasmuch as ye have not done it unto one of the least of these, ye have not done it unto me." May God save gospel ministers from deserving such a sentence.

D. E. Maxson.

THE CLINTON COUNTY SETTLEMENT.

Milton, Wis., Feb. 12, 1855.

I am asked a large number of questions about that point of the country in which a new settlement of Sabbath-keepers is proposed. To save time, and answer all questions of importance, I will reply through the *Recorder*.

The soil is good, perhaps from one to three or four feet deep. Don't know how deep wells are *generally*, but think from ten to fifty feet deep, perhaps twenty or thirty on an average. Do not know whether the water is limy (hard) or not, but think it is limy. I suppose the country about there is as healthy as any part of the West—do not know of any provailing disease. Stone can be obtained for all ordinary purposes. Building materials, brick of an excellent quality, and gravel, can be got in abundance; lime is cheap, lumber high. Well-watered, on the surface with small streams. Four to eight miles to a grist-mill at Dewitt. That place has from fifty to one hundred houses. Deep Creek runs through the vicinity where our people live, along one side of the settlement; has a good mill-seat, but a doubtful amount of water; some say it will drive three run of stone twelve hours in a day; others say it will not drive one more than that. The railroad running to Maquocats is to run up the creek. If the stream will warrant the erection of a mill, there will be a village at that place; there must be a business point somewhere near.

Eld. L. A. Davis' post-office address is Welton, Clinton Co., Iowa. They have meetings there every Sabbath; Eld. Davis is their minister, and much esteemed. There is a school-house, just built, half a mile from Eld. Davis'. Schools will be had as fast as there is a demand. Your maps will show you the latitude; land is generally prairie, wood scarce. Do not know whether the land is good for grass or not, (I speak of tame grass.) I suppose the titles to the land are good. I understand that two purchases have been made lately; more are intending to go from this quarter. There ought to be a studious effort to avoid excitement about land purchases there. If some good business man was employed to purchase for settlers, who should keep an eye to the whole matter, it would be very well. He would save purchasers money, and avoid excitement among the land-holders. Those leaving the East for that point, when they can should take teams of moderate value; horses that have the heaves in the East, generally get well in a few months, when they get into the western country; such teams pay the best to bring. Do not sell your wagons at a sacrafice; get their full value, or bring them; you will need them, and they are higher here than in the East. The people in Clinton Co. will do all they can to accommodate friends moving in there.

V. Hull.

Anthony Burns.—We have already announced the fact, that Anthony Burns, the fugitive slave whose arrest in Boston made so much noise, after being returned to his master, was purchased, liberated, sent to Oberlin to study for the ministry, and refused a letter of dismission and recommendation from the church to which he belonged. The following reply of the church to his request for a letter, is a curious document, and ought to be preserved.

"The church of Jesus Christ, at Union, Fauquier Co., Va.:

"TO ALL WHOM IT MAY CONCERN.

"Whereas, Anthony Burns, a member of this church, has made application to us by a letter to our pastor, for a letter of dismission in fellowship, in order that he may unite with another church of the same faith and order; and

"Whereas, it has been satisfactorily established before us, that the said Anthony Burns absconded from the service of his master, and refused to return voluntarily, *thereby disobeying both the laws of God and man*, although he subsequently obtained his freedom by purchase, yet we have *now* to consider him only as a *fugitive from labor*, (as he was before his arrest and restoration to his master,) have therefore

"*Resolved*, unanimously, That he be excommunicated from the communion and fellowship of this church.

"Done by order of this church, in regular church meeting, this 20th day of October, 1855. "W. W. West, Clerk.

This bill of excommunication was accompanied by a letter from the pastor to Mr. Burns, advising him to return to his master, in which he says, "By so doing you may measurably make amends for the expenditure of $30,000 by the government in your arrest, trial, and restoration to your legal owner."

Excommunication.—The Romish Church, looking upon marriage as a sacrament, regards with horror the subsidence of the relation into a civil contract, solemnized before civil authorities only. Marriage by civil functionaries is held to be but legalized sin. This view has given rise to a recent excommunication at Coblentz, Germany, of which the following account is given in the *Journal de Frankfort*:—

"On Sunday we were witnesses of a ceremony which has not been performed for centuries, viz.—an excommunication—the subject being M. Sonntag, a merchant at Coblentz, who was divorced from his first wife, and eight years ago was married by the civil authorities only to his present one. Last summer, M. Sonntag was commanded by the clergy to separate from his wife, and not obeying their decree, he was on Sunday excommunicated. Dean Kramentz, after preaching a sermon against the civil marriage, put on some other sacerdotal garments, and accompanied by two clergymen bearing wax tapers, read, standing in the middle of the church, the sentence of excommunication against M. Sonntag and his lady. He then extinguished the tapers, saying that the individuals named were not worthy to see the day of the Lord, and throwing the candlesticks to the ground, breaking them to pieces, exclaimed, 'Let the bells sound the funeral knell!' We immediately heard the sound of bells and the chants for the dead. The Dean, in conclusion, proclaimed that no one whosoever was to hold relations with the excommunicated, to salute them, &c. This prohibition has not had much effect, for their house has been filled ever since with visitors, and at night they have been serenaded."

The Right Spirit.—A Boston correspondent of the New York *Observer*, alluding to the expected special meeting of the American Board of Commissioners for Foreign Missions, remarks:—

"With all the slight differences of opinion as to the policy and action of the Board in certain instances, there is still in all our best churches a confidence in it and an affection for it, which it is truly delightful to contemplate. Times may be hard, and the pressure upon the means of Christians may be great; but yet the American Board, that efficient organization to which the Sandwich Islands owe their evangelization, and by which so many spots amid the night of heathenism have been made luminous with the light of the gospel, and vocal with the praise of the Son of God, must not and will not be forgotten, nor suffered to languish for want of the needed material aid."

Ordination.—Bro. Joel C. West was ordained and set apart to the work of the Gospel ministry, by the imposition of hands, and solemn prayer, and inaugurated pastor of the Seventh-day Baptist Church in Preston, Chenango Co., N. Y., Feb. 24th, 1856. Ordination Sermon preached by Eld. J. R. Irish, of DeRuyter, N. Y., from 1 Cor. 2: 2, after the public examination of the candidate. The consecrating prayer was offered by the same. The charge and right hand of fellowship were given to the candidate by Eld. A. W. Coon, of Scott, N. Y. The charge to the church was given by Eld. J. Clark, of Brookfield, N. Y.

The School at Milton, Wis.—A letter from Bro. A. C. Spicer, at Milton, Wis., informs us that the school at that place is in a very prosperous condition. It was never doing so well before, and never promised so much for the future. The number of scholars in regular attendance is about one hundred and thirty.

As long as the influence of Russia in the Turkish Empire was predominant, the Oriental churches were effectually assisted by her in opposing the constant endeavors of the Roman Catholic Church to create in their midst a party favorable to a union of these churches, as a body, with Rome. Since Russia's influence has been broken by the war, the Roman Church, aided by France and Austria, redoubles her efforts.

RELIGIOUS INTELLIGENCE.

We are pleased to state (says the Evangelical Lutheran,) that the late revival in Wittenburg College has been attended with very happy results. Nearly all the young men in the institution who were not professors of religion at the commencement of the session have been hopefully converted; and the remainder are much impressed, and are earnestly engaged in seeking Christ. The congregation in town has also shared largely in the blessed fruits of this work of grace, and a number of the young have found in Christ the fountain of life.

The friends of Rev. Mr. Brown, of Cleveland, decoyed him from home on the 1st Jan., and detained him and wife in a sleigh-ride till eight o'clock in the evening, when, driving up to his door, he was surprised to find his house full of guests. Long tables loaded with provision were spread, and valuable presents were showered upon him from all sides. It was indeed a surprise party. Not the least interesting item was the presentation of a purse containing five hundred dollars in cash.

By the generosity of Mrs. Codman, widow of the late Dr. Codman, of Dorchester, Miss., we have in charge, says the editor of the Congregational Journal, a supply of the Memoir of John Codman, D. D., for the Missionaries of New Hampshire Missionary Society. It is a volume of 408 pages. Any Missionary can receive it by mail, by forwarding 29 cents in letter-stamps to pay the postage.

An interesting revival is in progress in the First Baptist church, Salem, N. J., under the pastoral charge of Rev. Dr. Perkins. Seventeen were baptized on a late Sunday evening. Some ten or twelve more are now indulging hope, and some twelve or fifteen come forward every evening for prayer. The meetings are characterized by deep solemnity, and the presence of the Holy Spirit. The church has been very much revived.

From a private letter from one of the professors in the Ohio University, Athens, Ohio, dated Jan. 31st, we are permitted to make this extract: "We are in the midst of a wonderful outpouring of the Spirit. There were about forty at the altar last night. Among these are many of our students—some of them our brightest young men, eminent for talent. There have been, perhaps, eight or ten conversions. It bears every mark of a work of God. Twenty-three have joined the Methodist Episcopal Church."

A petition now in circulation among the citizens of Maryland, advances some strong arguments in favor of the suppression of the nunneries which at present exist in that State. They are termed Private Prisons, into which girls and women are decoyed under various pretexts, and there continued without any protection from the laws under their present system.

In the year 1790, it was computed that there were 5000 Catholic ecclesiastics in Paris. According to the increase of the population of the city from that day to the present, the number of Catholic priests should now be 10,000, whereas the total number at the present time is only 800!

When Paradise Lost was published, the celebrated Waller wrote this passage: "The old blind school-master, John Milton, hath published a tedious poem on the fall of man; if its length be not considered as merit, it hath no other."

The Hospodar of Wallachia, following the example of Prince Ghika in Moldavia, has just caused a bill to be prepared for the abolition of the slavery of the serfs on his territory.

Proceedings in Congress last Week.

SECOND-DAY, FEB. 25.

In the SENATE, Mr. Mason submitted a resolution requesting the President, if not incompatible with the public interest, to communicate to the Senate all the correspondence which may have taken place between this Government and that of Great Britain regarding the enlistment of soldiers in the United States to serve in the British army. Mr. Jones of Tennessee made his promised defense of Governor Shannon, in reply to the remarks upon the Governor by Senator Wilson, of Massachusetts. And out of this subject grew a sharp encounter between the defender of Shannon and Mr. Hale of New Hampshire.

In the HOUSE OF REPRESENTATIVES, the Committee on Military Affairs were instructed to inquire into the expediency of establishing a Military Academy in the Mississippi Valley. There was some talk about constructing fifteen additional steam-frigates, but nothing was done for want of a quorum.

THIRD-DAY, FEB. 26.

In the SENATE, a bill was reported from the Naval Committee, authorizing the construction of ten steam sloops-of-war. Senator Bell, of Tennessee, then made a speech on our difficulties with Great Britain; after which bills were passed amending the laws relative to pilots, and authorizing the Secretary of the Treasury to permit the owner of any vessel to change her name for sufficient reason.

In the HOUSE, a message was received from the President, transmitting a communication from the Secretary of War, recommending the adoption of recent improvements in arms and munitions of war; that more active and vigorous measures be adopted in regard to our fortifications, and that immediate steps be taken for increasing the military efficiency of the country generally. A debate ensued on its proper reference pending which the House adjourned.

FOURTH-DAY, FEB. 27.

In the SENATE, a bill to increase the efficiency of the army was reported by the Committee on Military Affairs. The Judiciary Committee reported their inability to decide in the case of the contested seat of Mr. Trumbull, of Illinois. Resolutions in favor of and adverse to Mr. T.'s retaining his place were offered, and the subject was made the special order for Second-day. The bill relating to fortifications in California, Texas and Florida, was discussed, and recommitted with instructions to the committee to report such works as may be necessary. The invalid and other pension appropriation bills were passed.

In the HOUSE, the Committee on Territories reported a bill authorizing the citizens of Oregon to form a State Government; and also a bill to annul certain legislative acts of the Assembly of Kansas; among others, that which requires officers of that Territory to take an oath for the support of the Fugitive Slave Law. The House debated till the hour of adjournment upon the President's recommendation to make an appropriation for increasing the efficiency of the army.

FIFTH-DAY, FEB. 28.

In the SENATE, a resolution was offered, calling on the Secretary of the Navy to furnish additional information in regard to the action of the Naval Retiring Board, and a bill was reported making appropriations for new fortifications; after which the official documents in the British enlistment difficulty were received from the President. A resolution was then adopted, on motion of Mr. Mason, calling for information as to whether an offer had been made by Great Britain to submit the Central American difficulties to arbitration.

The HOUSE adopted a resolution instructing the Committee on Naval Affairs to inquire into the expediency of making immediate provision for the construction of new vessels of war, and adjourned to Second-day.

European News.

One week later news from Europe has been received since our last.

In the present excited state of the public mind as regards our relations with England, the subject of the first importance is the feeling as relates to the difficulties with this country. But nothing of importance has occurred which tends to throw any new light on the affair, except a debate in the House of Commons on the 15th ult., when there was a lively discussion of the Enlistment question between Mr. Roebuck and Lord Palmerston, the former gentleman warmly advocating our cause, and declaring we were right in demanding the recall of Mr. Crampton, and that the pretended apology of the Government for the outrage upon our National honor was a pretense and a delusion. Though Lord Palmerston warmly and angrily replied to the charges of Mr. Roebuck, he expressed no vindictive feelings towards this country, and very decidedly hoped that all the matter in dispute would be amicably settled. There is nothing of an alarming character in the news, or to lead to any apprehension of serious difficulties.

The Dutch have concluded an important treaty of commerce with the Emperor of Japan, which gives them privileges denied to England and the United States. By this treaty Dicjma is ceded to the Dutch, wherein to form an entrepot for their trade with Japan, and it allows them to land goods and stores duty free.

California News.

Two weeks later news, and more than a million dollars in gold dust, were received in New York Feb. 27th, from California.

A terrific explosion occurred on one of the river steamers near Sacramento, on the 5th Feb., which is reported to have caused the death of at least thirty persons, and wounded a number of others.

More rain had fallen throughout the mining region of California during the two weeks ending the 5th, than in any similar period the present Winter. From every portion of the mines we now hear good accounts of the miners, and the receipts of gold have largely increased at San Francisco. The farmers throughout the agricultural districts have also taken advantage of the rains to commence putting in their winter crops.

The Legislature, so far, has failed to elect a United States Senator to occupy the place recently held by Dr. Gwin.

From Oregon, we learn that there had been no more fighting with the Indians, but preparations were being made on the part of the red skins.

In Washington Territory, an attack had been made upon the town of Seattle, which had been garrisoned by the officers and men of the sloop-of-war Decatur. On the 26th January about seven hundred Indians attacked the town, which was defended by one hundred and ten men from the Decatur, and seventy citizens. The force proving too small to drive the Indians away, all the women and children of the place were put on board the vessel, and the guns of the Decatur were turned upon the assailants, which had the effect of dispersing them. The Indians had thirty-five killed and thirty six wounded Two were killed on the side of the whites, both of whom were civilians. Another attack was feared. Some of the Northern Indians had expressed their determination to seize the Decatur, in order to replenish their stock of ammunition. They will no doubt have a lively time in taking her, as she mounts sixteen guns.

PRAYER FOR COLLEGES.—Fifth-day of last week was extensively observed as a day of Prayer for Colleges. A writer in the Boston *Traveler*, after reviewing the religious experience of the various Colleges in the United States during the past year, concludes as follows:

"In the light of these cheering facts, it is evident that the past year was, in respect to our Colleges and Academies, a year of 'the right hand of the Most High;' and a comparison of these statistics with those of former years will show that, relatively, the year 1855 was one of signal spiritual blessings. In 1854 I made twenty memoranda of revivals, in Colleges and other literary institutions; in 1853, nineteen; in 1851, twelve; and in 1850, seven."

ROBBERY UNDER SINGULAR CIRCUMSTANCES.—On the 22d ult., a lady received a note which purported to come from her dressmaker, and which requested her to call upon the latter at once. The lady went, leaving the house alone. On arriving at the dressmaker's she learned that no such note had been sent, and upon returning home she found that the house had been broken open during her absence and plundered of jewelry and clothing to a heavy amount. The matter was placed in the hands of High Constable Franklin, who succeeded in arresting the thief. Most of the goods were recovered at a pawnbroker's, where they had been pledged after the latter had received notice of the robbery, and a printed list of the articles stolen. The robber proved to be a near relative of the family robbed. [Phil. Bulletin.

SALTPETER IN TENNESSEE.—A Tennessee paper has the following statement in reference to the manufacture of saltpeter in a portion of that State: "The caverns of East Tennessee, at least a great number of them, contain immense quantities of the nitrous earth from which saltpeter is manufactured. This is no new discovery. Many years ago its manufacture was carried on in several localities, though to a limited extent. Then the facilities for operating were limited, and, this section of country being cut off from all the principal markets, the cost of transportation, combined with the expense of working it, rendered its manufacture profitless, and it was abandoned."

SUMMARY.

Figures compiled from the recent Report of the City Comptroller, exhibit the almost imperial wealth of the City of New York at five hundred and twenty-nine millions of dollars to 624,000 inhabitants, or 88,815 qualified electors. The separate wealth of the City Corporation, $42,684,760, including the Croton Aqueduct, is five-fold greater than the public debt of $8,406,136 that encumbers it. The area of 750 acres set apart and assessed for the new Public Park, is equal to 7,700 building lots, 25 by 100 feet each. The property has been taken for this object at an assessed valuation of $5,169,469, to which is to be added the cost of grading, inclosing and ornamenting the grounds. The money to these ends will be raised by a City loan.

The Steamer Osprey recently left New York for New Granada, carrying with her some fifty men and their families for permanent settlement in the Province of Carthagenia. They go out under the auspices of the Company who have bought up the canal located in the northerly portion of the Province. This canal, extending from Colomas to Lake Savaguare, a distance of ninety-two miles, which has been blockaded for over two hundred years, has lately been rendered navigable for first-class steamers. One steamer has already been sent there—the Henry Wells, to remain permanently, and another, the James A. Rigna, will be dispatched in a few days.

The New Orleans Crescent says, M'lle Maria Susanna, a white maiden lady, in her 39th year, and a Creole, has instituted a suit claiming heavy damages of one Matthieu Richeto, for depriving her of her proper position in society by industriously circulating reports that she is of colored extraction. The defendant is father of the lady. M'lle Maria was placed in a colored family in her infancy, and until she arrived at her majority she believed she actually was of African extraction. It is a curious and interesting case.

A dispatch dated Cincinnati, Monday, Feb. 25, says: The Licking River opposite this city commenced rising rapidly yesterday morning, throwing immense quantities of ice into the Ohio, thereby breaking up the ice in the latter. The steamboats Albertine, Flag, Bridge City, Grapeshot, Madonna, Salem and Yorktown—all stern-wheel boats—sunk, and will prove a total loss. Several other steamers were injured. A large number of barges and flat boats were also sunk. The total loss, so far, is estimated at about $200,000, and the end is not yet.

A youth about 9 years of age called at the First District Station house, Brooklyn, recently, and stated that his friends resided at Newburg, which place he left against his will, by being carried off in a car attached to a train for New York, which he had entered to hide away from some playmates a few minutes before the train started. His story appeared so reasonable that an officer returned with him to Newburg. Upon arriving there, it was found that the boy resided in Brooklyn, and had adopted this ruse to obtain a ride.

The Hawaiian nation, which, 70 years ago, was estimated variously at from 200,000 to 400,000, now only counts 72,000, a decrease within this period of at least two thirds. Vast tracts of land do not harbor a human soul; fertile Kalo lands, once under cultivation, are left to the rule of grass and weeds. The island of Kausi, remarkable for the productiveness of its soil, and capable to sustain a population of at least 100,000, contains only 6,000.

Heretofore the Offal Contract cost the City of New York $60,000 a year; this year it will cost the City nothing, but, on the contrary, bring in a revenue of $4,000. The Scavenger's Department, which has before cost the city an enormous amount, now brings in a revenue of $4,100. The expenses of the Department have been reduced from $70,000 to $8,315 per year. The total revenue is $8,100, leaving the net burden to the city only $215.

The Missouri Democrat has three letters from Kansas, dated 14th, 15th and 18th, indicating probable renewal of hostilities on the 4th of March, which is the time fixed for the inauguration of the new State officers. Judge Elmore has advised the officers elect not to take the oath of office, as to do so will be treason. Robinson declares that he will take the oath of office, if he is hanged the same hour.

Madame Goldschmidt has, at the request of the working men of Liverpool, agreed to give a concert to the working classes solely. She insists on measures being taken to secure the admission to the concert of members of the working classes only, and has also expressed a desire that the price of admission should not be more than half-a crown.

In the last six months of the last year, nearly six hundred thousand trunks, carpet-bags, chests, boxes, and other articles of baggage, were checked upon the New York Central Railroad, and passed into the baggage cars of the several trains. The road has had to pay for only $75 worth as having been lost, and only $297 58 worth as having been stolen.

Mr. W. Fetridge, of Boston, narrowly escaped being shot in New Orleans, some days since. He happened to be passing in the street, while a reporter of the Delta, and another of the Crescent, were settling a little difference with their revolvers, and a stray ball trimmed one side of his whiskers. A nice place for reporters, as well as strangers, is New Orleans!

Dr Ridge, who has just published an account of John Hunter's character and life, says that Hunter probably killed himself by taking too little sleep. "Four hours' rest at night and one after dinner cannot be deemed sufficient to recruit the exhausted powers of body and mind."

A letter from Callao (Peru) says:—"The only business transacted at present is the selling of Chinese Slaves, landing from American and English ships. Language is inadequate to express the horrible condition of these miserable wretches."

The island of Nantucket has been cut off from communication with the main land by the ice. The Nantucket *Inquirer* of the 6th Feb. announces with a large display of capitals, *Eleven days later from America*—the steamer Island Home having landed her mails and passengers at Quidnit. The news was important, including the election of Mr. Banks as Speaker, foreign and California intelligence, etc. etc.

A dispatch dated Philadelphia, Thursday, Feb. 28, says: The large grain-warehouse of Messrs. Busby & Co., on Master-street, fell down this morning with an awful crash. Two men who were loading a car on the track are under the ruins and supposed to be killed. A wall fell on an adjoining building, killing Timothy Murphy, a porter. The building was only a year old, and an immense amount of flour and grain was stored in it.

A letter from Lima, dated Jan. 9, says: The late Minister Plenipotentiary of Peru to the United States, who returned to this country about six months ago, died lately in Lima, in a singular manner. While asleep, he swallowed three of his false teeth, with the gold band which confined them, and died from the effects shortly after. Efforts were made to extract the teeth, but without success!

A large and wealthy company of Americans, among whom is Wm Cost Johnson, of Maryland, have made provision to open a stage road over the Isthmus of Tehuantepec, 266 miles. The route to California by this will be some 1,800 miles shorter than either of the lower ones. The grant under which the company operate is known as the Garay Grant.

A dispatch dated St. Louis, Thursday, Feb. 28, says: The Mississippi River at this place is now open. The Missouri is also open to Kansas, and boats will resume running next week. The river broke up on the 26th, since which, eleven steamboats and a great number of smaller boats have been crushed through by the ice and sunk. The loss is over $100,000.

The total number of American seamen registered in the United States from October 1, 1854, to October 1, 1855, is 9,686, of whom 8,386 were native born, 300 naturalized. Massachusetts furnished the largest number, viz., 4,501; Maine furnished 1,303. The next in order is New York—the number of men from this State being 855.

On the 2d of January a fatal explosion of a boiler occurred at the steam planing establishment of Messrs. Thompson & Cole, in Calle Chacabucco, Valparaiso. By this four lives were lost. The building was reduced to a mass of ruins. The accident was caused by letting the boiler get low and suddenly filling up with cold water.

It appears from a list, that no less than 503 letters for cashiers have been misdirected to New-York since January 1, 1854, all of which were redirected and forwarded to their proper address. What a commentary on the carelessness of correspondents, all of whom probably charged the delay upon the Post-Office Department.

A dispatch dated Cincinnati, Wednesday, Feb. 27, says: The fugitive slave case, which has been pending before U. S. Commissioner Pendrey, was decided by him to-day in favor of the claimants, and the slaves ordered into their custody. They are still held by the Sheriff, however, under an indictment for murder.

A remarkable fact contained in the abstract of births in Massachusetts in 1854, is the great increase of children of foreign parents. Of the 32,000 born, but 16,470 were of American parents, while 14,000 were of parents, one or both foreigners—and the increase from foreign parents was more than twice what it was from native parents.

The Legislature of Georgia has granted a million of dollars State aid to the main line of Road connecting Savannah and Brunswick with Pensacola, Fla. The calculation is now made that the first section of the Brunswick and Florida Road, 37 miles, will be opened to business by the middle of May.

Hon. Edward Everett has been invited by the ladies of Richmond, Virginia, to repeat his oration on the "Character of Washington" in that city, and has accepted the invitation and appointed the 13th of March for its delivery. The proceeds of the lecture are to go towards the purchase of the Mount Vernon property.

The St. Antony (Minnesota) Express, of a late date says: We have been shown specimens of anthracite coal that were dug from a bed twelve feet below the surface of the ground, within twelve miles of St. Antony. We think that large beds of coal will yet be discovered to the northwest of us."

During the past 13 years, 18,500 persons have signed the pledge to abstain from using intoxicating liquors, in the Bethel Church, Main-street, Brooklyn, under the pastoral charge of Rev. Mr. Burnett. A large majority of those who signed the pledge at this place were seafaring men.

A dispatch dated Cincinnati, Thursday, Feb. 28, says: Judge Leavitt decided to-day that the fugitive slaves were in the custody of the United States Marshal, and they were accordingly delivered over to him, and have just been escorted by two hundred specials across the river.

The British Admiralty have given notice in the *Gazette*, that Dr. Rae, having claimed the reward of £10,000 offered to the first person who should discover the fate of the crews of the Erebus and Terror, they will adjudicate upon his claim within three months from this time.

The Cincinnati Gazette says that forty-seven fugitives have been dispatched to Canada by the Under-ground Railroad since the commencement of the fugitive case now pending before U. S. Commissioner Pendery.

The Supreme Court of Wisconsin has decided that it has full jurisdiction in the disputed Governorship, and the investigation in the case of Bashford vs. Barstow will at once proceed.

A dispatch dated Cincinnati, Thursday, Feb. 28, says: Navigation is fully opened, and steamers are running regularly. The water in the channel this afternoon is 35 feet in depth.

The Know Nothing National Convention at Philadelphia nominated Millard Fillmore for President of the United States.

Long Island Sound is again navigable, after being closed by ice for several weeks.

Liberal donations continue to pour into the Relief Fund for Kansas. Among the late contributions are $270 from the citizens of Augusta, Me., in addition to the $500 from the Maine Legislature; $1,000 from Newcastle, Ind., $200 from Westminster, $100 from West Boylston. Rev. J. F. Clark preached a sermon in behalf of Kansas, at the Indiana-street Chapel, Boston, Sunday, and a liberal contribution was taken.

The notes of the Central Bank of Tennessee, at Nashville, are refused by the other Nashville Banks. The Bank is said to be owned in New York. The Attorney-General of the State has been directed to examine into its condition. Their recent issues are payable at Dandridge, Jefferson County, Tenn.

A dispatch dated Columbus, Thursday, Feb. 28, says: Hon. B. F. Wade, whose present term as United States Senator from Ohio expires in March, 1857, was to-day re-elected for a second term of six years.

The schooner Kossuth ran into an unknown schonner off Cape Ann on Monday night, capsizing the latter. Probably all on board were drowned.

Capt. Whitely, of the Ordnance Department, Governor's Island, has received orders from the War Department, to put Governor's Island in war defence.

The United States Treasurer reports that the amount subject to draft, in the various Treasuries, on the 25th ult., was $22,714,956.

All the telegraph cables crossing the Mississippi River have been carried away by the breaking up of the ice.

New York Markets—March 4, 1856.

Ashes—Pots $6 25 a 6 50; Pearls 7 75.

Flour and Meal—Flour 6 75 a 7 50 for various grades of State and Western, 8 50 a 10 50 for extra Genesee. Rye Flour 4 25 a 6 25 for fine and superfine. Corn Meal 3 62 for Jersey. Buckwheat Flour 1 75 a 2 12 per 100 lbs.

Seeds—Clover 12½ a 13½c. Timothy 3 37 a 3 62 per bushel. Rough Flaxseed 2 15 a 2 25.

Tallow—10c. for city rendered.

Wool—38 a 46c. for low to fine qualities Fleece; 35c. for super Pulled.

MARRIED,

Feb. 17, 1856, by Rev. John Sallad, Mr. GEORGE L. MAXSON, of Richburg, N. Y., to Miss ADELMA I. BROCKWAY, of Caledonia, Elk Co., Pa.

DIED,

In Genesee, Allegany Co., N. Y., on the 22d of February, Mrs. ELIZABETH BURDICK, in the one hundredth year of her age. Mrs. B., or "Aunt Lizzie," as she was familiarly called, was a member of the 1st Seventh-day Baptist Church of Genesee, and had always sustained a good reputation for piety. Matured for heaven by the discipline incident to her long earthly pilgrimage, she approached the dying hour without fear, and peacefully resigned her soul to the Saviour in whom she had put her trust. She was a woman of small stature, but remarkably active in her movements, and retained her faculties, bodily and mental, in a wonderful degree, to the last. Only a short time before her death, she was visiting among her friends, from house to house, to the distance of two or three miles from home. Such was her agility at the age of ninety five, that she ranged the high hills of Genesee, in company with some young people, to gather blackberries. But her toils on earth are ended, and she sleeps in Jesus.

In Hopkinton, R. I., Feb. 23, 1856, of epilepsy, RUSSELL S., son of Eld. John and Elizabeth Green, aged 26 years, 11 months, and 5 days.

At New Market, N. J., on the 26th ult., after an illness of eight days, JEREMIAH DUNN, aged forty-five years. In early life, Bro. Dunn made a public profession of religion, and connected himself with the Seventh-day Baptist Church in this place, where he has retained his standing, until his name and membership, we trust, were transferred to the records of the church above. He bore his acute sufferings without a murmur, remarking, that his hope was "like an anchor to the soul, sure and steadfast, and reached within the veil" He leaves a family, an aged father and mother, and other relatives, to mourn his loss.

Also, on the 28th ult., at the residence of her son-in-law, Mr. Ross, Mrs. KEZIAH TITSWORTH, consort of the late Dea. Lewis Titsworth, in the seventy-ninth year of her age. For near half a century, she had been connected with the church, and during the whole time, it may be said of her, that "she hath done what she could." Perhaps few in our denomination are more widely known for their hospitality to strangers, while her interest in the cause of her Master at home did not abate in the least to the end. Among those numbered as her family, we noticed one minister of the Gospel, and four deacons, which speaks well for a mother's influence in a religious point of view. Her desire, while waiting patiently the day of her release, was, that she might depart and enter that "house not made with hands," there to meet dear departed friends, among whom were a companion and daughter. Her mind was calm and peaceful, her hope bright and clear; and without a single regret she met the messenger of death, and with him entered the confines of eternity. She leaves behind a numerous circle of relatives to mourn her absence, as she retires from earth to the enjoyment of heaven. H. H. B.

LETTERS.

Alfred Highland Water-Cure.

THIS establishment, for the cure of Chronic Diseases, is conducted by H. P. BURDICK, M. D. The facilities in this "Cure" for the successful treatment of Diseases of the Liver, Spine, Nerves, Female Diseases, Bronchitis, Incipient Consumption, &c., are not excelled in any establishment. Patients will have the benefit of skillful Homeopathic prescriptions—an advantage found in but few "Water-Cures." Especial attention will be given to diseases commonly called *surgical cases*, such as Hip Diseases, White Swellings, Cancers, (in their early stages,) and Caries and Necrosis of bone

Connected with the establishment is a Dental Shop, where all calls in that profession will be attended to.
Address, H. P. BURDICK,
Alfred, Allegany Co., N. Y.

Book Agents Wanted,

BY STEARNS & SPICER, PUBLISHERS AND WHOLESALE BOOKSELLERS, *Indianapolis, Indiana.*

We are in the *very heart* of the *best section* of the Union for the successful prosecution of the Subscription Book Trade, as testimony of which we need only refer to the unparalleled success of our agents during the past year, many of whom are still in our employ. Our books are of a character calculated to secure for us and our agents the *highest confidence* of the reading community, and we wish to engage the services of those only who will help us to *sustain* it. Our proximity to the field of labor enables us to attend personally to the interests of our agents, and fill their orders at short notice; saving them the delays and heavy expense of transportation from the eastern cities. Men of energy and business habits will find this a work worthy their attention. All communications promptly answered. STEARNS & SPICER.

Hudson River Railroad.

TRAINS leave Chambers street daily, for Albany and Troy. On and after MONDAY, Nov. 19, 1855, the trains will run as follows: Express Train 7 A. M., connecting with Northern and Western Trains. Mail Train 8 30 A. M. Through Way Train, 12 M. Express Train 5 P. M. For Hudson 3 30 P. M. For Poughkeepsie—Way Freight and Passenger Train, 12 30 P. M. For Peekskill, 5 30 P. M. For Sing Sing, at 4 20 and 9 P. M. For Dobbs' Ferry, 7 15 and 11 A. M. The Dobbs' Ferry, Sing Sing, Peekskill, and Hudson Trains stop at all the Way Stations. Passengers taken at Chambers, Canal, Christopher, and 31st streets. SUNDAY MAIL TRAIN at 4 P. M., from Canal street, for Albany, stopping at all the Mail Stations. M. L. SYKES, Jr., Superintendent.

Merchant Tailoring Establishment.

THE subscriber, having sold his interest in the firm of A. D. Titsworth & Co., of Plainfield, and located himself at the corner of Fulton and Pearl streets, New York, as Merchant Tailor and Manufacturer of all kinds of Clothing, would respectfully invite his friends, and as many others as feel disposed to study economy, to give him a call, feeling assured that his experience in the business will enable him to do better for his customers than they can do for themselves. He will employ the best of workmen, and give to the business his whole attention.

Cloths, Cassimers, and Vestings, of the latest patterns, constantly on hand, and made to order in the most approved manner, at short notice.

Also, any persons wishing cutting done for their friends at home, by observing the following directions, can be accommodated with any style they wish:—

Coat Measure—1st. Placing the measure at socket bone of neck, down to center of arm or shoulder; then to waist above the hip, and length of coat. 2d. From seam of back, giving width of back; then to elbow and length of sleeve, bending the arm in right angle. 3d. Breast and waist, noting the position, whether stooping forward or extra straight.

Vest—1st. From socket bone down front, giving length of vest. 2d. Breast and waist measures.

Pants—1st. From hip bone to thigh joint and knee, and length. 2d. Waist, hip, thigh, and knee measures.

Also, any persons wishing to avail themselves of my assistance in selecting a stock of clothing or other merchandise, will find me at my office every day, except Sabbath day. All orders thankfully received and attended to with dispatch.

Terms, cash on delivery.
E. B. TITSWORTH, Merchant Tailor.

☞ I can accommodate a Sabbatarian with an office in my room.

Seventh-day Baptist Publishing Soc.'s Publications.

The Sabbath Recorder,

Published Weekly.

Terms—$2 00 per Annum, in Advance.

The Sabbath Recorder is devoted to the exposition and vindication of the views and movements of the Seventh-day Baptist Denomination. It aims to promote vital piety and vigorous benevolent action, at the same time that it urges obedience to the commandments of God and the faith of Jesus. Its columns are open to the advocacy of all reformatory measures which seem likely to improve the condition of society, diffuse knowledge, reclaim the inebriate, and enfranchise the enslaved. In its Literary and Intelligence Departments, care is taken to furnish matter adapted to the wants and tastes of every class of readers. As a Religious and Family Newspaper, it is intended that the *Recorder* shall rank among the best.

The Sabbath-School Visitor,

Published Monthly.

Terms per annum—Invariably in advance:

One copy	$ 25
Five copies to one address	1 00
Twelve copies to one address	2 00
Twenty copies to one address	3 00
Twenty-eight copies to one address	4 00
Forty copies to one address	5 00

The Seventh-day Baptist Memorial,

Published Quarterly.

Terms—$1 00 a Year, 25 Cents a Number.

Each number of the *Memorial* will contain a lithographic portrait of a Seventh-day Baptist preacher, together with a variety of historical, biographical, and statistical matter, designed to illustrate the rise, progress, and present condition of the Seventh-day Baptist Denomination. Wood-cuts of meeting-houses will be introduced from time to time in connection with the history of the churches.

[The first, second, and third volumes of the *Memorial*—being for the years 1852-3-4—may be had bound, for the subscription price and the cost of binding.]

The Carol:

A Collection of original and selected Music and Hymns, for the use of Sabbath-Schools, Social Religious Meetings, and Families. Compiled by Lucius Crandall. 128 pages octavo; price 35 cents per copy.

The *Carol* is designed principally for Sabbath-Schools, and contains Music and Hymns adapted to all ordinary occasions, and to such special occasions as the sickness of teachers, funerals, anniversaries, &c. A number of pieces suitable to social and public worship, together with a few Temperance Songs, are included in the book. It contains 93 tunes, and 156 hymns.

☞ Orders and remittances for the above should be addressed to the General Agent, GEORGE B. UTTER, No. 9 Spruce-st., New York.

Postage.

The postage on the Sabbath Recorder is 13 cents a year in the State of New York, and 26 cents in any other part of the United States, payable quarterly or yearly in advance.

The postage on the Sabbath-School Visitor is 3 cents a year in the State of New York, and 6 cents in any other part of the United States, payable in advance.

The postage on the Seventh-day Baptist Memorial is 2 cents a year in any part of the United States when paid in advance, or 4 cents a year when not paid in advance.

Miscellaneous.

Dr. Kane's Adventures.

Abridged from Graham's Magazine.

Doctor Elisha Kent Kane is not quite thirty-four years old, yet he has done more than circumnavigate the globe; he has visited and traversed India, Africa, Europe, South America, the islands of the Pacific, and twice penetrated the Arctic region to the highest latitude attained by civilized man. He has encountered the extremest perils of sea or land, in every climate of the globe; he has discharged in turn the severest duties of the soldier and the seaman; attached to the United States Navy as a surgeon, he is, nevertheless, engaged at one time in the coast survey of the tropical ocean, and in a month or two, we find him exploring the frigid zone; and all the while that his personal experiences had the character of romantic adventure, he was pushing them in the spirit of scientific and philanthropic enterprise.

As a boy, his instinctive bent impelled him to the indulgence and enjoyment of such adventures as were best fitted to train him for the work before him. His collegiate studies suffered some postponement while his physical qualities pressed for their necessary training and discipline. It was almost in the spirit of truancy that he explored the Blue Mountains of Virginia, as a student of geology, under the guidance of Professor Rodgers, and cultivated, at once, his hardihood of vital energy and those elements of natural science which were to qualify him for his after services in the field of physical geography. But, in due time he returned to the pursuit of literature, and achieved the usual honors, as well as though his college studies had suffered no diversion—his muscles and nerves were educated, and his brain lost nothing by the indirectness of its development, but was rather qualified for all the uses which it has served since. He graduated at the University of Pennsylvania—first, in its collegiate, and afterwards, in its medical department. His special relishes in study indicated his natural drift: chemistry and surgery; natural science in its most intimate converse with substance, and the remedial art in its most heroic function. He went out from his *Alma Mater* a good classical scholar, a good chemist, mineralogist, astronomer, and surgeon. But he lacked, or thought he lacked, robustness of frame, and soundness of health. He solicited an appointment in the navy, and upon his admission, demanded active service. He was appointed upon the diplomatic staff as surgeon to the first American Ambassy to China. This position gave him opportunity to explore the Philippine Islands, which he effected mainly on foot. He was the first man who descended into the crater of Tael; lowered more than a hundred feet by a bamboo rope from the overhanging cliff, and clambered down some seven hundred more through the scoriæ, he made a topographical sketch of the interior of this great volcano, collected a bottle of sulphurous acid from the very mouth of the crater; and, although he was drawn up almost senseless, he brought with him his portrait of this hideous cavern, and the specimens which it afforded.

Before he returned from this trip, he had ascended the Himalayas, and triangulated Greece, on foot; he had visited Ceylon, the Upper Nile, and all the mythological region of Egypt; traversing the route, and making the acquaintance of the learned Lepsius, who was then prosecuting his archæological researches.

At home again, when the Mexican war broke out, he asked to be removed from the Philadelphia Navy Yard to the field of a more congenial service; but the government sent him to the Coast of Africa. Here he visited the slave factories, from Cape Mount to the river Bonny, and through the infamous Da Souza, got access to the baracoons of Dahomey, and contracted, besides, the Coast Fever, from the effects of which he has never entirely recovered.

From Africa he returned before the close of the Mexican war, and believing that his constitution was broken, and his health rapidly going, he called upon President Polk, and demanded an opportunity for service that might crowd the little remnant of his life with achievements in keeping with his ambition; the President, just then embarrassed by a temporary non-intercourse with General Scott, charged the Doctor with dispatches to the General, of great moment and urgency, which had to be carried through a region occupied by the enemy.

When he returned, he was employed in the Coast Survey. While engaged in this service, the government by its correspondence with Lady Franklin became committed for an attempt at the rescue of Sir John and his ill-starred companions in Arctic discovery. Nothing could be better addressed to the Doctor's governing sentiment than this adventure. The enterprise of Sir John ran exactly in the current of one of his own enthusiasms—the service of natural science combined with heroic personal effort; and, added to this, that sort of patriotism which charges itself with its own full share in the execution of national engagements of honor; and besides this cordial assumption of his country's debts and duties, there was no little force in the appeal of a noble, spirited woman to the chivalry of the American navy.

He was "bathing in the tepid waters of the Gulf of Mexico, on the 12th of May, 1350," when he received his telegraphic order to proceed forthwith to New York, for duty upon the Arctic expedition. In nine days from that date he was beyond the limits of the United States on his dismal voyage to the North Pole. Of this first American expedition, as is well known to the public, he was the surgeon, the naturalist, and the historian. It returned disappointed of its main object, after a winter in the regions of eternal ice and a fifteen months' absence.

Scarcely allowing himself a day to recover from the hardships of this cruise, he set on foot the second attempt, from which he has returned, after verifying by actual observation the long questioned existence of an open sea beyond the latitude of 82°, and beyond the temperature, also, of 100° below the freezing point. His "Personal Narrative," published early in 1853, recounts the adventures of the first voyage, and discovers his diversified qualifications for such an enterprise.

The last voyage occupied two winters in the highest latitudes, and two years and a half of unintermitted labor, with the risks and responsibilities attendant. He is now preparing the history for publication.

This man of all work, and desparate daring and successful doing, is in height about five feet seven inches; in weight, say one hundred and thirty pounds or so, if health and rest would but give him leave to fill up his natural measure. His complexion is fair, his hair brown, and his eyes dark gray, with a hawk look. He is a hunter by every gift and grace and instinct that makes up the character; an excellent shot, and a brilliant horseman. He has escaped with whole bones from all his adventures, but he has several wounds which are troublesome; and, with such general health as his, most men would call themselves invalids, and live on furlough from all the active duties of life; yet he has won the distinction of being the first civilized man to stand in latitude 82° 30′ and gaze upon the open Polar Sea—to reach the northernmost point of land on the globe—to report the lowest temperature ever endured—the heaviest sledge journeys ever performed—and the wildest life that civilized man has successfully undergone; and to return after all to tell the story of his adventures.

The secret spring of all this energy, is in his religious enthusiasm—discovered alike in the generous spirit of his adventures in pursuit of science in his enthusiastic fidelity to duty, and in his heroic maintenance of the point of honor in all his intercourse with men.

Insectivorous Birds

The following interesting passages are from a paper read by Mr. Townsend Glover, before the late meeting of the United States Agricultural Society, and published in the Washington *National Intelligencer:*

Here, however, let me change the subject, to put in a special plea for insectivorous birds, which appear to have been sent to keep the "balance of power" in insect life, which insects would otherwise multiply to such a degree as to be perfectly unbearable, and render the agriculturist's toil entirely useless. A farmer keeps a watch-dog to guard his premises, and cats to kill rats and mice in his granary and barn; yet he suffers any "unfeathered biped" to tear down his rails in order to get a chance shot at a robin, wren, or blue-bird, which may be unfortunate enough to be on his premises; and yet these very birds do him more good than either dog or cat, working diligently from morn to dark, and killing and destroying insects injurious to his crops, which, if not thus thinned out, would eventually multiply to such an extent as to leave him scarcely any crop whatsoever.

Birds are accused of eating cherries and other fruits. True; but the poor birds merely take a tithe of the fruit to pay for the tree, which but for their unceasing efforts would otherwise probably have been killed in its infancy. To exemplify the utility of birds, I will give one or two instances that have occurred under my own observation. Some years ago I took a fancy to keep bees; accordingly, hives were procured and books read upon the subject. One day a king-bird, or bee-martin, was observed to be very busy about the hives, apparently snapping up every straggling bee he could find. Indignant at such a breach of hospitality, as his nest was on the premises, I hastened to the house to procure a gun to shoot the marauder. When I returned, I perceived a grayish bird on the bushy top of a tree, and thinking it was the robber, I fired, and down dropped a poor, innocent, little Phœbe-bird.

Hoping to find some consolation to my conscience for having committed this most foul murder, I inwardly accused the poor little Phœbe of having also killed the bees; and having determined to ascertain the fact by dissecting the bird, it was opened, when, much to my regret and astonishment, it was found to be full of the striped cucumber bugs, and not one single bee. Here I had killed the very bird that had been working for me the whole season, and perfectly innocent of the crime for which it was sacrificed. After this circumstance, I determined never to let a gun be fired on the premises, excepting on special occasions; and at present the place is perfectly crowded during spring, summer, and autumn, with the feathered songsters, which build their nests even in my very porch, and bring up their young perfectly fearless of mankind; and although cherries, strawberries, &c., do suffer, yet the insects are not a quarter as numerous and troublesome as they were formerly.

In the Southern States I have seen the bee martin chase and capture a boll-worm moth not ten paces from where I stood, and the mocking-bird feeding its nearly-grown young on the same insect. Even the ugly toad works for the farmer and gardener, as his food consists of insects more or less injurious. The beautiful and lively green and gray lizards of the Southern States, which are seen running on the fence-rail, or amidst the green foliage of trees, shrubs, and bushes, and from which they can scarcely be distinguished except when in motion, are ever on the watch for insect prey; and I know of one curious case in which even the mice in a greenhouse were of service, as they had rooted up the earth around several peach trees, in order to devour the chrysalis of the peach-tree borer.

Insect Power.

The following extract from the *Excelsior*, an English journal, gives an insight into some of the marvels of the insect world:—

"The muscular strength of insects is immense. We once were surprised by a feat performed by a common beetle, in the United States. We had put the insect, for want of any box at hand, beneath a quart bottle full of milk upon a table, the hollow at the bottom allowing him room to stand upright. Presently, to our surprise, the bottle began slowly to move and glide along the smooth table, propelled by the muscular power of the imprisoned insect, and continued for some time to perambulate the surface, to the astonishment of all who witnessed it. The weight of the bottle and its contents could not have been less than three pounds and a half; while that of the beetle was about half an ounce. A better notion than figures can convey, will be obtained of this feat by supposing a lad of fifteen to be imprisoned under the great bell of St. Paul's, which weighs 12,000 pounds, and to move it to and fro upon a smooth pavement by pushing within.

Mr. Newport has given other instances of insect power equally remarkable. Having once fastened a small kind of *Carabus*, an elegantly formed ground beetle, weighing three and a-half grains, by a silk thread, to a piece of paper, he laid a weight on the latter. At a distance of ten inches from its load, the insect was able to drag after it, upon an inclined plane of twenty five degrees, nearly eighty-five grains; but when placed on a plane of five degrees' inclination, it drew after it one pound and twenty-five grains, exclusive of the friction to be overcome in moving its load, as though a man were to drag up a hill of similar inclination a wagon weighing two tons and a half, having first taken the wheels off.

According to the same excellent authority, the stag beetle—*Lucanus cervus*—has been known to gnaw a hole an inch in diameter through the side of an iron canister in which it was confined, and on which the marks of its jaws were distinctly visible; as proved by Mr. Stephens, who exhibited the canister at one of the meetings of the Entomological Society.

Let us look at the powers of insects exercised in the act of flying. The house flies—*Muscu domestica*—that wheel and play beneath the ceiling for hours together, ordinarily move at the rate of about five feet per second; but if excited to speed, they can dart along through thirty-five feet in the same brief space of time. Now in this period, as Kirby and Spence observe, 'a race-horse could clear only ninety feet, which is at the rate of more than a mile in a minute.' Our little fly, in her swiftest flight, will go more than one-third of a mile. Now compare the immense difference of the size of the two animals—ten millions of the fly would hardly counterpoise one racer—and how wonderful will the velocity of this minute creature appear! Did the fly equal the race-horse in size, and retain its powers in the ratio of its magnitude, it would traverse the globe with the rapidity of lightning. Some of the flies that haunt our gardens shoot along so rapidly that the eye cannot follow them in flight.

Nor are these tiny creatures less masters of the arts of running and leaping. DeLisle mentious a fly so minute as almost to be invisible, which ran nearly six inches in a second, and in that space was calculated to have made one thousand and eighty steps! This, according to the calculation of Kirby and Spence, is as if a man whose steps measured only two feet, should run at the incredible rate of twenty miles in a minute.

Every one has had occasion to observe, not always without an emotion of anger, the leaping powers of the flea—*Pulex irritans.* A bound of two hundred times its own length is a common feat; as if a man should jump twelve hundred feet, or a quarter of a mile! What a pity that insects were not allowed to be competitors in the athletic games of old!"

Physical Degeneracy in America.

Catherine Beecher has published a volume to prove that few American women have sound and healthy bodies; and it is a lamentable fact, that neither men nor women among us possess the iron constitutions of our fathers and mothers a few generations ago. The N. Y. *Times* has some sensible observations on the matter:—

"The average weight of General Washington and his staff, men not selected for physical strength, and therefore more likely to furnish a fair average, was nearly two hundred pounds. They were heavier and stronger men than are usually seen to-day. Returned missionaries, after an absence of twenty five or thirty years, after the substitution of only one generation for another, tell us that they perceive a lower tone of general health, a more nervous and leaner and sallower type of physical frame, a more feverish and exaggerated and spasmodic activity, than marked the race which they remember to have left. Physicians observe from lustrum to lustrum, a gradual increase and exacerbation of diseases which spring from unhealthy and di-proportionate stress upon the brain and nervous system, and correspondent neglect of the health of the other framework of the body—of the muscular or respiratory or digestive systems Appoplexy, they say, and paralysis, and the fatal darkness of insanity, are yearly more frequent among the most active and laborious classes of our population. Our blood, even, 'which is the life,' as the Scripture, with nearly scientific truth, states its office—which nourishes all the rest of us—is absolutely corrupt; insomuch that actual autopsy enables surgeons to declare that in more than half our population there is either a strumous taint—scrofula, in other words—or sure indications that it has existed, and has by care or good fortune been removed.

"Reasons are not lacking to account for these phenomena. Trace for a moment the life of an American man. The chances are almost even, physicians say, fifty in the hundred—that he is born with an unhealthy constitution; that is, with an inadequate original supply or fund of life power—vitality—ability to live and act. This may very possibly cause him to die before he has lived ten years. But suppose he lives. Upon this original fund he forthwith begins to overdraw and anticipate in every possible way. A portion of it he expends in digesting the cake and candy and luxuries of his childhood. Another portion is used in fighting against the unhealthy atmosphere and crooked positions of the school-room, and the over-stimulated mental action usually necessary to get his lessons. Then he leaves school and goes into business; learns to chew and smoke, and draws on the fund of life, against the exhaustions of the tobacco-stimulus; squirts a further portion of it through his front teeth in the form of poisoned spittle; very probably adds other drafts to compensate the exhausting reaction of spirituous liquors, that stir the fires of the system into a sudden blaze, to let them fall into the inevitable languor that follows. More drafts must meanwhile all the time maintain the life long struggle of his stomach against hot food, and greasy food, and stimulating food, and indigestible food, and unseasonable food, and excessive food, and every other phrase of food, in which the diabolical cunning of the devil, the proverbial instigator of cooks, could be supposed to present it, let his spite be as bitter and acute as it may. More drafts, yet, however, upon the like fund, to maintain the desperate battle of his brain; that tremulous struggle which the wild whirl of our feverish commercial activity necessitates, even for the gaining of a moderate living. Is it any wonder that by middle age the run upon the unrenewed deposits has exhausted them, the drafts dishonored, the reckless drawer utterly bankrupt in health the short remainder of his life—as indeed much of the former part has been—sickly, inefficient, unhappy; his children feebler, and crosser and crookeder than he, a legacy of harm and sorrow to themselves, his country and his race—living monuments of one misspent life, and certificates of more? Our women do no better; their experience in childhood, at school, in eating, is similar, except that it tells more heavily upon the delicate and impressible female constitution. And if they are less vicious in the two items of liquor and tobacco, they fully compensate for that irregularity by their immeasurable superiority in the art of suicide by dress, jam their ribs in and their abdomen out; they squeeze their interiors into such disarrangement that their hearts hang dangling and knocking painfully about without their natural support above the diaphragm and their stomachs below it. They tie up their lungs tight; that diminishes the amount of their breathing; that keeps the blood impure, and sends it, dirty and stagnant, to drag along through flabby muscle and inert brain, and indirectly to vitiate and degrade every manifestation of every bodily or mental faculty Fit partners are such women for such men; and a sadly deteriorated race is the progeny of such parents!"

Prescott, the Historian.

In a notice of Mr. Prescott's recent volumes on the History of Philip II., King of Spain, the *Examiner* gives the following account of the author:—

It is now nearly thirty years since Mr. Prescott, already an aspiring scholar of liberal and elevated tastes, and blessed with hereditary affluence, first began his preparation for writing the History of the Reign of Ferdinand and Isabella—the earliest of the noble works with which he has enriched the literature of his country. The circumstances in which that and some of his later historical works were prepared, were familiarly known at the time, but they are so extraordinary that they deserve to be again brought to remembrance, in connection with this new monument of his lofty genius and untiring industry. Scarcely had he received from Madrid the mass of volumes and manuscripts out of which his materials were to be extracted, when he was entirely deprived of the use of his eyes, and was thus left sitting in the dark among the treasures which he had gathered around him, "like one pining from hunger in the midst of abundance." "In this state," he writes in the preface to his Conquest of Peru, "I resolved to make the ear, if possible, do the work of the eye. I procured the services of a secretary, who read to me the various authorities; and in time I became so familiar with the sounds of the different foreign languages (to some of which, indeed, I had been previously accustomed by a residence abroad,) that I could comprehend his reading without much difficulty. As the reader proceeded, I dictated copious notes; and when these had swelled to a considerable amount, they were read to me separately, till I had mastered their contents sufficiently for the purposes of composition." In the midst of discouragements and disabilities like these, did he master his materials, and transfer from manuscript and tome of Old World lore to his own mind, the characters and events which he was to chronicle in history But the work of writing is as difficult to one bereft of sight as that of reading, and when the materials were already in his mind, how were they to be written out in sentences and chapters, and converted into living literature? "This was done," says he, "by means of a writing case such as is used by the blind, which enabled me to commit my thoughts to paper without the aid of sight, serving me equally well in the dark as in the light. The characters thus formed made a near approach to hieroglyphics; but my secretary became expert in the art of deciphering, and a fair copy—with a liberal allowance for unavoidable blunders—was transcribed for the use of the printer."

Look to your Bees.

The want of proper ventilation is scarcely less destructive to bees than the moth. If the hive is moderately close, the continued extreme cold which we have had has probably congealed their breath and the vapors of their bodies into sheets of ice, which now line the inside of the hive. The bees pass into the upper part of the hive, and huddle together over comb well filled with honey, from whence they move away occasionally to feed. Thus they are incased in ice, which gradually thaws as the weather moderates, and drips upon them or keeps the hive and comb moist so long as to induce mustyness and mould. An examination should be made and this state of things remedied as far as possible. Ventilation is as important—perhaps more so—in winter as in summer, and for the want of it, we have no doubt many swarms annually perish, when the loss is charged to extreme cold.

On examining several swarms the last week in January, we found those in loosely-constructed hives, having cracks about them an eighth of an inch wide, in better condition than those in hives where the corners fitted closely. If the wind does not reach them, nor moisture, they will probably care little for any degree of cold we experience, if they, at the same time, have plenty of honey At no time this winter have we opened a hive but we found the bees in lively motion and ready to take wing, although standing in an open bee-house But an occasional examination is necessary to ensure a successful wintering. [New England Farmer.

A New Disease.

A correspondent of the *Journal of Commerce* writes from Limeria, Brazil:—

I recently became aware of a new disease, which, like the *goitre*, seems to be confined to certain localities. I was sitting in the office of Dr. R., conversing with him in regard to Brazil, when I observed a Portuguese, about sixty years of age, enter and demand, with great earnestness, if he thought he could live. Soon after, a middle-aged Brazilian came, and, seeming to cling to the words of the physcian as to a Divine oracle, made nearly the same interrogatory. Neither of these men appeared in ill health, and if I had not heard them state that they had great difficulty in swallowing, I would have considered them in a perfect sanitary condition. Upon inquiry, I ascertained from Dr. R., that these men had a disease which is widely prevalent in some portions of interior Brazil, but he has never seen a notice of it in any medical work what ever. The Brazilians call it *mal de Engasgo.* The first indication of its existence is a difficulty in swallowing. The patient can swallow dry substances better than fluids Wine or milk can be drunken with more facility than water; still, both are attended with difficulty. To take thin broth is an impossibility. In some cases, fluids have been conveyed to the stomach in connection with some solid. The person thus affected appears to be in good health, but in five or six years death ensues from actual starvation. The suffering of such a one was described to me as most horrible. Some physcians in the province of San Paulo believe it to be a paralysis of the æsophagus; but Dr. R. who has seen many cases of *mal de Engasgo*, inclines to the belief that it is a thickening of the mucus membrane. As the *æsophagus* is in general the least affected by disease of any part of the body, and is very rarely paralyzed, he cannot believe that so wide-spread a disease as the *mal de Engasgo* can proceed from paralysis. Living as he does in the interior, it is difficult to obtain a subject for dissection, or permission to make a *post mortem* examination; and therefore he has had no opportunity for a thorough investigation of the disease; but it is his intention so to do, as soon as facilities present themselves, and then to lay the results before the medical world. He informed me that he was called to visit a man suffering from this malady, 80 miles from Limeira, and to his astonishment he found in the same room no less than nine persons similarly affected. As yet no remedy has been found. The full extent of country over which the *mal de Engasgo* prevails is not known, but to Dr. R.'s certain knowledge, it exists from Limeira (200 miles from the sea coast) to Goyaz, a distance of 400 miles. It is not found upon the coast.

Cultivation of Fishes.

In a paper from the Patent Office, published in the National Intelligencer, it is suggested that fishes of many varieties not now known to them, might be introduced into the waters of this country, by means of transfering the spawn from one locality to another. The mullet of the Garonne would be valuable in the Potomac, and also the sardine. The trout and salmon of the Rhine and its waters would answer further north; turbot and sole for the Jersey waters; and trout, carp, and salmon for north of the Delaware. The carp, it is known, was introduced into the waters of the Hudson. The golden carp was introduced into a pond near the same river. The breaking of a dam caused these fish to be swept into the Hudson, where they now exist in tolerable abundance. To a similar accident we are indebted for its presence in the Schuylkill. Mr. Pratt used to have them in a pond on Lemon Hill, whence they were washed into the river, and are now caught by boys in abundance.

The smelt, now abundant in Jamaica Pond, near Boston, did not originally exist there, but was carefully transported, either from Europe or from some section of this country. Salmon and shad were formerly found in the Merrimac and the latter in Lake Winnipiseogee and its tributaries; but since the establishment of manufactories at Lowell, and the consequent damming of the river, these fishes have disappeared from all the upper waters; while, on the other hand, the opening of communication between Lake Erie and the Hudson has introduced to that Lake and its accessories eels and perhaps other fish not previously found there. The same result has been experienced in Lake Ontario since its connection with Lake Erie by means of the Welland Canal. The officers of the navy on foreign service could have assigned them the duty of collecting varieties of fish not known to the waters of the United States.

Mr. Peel, of Saugerties, New York, has shad, carp, tench, gold-fish, &c., in the ponds on his estate, and so well are they protected from molestation of every kind, that upon the appearance of persons at the margin of the waters, they approach to receive food from their hands. This gentleman, it is said, has a sturgeon seven feet long, and when he wants a sail on his pond, he harnesses this sturgeon, attaching a line and cork float to the traces. The sturgeon will swim with the utmost speed around the pond several times, keeping near the shore. Then it will suddenly stop, rise to the surface of the water, and turn upon its back, thus indicating its exhausted condition. [Philadelphia Ledger.

The New Park for New York.—All obstacles to the New Park have been removed, and there is now little doubt that it will be secured. It is to extend from 59th Street—a little more than half a mile above the Crystal Palace—up to 106th Street, being about *three miles* in length; and from 5th Avenue on the East, to the 8th Avenue on the West, or about *half a mile* wide. The natural inequalities of the ground fit it admirably for the purpose, and render it capable of the highest ornamental improvement, with comparatively small expense.

The number of city lots taken from private owners, and included in this park, is 7,500, for which the owners are awarded more than $5,000,000. With this award nearly all are satisfied. New York itself is awarded $650,000 for property taken which belongs to the city. Owners in the immediate neighborhood, are assessed towards the expense of the park, because of the increased value of their property, about $1,650,000.

Many gentlemen have long since purchased lots, fronting on, or lying near the park, for residences. It will be encircled with costly and beautiful dwellings, and will constitute, eventually, the great centre of fashionable life.

Early Tomatoes.—This is one of the most difficult of vegetables to force, and should be started very early in order to anticipate the season. Those who have greenhouses and hotbeds, need no other facilities. But those who have only a stand of parlor plants, and keep up a constant fire for them, can start a few tomatoes with very little trouble. Take a half dozen 4 or 5 inch pots, and plant two or three seeds in each, in rich garden loam. The pots can stand with the other house plants, and receive the same watering and attention. When the plants are well started, pull up all but the most vigorous one in each pot. Stir the earth frequently around them, and they will grow rapidly and fill the whole pot with a mass of fine roots, by the last of May, when they will probably be in blossom If they have rich soil and a good exposure on the south side of a wall or fence, they will suffer little check in the transplanting, and you will get tomatoes much earlier than from seed planted in the open ground in April.

The grants of bounty land under the various Acts from 1837 to 1847, had amounted, up to Sept. 30, 1855, to 30,316,440 acres; of which 6,019,240 were in warrants not located and still outstanding.

The receipts from the public lands during the two years and three months ending Sept. 30, 1855, were $22,480,000, and during the past twenty years have been over $106,000,000.

Central Railroad of New Jersey,

IN connection with the Lehigh Valley Railroad opened to Mauch Chunk—WINTER ARRANGEMENT, commencing Nov. 19, 1855. Leave New York for Mauch Chunk from Pier No. 2 North River. at 7 30 A. M. For Easton, at 7 30 A M and 3 15 P. M. For Somerville, at 7 30 and 10 45 A. M, and 3 15 and 4 30 P. M. The above trains connect at Elizabeth with trains on the New Jersey Railroad leaving New York from foot of Courtlandt street, at 7 30 and 11 A. M, 3 and 4 P. M.

Leave Plainfield for New York at 7 05 and 9 05 A. M., and 1 40 and 6 13 P. M.

JOHN O. STERNS, Superintendent.

Bibliotheca Sacra,

AND AMERICAN BIBLICAL REPOSITORY.—The Thirteenth Volume commenced Jan. 1, 1856. This volume will be enlarged to 900 pages; will be printed on a new, large, and beautiful type, and on paper superior to that of any previous volume. This Quarterly contains articles of permanent value, by some of the ablest writers in the country.

In its department it has no superior, and no Minister can afford to be without it.

It is the most learned, the largest, and the cheapest Quarterly of its kind in the country.

TERMS—$3 per annum in advance.
$4 if not in advance.

Ayer's Pills.

FOR all the purposes of a Family Physic. There has long existed a public demand for an effective Purgative Pill which could be relied on as sure and perfectly safe in its operation This has been prepared to meet that demand, and an extensive trial of its virtues has conclusively shown with what success it accomplishes the purpose designed. It is easy to make a physical *Pill*, but not so easy to make the best of all *Pills*—one which should have none of the objections, but all the advantages of every other. This has been attempted here, and with what success we would respectfully submit to the public decision. It has been unfortunate for the patient hitherto that almost every purgative medicine is acrimonious and irritating to the bowels. This is not. Many of them produce so much griping pain and revulsion in the system as to more than counterbalance the good to be derived from them. These *Pills* produce no irritation or pain, unless it arises from a previously existing obstruction or derangement in the bowels. Being purely vegetable, no harm can arise from their use in any quantity; but it is better that any medicine should be taken judiciously. Minute directions for their use in the several diseases to which they are applicable are given on the boxes. Among the complaints which have been speedily cured by them we may mention Liver Complaint, in its various forms of Jaundice, Indigestion, Langor and Loss of Appetite, Listlessness, Irritability, Billious Headache, Billious Fever, Fever and Ague, Pain in the Side and Loins, for in truth, all these are but the consequence of diseased action of the liver. As an aperient, they afford prompt and sure relief in Costiveness, Piles, Colic, Dysentery, Humors, Scrofula and Scurvy, Colds, with soreness of the body, Ulcers and impurity of the blood; in short, any and every case where a purgative is required.

They have also produced some singularly successful cures in Rheumatism, Gout, Dropsy, Gravel, Erysipelas, Palpitation of the Heart, Pains in the Back, Stomach, and Side. They should be freely taken in the spring of the year, to purify the blood and prepare the system for the change of seasons. An occasional dose stimulates the stomach into healthy action, and restores the appetite and vigor. They purify the blood, and, by their stimulant action on the circulatory system, renovate the strength of the body, and restore the wasted or diseased energies of the whole organism. Hence an occasional dose is advantageous even though no serious derangement exists; but unnecessary dosing should never be carried too far, as every purgative medicine reduces the strength, when taken to excess. The thousand cases in which a physic is required cannot be enumerated here, but they suggest themselves to the reason of every body; and it is confidently believed this Pill will answer a better purpose than any thing which has hitherto been available to mankind. When their virtues are once known the public will no longer doubt what remedy to employ when in need of a cathartic medicine.

Being sugar wrapped they are pleasant to take, and being purely vegetable, no harm can arise from their use in any quantity.

For minute directions, see the wrapper on the Box.

Prepared by Dr. J. C. AYER, Practical and Analytical Chemist, Lowell, Mass.

Price 25 Cents per Box. Five Boxes for $1 00.

Ayer's Cherry Pectoral,

FOR the rapid cure of Coughs, Hoarseness, Bronchitis, Whooping Cough, Croup, Asthma, and Consumption. This remedy has won for itself such notoriety for its cures of every variety of Pulmonary diseases, that it is entirely unnecessary to recount the evidences of its virtues in any community where it has been employed. So wide is the field of its usefulness, and so numerous the cases of its cures, that almost every section of the country abounds in persons publicly known, who have been restored from alarming and even desperate diseases of the lungs by its use. When once tried its superiority over every other medicine of its kind is too apparent to escape observation, and where its virtues are known, the public no longer hesitate what antidote to employ for the distressing and dangerous affections of the pulmonary organs which are incident to our climate. And not only in formidable attacks upon the lungs, but for the milder varieties of *Colds, Coughs, Hoarseness, &c.* and for Children it is the pleasantest and safest medicine that can be obtained.

As it has long been in constant use throughout this section, we need not do more than assure the people its quality is kept up to the best that it ever has been and that the genuine article is—

The Sabbath Recorder,

PUBLISHED WEEKLY
By the Seventh-day Baptist Publishing Society,
AT
NO. 9 SPRUCE-STREET, NEW YORK.

Terms:

$2 00 per year, payable in advance. Subscriptions not paid till the close of the year, will be liable to an additional charge of 50 cents.

☞ Payments received will be acknowledged in the paper so as to indicate the time to which they reach.

☞ No paper discontinued until arrearages are paid, except at the discretion of the publisher.

☞ Communications, orders, and remittances, should be directed, post paid, to

Geo. B. Utter, No. 9 Spruce-st., New York.

Liabilities of those who take Periodicals.

The laws declare that any person to whom a Periodical is sent, is responsible for payment, if he receives the paper, or makes use of it, even if he has never subscribed for it, or has ordered it to be stopped. His duty in such a case is not to take the paper from the office or person with whom the paper is left, but to notify the publisher that he does not wish for it.

If papers are sent to a post-office, store or tavern, or other place of deposit, and are not taken by the person to whom they are sent, the postmaster, store or tavern-keeper, &c., is responsible for the payment until he returns the papers, or gives notice to the Publisher that they are lying dead in the office.

THOUGHTS ON CONVERSION.

Of all the changes and revolutions of time, the change effected in the mind of a sinner, which we call conversion, is the most interesting and wonderful. It makes entirely a new era in a person's life, and the angels in heaven rejoice to see it. It was said of Saul of Tarsus, "Behold, he prayeth." That proud Pharisee, who had opposed the Almighty, and persecuted his saints, and breathed out threatening and slaughter like a wild and savage beast of prey, is prostrate at the footstool of divine mercy. His heart is smitten, his pride humbled, and he reckons himself as the vilest *of the vile*. There was no change in the blessed and divine personage whom he hated, nor in that gospel plan which he had indignantly rejected; but the change was all in him. Only a short time since, he had virtually crucified the Son of God, and in all probability possessed the same spirit as those who reviled him when hanging on the cross, and pierced his side in malicious sport. But see him now lying in the dust, and with the deepest anxiety and most intense sorrow over his past life, asking the very same Person what he should do to repair the injury done to him and his cause.

All sinners are not converted in the same wonderful manner as Saul, nor so instantaneously; but yet the change is marvelous, both to the individual and to beholders. It has not been effected by reasoning, nor persuasion, nor example, (though all these may have been instrumental;) but a mighty power has been at work, which has disposed the will, humbled the pride, and opened the heart to receive divine truth and a divine Saviour, and turned his feet to obedience. If we were to define conversion, we should say, it is the manifestation of a divine life, imparted to the soul by the Spirit of God, which is called regeneration, or new birth, or a new creation in Christ Jesus. There may be apparent conversion where this divine principle is wanting; and hence many, who profess to be converted, go back to the world, and walk no more in the company of the godly; their goodness is like the morning cloud and the early dew, which quickly vanish away. This germ of a divine life, planted in the heart by the Spirit, is sure to expand and flourish and produce fruit to the glory of God. We need no divine decree to insure our salvation, for the principle itself is the immortal seed of the kingdom, which liveth and abideth for ever, and all the means appointed for our use and progression are so congenial to a renewed soul, that they are sure to be used, whether public or private.

We may give another view of conversion. It is the restoration of the soul to moral excellence, and its right position as an intelligent creature. There can be no doubt in the mind of a believer in Revelation, as to man's original purity, and his close connection and friendship with his Maker. Made in the image of God, intellectually and morally, he possessed a nobility and an excellence but a little lower than the angels. His soul glowing with the love of God, he looked up to heaven, and fixed his affections on the great Supreme, and those intelligences which God had made shared equally in the sympathies of his generous and benevolent mind. There was no corrupt thought or wish or purpose; hence all objects of pursuit and contemplation —all activities and pleasures—were pure, and God and angels maintained familiar intercourse in that beautiful paradise. Man has fallen—the bloom of moral beauty is gone—intelligent and immortal yet, but O how depraved! The brother of angels once, but now of devils—an enemy to the God who made him, and a willing ally with all others in opposing him—blind to all that is good, affections defiled, purposes and desires and aims all wicked. When the Son of Man came, it was to seek and save that which was lost—he was that kind Shepherd who sought the lost sheep, and pulled it out of the pit, and restored it to the flock—that generous friend who restored the poor prodigal to his father, and reïnstated *him* in the riches and honors and enjoyment of his home. What a marvelous change is wrought by the grace of God in the enlightening of the understanding, so that moral excellence is discovered—in the sanctification of the affections, so that spiritual and divine things are loved—and in the impartation of a spirit of obedience, so that the individual delights in doing the will of God. Still farther, in carrying out the idea of restoration, those great moral principles possessed by man originally, again take possession of and govern the man, which perhaps may be comprehended in the term holiness. Justice, truth, integrity, and faithfulness, the great principles of the divine government, and designed to be possessed and carried out by all intelligences, are restored to the soul in regeneration, and will thrive and grow under the genial influences of divine grace, in connection with our cultivation, imparted in answer to daily prayer. This restoration comprehends our right position, designed by the Creator when he endowed us with intelligence. In what particular ways man was to serve his God in a state of innocence, it would be vain to conjecture; but pure love would be necessarily busy and active in studying the divine will, and would induce to prompt and faithful obedience. All those noble powers he possessed would be engaged according to their design, and the divine glory would be illustrated by their exercise. When souls are restored or converted by divine grace, they are at once introduced into a state of active service, and the aim of the life is to carry out the purposes of love and mercy to a lost world. Hence the first question which arises to the mind, when the new life begins, is, What shall I do for the Lord, and in what way shall I most promote his glory? As grace advances in the soul, and shines out in the life of the true convert, a moral influence is exerted on the community around, by a holy example, and a devoted life.

If what we have said is correct, how important, both for this life and the life to come, is conversion to God, and what an honor and blessedness to be possessed of the religion of Christ. Are we converted, or are we not? —a question of vital moment—a question that must be settled, and settled quickly, for eternity is at hand, and then it will be, "He that is holy, let him be holy still, and he that is filthy, let him be filthy still."

GEO. R. WHEELER.

For the Sabbath Recorder.

SELF-EXAMINATION.

"Examine yourselves, whether ye be in the faith; prove your own selves. Know ye not your own selves, how that Jesus Christ is in you, except ye be reprobates?" 2 Cor. 13: 5.

Of all the mental, moral, or religious exercises incumbent upon man in his earthly career, none is more important than self-examination. Every man ought to make the inquiry, By what spirit am I led? Each individual ought to know whether he is in the strait and narrow way that "leadeth unto life," or in the broad road that "leadeth to destruction." But how *can* he know this, without searching his own heart, and *marking* the fruit he bears? "Every tree is known by its fruit." "Men do not gather grapes of thorns, nor figs of thistles." Diligent *search* should be made, to know where the affections are placed. By the professor of religion the examples of Christ should ever be kept in view; and those examples he is bound to imitate. Without the force of good examples in the daily life of a Christian, very small will be his influence for doing good.

The indwelling of the Holy Spirit he should daily and hourly crave "Except ye have the Spirit of Christ, ye are none of his." Meekness and humility are indispensable attributes of the true Christian character. Reader, hast thou a good and tender conscience, and one that is "void of offense, toward God and man?" All persons, whether professedly renewed in heart, or not, ought to be mentally and spiritually interested in this great work. "He that soweth to the flesh, shall of the flesh reap corruption." But "he that soweth to the Spirit, shall of the Spirit reap life everlasting." Heart-religion cannot be promoted without examining the deep recesses of the heart—the desires, motives, and affections. Head religion may be possessed, but what will *that* profit in the day of judgment? In accordance with the real state of the heart is our moral and spiritual condition.

"A soul without reflection, like a pile
Without inhabitant, to ruin runs."

"Keep thy heart with all diligence, for out of it are the issues of life." If the affections be set upon earthly objects, enjoyment is sensual, low, and groveling. "He that findeth his life shall lose it; and he that loseth his life for my sake shall find it." And again, our Lord and Saviour says, "He that taketh not his cross and followeth after me, is not worthy of me."

In the mind, heart-examination precedes a deep sense of indwelling depravity and pungent conviction of sin; and this is a prelude to the new birth. Conjoined with this state of feeling, through the grace of God, in the operation of the Holy Spirit, the soul is led to repent and believe the Gospel. The creature is not *passive* only, but also *active*, in the great work of regeneration. Important duties devolve upon *him* as a moral agent. Repentance must be exercised, and submission to the Divine will. With faith and love he is inspired, and by the former he is justified. Hope, "like an anchor to the soul," is then ushered in. A good conscience, peace, and joy, are his, so long as he "lives" and "walks in the Spirit." Reader, have you been born again? If so, you have had exercises, gifts, and feelings, like those above mentioned. You have had the Spirit of Christ, whether you have it now or not. You have been transformed from the image of the *earthly* to that of the heavenly. You are continually serving either God or Satan. "Ye cannot serve God and Mammon" at the same time. Perhaps "the light that is in thee is darkness." If so, "how *great* is that darkness!" Perhaps thy faith is dead! "For as the body without the spirit is dead, so faith without works is dead also." James 2: 26. The Christian is required to strive with all diligence to make his "calling and election sure." "Watch and pray, lest ye enter into temptation," is the Saviour's command. The powerful influences of the world, the flesh, and the devil, turn the soul from God, ere the saint is aware, "The flesh lusteth against the spirit," and hinders the exercise of faith, and the progress of religion in the soul. "If ye love the world, the love of the Father is not in you." Even the Christian is liable to become "wretched, and miserable, and poor, and blind, and naked."

But some one may ask, What are we to watch? To which I answer, Our thoughts, words, motives, affections, desires, and purposes, to see that they all be pure, and that we do not harbor within our bosoms any evil thought of a neighbor, friend, or stranger—that we "keep our tongue as with a bridle," and use it not in slander. But alas! how often the contrary course is pursued—and how often, through these channels, egregious sins are committed! We are exhorted, by St. John, to believe not every spirit, but "try the spirits, whether they be of God." Hence we should love that which is good, and hate that which is evil, and suffer not a wicked spirit to govern us. Very many, who "have begun in the faith," and traveled the narrow way for a time, have wandered, and "left their first love." Why is this? Because they have neglected to watch continually, and to pray without ceasing." Again, we see the urgent necessity of heeding the voice of inspiration, in the words, "Be sober, be vigilant; for behold, your adversary the devil, as a roaring lion, walketh about, seeking whom he may devour." Him we are exhorted to "resist steadfastly." "Resist the devil, and he will flee from you." How exceedingly apt are the cares of the world to make the good seed sown to become unfruitful! Man is as naturally inclined to do evil as water is to run downward. Hence a frequent, rigid examination of our hearts—a careful inspection of the nature and influence of our thoughts, words, and actions, and their comparison with the Word of God—cannot hurt us, but would add much spiritual benefit to the professed follower of our Lord and Saviour Jesus Christ. And to this end let us search the inmost recesses of our souls, to know by what manner of spirit we are led, and institute a careful, candid inquiry, in order to prove ourselves.

In what do I most delight? Is it in the service of the Lord, or in the service of the world, the flesh, and the devil? Do I delight more in speculative schemes, building air castles, and serving the flesh, than in *spiritual* duties, taking care of the soul, and doing good to my fellow creatures? Do I love money, and the accumulation of wealth, better than religion? Do I "love the Lord with all the heart, and with all the soul, and with all the mind," and my neighbor as myself? As I would that others should do to me, do I the same to them? Am I strictly honest in all my dealings with men, or are the secret inclinations of my heart to covet or overreach a little in trade? Is my "eye single, that my body may be full of light?" Do I suppress and discard anger, pride, hatred, variance, and all the "works of the flesh," and cherish love, gentleness, peace, and other virtues, which are the "fruits of the Spirit?" Am I striving, with all my powers, to "glorify God in my body and spirit which are his?" Do I greatly delight in secret, domestic, and public worship, and in reading carefully the Bible above all books? Do I sincerely "love the brethren?" Do I desire the promotion of the cause of Christ above all things? Do I enjoy the spirit and power of religion in the soul? Have I Christ within me, the hope of glory? Am I ready to die? E. S. B.

NEW YORK MILLS, Feb. 18, 1856.

A MOTHER IN THE LAST CENTURY.

One might search widely without finding an original for the following portrait of Jona than Edwards' mother, which we find in *Zion's Herald*:—

Devotedly pious, consecrated to her work, and entering into all her husband's plans of usefulness, she was, at the same time, remarkably intellectual. Her concealed metaphysics broke out amidst kitchen and parish duties; and even in her devotions she was a philosopher without knowing it. Inferior to her husband in taste and years of life, she possessed a more stern and powerful intellect, fond of reasoning, of studying philosophy, and pondering the deepest problems of theology. Had Paul's prohibition been out of the way, she might have eclipsed her companion in the pulpit, and anticipated the fame of her immortal son.

As it was, her ambition was content to operate in her sphere; to train the family, to instruct the ignorant, to bless the stranger, and, in all her ways, to aid her husband in his work. She assumed the entire care of the family, managing all the temporal affairs, in doors and out, and thus permitting him to devote all his time and efforts to his charge and his studies. In addition to these duties, which were by no means slight, she contrived to find time to read all the great theological works of the age. A new book was not long in the house before she devoured it, which was about synonymous with the digestion of its contents.

In later life, after the death of her husband, and when she had passed the bounds of ninety years, she found a season of leisure which was devoted to study. Most persons, at that advanced age, would have passed their days in dreamy musings, with faculties nearly perished; but she had her books, and every day invited in her neighbors to read with her, when she would make remarks that exhibited her extensive and acute research, and the almost undiminished powers of her mind.

The family training of such a woman must be invaluable. She was the Susanna Wesley of New England, and, like her English sister, left the lines of her own character engraven on succeeding generations. She was the mother of eleven children, all of whom showed the marks of her training. They were made the subjects of prayer before their birth; were carefully nurtured in childhood, and even in the cradle, were taught to submit to the wills of their parents. "The government of their family, at once strict and affectionate, formed them to early habits of obedience and sobriety, and saved them from those evil communications, which too often lead to follies and excesses in childhood and youth."

At a very early age they were instructed in letters, and, as they passed along in youth, were taught all the branches that are taught in the schools. Her son was instructed in Latin at eleven years of age.

Mrs. Edwards lived to the age of ninety-nine years, departing with the consciousness that she had not lived in vain. And we can but express our gratitude that "woman's rights" had not, at that time, so far prevailed, as to call her from the family circle to contend in the stormy arena of politics, or professional life. Her home influence outshone a dozen such lives. To train one Jonathan Edwards is a greater privilege than to be President of the United States, or the autocrat of all the Russias; and had we more Mrs. Edwardses, we should, no doubt, see more Jonathans rising up to stir and bless the world."

THE CANDIDATE.

BY MRS. MARSHALL.

I knew it would be so. I had not lived in the midst of these people, fitting frocks, and stitching away all the daylight in these families, for thirty-seven cents per day, without taking away with me a little key to their thoughts and speech.

I knew what they would say at the weekly meeting of the India Circle, on the Thursday evening after Mr. Woodward had preached for them, as "their Candidate."

I knew that Mrs. Tyler would think that his sermons were too long; that Mrs. Crane would be sorry that he did not mention the India Circle particularly, in his prayer; that Miss Wyman would be shocked at his colored gloves; that Miss Smith expected to see at least a white cravat; that Mrs. Brace would be afraid he was extravagant; that Miss Bliss would be sure that he could never enter a room gracefully; and Miss Mills *would be horrified* at his large hand.

I knew that Deacon Crane *was afraid* he *might* agitate the Slavery question; while the spry little Dr. Chapman hoped that he was a prompt man and "up to the mark" on all reforms.

I felt that Deacon Brace wished that he knew whether his wife was a fashionable lady, or a good domestic woman; and that "Squire Willis" was sorry he had so many children, as he would require more salary; while Mr. Smith was afraid that a man with only three children could not sympathize fully with a man who was the proprietor of nine.

Miss Maria Willis hoped his children had curling hair; and the new bride of the handsome Mr. Jones wondered that his wife *could* marry a man with such a large nose. Mrs. Stone shook her head, and thought that she discovered, in his grave face, symptoms of an unsocial spirit, while Mrs. Green was quite shocked to see him smile, and pat the head of a little boy, "right in the broad aisle" of the church; and Miss Childs thought the *sweetest* thing he did was to help Aunt Massa down the slippery steps.

Mr. DeWitt did n't want any body to tell him that he was going to destruction, if he took a little pleasure in this world; and Mr. Parsons hoped that he always preached the plain Gospel. Miss Allen was determined to ask Deacon Bond's wife, when she saw her, if he ate with his knife, or fork; while Miss Stetson *could get along*, if he did not drink his tea out of a saucer.

All this I knew before those men and women, with their young sons and daughters to see and hear them, met for the ostensible purpose of aiding the self sacrificing and God-loving missionary; and when I heard Deacon Brace in his prayer lament "the low state of Zion in this place," I could not marvel that the Holy Dove, sent from Paradise on its mission of love, was grieved and frightened from such a frivolous, degrading scene.

I knew all this, and *felt* more; for at the good Deacon Bond's, where the candidate was entertained, and where I had a room adjoining his, I heard this meek servant of our Saviour, night, morning, and noon-day, offer in his low, earnest voice, such a prayer for the people—*such a prayer*, as seemed to me could only come from a burning heart and inspired lips! And I knew from his radiant face, that he had been on the Mount with his God, and from his subdued, cheerful manner, that he felt the assurance of a living faith.

[Puritan Recorder.

EFFECTIVE PREACHING.—When Dr. Rush was a young man, hewas invited to dine in company with Robert Morris, Esq., a man celebrated for the part he took in the American Revolution. It so happened that the company had waited some time for Mr. Morris, who on his appearance apologized for detaining them by saying that he had been engaged in reading a sermon of a clergyman who had just gone to England to receive orders. "Well, Mr. Morris," said the doctor, "how did you like it?" "It's too smooth and tame for me." "Mr. Morris," replied the doctor, "what sort of a sermon do you like?" "I like, Sir," replied Mr. Morris, "that kind of preaching which drives a man into the corner of his pew and makes him think the devil is after him."

CONSOLATION.

It is not when the parting breath we watch with anxious heart,
It is not in the hour of death, when those we love depart,
Nor yet when laid upon the bier we follow slow the corpse,
And leave it in its resting-place, that most we feel the loss.

When past the last, the solemn rite, and dust to dust hath gone,
And in its wonted channeled course the stream of time rolls on,
Oh, who can tell how drear the space once filled by those most dear,
When well-known scenes which *they* have loved, and all *but they* are here!

This deep, this heartfelt loneliness, this quietness of grief,
Falls heavier on the flowers of joy, than tempests strong but brief;
Though whirlwinds tear the blossoms fair, yet still the stem may thrive,
But wintry nights' chill, with'ring blight, scarce leaves the root alive.

Yet, as our earthly pleasures fade, if plants of purer peace
Spring in our bosom's wilderness, and, nurtured there, increase,
And humble hope and holy fear our wounded bosoms fill,
They'd teach us all the blessedness of yielding to His will.

Then seek not hours of sober grief, or sorrowing thought, to shun,
Until we feel that we can say, "Thy will, not mine, be done;"
And then our hearts to Him will pay an homage pure and warm,
Who saw the cloud o'er those we loved, and housed them from the storm. [Home Journal.

A MISSIONARY AMONG ROBBERS.

The *Watchman and Reflector* is permitted to make the following extract from a letter recently received from a missionary in Turkey.

SIVAS, Nov. 15, 1855.

DEAR BROTHER,—Lest you and other dear friends should, from some source, hear a distorted account of an adventure I have recently had with five Koordish robbers, I have thought it best to give you the particulars as they occurred. Having had a call to visit the brethren in Sivas, upon business connected with my medical profession, I left Tocat for this place, on the 31st of October, a little past one o'clock P. M., intending to spend the night in Gharkin, a village just half the distance from Tocat to Sivas. Our company consisted of four persons. The day was pleasant, and we hoped to reach our stopping-place for the night a little after dark. We had nearly reached the summit of the high-lands that lie in our path, and were passing the last ascent. It was about half-past three o'clock, and we were about eleven miles from home. The road was narrow, and a high bank was on our right hand and a small hill lay on our left, close by the road, covered with stunted oaks and bushes. Our company were riding in single file; I was forward. On a sudden I saw two armed ruffians leap out from among the trees a little in advance. A gun was snapped by the men, but, providentially, it missed fire. In a moment as it were I was dragged from my horse and found myself lying upon my back in the road, one of the robbers with his long knife standing over me. I involuntarily raised my hand in which I held my whip, my only weapon of defense, when the robber, with some heavy instrument, struck me one or more blows upon my upraised arm. On looking round I saw that each of our party was in the hands of a robber. Besides the two robbers that I first saw, three others had leaped out from their ambush directly by the roadside. They commanded us to rise, and compelled us to go over the hill on our left. As they were urging us along at a rapid rate, some of them began to make preparations to bind us; but Carabat Agpa begged of them not to do so, assuring them that we would readily go with them wherever they desired, and deliver up to them all our money. Resistance would have been useless, perhaps fatal.

Soon we reached a little secluded valley, where they might plunder our persons and our baggage without fear of discovery by the passer-by.

Hence we were commanded to sit down and be silent. Then they began the work of robbery upon the driver, but found little money and not much else of value. From our guard they took his coat, a nice shawl girdle, a good sword, pistol, knife, pipe, tobacco, and some money. From our Protestant brother, Carabat, they took ninety-nine English gold sovereigns and sixty Turkish sovereigns, amounting to seven hundred and twenty dollars in gold. Besides this they took his watch and other articles, to the amount of sixty dollars more. Then they began to search me. From what they said it is evident that they mistook me for Mr. Belcher, (an English officer who was engaged in purchasing animals and provisions for the army,) and supposed that I must have a lot of gold upon my person or among my baggage. But I took no gold money, and had only about four dollars in metallic currency—the only currency of the interior—in my porte-monnaie. They readily stript open my vest and my outer pants, and soon perceived my porte-monnaie in my pocket, but knew not how to get at it, probably. So one of the fellows with a large knife cut open my pants over the pocket, which he pulled out with its contents, and cut it off. He told me to open the porte-monnaie; he then took it from me, and I saw neither it nor its contents any more. In my vest pocket they found a case of lancets and some other articles, which they took. From my pants they took my knife, and from my overcoat a silk handkerchief. The article upon my person of chief value was a gold watch—a present from my dear brother. This was in its pocket in my vest. As the robbers had stript open my vest in order to search all about my waist—the usual place in the East of carrying articles of value—I continued to hold the vest open, keeping the upper part of it pulled back close to and partly under my arms, and somewhat hidden in the folds of my overcoat. Thus the watch escaped the robbers' search, although repeatedly they put their hands almost upon it, and I momentarily expected that it would be discovered. Then, for a time, they left off searching my person and began to plunder my baggage. As they left me, the leader of the gang said:

"This Frank must have gold *somewhere*, and if he does not find it we will murder him."

Carabat Agpa said to them:

"You are mistaken in the man. This man is a Doctor. He carries no gold. Examine his goods. You will find only his medicines and things necessary for his journey. *Do not kill him.*"

In a sullen, rude manner, they began to open my valise, medicine chest, and a small trunk containing chiefly surgical instruments and a few books. They searched all carefully, and appropriated whatever their fancy or avarice demanded. But found of course no gold, and were dissatisfied. They repeated their former threat and sat down to consult together. Soon they arose and again searched my person and my goods. Again they threatened in their bloody manner, and sat down once more to take counsel, speaking in Koordish tongue

As the robbers sat deliberating, and my friends were pleading for me, I could not but feel that my situation was a critical one, and that truly there might be but a step between me and death. I was sitting apart from the others. My thoughts and prayers were addressed to Him in whose hands are the hearts of all men, and who turneth them as he will. "If it be possible and consistent with thy Holy Will," I prayed, "spare my life, O Lord; but if not, Lord Jesus, receive my spirit." Perhaps this prayer was heard, for when the robbers arose they talked no more of murders, but only said, "We must have one of your horses." But from this they were finally dissuaded, and at length gave us permission to pick up and repack the scattered remnant of our goods. As night was approaching, we asked permission to go, but no, we must sit down and wait a while longer.

The robbers filled their pipes and gave back a little tobacco to Carabat and Ahamet, and they all talked and smoked together like old friends. They also gave back to each of us a small piece of Turkish confectionery, of which they had taken from us a large package; and upon being solicited, they gave back about *forty cents* to enable us to defray the remaining expenses of our journey. Noble generosity! They sent two of their number around to the road *leading* to Tocat, in order, probably, to intercept our return to report there. At length, when it was quite dark, two of them conducted us by a circuitous route or back path to our road again, and, as they disappeared from us, we heard the usual polite and friendly farewell—"posh Geldin," &c., which, being interpreted, signifies, "Your coming was very agreeable." No doubt, in saying this, they for once spoke the truth, though under the circumstances, such a parting salutation sounded rather "*cool.*"

FAYETTE JEWETT.

LIFE IN AFRICA.

Rev. Mr. Beachman, a member of the "London Wesleyan Mission," has recently returned from a visit to Africa, and in his sketch of the social condition of the negroes inhabiting the gold coast and its vicinity, he furnishes a truly awful picture, thus:—

Scarcely has one of their barbarous and bloody customs been abandoned, from the earliest period of which anything is known of them. They will even pave their court-yards, palaces, and even the streets or market-places of their villages or towns with the skulls of those butchered in the wars, at feasts, funerals, or as sacrifices to Bossum.

Still their wives and slaves are buried alive with their deceased husbands or masters. When Adahanzen died, two hundred and eighty of his wives were butchered before the arrival of his successor, which put a stop to it, only to increase the flow of blood and the number of deaths in other ways. The remaining living wives were buried alive, amid dancing, singing, and bewailing, the noise of muskets, horns, drums, yells, groans, and screeches, the women marching by headless trunks, bedaubed themselves with mud and blood. Their victims were marched along with large knives passed through their cheeks. The executioners struggle for the bloody office, while the victims look on and endure with apathy. They were too familiar with the horrid sacrifice to show terror, or to imagine that all was not as it should be. Their hands were chopped off, and then their legs sawed off, and then their heads sawed off, to prolong the amusement. Even some who assisted to fill the graves were then hustled in alive, in order to add to the sport or solemnity of the scene. Upon the death of the king's brother, four thousand victims were thus sacrificed. These ceremonies are often repeated, and hundreds slaughtered at every rehearsal. Upon the death of a king of Ashantee, a general massacre takes place, in which there can be no computation of the many victims.

At their Yam customs, Mr. Bowditch witnessed spectacles of the most appalling kind. Every cabocer, or noble, sacrificed a slave as he entered the gate. Heads and skulls formed the ornaments in their possession. Hundreds were slain; and the streaming and teaming blood of the victims was mingled in one vast brass pan, with various vegetables and animal matter, fresh as well as putrid, to compose a powerful Fetchie. At these customs the same scenes of butchery and slaughter occur. The king's executioners traverse the city, killing all they meet. The next day desolation reigns over the land. The king, during the bloody saturnalia, looked on eagerly and danced in his chair with delight.

The king of Dahoney paves the approaches to his residence, and ornaments the battlements of his palace, with the skulls of his victims; and the great Fetchie tree, at Bodagry, has its wide spread limbs laden with human carcases and limbs. The want of chastity is no disgrace, and the priests are employed as pimps.

"Murder, adultery, and thievery," says Bosman, "are here no sin."

The Sabbath Recorder.

British Correspondent- JAMES A. BEGG.

OUR ACCOUNTS.—The twelfth volume of the Sabbath Recorder is more than three-quarters completed. Bills to the end of the volume have been sent to those who owe the establishment, so that no one need be in doubt as to the state of his account. All of these bills ought to be paid before the volume closes. It has been proposed to make out a list of dues at the end of the volume, and print it with the next Annual Report of the Publishing Society, so that the members may estimate for themselves the value of those unpaid accounts which so seriously embarrass our operations. It is desirable that the list should be as short as possible.

THE AMERICAN BOARD.

A special meeting of the American Board of Commissioners for Foreign Missions was held in Albany, commencing on the 4th inst. For several years, there has been much correspondence between the Board and its missionaries in India, on the question of teaching as a part of missionary labor. The Mission in Bombay requested permission to establish a high school on the model of a Scotch establishment, in which the English language is taught. The expense of this school, in the beginning, would be about $25,000; the annual expense would be about $3,500. This request was also urged by the brethren of the Ahmednuggur Mission. The distinguishing feature of this class of schools is, that the English language is made the chief medium of instruction. This was urged upon the Board as necessary to save the mission from extinction, on account of the strong attractive influence of schools of that class, established by other Societies. The Board felt unable to settle this question by correspondence. It was therefore determined to send out a Deputation to investigate and settle it, subject to the revision of the Board. This Deputation consisted of Dr. Anderson, Senior Corresponding Secretary, and Rev. Mr. Thompson, of the Prudential Committee. Very full instructions were given to the Deputation upon this question and collateral questions.

The Deputation sailed from Boston in August, 1854, and spent 220 days among the India missions, making investigations. They visited 37 missions—28 in India, and 9 in Western Asia. They conferred with 58 missionaries, and carefully considered 87 written reports, in which the views of missionaries were embodied. They held formal conferences with the Mahratta, Madura, Ceylon, Madras, Arcat, and Syrian Missions. Most of their labors were expended with the missions in India. In these conferences with the missionaries, a series of questions were propounded by the Deputation for discussions and reports. The following are some of the topics on which discussions were held, and reports made: The governing object in missions to the heathen; preaching; native churches and pastors; caste and polygamy; station schools; girls' schools; the free schools; the Oodooville Female Boarding School; Batticotta Seminary; Printing and Medical Establishments. After a full discussion upon the topics, they were referred to committees of missionaries, who made their reports. Brief extracts from these reports were made; from which we learn, that the Ahmednuggur, Madura, and Ceylon missions and schools were alike in their beginning. Schools for heathen children were taught by heathen masters. The number of pupils rose at one time in the Mahratta mission to 2,000; in the Madura to 4,000; in Ceylon to 6,000. These schools have declined. Very few conversions resulted from these labors. Looking at the working of the schools, the Deputation decided that "schools, regarded as *converting* instrumentalities, have almost wholly disappointed us; as *preparatory* means, they have not answered expectation; as *auxiliaries*, they have been expensive. Where there are competent Christian teachers, and funds to spare for the purpose, it is well to have schools in heathen villages. In general, and more as missions succeed, the funds to be appropriated to such purposes, will little more than suffice for aiding native Christians in educating their own children, and for educating catechists and preachers." Schools in Ceylon are not as valuable as before. Children do not remain as long, their services being demanded by their parents at an earlier age.

The tendency to centralization in missions, is indicated by the centering of schools, congregations, native helpers, boarding schools, English schools, printing press, &c., at the station where missionaries are located. This centralization is not regarded as useful in missions, and especially the school is not regarded as a good nucleus. The church is in fact the only effective nucleus. The system of village schools and village congregations, commenced some ten years since, is the converse of the centralizing system. The village system is the result of progress, and is found to be much more efficient.

There were found by the Deputation four boarding schools for boys. It was arranged that they should be merged in two at the end of the year, and in one at the close of 1856, and that one to be discontinued at the close of the year 1857. The Prudential Committee decided to relinquish the school at Ahmednuggur, expecting to resume it in an improved form. It was said that "the education of native pastors should be according to their talents, and the field of labor which they were expected to occupy." In cities, it is important that pastors should have such knowledge of English as to consult English books and commentaries. They should also have some knowledge of English science, that they might stand on an equality with educated natives, who are deists or infidels. They should have a knowledge of Sancrit, that they might be able to answer the learned Brahmin in his opposition to Christianity. This education, it was said, was not needed for native pastors in the villages, and that a knowledge of their vernacular would enable them to explain the truth of the Word of God in a satisfactory manner. Arrangements were made to commence the village system on the Ahmednuggur Mission. This would mainly do away with the plan before adopted, and limit its course of education.

The Deputation was clear in the opinion, that the English High School at Bombay should be closed. Their reasons were—1st. The English language is made, to too great an extent, the medium of communicating instruction. The vernacular of any people is believed to be the most suitable language in which to communicate truth, and through which to affect the heart. Schools in which the vernacular is the grand medium of instruction, and the English, if introduced, only taught as a classic, seemed to be founded on the best basis, and to promise and produce the best results. 2d. The expense of such a school is an objection to continuing it. It must be made to compete with other schools of a similar character, or it cannot be successfully maintained. The present amount of funds would not warrant this. 3d. The influence of such schools on other missions is not desirable. Other missions could not be persuaded that there are good reasons for such a school in one city, and not in another. Hence the question became one of mission policy.

The Batticotta Seminary had been shorn of its former great religious strength, and was working mainly for the secular advantage of the native youth. The study of the English had increased on the Tamil, till there were only twelve studies of the Tamil to thirty-five of the English. The introduction of pay scholars was filling the school with the sons of rich men, or men connected with the government, who were preparing for secular posts of honor or profit. The Deputation suggested throwing out the English, except to a select theological class of graduates. To this the Mission objected, and it was decided to suspend the Seminary.

The Oodooville Female Boarding School has retained its character as a religious institution. The object of this school is to give to a select number of promising females an education superior to what they can obtain in the Christian village schools, with a view to their becoming the wives of native pastors, catechists, and other missionary agents. It was determined to reduce the number of pupils to thirty-five; and they are to be twelve years old when they enter, and generally to give evidence of piety, and to come from families of church members, or nominal Christians.

The Board had expended $250,000 in education. After such an outlay, it is thought that a sufficiently broad foundation has been laid in general education. The alumni of these schools are among the leading men—the intellectual aristocracy of their day. But the precise value of the results of the above expenditure, in a religious and missionary point of view, will be seen only after there shall be time to know the results of the changes that are now in progress in the working of the missions. The labors heretofore expended are regarded as only a preparation. It is thought that the labor expended in schools has been very inefficient as converting influence, and that the field ought to be abandoned as unproductive, even if the same amount of talent and labor had been employed in preaching with no better results.

The foregoing brief sketch of the report and views of the Deputation, shows their estimate of teaching as missionary labor. It will be seen, that they have suspended several schools, and limited others, and have almost excluded the study of the English language, confining the labors of the schools to the study of the vernacular where the schools are located. It was also represented, that these changes were suggested or approved by the missionaries of the several missions.

When the report came before the meeting for consideration, a somewhat spirited discussion arose with regard to this part of the report. Several members spoke briefly, advocating and opposing the report of the Deputation. Among these were Chancellor Walworth, Drs. Riddle and McIllvaine. Dr. Cox desired discussion, and said he was informed that the venerable Dr. Winslow, who had been a missionary in India thirty-six years, had just arrived, and requested, if he were in the congregation, that he would take the stand. Dr. Winslow then came forward, and after a hearty greeting from Dr. Cox and others on the stand, proceeded to give his views upon this subject. His long experience in missionary labors secured for him the most respectful attention, and for his opinions the greatest respect. He said that upon the question of oral preaching, in opposition teaching, he took the commission of the Saviour, "Go teach all nations." All teaching on missionary ground is preaching. Teaching schools is preaching the Gospel to children, and this is the most that can be done by a missionary for several years after his arrival. The influence of the schools was underrated. He thought Jaffna in advance of other parts of the country, on account of its education. Education produces effects immediately and remotely. There were many converted in the schools, and many after they had left them, from the instructions there received. He knew of sixty masters in the schools in the district of Jaffna, who had been converted. The Female School had produced greater interest in the community than any thing else. Female education was the only hope of the Gospel in India. Instead of stopping the schools, and the little good that is being done, the churches should furnish greater means for their support, and make them more effective. It would be a very great evil to undo at once what had been done for thirty-five years. Funds are given for the support of schools, that will not be given for other purposes. Sabbath-School children will give for schools. Change should not be made among the Hindoos in a system already in operation. Good results could not be expected from the Madura Schools, because they were stinted. He looked upon the labor in his school as an interesting preparatory work. Bombay and Madras are important missions. It will take a missionary three years to learn the language so as to preach intelligibly. Without anything else to do, he would get discouraged. Missionaries should have something to do. Teaching would be appropriate for them. Missionaries as a body should be permitted to manage the details of their missions. Missionaries should devote themselves principally to preaching, but should have liberty beyond this. In every possible way they should labor to convert the heathen. Native preachers should be raised up. Foreigners cannot give the pure word of God in the vernacular. Superior young men should be educated in English to do this. English should be taught there as Greek and Latin are here. There are not words in the Tamil language to express Christian ideas. There is no word that can give the scriptural idea of sin. It is there equivalent to error or fault. God overrules education. There are five hundred girls in Madras under religious instruction. This is more powerful than preaching. Missionaries need a variety of occupation. He thinks the missionaries were influenced by the Deputation in deciding to make the changes. Regrets these changes, as advantage will be taken of them by Catholics and Jesuits. Regards the village schools as important among one hundred and fifty millions of inhabitants. The English language is progressing, and cannot be stopped. The Bible accompanies the English language in its progress. He would have the English taught to a class of scholars, that they might assist in preparing a full literature, and make translations of tracts and other religious works. Labor should not be valued by the number preached to. He had the highest regard for the Deputation. The system of village churches and schools, with native pastors and teachers, which they had aided in inaugurating, would pay for the effort they had made. He was concerned for the pupils of the disbanded schools. The Catholics were getting strong influence by their education.

From this sketch of the speech of Mr. Winslow, it will be seen that he does not approve the action of the Deputation with regard to teaching as missionary labor. He founds his opinion upon the experience of thirty-six years of missionary labor. It is entitled to much consideration.

I must defer the remainder of my report till next week, and bespeak for this subject a careful consideration, as it may yet affect very much our own missions. J. B.

THE PROMOTION OF RELIGION.

Ever since the introduction of Christianity, the inquiry among the pious has been, "How can we be the most successful in promoting religion in the world?" From the principle which prompts this inquiry, all the machinery that has been heard throughout the length and breadth of the land, has been put in motion, and each has manufactured its own material. Religion will not prosper without the ordinary instrumentalities that God has appointed; and with the appropriate use of these, it will prosper. One of these is the light of Christianity as reflected through its professed friends. "Ye are the light of the world." Every person will have an influence according to the character he sustains; and if all professors of religion sustained characters corresponding with that profession, how soon would we see "Zion arise, with her lamps trimmed, and her lights burning." It is truly lamentable to think that we have in our churches baptized infidels, made worse for mending—rum-drinkers, tavern-haunters, frolickers, gamesters, horse-jockeys, speculators, the worldly-minded, the covetous, and the deceiver, in whose religion the world has no confidence. Christianity is sometimes measured by these hangers on, who will not leave the church, wishing to be called Christians, to take away their reproach; and at the same time the church has not moral fortitude and piety enough to apply to them the principles of Christian discipline. This is a sad state of things, but I believe that in some instances it is true.

To promote religion, the Gospel must be preached in its primitive simplicity. Possibly the influences of the age have tended to lead God's ministers, though unperceived by them, to depart from the plainness and simplicity of the past, and, in adopting a more modern style of sermonizing, they have either blunted the edge of the sword, or formed for it a sheath that has made it harmless. The same success does not attend the word preached now as was apparent in the days of Tennant, Wesley, Whitfield, and others of that class. In 1832 and '33, revivals were the result of faithful preaching in almost every part of the country, both in America and in England. Since that time religious advantages have been increasing; costly sanctuaries have been built; Seminaries, Academies, and Colleges, have been multiplied; and the means for acquiring knowledge have increased beyond our fondest expectations. Hence the mass of the people are better informed than they were then. Why, then, does not the word preached have an effect as it did then? Is it not because it is not preached with the same earnestness, fervor, zeal, and faith, that it was by those men of God?

It is important for the promotion religion, that those who preach the word be truly pious. A stream will not rise above its fountain. It is not impossible for a church to be more religious than its pastor; but a church has a right to expect in him who has willingly taken that office upon him an example of uprightness and piety, and if he has it not, he should not impose on a people in attempting to fill a place that he will only disgrace. I believe that we ought to pray for and expect a higher state of practical piety, and less conformity to the world, among those "who are placed over us in the Lord."

Have we not been too well satisfied with worldly prosperity, and thus, through the deceitfulness of riches, neglected the cultivation of the heart? Our churches have been rapidly increasing in wealth for a few years past. The people being mostly agriculturists, their investments have been safe and sure, and their income abundant. Brethren, I fear this has injured us; we have not piety enough to be rich; we shall be "lifted up with pride, and fall into the condemnation of the devil." Have our churches increased in piety as they have increased in numbers? Are the meetings for prayer and praise as faithfully attended as formerly? And do you see there bowed at the same altar the parents and the children, and the pastor with his flock? I am positive that the preaching of the Gospel, in its simplicity, by men of God, accompanied with a corresponding influence from the church—accompanied also with a knowledge of God's will—and the general exercise of prayer and praise to God, according to the gifts bestowed, are indispensible in promoting true, lasting piety in the churches. There may be some spasmodic movements, and symptoms of returning life, with only a partial use of those means; but the dry bones will not truly live without it; for so hath God ordained. "Ye must be lively stones of the spiritual building." "Ye are God's husbandry; ye are God's building." "Preach the word; apply thyself in season, out of season; reprove, rebuke, exhort, with all long-suffering and teaching." 2 Tim. 4: 2. A CHURCH MEMBER.

THE COUNTRY HAMLET, N. J., Feb. 7, 1856.

THE CINCINNATI FUGITIVES.

The poor fugitives arrested at Cincinnati have been taken back into Kentucky. It is generally understood that they will soon be sent down the river and sold, in company with several others who have recently made attempts to escape from slavery. The State of Ohio had an undoubted right to hold them for trial on the charge of murdering or encouraging the murder of the child. But the United States District Judge decided that it was the duty of the United States Marshal to take them out of the hand of the Sheriff, and the Sheriff had not pluck enough to resist the demand. The personal claim of the slaveholder to his property was recognized as paramount to the demands of public justice for the punishment of crime. Accordingly, the slaves were taken by the ferry-boat across to Covington, where a grand demonstration was made in honor of the triumph of Kentucky over Ohio.

In this connection our readers will peruse with interest the following letter, written by P. C. Bassett, from Fairmount Theological Seminary, Cincinnati, on the 12th of February, and published in the *American Baptist*:—

Last Sabbath, after preaching in the city prison, Cincinnati, through the kindness of the Deputy-Sheriff, I was permitted to visit the apartment of that unfortunate woman, concerning whom there has been so much excitement during the last two weeks.

I found her with an infant in her arms only a few months old, and observed that it had a large *bunch* on its forehead. I inquired the cause of the injury. She then proceeded to give a detailed account of her attempt to kill her children.

She said that when the officers and slave-hunters came to the house in which they were concealed, she caught a shovel and struck two of her children on the head, and then took a knife and cut the throat of the third, and tried to kill the other—that if they had given her time she would have killed them all—that with regard to herself she cared but little; but she was unwilling to have her children suffer as she had done.

I inquired if she was not excited almost to madness when she committed the act? No, she replied, I was as cool as I now am; and would much rather kill them at once, and thus end their sufferings, than have them taken back to slavery and be murdered by piece-meal. She then told the story of her wrongs. She spoke of her days of suffering, of her nights of unmitigated toil, while the bitter tears coursed their way down her cheeks, and fell in the face of the innocent child as it looked smiling up, little conscious of the danger and probable suffering that awaited it.

As I listened to the facts, and witnessed the agony depicted in her countenance, I could not but exclaim, Oh how terrible is irresponsible power, when exercised over intelligent beings! She alludes to the child that she killed as being free from all trouble and sorrow, with a degree of satisfaction that almost chills the blood in one's veins. Yet she evidently possesses all the passionate tenderness of a mother's love. She is about twenty-five years of age, and apparently possesses an average amount of kindness, with a vigorous intellect and much energy of character.

The two men and the two oldest children were in another apartment, but her mother-in-law was in the same room. She says she is the mother of eight children, most of whom have been separated from her; that her husband was once separated from her twenty-five years, during which time she did not see him; that could she have prevented it, she would never have permitted him to return, as she did not wish him to witness her sufferings, or to be exposed to the brutal treatment that he would receive.

She states that she has been a faithful servant, and in her old age she would not have attempted to obtain her liberty; but as she became feeble, and less capable of performing labor, her master became more and more exacting and brutal in his treatment, until she could stand it no longer; that the effort could result only in death, at most—she therefore made the attempt.

She witnessed the killing of the child, but said that she neither encouraged nor discouraged her daughter-in-law—for under similar circumstances she should probably have done the same. The old woman is from sixty to seventy years of age; has been a professor of religion about twenty years, and speaks with much feeling of the time when she shall be delivered from the power of the oppressor, and dwell with the Saviour, "where the wicked shall cease from troubling, and the weary are at rest."

These slaves (as far as I am informed) have resided all their lives within sixteen miles of Cincinnati. We are frequently told that Kentucky slavery is very innocent. If these are its fruits, where it exists in a mild form, will some one tell us what we may expect from its more objectionable features? But comments are unnecessary.

THE VENERABLE CHAPLAIN—The Chaplain elect of the House of Representatives has not yet reached Washington, but is expected there with unusual interest. The fact that he is a Revolutionary soldier, now on the pension list, though for seventy years a Congregational clergyman, excites a buzz of expectation when his name is mentioned. The Syracuse *Journal* thus speaks of him:—

"'Father Waldo,' as he is familiarly designated, is even now a remarkable man. He has never been sick, and now appears as hearty and vigorous as most men of the age of thirty years. He resides on his farm in Geddes, two and a half miles from Syracuse, and he has daily been in the habit of walking to this city and back. He has for some time been filling the pulpit of the Congregational church at Manlius, in this county. He never preaches a sermon a second time, but always prepares one for the occasion. We have never known an instance of a person of his age 'keeping up with the times' so completely as Mr. W. has done. He is as thoroughly read in the literature of the past year as in that of any previous time of his life. We regret to learn that the aged wife of Mr. W. died about six weeks ago. Dr. Sprague, of Albany, is now engaged in writing Mr. Waldo's life, which must form an interesting volume."

REVIVAL AT ADAMS—A business letter from Bro. Charles Potter, of Adams, N. Y., gives the following cheering intelligence:—

"It may be interesting to you to know, that the Spirit of the Lord has been among us during the Winter, and performed a work which has caused the hearts of many to rejoice, in bringing from the bondage of sin into the liberty of the Gospel many precious souls, and in awakening backsliders to a knowledge of their condition, and enabling them to return to their father's house. About forty have recently been baptized and added to the church; a number of others stand as candidates; and others still are inquiring the way. In this work we have the pleasure of witnessing the gathering in of a harvest, the seeds of which have been sown in our Sabbath School. For a few years past our Sabbath School has been in a prosperous condition, and most of our children have there received a knowledge of the way of life that has enabled them willingly to receive the Spirit, and prepared them for an inheritance beyond the skies."

MADISON UNIVERSITY.—A private letter received by the editor of the *Watchman and Reflector*, from one whose relations to Madison University enable him to speak intelligently, says:—

"Madison University is greatly prospering, though we have sustained a serious loss in the death of Dr. Taylor. As we had, however, been expecting this event for some time, ample provision was made to supply his loss, so far as the internal state of the institution is concerned. The question of the succession is now occupying the attention and anxiety of the Board and friends, and is a question of great importance. Our Theological Seminary has attained to all the vigor and fullness of the most prosperous period under the old dispensation. The University proper reached this position and went beyond it two or three years ago. The Theological Seminary has now come up. Our theological classes are highly respectable in numbers, and embrace members of great promise."

POWER OF CONCENTRATION.—The following incident, related of Webster, by President Woods, shows that the highest power of abstraction existed in the New England statesman. It occurred in one of his great speeches in reply to Calhoun:—

"At the moment when the argument seemed to demand his undivided attention, and when the powers of the assembly were most severely taxed in following him, and all were hanging on his lips, a package of letters was laid on his desk by a page of the Senate. Without at all arresting the course of his argumentation, except perhaps by a slight abatement of the fluency of his utterance, he opened his letters, and cast his eye over them, so as apparently to possess himself of their contents, by a perfect contemporaneous process of thought; and thus gave demonstration that, great as were the occasion and the subject, he had mind enough for them, *and to spare*."

THE JEWS.—By recent accounts, it appears that efforts in behalf of the Jews in Europe are attended with considerable success. The London Society have 91 laborers, of whom 51 are converted Israelites. In Poland, during the past thirty years, 400 Jews have been converted; in the Duchy of Posen 800 Jewish children are in Christian schools; in Berlin, there are 2,000 baptized Jews; in one chapel in London 700 adult Jews have been baptized.

To the Editors of the Sabbath Recorder:—

As I am intending to prepare a reply to Bro. Brown's rejoinder, I wish to defer it until Bro. B. fully develops his views on the mediation of Christ as modifying the Divine Government. And I would respectfully request of Bro. B., that he would explicitly state his view, as to whether the atonement was limited or general, as I am yet at a loss to know his views on that point. And I would just say, farther, that I hope those who have read and may yet read what may be offered, will give the subject a patient hearing; for, as much as Bro. B. sees alarming symptoms in my supposed defection from the faith, he cannot be more alarmed than I am at his views. It is not discussion I am after, but truth; and I was well aware, when I criticised his first article, what it might cost me. But I intend that none of these things shall move me. Neither the cry of Bushism, Swedenborgianism, or Arminianism, ought to deter one from seeking after truth. Whether I hold the faith of the Denomination, or not, I am almost certain that Bro. B. does not. But that is of little consequence, compared with the faith of Jesus. S. S. G.

MELANCHOLY ACCIDENT AT GREENMANVILLE, CT.—On Sixth-day, Feb. 29th, as Mr. Franklin Barber was arranging some of the machinery in the Factory in Greenmanville, Ct., his clothes were caught by a shaft revolving with great rapidity, and he was almost instantly killed. By this appalling accident a wife and two sons have been overwhelmed in sorrow. It has shrouded our community in mourning. His loss will be almost irreparable. As a husband, father, citizen, and Christian, he lived unblemished. In him the man and Christian were most happily blended. In the church at Greenmanville, he was a pillar—a bright and noble example of his profession. His funeral was attended on First-day, at Hopkinton, R. I., by a large concourse of people, who truly mourned the loss of a good man. A discourse from Eccl. 8: 8, was delivered by Elder S. S. Griswold.

COMM.

REVIVAL AT ADAMS CENTER.—As an item of good news, I take this opportunity to inform you, that this coldest and stormiest of winters has been, to the inhabitants of Adams, Jefferson Co., N. Y., a time of great favor from God. The religious community have been more than usually engaged, whilst God has revealed himself in saving majesty and power. The whole number of conversions, in both meetings, it is not now in my power to report; but all the churches have had additions by conversion and baptism. In our own favored Zion we have had thirty-eight baptized, and several others are received for the ordinance; and others still are inquiring; and this with but little more than our usual number of meetings, and amount of means. "Praise the Lord, O my soul, and all that is within me praise his holy name." J. S.

CHURCH EDIFICE FUND.—The Baptists in Illinois are engaged in a movement to secure a church edifice fund. The conditions on which the money is to be loaned are as follows:—

"Loans to the churches shall be made on the following conditions, viz: the sum loaned to be repaid at the end of two years, with interest at two per cent.; at the end of this time, however, the Board may, at its discretion, on application from the church, grant two years more at *six* per cent.; and again, two years, at *ten* per cent. The Board shall take a bond or note from the Trustees of the church, individually, secured by mortgage upon the church property, and on each occasion of renewing the loan, may require, if they think it best, additional securities. The whole transaction is to be regarded in the light of a strictly business one, and all obligations fulfilled as in ordinary business relations."

BAPTISTS IN OHIO.—The anniversary of the Ohio State Convention, held in October last, was, says the *Times*, the thirtieth since that body was organized. In the report we find this term divided into periods of ten years each, and the amount raised in each respectively given. In the first it was $4,720, in the second $16,480, in the third $33,900. This statement shows a very gratifying increase. The total is above $55,000. It is estimated that at the present rate of increase, the income of the Convention will, in ten years more, amount, annually, to $6,000. The last year, the sum raised was $4,300. The Ohio Baptists, with their great and prosperous State and its population of more than 2,000,000, have a noble field for missionary effort. During the year, twenty-five missionaries have been under employ, some for the whole year, others for portions of it. In connection with their labors, two hundred and twenty converts have been baptized, and eighty have been added to the churches by letter.

THINGS IN THE OLDEN TIME.—An article in the *Edinburgh Review*, professing to draw its facts from Felt's History of Salem, gives the following ludicrous description of the way things used to be done among the Puritans:

"The boys were ranged on the stairs of the meeting-house, and a man was appointed to keep people from sleeping by means of a short chubbed stick, having at one end a knob, and at the other a foxtail with which he would stroke the women's faces that were asleep, and with the other would knock unruly dogs and men. In the same place, Salem, two men were appointed to make a circuit of the town during service, and to mark down the non-attendants, in order to present them to the magistrate, while, at the same time, three constables were appointed to keep watch at the three doors of the meeting-house to prevent any one from going forth 'till all the exercises were finished.'"

Jefferson College, Pennsylvania, says the New York *Observer*, has educated nearly six hundred young men for the ministry during her fifty-three years of existence, thirty-five of whom have entered the foreign field.

RELIGIOUS INTELLIGENCE.

At the close of the two conference-years preceding the one just closed, the report of Methodist memberships in Texas gave not far from twenty thousand—over eight thousand in the Western conference, and over eleven thousand in the Eastern. At the recent sessions, the West reported an increase of about three thousand five hundred, making, in that conference, near twelve thousand; while the East reported over three thousand, making, in that conference, over fourteen thousand; so that the entire membership in Texas is not far from twenty-seven thousand —a rapidity of increase far exceeding that of any other denomination of Christians in that State.

The manumission of slaves in Georgia is forbidden by a statute of that Commonwealth. Persons desirous of freeing their slaves have heretofore been in the habit of conveying them to Ohio, Pennsylvania, or some other free State, and there executing the requisite deeds. It has also been the practice of persons desirous of liberating their slaves after their death, to leave provision in their wills for their conveyance to some free State and manumission there. A bill has just passed the Georgia Senate which forbids both practices, and declares null and void all such posthumous bequests.

A letter to the *Puritan Recorder* from Rev. A. Sharpe, of East Cleveland, Ohio, *February 14th, says*:—"I am most happy in being able to write that the Holy Spirit is doing a lovely work among a portion of my people. The interest commenced some six weeks since. There have been several cases of hopeful conversion, and there are others who are inquiring for the way of peace and life. If the blessing is in proportion to our wants, it will be great indeed."

Dr. Doulton's History of Concord, N. H., records the following facts respecting the First Congregational Church: "It is believed that public worship on the Sabbath has never failed to be observed by this church since its organization in 1730. No difficulty has ever existed in it which required the advice and action of an Ecclesiastical Council. Its pastors who have deceased are all interred in the old burying ground, and the average age of the pastors till the present time, is about 29 years.

The paragraph in circulation, stating that Father Matthew has become a missionary in the Feejee Islands, proves to be incorrect. That distinguished philanthropist, writing to a friend, says: "Since my return to Ireland (from Madeira) I have not left for a single day my dear brother's house, to which I am confined by illness. My heart is still, thank God, as ardent as ever in the glorious cause of temperance."

The severe persecution which the Protestants in Austria have endured since the reign of Francis Joseph has driven a considerable number of Lutherans to this country, and settlements have recently been made in Cape Girardeau and Perry counties, and near Jefferson city, Missouri, where churches have been constituted, which are supplied by ministers of the Missouri Synod. Another colony of emigrants from the vicinity of Linz has been made near Jonesborough, Union Co., Ill.

A box of New Testaments in Turkish, that were to be shipped to Thessalonia, were recently sent from the Bible depot in Constantinople to the custom-house. As they were books, some copies had to be sent to the Government censor to be examined before they could pass. They soon came back with the Government seal on the first blank leaf, authorizing their free circulation in Turkey.

It is stated that in consequence of the action of the Protestant Conference lately held in Paris, on the subject of religious tolerance, several Governments have instructed their representatives to use their influence to get the death penalty for apostacy from Mohammedanism removed, and they are already moving in the matter.

The Executive Committee of the Baptist Convention of the State of Georgia advertise the *Christian Index* for sale. They say it is an old-established paper, the organ of Georgia Baptists, and the number of subscribers is about twenty-seven hundred. Bids will be received till the 25th of April next. The *Index* is published at Penfield.

The *Commercial Advertiser* states that a gentleman residing at the South has generously devoted the handsome sum of *thirty-five thousand dollars* for the purpose of building an emigrant ship to run between New York, the Chesapeake Bay, and Liberia.

President Frelinghuysen gives to the *Christian Intelligencer* an interesting account of the religious condition of Rutger's College. He says that "there are forty-one professors of religion in the College, of whom thirty-four hope to labor in the Gospel ministry."

During the past year, the number of ordained missionaries in the service of the American Board was one hundred and sixty-five, and the number of members added to the church fourteen hundred and eighty-seven, making an average of a little more than nine members to each missionary.

In the Paris correspondence of one of the daily papers, we find the names of more than forty Americans, amongst them a large proportion of ladies, who were presented to the French Emperor and Empress at the Tuilleries on a late Sunday.

Rev. E. Jones, missionary among the Cherokees, writes that fourteen converts have been recently baptized. He sends a list of 81 persons—34 males and 47 females—baptized on profession of their faith in Jesus during the year 1855.

Rev. Charles G. Finney is engaged in a sort of Sebastopol seige of Satan's kingdom at Rochester. His preaching is attended by large and attentive audiences, and he is, as usual, making his mark.

Rev. Stephen Dod, of East Haven, Conn., left in his will bequests to religious charities and public institutions, amounting to more than $8,000; among which was a legacy of $3,000 to the Theological Seminary at East Windsor.

A private letter from the Rev. Mr. Wright, missionary among the Ojibwa Indians, in the northern section of Minnesota, reports great scarcity of food in that region.

The steamer Asia brought presents consisting of plate, medals, &c., for the officers and crews of the Kane Arctic Expedition.

Proceedings in Congress last Week.

SECOND-DAY, MARCH 3.

In the **Senate**, Mr. Cass made a personal explanation in relation to the matters in dispute between this country and Great Britain, called out by a communication which appeared in the *National Intelligencer;* after which the bill authorizing the construction of ten sloops-of-war was taken up, and passed after some debate. The estimated cost of each vessel is $507,000, and $2,000,000 are now appropriated.

The **House of Representatives** was engaged all day in a discussion on the Deficiency Appropriation bill.

THIRD-DAY, MARCH 4.

The **Senate** passed the bill appropriating $80,000 for new fortifications at Galveston, and the remainder of the day was occupied in a debate on the Illinois election case.

In the **House**, the Senate bill providing for the construction of ten sloops-of-war was referred to the Naval Committee. A bill was introduced, and referred to the Committee on Foreign Affairs, to prevent the introduction into this country of foreign criminals, paupers, &c. The Deficiency Appropriation bill was then taken up and passed.

FOURTH-DAY, MARCH 5.

In the **Senate**, a bill was reported, making appropriations for fortifications, &c.; the bill establishing Collection Districts was passed; after which, by a vote of 35 to 8, Hon. Lyman Trumbull was confirmed in his seat for six years from the 4th of March last. A rather personal debate on Kansas affairs, between Messrs. Hale, Toucey and Wilson, occupied the rest of the day.

In the **House**, majority and minority reports from the Committee on Elections, in relation to the Kansas contested seat, were presented, consideration of which was postponed.

FIFTH-DAY, MARCH 6.

In the **Senate**, a bill for the construction of a railroad from the Mississippi to the Pacific at San Francisco was introduced. It gives the Company 40,000,000 acres of land at fifty cents an acre; requires a hundred miles to be completed within eighteen months; Government to pay $600 per mile for carrying the mail; the road to be forfeited if not completed within ten years, and the lands to revert to the nation. The Senate passed the usual Fortification bill. After some talk on the Sound Dues, the Senate adjourned to Second-day.

In the **House**, the Military Academy and the Pension appropriation bills were passed. The House took up the Election Committee's report, asking power to send to Kansas for persons and papers in regard to the election of Delegate in Congress. Speeches were made by Messrs. Boyce against and Bingham for the report, and the House adjourned.

SIXTH-DAY, MARCH 7.

The **Senate** was not in session.

The **House** spent the whole day upon Kansas affairs, in connection with the application of the Committee on Elections for authority to send for persons and papers in the contested election case. Speeches were made by Oliver of Missouri, Cumback of Indiana, Culien, and Walker. Adjourned till Second-day.

European News.

News from Europe up to Feb. 23d, was received in New York on the 8th inst., by the steamship Africa.

No tidings from the missing steamship Pacific.

On the subject of the difficulties with the United States we have nothing new to report, excepting that the London Morning Advertiser professes to be aware that Mr. Dallas carries out very stringent demands in regard both to the Central American and the enlistment questions.

The Peace Conference, it was supposed, would meet on the day that the Africa left. Anxiety was daily increasing as to the result. It is stated, but not generally credited, that Russia consents to the dismantling of Nicolaieff. Paris editors have been ordered to write no more respecting peace or war while the Conference sits.

Constantinople advices roport much excitement and confusion in commercial affairs. All things have fallen in price, and merchants who have heavy stocks fear to incur heavy losses.

Sir Joshua Walmsley's motion for opening the National Gallery and British Museum on Sundays was discussed in the British Commons, snd negatived by a vote of 376 against 48. Lord Palmerston opposed the resolution, but without stating his reasons.

The defalcation of Mr. John Sadleir, Member of Parliament, and Chairman of the London County Bank, and Swedish Railway Company, was creating considerable excitement, and some embarrassment in financial circles. The aggregate fraud is double the famous Schuyler defalcation in this City, or about five millions of dollars, of which $1,250,000 is by way of overissue of the shares and obligations of the Swedish Railway.

The English Chancellor of the Exchequer stated to the House of Commons, on the 22d of Feb., that the cost of the Eastern war, for twenty months, was $217,820,000. He also stated that the sum of one hundred millions of dollars, or £20,000,000 sterling, would be wanted in the course of the present year by way of extraordinary loans, and having pointed out that the resources of the country remained unimpaired, moved the authorization of the sum of $25,000,000, being part of the loan that day taken by the Rothschilds.

Twenty-three Boats Wrecked at St. Louis.

From the St. Louis Democrat, Feb. 27.
